THE dog show of the Westchester County Fair was held at White Plains, N. Y., Sept. 25 to 30. The undersigned did the benching and superintending the show. There were 165 dogs on exhibition. Mr. George Laick, secretary of the National Beagle Club, was judge. Mt. Morgan Kennels of St. Bernards had a fine string of dogs, two fine Yorkshire bitches being with them. Palisade Kennels had smooth-coated St. Bernards; and mastiff dog Ray took second prize. Herman Kruger of New York city showed some St. Bernards, also Dr. James of Rye, N. Y., had seven St. Bernards. Foxhounds were fine; Hall, Brown & Co. won first in the dogs and first and second in puppies. Sixteen beagle dogs and puppies were shown. Sunnyside Kennels, owned by Beck and brother, showed six dogs; two won first and two second. Brier Cliff Kennels first in dogs. This dog won at Yonkers, N. Y., and he, at New York city. Mr. Laick was at home among these little hunters. Pointers shown by Mr. W. J. Gormley of Yonkers were a fine string. H. McCarty of Tarrytown showed two good pointer puppies. There were only three English setters shown and they were nothing extra.

Three collie bitches were shown; the first and second were good. In great Danes two showed up. The first prize dog, Hanniss II., owned by Ernest Hoig of New York city, stands 32in. and his weight is 160lbs.; he was admired by all who saw him. Three greyhounds were shown; the first and second dogs were fine. There were only three Irish setters and Mr. Laick was some time judging them as both winners were very good.

Terriers were out in force and there were many good ones. The bull-terrier prize winner was above the average. In pups one entry took first. French poodles had two entries, and the first prize winner in dogs, owned by H. McCarty, was a good one. The judging was done more systematically than ever before, Mr. Laick giving general satisfaction.

D. C. PAULDING.

NORTH TARRYTOWN, N. Y.

## Mr. Barrymore's Spaniels.

Editor *Forest and Stream*:

In my letter to you of recent date, and describing to you the spaniels which Messrs. Barrymore and Kent have, I fear I made a mistake, as these toys were obtained on board a China steamer at San Francisco, and as the description given by W. K. Taunton answers exactly to the dogs referred to, I am of the opinion that they are the genuine Chinese toy spaniel, as hereafter described: "China also possesses a small breed of toy dogs very much resembling the Japanese spaniel, with which the public are familiar from the specimens exhibited from time to time at our different shows. They are about the size of a small Blenheim spaniel, with long, silky, wavy coats, black and white; the nose is not so short as in our modern toy spaniels. These dogs come from Peking and thereabouts, and are obtained through the Napalese traders, who go to Lhasa in Tibet and get the dogs from the Chinese caravans which go there." (W. K. Taunton, "Foreign Dogs," 1888, England.)

The spaniels which I mentioned are black and white, with long hair, although they are not over five to seven months old. To give you a better idea I send you a photo of them, for which we must thank Messrs. Lear & Cotton. I have never been an admirer of toys, but after seeing these beautiful dogs I am converted and I hope to see a class for them in these United States.

RICHARD FRANCIS.

OMAHA, Neb., Oct. 10.

## New Jersey Kennel League Meeting.

At a meeting of the league held at Newark, N. J., Oct. 9, the following were present: Edward H. Radel, W. O. Knebler, Dr. W. F. Seidler, Edwin H. Morris, E. R. Christopher, A. E. Eisele, August Harne, M. A. Hanchett, Frank Link, Dr. L. R. Sattler, W. J. Whelan, C. F. Lewis, Dr. G. A. Van Wagenen, J. E. Eisele, C. C. Brandt, Chas. Kuschler, Dr. Guenther, J. N. Sinnock, Theo. L. Lenthauser, Dr. E. Guenther, F. McCue, L. Dumphrey, J. Mitchell, H. Johnson, A. Harrison.

The executive first made a report of the progress made in regard to the dog show, Thanksgiving week, at the Industrial Hall, adjoining the Grand Opera House, Newark, N. J., and received the most flattering commendation of the members.

The following judges were nominated and appointed by a unanimous vote: St. Bernards, Newfoundland and pugs, Miss Anna H. Whitney; mastiffs, a judge to be chosen by the Mastiff Club; great Danes, A. H. Heppner; deerhounds, greyhounds, Russian wolfhounds and all setters, John Brett; pointers, J. H. Winslow; collies, Martin Dennis; beagles and foxhounds, Jos. Lewis; whippets, poodles, Yorkshire and toy terriers, King Charles, Prince Charles, Blenheim, ruby and Japanese spaniels, Italian greyhounds, schipperkes and Mexican hairless, Edwin H. Morris; bloodhounds, dachshunds, all spaniels used for sport, bulldogs, bull, fox, Boston, Irish, Dandie Dinmonts, Scotch, Skye, Bedlington, Clydesdale and black and tan terriers, miscellaneous and selling classes, James Mortimer.

A change was then recommended in the premium list, from \$15 and \$7 in open classes, to \$12, \$6 and \$4, which with additional classes for puppies in fox-terriers, and a division of American and English foxhounds, were sanctioned.

Mr. John Read, of New York, was appointed as superintendent, and Mr. Frank Link, of Newark, assistant superintendent. Dr. C. R. Sattler was made veterinarian of the show. Messrs. Kuebler, Whelan, Christopher and Winter were selected as a committee to secure the presence of the Governor of the State.

A first list of local specials was read, which includes a valuable award for best St. Bernard given by Ed Radel, the president.

A special for best pointer in the open class, by Charles Bassini. A piece of furniture for a class he selects by Mr. Kuhn, of Kuhn & Co. A handsome table for best toy dog, by Miss Augustine Hahn. By a friend of the breed, \$10, for best open class mastiff. For best Irish setter, \$15 cash, by Mr. Quimby. For greyhound, \$10 lamp, by Emil Hoffman. Assemblyman Joseph M. Byrnes offers \$5 in cocker class. Mr. Sparkes, of Rockridge & Co., a valuable collar. Another list with \$40, given by the Fox-Terrier Club, medals by the Collie Club, a cup and flask for bull-terriers, two specials for poodles, several in the pet dog division, a picture by Muss-Arnolt for the best open class pointer; a wolfhound special, and several kennel specials, was also read.

The meeting was then adjourned until 17th inst., when the premium list is to be ready for issue.

## Pugs.

## Editor Forest and Stream:

In the "Dog Chat" of your issue of Sept. 23 is an item announcing the arrival per steamship Spain of my pugs Dong and Haughty Madge; and as the information is somewhat misleading I may be allowed space for a correction. The dogs were shipped from London Sept. 3 by that steamer and she reached her dock at New York on the evening of Sept. 18. Madge endured the fifteen days' trip well, and came ashore in very good condition, but I regret to advise you that Dong did not survive the voyage, having been found dead in his box on the morning of Sept. 16. As the steamer officials could assign no satisfactory explanation and neglected to bring his body to port the cause of this sudden demise of one of the best pugs of his day may ever remain a mystery.

Dong (E. 30,104) was by champion Loris ex Pooty, and was born Feb. 21, 1890, consequently was in the very prime of life and usefulness. He was the possessor of a great show record, having been the winner of over sixty prizes, and gold and silver medals, at all the best shows in the Kingdom. He has repeatedly beaten Fairy King, champion Mayor of Leeds, Royal Duke of Rozelle, Royal Darkie, Drummer and others in the front rank. It has been claimed for Dong that he was the best-headed pug living, and as a sire he knew no superior, being prolific, sure, and potent in begetting high quality. He gave promise of great usefulness in this country, and his loss is a sad misfortune to the pug fancy of America.

Haughty Madge (E. 35,149) is by Bentley ex Sea Gull, and was born March 13, 1891. She also has made a remarkable show record on the other side, being the winner of 46 firsts, 21 specials, 4 gold medals and 8 cups at the leading shows, and having meritoriously defeated champion Mayor of Leeds, Royal Duke of Rozelle, champion Confidence, Haughty Major, Drummer, champion Princess Rose, Aline, and all other competitors. Indeed, she is quite generally considered in England the best pug alive, and it is hoped that her excellencies may be as apparent in America. F. C. NIMS.

PAINTSVILLE, O., Oct. 3.

## A Police Dog.

ROCHESTER, N. Y.—I append a clipping from the Rochester Democrat and Chronicle which tells the tale of a dog without a pedigree: "Police Jack, the dog who has been known to every policeman on the night force for over five years, met with a fatal accident shortly after midnight this morning. He went with Special Officer Nield into the Union and Advertiser building, and when on the fifth floor fell through the elevator shaft to the basement, six stories below. He died instantly.

"Police Jack, or Copper Jack, as he was sometimes called, was a small, brown, insignificant looking dog, who came to Sergeant Frank Allen in East Rochester five years ago, and has been with the night force ever since. Every night after that as the night force went on duty he appeared, and followed some officer along his beat. Where he came from when first he appeared nobody has been able to discover. There was not a man on the night force who was not his friend. Whenever a prisoner was refractory, when the dog was near, he would bite him on the legs and help the officer in every way possible. The death of the little dog will bring genuine sorrow to the entire force."

O. STEWART BAMBER.

## A Badger's Invitation.

## Editor Forest and Stream:

I have read the article in your paper of Sept. 23, in which my friend Mr. Geo. Thomas says that Paddy Doolan "can do" my badger. If he can do her (George being in the terrier business), he can sell Paddy to advantage. I do not sign my real name, but that George may know that his dog will have good care while in my possession (I don't vouch for what the badger will do with him), I refer to Mr. Lacy, of your paper. The badger and I are both waiting for Paddy, and George if he will accompany his tyke.

[We can vouch for it that the "Badger" on the outside will take good care of Paddy before he goes in and afterward, should he come out. But "between whites" he must take his chances.]

Dr. O. S. Bamber has purchased a pointer pup 11mos. old by Billy Beaumont—Lady Monte, that is said to show excellent field qualities, as well as being pleasing to look upon.

## DOG CHAT.

## Sir Bedivere Goes West.

Things are very quiet in St. Bernard ranks just now, and the St. Bernard Club seems to have pulled down the blinds altogether for the nonce. We are able, however, to give a little news that will startle St. Bernard from its lethargy. We have heard little of Arthur Trickett since he went out to Little Rock, Ark., to take charge of Mr. C. A. Pratt's kennel. Arthur is a pretty quiet sort and mysterious at times, and especially so when he is freighted with important news. In this mood he seems to have strolled into the FOREST AND STREAM office on Monday, much to our surprise, and it was some time before we learned that the great Sir Bedivere leaves us to take up his quarters in the Argyle Kennels. We did not suppose that Mr. Reick was in earnest when he placed all his dogs on the sale list, and that the gem of his collection should be the first to go surprised us no little. Such is the case, however, and the crack is said to be in good health, though out of coat and flesh. Mr. Trickett starts with him to-morrow (Tuesday) on his 2,000-mile journey. The price paid is private. Mr. Pratt has Alton 11, Wyoming Belle, etc., in his kennel, besides several very fair bitches, and one smooth pup is said to be quite a good one. In all he has about twenty St. Bernards. The kennels are situated near the station at Little Rock, and as the latter is on the line of travel to and only sixty-five miles from the Hot Springs, it would seem a good location for a kennel, though the weather is rather warm for St. Bernards we should think. Whether Sir Bedivere will be shown East will all depend upon how he improves in condition between now and spring. Mr. Trickett tells us he is well pleased with his new quarters, and with the aid of another good bitch which they expect to purchase, can now put down a team that will compare favorably with former teams Arthur has had in charge. Mr. Reick has still Marvel, Young Bute, Kingston Regent, Princess Florence, Rustic Beauty, etc., from which he can choose a formidable quartette for the kennel prizes. It is not unlikely that A. M. Hughes will take hold of this kennel, and if he does we shall hope to see the dogs in good shape once more. We congratulate Mr. Pratt on his plucky purchase and trust he will have the success he deserves. Little Rock may now lay claim to having the best of the breed.

## Dandie Dinmonts.

There is quite a discussion going on in English papers on the question of training Dandie Dinmonts, and Mr. Rankine in the course of a letter to the *Scottish Fancier* drops some ideas gained from his experience of thirty years' breeding that may be useful to our breeders this side of the water. As we have noticed the same things that he complains of in some of the terriers shown lately at our shows. In speaking of the coat standing out—staring—and making a certain dog look much heavier than in reality he was, and almost like anything than one would expect a working Dandie should appear, he says: "It has all along and still remains to be my firm and distinctive conviction that a Dandie should have what is known as a 'pily coat,' composed of a mixture of hard and softish hair—the hard, however, predominating over the soft; so as to give, when handled, a crispish feeling—and its length may run from 1½ to 2½ in., but as above indicated, when it exceeds the latter figure it may be said to have grown to an unnatural length, which it often does under what may almost be termed artificial or unnatural circumstances, for it is not by any means the Dandie's nature to be made a pampered house pet. Now, I hazard the further remark that it has long been an established fact that where a Dandie is pampered in the house—as too many undoubtedly are—and insufficiently exercised, and not groomed with a pretty hard brush, the soft hair seems to grow considerably more profuse and to a much greater length than the hard hair, and eventually the soft hair predominates over the hard, giving the coat a soft, silky feeling and the dog a false appearance, neither of which are characteristic of the breed."

## N. E. K. C. Meeting.

THE New England Kennel Club selected a good list of working officers at their annual meeting, Oct. 5: President, Edward Brooks; Vice-President, John E. Thayer; Secretary, David E. Loveland; Treasurer, George A. Fletcher. Board of Governors, Edward Brooks, John E. Thayer, David E. Loveland, George A. Fletcher, James W. Newman, J. P. Barnard, George H. Eddy, Harry W. Smith, Samuel Hammond, Jr. Bench show committee, Edward Brooks, David E. Loveland, George A. Fletcher. Delegate to A. K. C., Edward Brooks. There have been rumors that Mr. Brooks was going to retire from active interest in dogs and dog shows, but we can ill afford to lose such men in the fancy, and his election to the presidency of such a prominent kennel club as the N. E. K. C. will, we trust, draw the bonds still tighter.

## Dachshunds.

Mr. John Matthews, the well-known bulldog exhibitor, did so well at the pet dog show with the dachshund bitch he bought from Mr. Manice that he has purchased another one, a dog pup this time, by Jay ex Sister. Mr. Manice thinks he has a coming dog in the queerly named Ichthyosaurus, second at Boston, though it is a bit coarse. We do not know whether Mrs. Cleveland's new fancy will turn the fashion toward this quaint breed, but at any rate dachshunds are coming to the front. A well-bred dachshund or two round the house lend a quaint charm that is absent in many of the more popular breeds. Mr. Manice this week places some of his stock at prices that are ridiculously low.

## Pug Dog Dong's Death.

We very much regret that such a good pug as Dong must have been did not live to take his part in our dog shows. The disqualification of Sprake, the death of Bonser leave a gap in the pug ranks here that should be filled by something as good, if not better. A good pug or two are sadly needed just now, as, outside of Bob Ivy, there is really not a good one going the rounds at present. Half a loaf is, however, better than no bread at all, and we are glad that Mr. Nims has at least one good one in Haughty Madge, who will probably, if all goes well, be seen at Chicago next February.

New breeds are cropping up every day. In the New York Herald we see an inquiry for a very small white Puerto Rican poodle, about two years old, with abundance of hair. *Stock-keeper* this week tells us of a new one that Mr. Morrison of England has just introduced at the Edinburgh show. Yozo, as it is named, comes from the interior of Japan and is coal black, his head in formation and expression is exactly that of a black pig's, so are his ears, and his tail has the curl; his legs are shorter and he has more bone, but he has a rough long coat like a Pomeranian. It is the first that has ever been seen in England, but Mr. Raper found no difficulty in putting it first in the foreign class, and the above journal pertinently asks how he came by his knowledge of the breed.

A gentleman living in Philadelphia writes us as follows: "Can you give me the name and address of a good man to break in a young setter dog, who lives near Philadelphia?" This is the third request of this kind that we have received within a week from persons living in cities not very far from New York, and such inquiries are constantly coming to us.

We know of many good dog handlers, but most of them devote all their time to preparing dogs for field trial work, and so reside at a distance from the larger cities, and in places where inhabitants are few and birds abundant. While persons who have dogs to be trained for field trials are usually willing to send them far away to the best handlers, there are a great many others, having young dogs to be broken for their own shooting, who much prefer to keep the animals within reach, where they can occasionally see them and judge with their own eyes as to how their education is progressing. We have no doubt that many excellent handlers are to be found within easy reach of Philadelphia, New York, New Haven and Boston, but we do not know their names and are not able to learn them. It would certainly seem worth while for such handlers to register their names at this office, sending in at the same time references from sportsmen with whom they have had dealings. In this way we should be able to recommend such handlers and to benefit them and such of our readers as may wish to obtain their services.

Mr. C. C. M. Hunt, of Palmyra, N. Y., called last Friday on his way to Mr. Bradley's place at Greenfield Hill, to enjoy a little shooting. He tells us he will run his pointer Grouse in the All-Age at the Eastern field trials next month. Mr. John Lewis, who is now at Reidsville, N. C., will have him in hand and also educate a young setter of Mr. Hunt's.

Mr. Angus Cameron goes South shortly with the Hempstead Farm Kennels entries in the Eastern.

We have received several letters commenting unfavorably on the late awarding of the "Ashmont" trophy, but as they are over *noms de plume*, it would serve no good purpose to publish them, anonymous communications carrying no conviction or weight. The prize has been awarded, and the lesson learned, so let the sore heal up as best it may.

At a meeting of the Pacific Kennel Club held Oct. 4, the treasurer reported a balance of \$891.

We have received a letter from the owner of the bull-terrier Young Marquis, questioning Mr. Watson's decision at Danbury show and asking for information of the relative merits of Cordona and his dog Topsparkle, etc. We do not wish any controversy on the subject, but if the judge sees fit to give reasons for his decision, all well and good, further than this we are not interested in the matter.

Mr. C. W. Tway, of Irwin, O., left Tuesday week for Bloomfield, Ia., where he will locate to train some dogs for private shooting, and prepare his entries for the field trials. He also advises us that he will accept two more dogs to train for private shooting and one for trials.

Mr. W. L. Washington's Irish setter bitch Ownie met her death through the burning of Mr. J. C. Heinz's business building, her owner having loaned her to Mr. Heinz for sporting purposes. Mr. Washington valued the bitch highly and we sympathize with him in his loss.

The annual meeting of the National Beagle Club will take place at the Krueder Homestead, Nanuet, N. Y., Oct. 30, at 7 P. M. Officers for ensuing year will be elected.

Mr. Tulk tells us that the Hamilton Kennel Club propose holding another local show some time during the winter and are trying to secure the old post-office building. There is also some talk of starting a boarding kennel on the outskirts of the city.

The postponed executive committee meeting of the A. K. C. will be held Oct. 27, at 3 P. M., at 44 Broadway, New York.

Field trial men should not forget that the All-Age Stake entries for the International Field Trials close Nov. 1. In addition to the 40% of entrance money for first the winner will also take the cup for one year, presented by Messrs. Cassimir Gzowski and Christopher Robinson, Q. C. The forfeit is \$5 and \$5 additional to start. Mr. W. B. Wells, Chatham, Ont., is the secretary.

The noted collie bitch Elgin Bawdor Vida was recently shipped to this city on the Ethiopia, consigned to a gentleman who is starting a kennel of this breed. The bitch has won several prizes in England and before sailing was bred to Fife Keith Mark. With her came Bowdler Mayflower, by Ormskirk Chris ex Blundellsand Benie, and she was bred to Ormskirk Amazement. She is also a winner of prizes.

## Detroit Will Have a Show.

## Editor Forest and Stream:

The second annual dog show of the City of the Straits Kennel Club, Limited, will be held at the Auditorium, Detroit, Feb. 14 to 17, 1899, under A. K. C. rules.

We would like to hear from breeders and handlers that may have suggestions to make, as we wish to prepare premium list as soon as possible. There will be classes for all breeds same as at last show, with puppy classes added. The regular list will show fully as much money as in '92, and if possible will be larger, while our list of cash specials, cups, etc., will excel. GUY D. WELTON, Sec'y.

DETROIT, Mich., Oct. 3.

## KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

## NAMES CLAIMED.

## Prepared Blanks sent free on application.

*Love's Kent*. By W. I. Love, Birmingham, Ala., for black and white pointer dog, whelped June 10, 1893, by Kent Elgin (King of Kent—Vera Bang) out of Macker's June (Rex Morgan—Flee).  
*Edge*. By V. B. McBride, Birmingham, Ala., for silver fawn pug dog, whelped June 18, 1893, by imported Drummer (Bruce—Patience) out of Pitti Sing (imported Othello—June).

## BRED.

## Prepared Blanks sent free on application.

*Devonshire Pearl*—Duke of Dexter. C. D. Roberts's (Dexter, Me.) imported pointer bitch Devonshire Pearl (Devonshire Nero—Devonshire Fan) to his Duke of Dexter (Duke of Vernon—Boski). July 10.  
*Uno King Don*—Duke of Dexter. R. W. Pope's (Gardiner, Me.) pointer bitch Uno King Don (King Don—Patti M. II.) to C. D. Roberts's Duke of Dexter (Duke of Vernon—Boski). Sept. 22.

*Lady Vixen*—Duke of Dexter. F. R. Page's (Orland, Me.) pointer bitch Lady Vixen to C. D. Roberts's Duke of Dexter (Duke of Vernon—Boski). April 23.

*Romulus*. David Dows, Jr.'s, Irish terrier bitch — to Hempstead Farm Kennels' Romulus, July 3.

*Westminster Gladys*—Duke of Hessen. Philip Daly, Jr.'s, pointer bitch Westminster Gladys to Hempstead Farm Kennels' Duke of Hessen, July 15.

*Minnie Sefton*—Conrad II. Hempstead Farm Kennels' (Hempstead, L. I.) collie bitch Minnie Sefton to their Conrad II, July 25.

*Westminster Blanche*—Sandford Druid. Hempstead Farm Kennels' (Hempstead, L. I.) pointer bitch Westminster Blanche to their Sandford Druid, July 24.

*Suffolk Rarity*—Suffolk Trimmer. Hempstead Farm Kennels' (Hempstead, L. I.) fox-terrier bitch Suffolk Rarity to their Suffolk Trimmer, June 26.

*Merryleys*—Sandford Druid. Hempstead Farm Kennels' (Hempstead, L. I.) pointer bitch Merryleys to their Sandford Druid, April 13.

*Suffolk Venus*—Suffolk King. Hempstead Farm Kennels' (Hempstead, L. I.) wire-haired fox-terrier bitch Suffolk Venus to their Suffolk King, April 8.

*Roslyn Eileen—Romulus.* Harry Jarrett's Irish terrier bitch Roslyn Eileen to Hempstead Farm Kennels' Romulus, Sept. 3.  
*Gypsy—Woodmansterne Trefoil.* B. E. Valentine's collie bitch Gypsy to Hempstead Farm Kennels' Woodmansterne Trefoil, Aug. 29.  
*Gen. Conrad II.* Woodlawn Park Kennels' collie bitch Gem to Hempstead Farm Kennels' Conrad II., Aug. 16.  
*Nellie—Fenian Boy.* Valentine Mott's Irish terrier bitch Nellie to Hempstead Farm Kennels' Fenian Boy, Aug. 17.  
*Flora—Woodmansterne Trefoil.* Woodlawn Park Kennels' collie bitch Flora to Hempstead Farm Kennels' Woodmansterne Trefoil, July 28.  
*Queen Dare—Lad of Kent.* A. Gedge's (New Haven, Conn.) pointer bitch Queen Dare to champion Lad of Kent, July 29.

WHELPS.

Prepared Blanks sent free on application.

*Queen Dare.* A. Gedge's (New Haven, Conn.) pointer bitch Queen Dare, Sept. 23 four (three dogs), by champion Lad of Kent.  
*Devonshire Pearl.* C. D. Roberts's (Dexter, Me.) pointer bitch Devonshire Pearl (Devonshire Nero—Devonshire Fan), Sept. 10, eight (five dogs), by his Duke of Dexter (Duke of Vernon—Boski).  
*Lady Vixen.* F. B. Page's (Orland, Me.) pointer bitch Lady Vixen, June 28, eight (four dogs), by C. D. Roberts's Duke of Dexter (Duke of Vernon—Boski).  
*Florence.* M. J. Flaherty's (Providence, R. I.) English setter bitch Florence (Roi d'Or—Nellie Bly), Oct. 1, nine (four dogs), by T. M. Aldrich's Gene (Druid—Ruby).  
*Miss Nelson.* W. M. Woods's (Pittsfield, Mass.) English setter bitch Miss Nelson (Tacoma—Kamela), June 25, five (two dogs), by E. O. Damon's The Corsair (Dan Gladstone—Haydee).  
*Miss Russell.* J. D. Foley's (Washington, D. C.) English setter bitch Miss Russell (Gath's Mark—Princess Joy), Sept. 24, five bitches, by Blue Ridge Kennels' Antonio (Roderigo—Bo-Peep); entire litter dead.  
—Hempstead Farm Kennels' (Hempstead, L. I.) pointer bitch (Duke of Hessen—Queen Fan), July 23, nine (five dogs), by their Sandford Druid.

*Gen. of Kippen.* Hempstead Farm Kennels' (Hempstead, L. I.) pointer bitch Gem of Kippen, July 23, eight (five dogs), by their Sandford Druid.  
*Zmeika.* Hempstead Farm Kennels' (Hempstead, L. I.) Russian wolfhound bitch Zmeika, July 8, ten (five dogs), by C. S. Hank's Groubian.

*Ormskirk Julia.* Hempstead Farm Kennels' (Hempstead, L. I.) collie bitch Ormskirk Julia, June 30, seven (two dogs), by their Conrad II.

*Merryleys.* Hempstead Farm Kennels' (Hempstead, L. I.) pointer bitch Merryleys, June 15, two dogs, by their Sandford Druid.  
*Suffolk Venus.* Hempstead Farm Kennels' (Hempstead, L. I.) wire-haired fox-terrier bitch Suffolk Venus, June 11, two (one dog), by their Suffolk King.

*Countess.* W. L. Davidson's smooth fox-terrier bitch Countess, Sept. 20, six (two dogs), by D. J. Rogers's Ebor Larchmont.

SALES.

Prepared Blanks sent free on application.

*Nellie Mac.* Liver and white pointer bitch, whelped Feb. 3, 1891, by Beaufort H. out of Fannie, by C. D. Roberts, Dexter, Me., to J. C. Stiver, Boston, Mass.  
*Strebor Fyank.* Liver and white pointer dog, whelped July 13, 1892, by Duke of Dexter out of Uno King Don, by C. D. Roberts, Dexter, Me., to J. S. Cross, New York, N. Y.  
*King.* Black and tan foxhound dog, by C. D. Roberts, Dexter, Me., to W. E. Tibbatts, Amesbury, Mass.  
*Strebor Deblis.* Liver and white pointer dog, whelped July 13, 1892, by Duke of Dexter out of Uno King Don, by C. D. Roberts, Dexter, Me., to J. E. Hair, Bridgeport, Conn.  
*Strebor Martha.* Liver and white pointer bitch, whelped July 13, 1892, by Duke of Dexter out of Uno King Don, by C. D. Roberts, Dexter, Me., to John McElwain, same place.  
*Arlene.* White, black and tan beagle bitch, whelped March 13, 1893, by champion Fitzhugh Lee out of Lady Novice, by A. D. Fiske, Worcester, Mass., to A. Wood, Pawtucket, R. I.  
*Eva.* White, tan and black beagle bitch, whelped March 13, 1893, by champion Fitzhugh Lee out of Lady Novice, by A. D. Fiske, Worcester, Mass., to H. G. H. Tarr, New York, N. Y.  
*Claude.* White, black and tan beagle bitch, whelped March 13, 1893, by champion Fitzhugh Lee out of Lady Novice, by A. D. Fiske, Worcester, Mass., to E. P. Butler, Pawtucket, R. I.  
*The Deuce.* White, black and tan beagle dog, whelped March 13, 1893, by champion Fitzhugh Lee out of Lady Novice, by A. D. Fiske, Worcester, Mass., to J. E. Dawson, Pawtucket, R. I.  
*L. I.* Bull-terrier dog, by Hempstead Farm Kennels, Hempstead, L. I., to J. C. Cross, New York, N. Y.  
*Duke of Hessen—Queen Fan whelp.* Pointer dog, whelped July 11, 1893, by Hempstead Farm Kennels, Hempstead, L. I., to F. E. Lewis, Tarrytown, N. Y.  
*Duke of Hessen—Woolton Game whelp.* Liver and white pointer, whelped July 27, 1893, by Hempstead Farm Kennels, Hempstead, L. I., to F. E. Lewis, Tarrytown, N. Y.  
*Grove Tipter—Nedgie whelp.* Fox-terrier dog, by Hempstead Farm Kennels, Hempstead, L. I., to H. S. Brooks, New York, N. Y.  
*Woodmansterne Trefoil—Green Mountain Lass.* Collie dog, whelped May 20, 1893, by Hempstead Farm Kennels, Hempstead, L. I., to Col. H. Le Grand Cannon, Burlington, Vt.  
*Drummer—Pitt Sing whelps.* Silver fawn pug dogs, whelped June 18, 1893, by T. T. Ashford, Birmingham, Ala., one each to W. B. McBride, same place, and W. W. Hobson, Clinton, Ia.  
*Kent Elgin—Luck of Ruby whelp.* Black and white pointer dog, whelped June 18, 1893, by T. T. Ashford, Birmingham, Ala., to W. B. Townsend, Lewisburg, Ala.  
*Love's Kent.* Black and white pointer dog, whelped June 10, 1893, by Kent Elgin out of Mack's Juno, by T. T. Ashford, Birmingham, Ala., to W. L. Love, same place.  
*Kent Elgin—Mack's Juno whelp.* Lemon and white pointer dog, whelped June 10, 1893, by T. T. Ashford, Birmingham, Ala., to W. B. Townsend, Lewisburg, Ala.

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.

F. B. Z., Gloversville, N. Y.—The owner of the collie Sefton Hero is Mr. J. Pierpont Morgan, whose kennels are at Highland Falls, N. Y.

J. M. N., Albany, N. Y.—Would you be kind enough to give me the pedigree of the rough-coated St. Bernards Blucher and Madeline. Ans. Blucher (A. K. R. 3,577), by Thor out of Myrtle, by Leo (E. 7,461), Thor by Thor (E. 2,462), Madeline (A. K. R. 5,532), by Hermit (E. 11,757), oat of Mochin's Mab, by Bailey's Hob (Roy—Duchess, E. 6,429), out of King's Juno, by champion Oscar out of Luna.

Nearing Perfection.

In the growth and perfection of appliances which make railway traveling luxurious and comfortable, the people of the United States have noted with much pride the progress that has been made in recent years. We have been for many years much better off in this regard than have the people of Europe. In the old countries the tracks have been so much more solidly and substantially built that until recently we have been behind Europe in the speed at which trains could be moved over the rails. This state of affairs has, however, been remedied. The great four track New York Central & Hudson River Railroad has been patiently spending enormous sums of money upon the improvement of its road-bed, till to-day, with steel rails of massive size and weight, bridges and culverts of steel and solid masonry, block signs and ballasted with broken stone, it can challenge any country in the world to compete with it. In point of fact, the traveler in America to-day, going west from New York via the New York Central, has his choice of Five Great Limited Trains, on each of which he may enjoy all the luxuries of a palatial home, or a completely equipped business office, and be whirled over the country at a rate of speed uniformly higher than is known anywhere else in the world, while at the same time he can keep thoroughly informed as to the state of the market and on all essen ial matters pertaining to his business. Truly, we are a luxurious people.—adv.

A NEW SUBSCRIBER OFFER.

A bona fide new subscriber sending us \$5 will receive for that sum the FOREST AND STREAM one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals.

For \$3 a bona fide new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Fleet's handsome work, "Bird Portraits for the Young" (the price of which is \$3).

Hunting and Coursing.

FIXTURES.

Nov. 7.—New England Beagle Club's Trials. W. S. Clark, Linden, Mass., Sec'y.

Coursing in Colorado.

Editor Forest and Stream:

A jolly party of enthusiastic coursers was that which took the Union Pacific train out of Denver on Saturday evening, Sept. 20. After five hours' ride the party left the train at Kit Carson, 152 miles east of Denver, where they were met with a team and wagon and taken to the Bartels Brothers' stock ranch, seven miles southeast. The whole party at once unfolded their blankets and then took several hours' rest. A good breakfast was served, after which the party all went out in the pasture to witness the trials of the dogs belonging to the St. Patrick Kennels, preparatory to the Goodland meet. The first pair put in the slips were Boomerang and Border Ruffian. The former is well known, having made quite a reputation for himself at Great Bend last year. The latter is a black and white puppy sired by Dingwall out of Miss Kitten. Jacks being plentiful one was soon put up. The invincible Boomerang had no difficulty in disposing of the Dingwall puppy. He ran with all the fire and determination which characterized his running at the Bend. Bon Bon and Bonny Belle, both litter sisters of Border Ruffian, were next on the card. To a poor slip Bonny Belle reached the jack a scant length in the lead. After the first turn a number of exchanges, in which it was "give and take" were made before Bon Bon dashed in and killed.

Then a pair of the ranch dogs, old St. Patrick and Bracelet, furnished the party with a good course, the puppy Bracelet getting the better of the old dog, who has lost none of his speed, but has learned to be "cunning." The course finished the party adjourned to the house, where several hours were spent in recalling reminiscences and telling yarns over the dinner table.

Dinner over, fresh horses were saddled and the same dogs taken out for another trial. Boomerang and Bon Bon made a good course of their trial. Boomerang led, turned to Bon Bon, who once in possession, worked the jack very quickly, and was hard to displace. Boomerang, however, was equal to the occasion and fairly crowded the bitch out of his way, wrenched twice, flecked and killed. Then came the race of the day. Border Ruffian and Bonny Belle were slipped on a blacktail at about 75yds. The run up was the prettiest and most exciting one ever witnessed by any of those present. The pair left the slips on even terms and both seemingly getting into their stride at the same time, neither could get clear of the other. A blanket would have covered the pair until within a few yards of the jack, when the rabbit sverring in favor of the dog he pulled out and gained the turn by half a length. Then it was give and take until the kill was effected, and all in all was a very near thing.

These trials over, the above dogs were taken back to the kennels and the ranch dogs turned out. The party then rode out on the flats east of the ranch toward "First View" (so named because in traveling west you can get your first view of the Rockies from this point). About five miles out, one of the party sighted a band of antelope. There proved to be eleven in the band, but in spite of all the precautions taken they were unable to get near enough to start the dogs. Several coyotes were seen in the distance, but they too avoided being chased by "lighting out from the word go."

On the ride back to the ranch, several jacks were run, some killed and others allowed to live to run another day.

After a hearty supper the courses and the sport in general were discussed and run over again.

The following day the party returned to Denver well satisfied with the sport furnished. A vote of thanks was extended to the Bartels Bros. for their hospitality and to the ranch hands, who did everything in their power to make the trip a pleasant one. That they all look forward to these annual trials with great pleasure, goes without saying.

KEPPEL.

"Huronites."

ANY ONE who wishes to indulge in a sport that stirs the blood, and that has a slight touch of danger in it, should try a little coursing on the prairies. We have followed the hounds in good countries; bushwhacked it in Australia when an "old man's" kangaroo has been our game; but for breezy, clean and exciting sport commend us to a hot burst after a strong jack on such ground as South Dakota affords. Coursing as conducted at Huron affords a sport that should be welcomed by sportsmen in the East or anywhere. If this sport was only given the attention it deserved we are certain that many of our wealthy young men would start a kennel of greyhounds, and soon, instead of a few isolated meetings, we should have a list of fixtures that would increase with every year. Coursing men are proverbially good sportsmen and we may take the Huron meeting as a criterion. Coursing cannot be properly indulged in in the East, but there is no reason why clubs cannot be formed which can hold their meetings at different localities in the West in the same way that the field trials clubs bring off their setter and pointer trials. The expense is no greater; and the excitement and fun beats comparison.

Mr. H. C. Lowe must feel content with his efforts as a greyhound breeder. The winners and runners-up in Cup and Plate were his breeding, and his dog Lord Neversettle, in the first round of the cup, had six of his progeny left in. A feature of this meeting was the excellent shape and build of the greyhounds that came to slips in the finals. There was not one that could not be shown with confidence of getting well up in any bench show company. Viola and Van's Peter are winners, Viola winning firsts at Nashville and Chicago shows. Princess May is a beautifully formed greyhound from shoulders back and has a good front. No such absurdities as a 35-pound greyhound with all legs and wings, as one might say, were seen at this meeting. The names of the parents of nearly every dog that ran are well known, and probably the parents of those unknown to us, such as Mr. Hall brought on from California, are just as good.

Several New York dogs have run in coursing meetings at Great Bend, but never done themselves justice because they were not prepared properly. The result of this meeting shows that Eastern dogs can be sent out here and put in the hands of good trainers, who will crop up in time, just as the field trial trainers did.

Mr. Thos. Hall takes back with him to Merced, Cal., a four months old pup by Royal Crest—Drytime that should give a good account of itself when he gets on his legs. His breeding is good enough anyhow.

Dr. Van Hummel and J. R. Cochran, of Winfield, Kan., with whom he has gone into partnership in running greyhounds, started for Goodland, Kan. on Saturday morning, on a train that carried east a crowd of the visitors to the Huron meeting, including Messrs. Watson, Page, Williams, Hayman, Hall, Allen, Brett, and the FOREST AND STREAM man, and although the train simply scrambled through the

intervening territory between Huron and Chicago and left us to forage in the open for victuals, a very enjoyable journey was experienced. The courses were run all over again and though the slips did not break there was lots of fun.

Mr. H. C. Lowe will take his dogs on to Goodland and there is little doubt but that success will be his again.

Mr. A. C. Bradbury stayed over in Huron till Monday, when he also started for the Goodland meeting. It is a pity that Dover, his best dog, went wrong, as he tells us he can run rings round any other in his team. The dog developed rheumatism in the shoulder after being out on Tuesday, the first day, and he was drawn from the rest of the stakes. As evidence of the good going in the Huron country, there were few, if any, dogs beyond Drytime that were seriously affected in their feet, all going to slips, seemingly, in good shape. Sir Hugo, Ban Boy and one or two others were cut by wire, but not to incommode them much.

The stakes were all paid by check to the lucky winners on Friday evening, and although the amounts were not as large as anticipated they were in advance of anything yet given east of the Rockies. Afterward the visitors adjourned to the Huron club room, where with dog chat and song the company passed the time till an early hour next day.

Mr. Longstaff, the secretary of the Huron Coursing Club, is the publisher of the local paper *The Huronite*, and al o holds down the postmastership. He devoted a column each day to the coursing and served up several paragraphs that pleased the boys greatly. Here are a few of them:

"A few years from now some of the jacks that were chased and holed will say to the younger generation, 'Oh, yes; you're swift. Or at least you think you are, and that is just as good as long as nothing but our dogs chase you, but you ought to be put against the dogs that chased me at the great International of '93. I am glad you don't get such races, for your folks would be awful sorry to see you killed. Run! why, when I was your age I could do up one leg in a gum overshoe and outrun anything that went on four legs.' And then the young jacks will wink at one another and say, 'Grandad is talking through his hat again to-day.'"

"There should have been a dog race here in June. It seems a great rain producer." Alluding to the rain on Wednesday and Thursday nights. "For producing rain dynamite isn't in it. One healthy jack and two dogs will make a bigger hole in the atmosphere than a ton of dynamite."

[The above paragraphs were intended for last week's issue, but were unavoidably crowded out.]

National Beagle Club Trials Entries.

DERBY CLASS C.

BILL NYE II.—W. H. Hyland's dog (Rip Van Winkle—Queen Nellie), July 17, 1892.  
TRIX—John W. Rusk's bitch (McGinty—Nellie Bly II.), April 17, 1892.  
LETTY IV.—H. F. Schellhass's bitch (Glory—Marvel).  
LITTLE LEE—Glenrose Beagle Kennels' dog (Fitzhugh Lee—Dill), June 24, 1892.  
MOLLIE DEAN—Glenrose Beagle Kennels' bitch (Sam—Baby Dean), January 15, 1892.  
CLO—Forest Beagle Kennels' bitch (Bannerman—Twin Two), March 25, 1892.  
LEE III.—H. L. Kreuder's dog (Fitzhugh Lee—June Rose), April, 1892.  
BLANCHE—H. L. Kreuder's bitch (Fitzhugh Lee—Ina), September, 1892.  
QUEEN OF THE FOREST—H. L. Kreuder's bitch (Fitzhugh Lee—Una), September, 1892.

OPEN CLASS A—15IN.

TRIPLE II.—Geo. Laick's dog (Leader—Jenny).  
ORACLE—Waldingfield Kennels' bitch (Orator—Likely).  
LUFRA—Waldingfield Kennels' bitch (Orator—Lonesome).  
JOE—Guy D. Welton's dog (Billy—Kate).  
MODLE—Middleton Kennels' dog (Stormy—June M.).  
SNOW—Middleton Kennels' bitch (Stormy—Lucy).  
HALCYON—E. J. & F. W. Becker's dog (Frank Forest—Maud R.).  
WANDERER—P. Dorsey's dog (Lee—Fairy).  
RAMBLER—P. Dorsey's dog (Lee—Fairy).  
BUCK—P. Dorsey's dog (Teumseh—Mary).  
VENUS II.—P. Dorsey's bitch (Lee—Venus).  
GLORY—Thos. H. Terry's dog (Storm—Una).  
MILLARD—Thos. H. Terry's dog (Burk—Little Fly).  
GYPSY A.—Glenrose Beagle Kennels' bitch (Kennealy's Lee—Tone).  
MARGUERITE—Glenrose Beagle Kennels' bitch (Fitzhugh Lee—Dido).  
VICK R.—Forest Beagle Kennels' bitch (Fitzhugh Lee—Nell).

FANNY RACER—H. L. Kreuder's bitch (Racer, Jr.—Nellie).  
GRAYBURN DAISY—H. L. Kreuder's bitch.  
JACK BANNERMAN—H. L. Kreuder's dog.

OPEN CLASS B—13IN.

INA—Hermann Mann's bitch (Dan—Jolly).  
SPOT R.—George F. Reed's bitch (Kennealy's Lee—Skip).  
ADAM—Middleton Kennels' dog (Sport—Trill).  
PADE—P. Dorsey's dog (Ned—Flora).  
LITTLE LEE—Glenrose Beagle Kennels' dog (Fitzhugh Lee—Dill).

MOLLIE DEAN—Glenrose Beagle Kennels' bitch (Sam—Baby Dean).  
GYPSY FOREST—Forest Beagle Kennels' bitch (Frank Forest—Sue Forest).

LOU—H. L. Kreuder's bitch (Keno—Fly).

CHAMPION CLASS D—15IN.

LEE II.—P. Dorsey's dog (Lee—Juliet).

CHAMPION CLASS E—13IN.

ZILLAH—H. L. Kreuder's bitch (Racer, Jr.—Nellie).

Sale of Greyhounds at Huron.

On Thursday Mr. E. H. Mulcaster, of Fox Lake, Wis., well known as a cunning man of experience, sold by auction a draft of 11 puppies in the field after luncheon. They were very well bred, the blood of Misterton, King Lear, Canarado, King Death and Chloe, and many others, including Contango, running in their veins. Considering this, the prices realized were ridiculously low. The following is the list. The first eight are by Glenkirk out of imported Gilda:

H. Munroe, one dog.....	\$12 50
A. C. Bradbury, one dog.....	6 50
B. Hayman, one dog.....	10 00
Mr. Allen, one dog.....	8 00
A. C. Bradbury, one dog.....	16 50
Melrose & Durban, one bitch.....	9 00
C. H. Vinton, one bitch.....	21 50
Dr. Van Hummel, one bitch.....	15 00
J. H. Longstaff, one bitch.....	9 00

By Miller's Rab out of Gilda:  
Melrose & Durban, one dog..... 13 50  
C. H. Vinton, one dog..... 10 00

A New Coursing Club.

A new coursing club has just been organized in San Francisco at a meeting where about thirty lovers of the leash were present. The officers elected are: D. Shannon, Pres.; J. H. Perrigo, Vice-Pres.; Hugh McCracken, Sec'y; T. T. Trian, Treas. The club will probably open the season at Newark, Cal., on or before Thanksgiving Day, and it is thought will hold a more pretentious meeting at Merced before long. The club starts with a membership of about fifty.

### Vermont Foxes and Beagles.

BARTON, Vt.—*Editor Forest and Stream:* Will give you a few notes for Hunting and Coursing columns; and I must thank you for the same column, for I think we lovers of the hounds are deserving of one.

Well, I hate to run up against any such airy writer as "F. J. H.," but we are having some nice weather for fox hunting; heavy frosts and still days—and I have had the good luck to credit myself with five cases of murder in seven hunts; and "F. J. H." may rest assured that it was no place for him and his steed with wings to be fooling around where these hunts were run.

Foxes are plenty this fall, but soon the fellow with his traps will be around.

My beagles are doing finely. Sport R. that won reserve in Boston '93, and that you spoke so highly of, has six nice-marked ones by Ned (Flute M.—Pride). Pride was a 13in. bitch bred by Dorsey and was as good a dog on fox as you would wish to see work, and would stay up all day. Haida has six by same dog, but what I am looking forward to is a litter from Flash (Bannerman—Lou). These pups are sired by Rattler, a son of Flute M. and Skip and I am in hopes there will be another Frank Forest in the lot. Old Skip is looking fine and takes her hunt alone or in company two or three times each week; she is quite deaf. I think I shall take her to Oxford just to show the boys what a good old beagle is. She will be 12 years old in March. Sport R. I shall run at Nanuet.

GEO. F. REED.

### The Northwestern Beagle Club's Trials.

THOSE who are admirers of the miniature foxhound and are interested in his advancement in the appreciation of the public should not neglect such opportunities as are offered by the trials of the Northwestern Beagle Club of America. The sportsmen of America as a class are not informed of the practical qualities of beagles. One field trial in the open fields will accomplish more to enhance the value and appreciation of the breed than a thousand trials on paper. Only by real work can their value be demonstrated. The merry ring of voices, the scurrying closely to a trail through open or cover, the intelligence displayed in solving puzzling problems left by the fugitive rabbit, will all form a part of the work afield and a lesson for the spectators. Goodfellowship, new acquaintance and a better understanding will attend and follow a trial. For every reason, the beagle fancier should strive to give the trials his personal and material support.

B. WATERS.

### N. E. B. C. Meeting.

A MEETING of the New England Beagle Club will be held at the Bacon House, Oxford, Mass., Nov. 6, at 7:30 P. M., to nominate officers for the ensuing year. Members are earnestly requested to attend.

### HUNTING AND COURSING NOTES.

The entries for the National Beagle Club's coming trials show that interest in the sport is spreading. Mr. Thomas H. Terry's name is a new one in this particular field, and that he enters two such good dogs as Glory and Millard proves that he takes more than a passing interest in the sport. Beagle men will also be pleased to see Mr. George F. Reed's name among the entries. The Waldingfield Kennels, owned by the Appleton brothers, are welcome additions to the ranks of the "practicals," as are Messrs. Welton, Schellhass, Becker, Mann, Hyland and Rusk. The number of entries from the principal kennels is not so large this year as last, the club in New England evidently having some effect in this respect. Last year the sexes were divided in both 15in. and 13in. classes, and polled four more entries than this year, but we trust that when the draws take place a large number will stay in this year, and this is very likely to be the case. The Derby shows an increase of two entries over last year. Taken altogether the list shows a healthy progress, especially when we remember that there are two other trials in prospect.

The Bartels Brothers, of Denver, Col., take down a good string of greyhounds to Goodland, Kan. It will consist of Bon Bon, Border Ruffian, Bonny Belle, Billy Taylor and Beau Brummell for the Puppy Stake and Boomerang in the All-Age. They also intended to take Monk Bishop along for the All-Age, but he went lame a week or so ago, and his training was stopped. Mr. Sam Vidler will take Buena-rita for the All-Age, and Breakaway (one of the Bartels' dogs), for the Puppy Stake. E. H. Shaw, of Wallace, Neb., will have Beaconsfield (Brabazon—Daisy B.), a greyhound he bought from Bartels Brothers, for the Puppy Stake, and Hart Boals, of North Platte, Neb., will take two more of the St. Patrick Kennels' breeding—Boal's Hope and Miss Cody (both litter sisters to Breakaway and Beaconsfield), for the Puppy Stake. Mr. Bartels writes us that they are pinning their faith to Bon Bon and Border Ruffian for the Puppy Stake, while Boomerang, if he runs in his Great Bend form, is expected to more than hold his own in the All-Age.

The business meeting of the American Coursing Club will probably be held at Goodland, Kan., during the coursing meeting there this week. The club may hold a coursing meeting next spring at Great Bend, Kan. Although the affairs of the club have not been managed as well as they might have been it will be a loss to coursing interests to see its fixture abandoned. There are other localities, and probably better suited for the purpose, where they can hold their annual coursing meet. Now that coursing is taking such root among sportsmen it would be too bad for this club to give up.

Owing to our execrable chirography one or two typographical errors crept into our report of the Huron coursing. The worst was when we were made to say "scent" instead of "scut." Greyhounds do not follow by scent, but they know a good thing when they see it.

Mr. John Brett had to hurry home after the coursing at Huron, S. D., to get his kennel in shape for a long absence, as he intended starting south in a week or two. He will take with him his Derby entries Maid Marion and Cactus, who will be put through their final preparation for the trials at Newton, N. C.

It has been deemed advisable by the executive committee of the Cowley County Coursing Association, to change the date of its second annual meeting to Oct. 31, 1893, instead of Nov. 7, as has been advertised. Mr. J. R. Ballard, Winfield, Kan., is the secretary.

Mr. W. H. Sweet, president of the Wallace County Coursing Club, and E. H. Shaw were to leave Wallace, Neb., Oct. 10, and go overland to the Goodland meeting. It is 90 miles across country.

Mr. H. A. P. Smith, of Digby, N. S., before running his foxhounds at the Brunswick Fur Club trials, will have a week with the New Hampshire reynards at North Dunbar-ton.

It is not unlikely that before long a National Coursing Club will be formed to include the different coursing clubs

of the country. There is a feeling that it is rather ridiculous that these clubs should owe allegiance and be governed in any way by a specialty club, whose officers, in most part, are not practical coursing men, and whose affiliations are rather with the dog show than the field. The officers of such a club should be men who are thoroughly familiar with coursing.

## Yachting.

Now that the eighth contest for the America Cup has gone into history, it is pleasant to note that the races have passed off without the least disagreement or ill-feeling, and with satisfaction to both sides. In all of the immediate conditions of the races, the Cup committee, representing the New York Y. C., has displayed every consideration for the wishes of the challenger, and the arrangements have been perfectly fair to both sides. It has been proved, however, that there are two things beyond the power of any committee, however able and fair it may be; it cannot insure wind for the races, and it cannot control completely the host of excursion boats that will crowd the course, whether at New York, Newport or Marblehead. The police arrangements this year were more extensive and successful than ever before, but both boats suffered at times from the ignorance or carelessness of the skippers of outside craft, tugs, steamers, and even yachts.

CONSIDERING the immense numbers of vessels present, there has been no more cause for complaint than might naturally be expected, but the captains, and in some cases the owners of some steamers have

"VALKYRIE" ROUNDING THE MARK.

shown themselves in a very bad light. The main cause of the crowding is the keen competition among the rival steamers which carry passengers at from \$5.00 to \$1.00 per head. These boats have been extensively advertised, and West Street has been alive with runners peddling tickets for them.

One conspicuous offender has been the steamer Monmouth, owned by the Central R. R. of New Jersey, one of the largest boats which has followed the races. Her interference with the two racing yachts was so marked that the influence of the New York Y. C. was at once exerted to stop it; but her handling was no less objectionable in another way that the club was not called on to take cognizance of. From all appearances she was so maneuvered as to cut off completely

the view from smaller boats, her rivals for passengers, a proceeding which netted additional dollars to her owners on the next race.

No fair-minded man would justify the interference with the racing boats, or even with the rights of other spectators, but a steamer which has the reputation of running the closest to the yachts is sure of a full load of passengers; and after a man has spent a part of a day in watching the side of a big steamer which cuts off his view of the yachts, and has expressed at length his private opinion of the captain thereof, he must be more than human if he does not make up his mind to pay his money for a place on that very boat in the next race, thus encouraging the selfishness which he condemns.

One petty swindle on the part of another steamer has come to our notice. Two steamers took their passengers from the same pier, one boat charging \$2 and the other \$1. The \$2 boat left the pier promptly on time, but stopped in midstream. After her impatient passengers had speculated some time over the cause of the delay, she put back to the pier and took on board the passengers from the \$1 steamer, and after all this delay reached the Lightship too late for the start, to the double disgust of those who had been tricked into paying \$2 for a \$1 ride.

The criticism has several times been made by British yachtsmen and yachting journals that the weather conditions are habitually exaggerated by the American papers, and that it is quite well grounded is proved by the reports during the season in the New York Herald. Anything more than a drift has been magnified into a fine sailing breeze, while a wind in which clubtopsails were easily carried becomes a cyclone or at least a gale of some appalling description. In the same way a tide rip on the Sound is pictured as really rough water, while a loup outside the Hook that sends an occasional dash of spray over a tugboat's bow gives excuse for paragraphs of fine writing, descriptive of a storm at sea.

The weather conditions of the last trial race were grossly exaggerated, and the weather in the final race of Friday figured in big type as "A Smashing Gale." After such an introduction, it is ridiculous to read that the yachts carried topsails to windward, and that Vigilant safely carried home before this "smashing gale" her clubtopsail, balloonjibtopsail and largest spinnaker. It is true that there was a gale a thousand miles down the coast, and that in the evening after the race was finished, the wind rose very rapidly, approaching a gale during the night; but at the start the wind was not heavy, the shortening of sail was due not to existing conditions at the start, but to the weather reports and a falling barometer, and even after the wind had increased, near the end, all kites were carried on Vigilant. Compared with the Sound in August, there was quite a sea, but by any sailor's understanding of outside conditions it might have been classed as fairly smooth water; the yachts rolled and pitched some, but there was no breaking sea. Once on a time the Herald was deservedly rated as an authority on yachting, and such yarns as have appeared this season would never have been tolerated in its columns.

The increase of wind in the latter part of the final race seems to have marked the breaking up of the light summer weather which has prevailed since Valkyrie reached New York. That night and the next morning the wind blew very heavily, and since then there has been a strong westerly breeze and much colder weather. There would be no trouble this week in finding wind enough to suit all parties.

ONE hardly looks for an international race without the accompaniment of a lot of fossilized old fables, and the present one is no exception; already three old and familiar friends of this sort are traveling far and wide over the country in various guises. The chief of these is the touching incident of the Queen and the Quartermaster, or "Your Majesty, there is no Second." Next to this is the report industriously circulated after every Cup contest that Mr. John Jameson, owner of Irex and later of Iverna, is positively about to challenge with a new cutter. In this same company is also found the explanation of various British papers and would-be authorities, to the effect that the centerboard did it all, and that the next challenger for the Cup must be a centerboard craft.

It is sad to shatter these fondly cherished myths, but not one of the three has the slightest foundation in fact. In the race in which the America won the Royal Yacht Squadron cup, since known by her name, there not only was a second, but a very close one considering the course and weather, the little cutter Aurora, of 47 tons, which finished but 22 minutes after the America, and would have won under

"VALKYRIE" IN TOW.

any modern time allowance. As for the chances of a challenge from the owner of Iverna, nothing is more improbable; we would as soon expect to see the Queen building a yacht and challenging, coming out in person to see the races. Mr. Jameson finds too much pleasure in the home racing to leave it for a season, with the strong probability of being beaten in the end.

The centerboard story is hardly less absurd than the other two, and

Valkyrie went on port tack at 4:23, and when Vigilant tacked a minute and a half later she was to windward of Valkyrie's wake and fast lessening the distance.

Valkyrie went about at 4:26 and Vigilant came very close, but could not cross, tacking half a minute later. Again Valkyrie went on port tack at 4:30:30 and stood inshore, but if she expected Vigilant to follow her she was mistaken. While she moved rapidly up past the objects on shore, apparently feeling the flood tide square abeam, Vigilant held off to seaward and gained materially. Six minutes Valkyrie

little from the change in this respect. At the same time it is quite likely she handled differently in her lighter trim, and her crew had not had time to understand her and get the best out of her. The same thing is very often seen on the New York Y. C. cruises, a yacht winning easily in her class in the cruising runs and being beaten when completely stripped for the Goelet Cup race. Whether rightly or wrongly, Lord Dunsen concluded that the yacht would be better for more weight and a little more trimming by the stern, and on Thursday two tons of lead, loaned by Com. Sutton from the schooner Loyal, were taken aboard and stowed as low as possible.

This change of waterline and trim, of course, necessitated a re-measurement, and in the afternoon the yacht was towed to the Erie Basin, where her waterline was measured by Mr. Hyslop, the new figures being 85.92ft., or a lengthening of just 5in., making her sailing length 93.57ft., and reducing the time allowance from 1m. 48s. to 1m. 38s.

Thursday night brought news of another severe cyclone in the South and of a storm on its way up the coast, the predictions being cloudy weather and southeasterly breezes of 12 to 20 miles velocity during the day, increasing at night, with rain.

Friday was warm but overcast and cloudy, the wind in the morning being N. E. and shifting to S. E., blowing moderately off the Lightship, an oyster sloop being out at the line under full mainsail and jib and carrying them easily. There was more sea than in any previous race, the conditions being similar to the final trial race in September, though a less severe one.

Vigilant was under way early off the line, with one reef in and a jib-headed topsail set, and her large jib. Valkyrie came out in tow, but when below the Narrows her mainsail was lowered, and one of the throat halliard blocks brought down on deck for some repairs to the shell. The block was fitted up and replaced and the mainsail set, but it was 11:15 before Valkyrie neared the Lightship, with a small reef in the mainsail and a jibheader set over it, and her headsails in stops.

As she cast off her tow line at 11:20 the course signals, due East, were set on the May, but by this time Vigilant was hove to, and the "wig-wag" flags were at work on board, signalling to the May that she needed time to make repairs. The signal C. G., "Race postponed on account of fog," was set on the flagstaff, though the horizon was clear and the sun was trying to look through the clouds; but no other signal for a postponement had been arranged.

Vigilant lowered her staysail and ran off to the eastward, her crew being busy with the centerboard. The board had jammed, and in trying to raise it the cogs in the winch had been broken. The board was finally lowered about 11ft. and carried this way on the wind. Off the wind it was raised by a tackle until but 5ft. projected. When Vigilant stood back about 11:45 one of the club lugs spoke her and ran up to the May, but at 12:07 the boat started, signifying a start. The two were now under the same canvas, each with jibheader set over a single-reefed mainsail, and jib and staysail. The wind was moderate, the schooner Yampa being out under lower sails and main-topsail, and the sea was easy.

The course was dead to windward and the two ran off southwest off the Lightship just before the preparatory gun fired at 12:17. With the gun there began one of the prettiest work seen in a very long time as the great vessels chased each other like a pair of kittens in the effort to get the weather berth on the line. Vigilant was standing away on port tack when the gun fired and Valkyrie, just by the Lightship, ran down toward her. After a little maneuvering, at 12:20, with 7m. to go, Vigilant hauled her staysail to windward and ran toward the Lightship, with Valkyrie turning and following her. Valkyrie crossed Vigilant's wake and went to windward, but she had not yet forgotten ahead Vigilant slipped her astersail and between her and the mark, getting to windward. Valkyrie came round like a bicycle, jibed over, and slipped in alongside the Lightship and to windward, with less than a minute to go, but Vigilant, further ahead, was obliged to reach along the line, going so fast that when the gun fired she was almost aboard the May and barely shaved over the line by a sharp luff. Valkyrie cut the weather end of the line at 12:27:10, while Vigilant crossed the line end without the extra ballast. As it proved, the first tack was a long one, at least six miles inshore from the Lightship toward the Long Beach Hotel, on the Long Island shore, Valkyrie pointing for the big hotel when half way out. The sea was abeam and the two yachts were pitching some. Of the two, Valkyrie was carrying her sail decidedly the better, in a way that suggested that the half reef in the mainsail was hardly necessary, or that she might have sailed as well without the extra ballast. At no time in the races has she shown any tenderness, and to-day, in the strongest breeze, she was notably stiff. She pointed fully as high as Vigilant, and what is much more, she had none of the appearance of sliding off, but seemed to hold her windward berth easily and comfortably, both footing and pointing as she did so.

Vigilant had all the sail that she wanted, if not a little more, and she was to a greater angle than Valkyrie, though in doing so she did not bury her lee side or show much less of it; the effect seems to be to roll out the weather side when pressed, rather than to bury to leeward. She was well sailed, but in open boat fashion, luffing out all the time, and though she footed quite as fast or a little faster at times, she was doing no better windward work with a centerboard than Valkyrie with a keel. From her performance in the trial races one would naturally look to see her slide up to windward in her peculiar way, but this time she seemed to hold on hardy as well as the keel boat. Her jib seemed large and may have hurt her some, but her performance altogether was inferior to the keel boat.

At 12:50 Vigilant had not improved her weather position, but was footing faster than Valkyrie and had gone clear ahead. Captain Cranfield had devoted all his skill to blanketing his rival, but by her footing Vigilant had finally gone clear ahead and got the wind unbroken, but at the expense of a weather position.

At 1:12 she tried a tack off shore, evidently expecting to weather Valkyrie, but in this she was very much out; after standing on for two minutes and a half she had to go back to starboard tack in a worse position than before, well under Valkyrie's lee. So much had she lost that she could now afford to tack across Valkyrie's wake, but as she came up in the wind at 1:18:30 Valkyrie swung around and was at once under way on her weather bow. To add to Vigilant's loss, a jib sheet was adrift for a short time.

The wind was now stronger than at the start, and the sun showing through a fairly clear sky, the promised cyclone not having materialized as yet. The yachts were now heading into the sea, and the result was visible on the wide boat, as she lost more than in the first hour with the seas abeam. This tack, too, was a long one, lasting nearly an hour; when they came about near the outer mark at 2:15 Valkyrie had a lead of three-eighths of a mile.

She luffed around the mark at 2:33:40, and her boom swung over to starboard, a big white spinnaker going up just as Vigilant rounded at 2:35:35. In the beat of fifteen miles Valkyrie had gained just 1m. 55s. on Vigilant.

The wind had been increasing, and there was too much of it to set a spinnaker flying; but Valkyrie's crew are used to no other way, and up it went, quickly and in good shape, but with sheet and tack far off, the big sail way up in the air. Vigilant was just five minutes in running out her spinnaker boom from its position on deck, masteading the sail in stops and breaking it out; but like Valkyrie, she kept the sheet and tack well off, and the sail mounted skyward like a balloon.

At 2:47 the largest jibtopsail went up flying on Valkyrie's stay, the same sail she has set off the wind in the previous races. Vigilant was

this year in particular there is even less ground for it than of old. Those who ascribe more than a title of Vigilant's success to her centerboard are likely to go very far astray in the future; the centerboard has played a very small part in the present races, and any attempt to win the Cup by the mere adoption of this detail is likely to lead to far worse defeat than that of Valkyrie.

## AMERICA'S CUP RACES—1893.

### Third Race—Windward and Leeward.

Fourth Day, Wednesday, Oct. 11.

The mishap to Vigilant's bowsprit in Monday's race occurred somewhere near the May anchored and set the following day for a course S. by W. just outside of the inner of the two large tubes which serve as gammon iron and bitts, while the outer end was also split, and extra care was used in the rest of the race. As soon as the yacht reached Bay Ridge the Commander started for City Island, a telegram being sent to Mr. Piegras, and when she reached the yard late in the evening the spare bowsprit was ready on the dock.

After taking it on board she hurried back to Bay Ridge, where Mr. Winttingham, with fifteen of his men were waiting her, arriving at midnight. The damaged spar was sawn in pieces, for convenience in unshipping and handling, and taken ashore for a pattern; and from it the new stick, which was already roughed out in octagon, was finished off, and the ironwork fitted. Late on Wednesday afternoon the stick was shipped and the rigging set up; Vigilant getting under way afterward for a short turn around the Bay. During the day Valkyrie's shrouds were slackened off, and her forestay set up, throwing the mast a little forward.

Wednesday morning was rather cooler and sharper than any of the preceding days, but before the time of starting the sun was shining brightly over a calm, dead sea, while the air was like summer. Early in the morning there had been a light westerly air over the Upper Bay, and when the big fleet came out the wind shifted to the east for a time, but at 11 o'clock there was no wind at all. Vigilant and Valkyrie were near the Lightship with clubtopsails set, and the May lay drifting, waiting for some change of weather. No signals were sent up at 11:15, and at 11:30 there was so little wind that a line was passed from the Commander to Vigilant, and she was towed about. Valkyrie, swinging a very handsome new clubtopsail, without a batten in the head, was under way and working about, the Pulver, however, sticking closely by her.

Just before noon a faint zephyr drifted in from the south, but it soon died away, and a little later the letter G went up on the May, asking whether both parties would consent to a postponement. Vigilant hoisted the assent signal, but Valkyrie made no reply, showing that she preferred to wait longer.

During the next hour the wind came in at times from the southwest, and at 1:25 the May anchored and set the following day for a course S. by W. Vigilant cast off her towline and Valkyrie sent up flying a large jibtopsail, both standing along the line toward the west on port tack, when the preparatory gun fired at 1:35.

The Lightship made the weather end of the line and the May the lee end, the maneuvering being done just west of the Lightship. Valkyrie was to leeward of Vigilant as they stood off on port tack at the gun. Vigilant made a sweep and jibed when the wind shifted to the east, but Valkyrie tacked between her and the Lightship immediately after. Valkyrie was now to windward, both on starboard tack heading for the line with five minutes to go. Vigilant bore off a little and Valkyrie followed, the two at once luffing up again, with two minutes to go. Vigilant was to leeward, her bowsprit end abeam of Valkyrie's mast; Valkyrie tacked and Vigilant followed, being just to leeward. The starting gun fired and they all started. Valkyrie on the instant and Vigilant quite slowly. They crossed the line, Valkyrie at 1:46:13 and Vigilant at 1:47:19, the latter so close to the Lightship that she tacked as she crossed, Valkyrie going about instantly on her weather bow and taking the honors of the start.

Once away, both on starboard tack, there began some beautiful work as Captain Cranfield undertook to hold by still more clever maneuvering the advantage he had thus far gained. After seeing the two yachts in the distance, there was little question that Vigilant would ultimately come out ahead; but the way in which Valkyrie fought to stop her was none the less interesting from the fact that it was likely to be futile in the end.

The number and variety of kites and special sails carried on the two yachts is known only to those on each boat, and the outside spectator is likely to be puzzled very often to know what particular sail is set. Vigilant has, we should mention, a different arrangement of the sides of balloon jibtopsails and two "baby" jibtopsails, the smaller of the latter being a very small sail made for her, while the second size is a larger and better sail, borrowed from Jubilee. At the start Vigilant was carrying her own small "baby," while Valkyrie had a much larger sail, probably the "intermediate," to use a common but indefinite term.

Vigilant started to foot at first, not holding as high as Valkyrie, but she gained nothing at this game, Valkyrie footing quite fast for the light air and certainly pointing well. At 1:59 Valkyrie came about and stood in toward the south point of the Navesink Highlands, Vigilant also tacking. The difference in the two was most marked, Valkyrie came about like a weathercock, and was off without losing way, while Vigilant turned slowly and then took some time to regain her headway. Every tack piled up seconds of gain for Valkyrie, and it was a question how long she could make Vigilant follow her at this game.

For half an hour as they held a long tack inshore Valkyrie continued to gain, until she was a clear 300yds. on Vigilant's weather beam. At 2:55 the position being still unchanged, Vigilant luffed up for a short time; the wind was still light, but was drawing more off the land, and in flaws and streaks. At 3:55 Valkyrie went on port tack and crossed Vigilant's bow easily, tacking again at 2:57:30. The coasting steamer Yemassee, bound from the South, came along up the beach and crossed the bows of the pair, her swell setting them to pitching a little in the smooth water. Both were now heading about SW. by W., the wind shifting from time to time as it came over the low Jersey shores.

When Valkyrie went on starboard tack at 3:13, Vigilant was at least one-third of a mile astern, tacking at 3:15. A few minutes later Valkyrie made a short, hitch inshore, then stood out; at 3:21 Vigilant tacked inshore, Valkyrie tacked ahead of her two minutes later, Vigilant then coming about again, losing a little in each tack.

Whatever gain Vigilant had made thus far in footing as the wind strengthened a little, she had lost in the frequent tacks through her slowness in stays, and her small baby jibtopsail was also hurting her. At 3:31 she lowered this sail, and in about four minutes broke out the "Jubilee" jibtopsail, a larger and better sail, though well skewed with battens.

The benefit of the change was apparent from the first; the conditions were much the same as before, absolutely smooth water and very little wind; but Vigilant began to foot faster and to pick up her loss. She had footed clear ahead by 4:10, though still to leeward;

held her long tack and then stood off. Vigilant had been for ten minutes on the same off shore tack, and she held it for six minutes longer, when she came about and stood in toward Valkyrie. Though there was no doubt of her great gain, it was still a question to those on the steamers off shore how the two would cross, but about 4:45 there came a salute of whistles from some boats close in shore and on a line, indicating that Vigilant had crossed Valkyrie's bows. Vigilant went around at 4:49 to stand off shore, while Valkyrie again stood in shore a minute and a half later.

The sun was now dropping low over the Jersey shore and the wind was lighter, while the mark was a long distance off. Slowly the pair drifted and there was little chance of the race finishing within the limit. Several more tacks were made, Vigilant now gaining slowly all the time, and long after dusk had set in she rounded the mark, timed at 6:07:17, and slowly set her spinnaker. Valkyrie came up and made her last tack near the mark at 6:12 and turned at 6:14, setting her light spinnaker. Balloon jibtopsails were barely discernible as they went up in the darkness a little later, and the steamers started on the thirty-

THE STEAMER FLEET.

five-mile course for New York, the finish within the time limit being plainly impossible.

After running until all doubt of a finish was at an end, the yachts were taken in tow by the Pulver and Commander, sails were stowed, and they towed into Bay Ridge counted for nothing, but Valkyrie did good work on the wind, pointing and holding on well. Vigilant's gain only beginning with the setting of the larger jibtopsail. Captain Cranfield held the lead for so long by clever work at the stick, winning the windward berth at the start and doing some very fine maneuvering afterward in keeping on Vigilant's weather, and giving her as much back draft as possible.

### Third Race—Windward and Leeward.

Fifth Day, Friday, Oct. 13.

That Lord Dunsen made a mistake in sending Valkyrie over so late in the season is now generally admitted, the result being that she had no time for trial sailing after being refitted, but went into the racing at once. It is hardly likely that she was enough off her proper trim and form to have affected the final result in any of the four days' sailing, but not unnaturally her owner and friends ascribed her poor performance alongside of Vigilant to the alterations designed or accidentally made in her ballasting and fore and aft trim. She had been lightened considerably by the removal of interior fittings and ballast for the lighter wind looked for on this side, and it is also stated that she was trimmed more by the head than in her home races.

So far as strategy goes, she carried her sail well enough in all the races, being apparently under-rigged, and she could have suffered a

"VIGILANT."

in trouble with her jibtop sail, and a man was sent down the topmast stay before the jibtop sail could be sent up in storm. In his haste the sail, the spinaker fouled one of the hanks, and had to be cleared before the jibtop sail could be fully hoisted. When it was finally broken out at 2:50, however, it proved to be a balloon, and not a working sail. Meanwhile her big crew had not been idle while one man worked aloft, but though the boom was squared the reef was shaken out at 2:55 and the working topsail hoisted higher, to the topmast head. In shaking out the reef, a man was hung from the mast-head in the light of a ganline, and hauled along the boom by an outhaul, casting off the stops. At the same time Valkyrie set a balloon foresail and masted her working topsail, but made no attempt to shake out the reef, though she was losing steadily to Vigilant.

For over a quarter of an hour a man was visible at the topmast head of Vigilant and another at the gaff end, lashing the head and tack of the topsail and casting off the halyard and sheet, and when this was done the second club topsail was sent up over the working topsail, which was left in place.

Vigilant had all this time been gaining steadily, and at 3:30, just before the clubtopsail was sent up, she ran through Valkyrie's weather and the white spinaker of the latter, which had been torn a little in setting, split clear across. Almost on the moment the sail was taken in and the light linen one set, but this too split before it was sheeted out, going in two pieces from head to foot. The first spinaker was of strong and heavy Scotch linen. In setting it, the foot was torn on the bitts, in two places. Later on the sail went over the topmast stay and caught in a hank, making a tear which spread clear across just as Vigilant ceased to blanket Valkyrie.

Valkyrie's chance was now gone, with the finish but three miles away, and Vigilant, in spite of the rising wind, carrying spinaker, balloonjibtop sail and clubtopsail, twice the area of canvas. Her crew worked in in spite of such discouragement, and at 3:38 set up a large jibtop sail as a backer, but it was too late, a dozen minutes more and Vigilant was over the line, winning the race by only 40s. corrected time, the official times being:

	Start.	Finish.	Elapsed.	Corrected.
Vigilant.....	12 27 00	3 51 39	3 24 39	3 24 39
Valkyrie.....	12 27 00	3 53 52	3 26 52	3 25 19

On the windward work Valkyrie led by 1m. 55s., and off the wind Vigilant gained 4m. 8s.

The attendant fleet was smaller than on any previous day, but still there was a very large number of people present at the start, turn and finish. The steamers and tugs kept clear of the yachts all day and gave no trouble. The yachts were comparatively little whistling at the turn or finish, but on the way home cannon were fired and whistles blown. As Vigilant passed and her signal was sent up on the May the steam yacht Corsair sent up the American ensign at both mastheads and on bowsprit and gaff ends.

The wind at the finish was stronger than at the start, but it is hardly necessary to state that the yachts do not carry balloonjibtop sails, large spinakers and clubtopsails in a living to a cyclone, and that the reports of the wind and sea are mostly exaggerated; at no time during the day did the accompanying steamers roll badly or become uncomfortable, and one could walk about the upper decks without serious trouble from the wind.

The worst time just after the finish, the sky clouded over, the wind piped up and the sea ran higher than in the Lower Bay; and all hands were glad enough to hear the jingle bell and to get a start of the steam fleet, many of them racing in pairs. Fast as they went, the racing yachts were but little astern, fairly flying up the bay under shortened canvas, in fact this was the finest sight of the day.

Valkyrie's defeat may be ascribed to the loss of her two sails, as she would probably have saved her time by a small number of seconds had the first spinaker been a flying jib, and even had she had the second one not cut under her bow after splitting. Vigilant's victory, however, is by no means laid to this account alone, but to the bold and skillful way in which the kites were piled on to her all the way home. With a strong following wind, increasing all the time, she spread all of her kites and ran the risk of losing her topmast and being badly beaten, rather than that of Valkyrie saving her time by a small margin. The work in shaking out the reef and reefing sheet and halliard, and setting the clubtopsail was very creditably done and won her the race.

Taken altogether, the race was an exceptionally fine one, and the honors are very even. Many have expressed their astonishment at the good showing of Valkyrie compared with her previous work on the wind; but there is really nothing contradictory about it. Mr. Watson has turned out a boat that is far and away superior to any keel yacht of large size ever floated, a boat that would probably have done well alongside of anything built to meet her of the Volunteer type improved up to date. She is not only fast through the water, but she carries a large rig with ease, and holds to windward in the same way that the smaller keel boats do. Her ocean voyage bears testimony to her strength and staying qualities, and in the detail of quick working she is ahead of anything of this class. The waterline in her speed in point of view, the perfection of her model is shown in her speed in very light weather and her quick working under all conditions.

At the same time it is quite evident that in a topsail breeze, light or heavy, she is outclassed and overpowered by Vigilant. The third and last of the three large Herreshoff boats of the year is very evidently intended to make the most of the New York Y. C. rule and the prevailing conditions of American racing, which is a club rule, at least a working topsail being always carried, lower sails being an exception and reefing unknown, the race of Friday being the first in which one of the large single-stickers, from Puritan to Vigilant, has reefed her mainsail, and even then she carried a working topsail over it.

With the power due to great beam and draft, carrying 1,300ft. more sail than her opponent, and with a great hollow in her keels, Vigilant stands as the latest representative of a type that has long been recognized as very fast in moderate weather. Compared either with Volunteer or Valkyrie, she is much nearer to a racing machine, and her influence on designing is likely to be for the worse rather than the better, but at the same time in producing her Mr. Herreshoff has clearly worked within the literal limits laid down by the clubs, and his latest boat is but the logical production of the present rule which we predicted several years since during the battle of the 40-footers.

On a limited length he has built the most powerful yacht yet seen in the larger classes, paying for his large sail plan the price set by the rule; and with no limit to the number of crew, he has used to the full, but at the same time the privilege accorded by the rule in designing a yacht which, in spite of her large sail plan, could profit materially by the use of movable weight to windward. While the tendency of this advance may be deprecated, it must be admitted that the fault lies with the clubs which have made and retained the rules, rather than with the designer who has produced an extreme boat under them, and until the clubs, American and British, see fit to define and limit the racing machine as a distinct type from the all-around yacht, it would be absurd to raise any such distinction in the present case.

The conditions of British racing call for a certain type of boat, and Valkyrie must be considered a perfect craft for her home racing, as well as a very fast boat on this side. The prevailing conditions of American summer racing call for a very different type, while the rules allow an extreme latitude to the designer. After three years of experience in the design of the fin-keel and a very hollow section, Mr. Herreshoff has carried the same principle to its logical end in one of his three large yachts, and it must be said, with complete success. Under all the conditions which she has met in her various races, Vigilant has proved very fast, and though these conditions do not include the whole range of yachting weather, they quite cover the average in the 80ft. class.

Opinions differ as to her performance in a strong breeze and rough water, conditions under which she has never been tried, but has only approached in two races, the last trial race and the last Cup race. A great deal of nonsense has been printed about the furious gales and breaking seas on each of these occasions, but neither day approached the proportionate weather for an 80-footer to that in which many of the 40ft. racers sailed.

While Vigilant has given every indication of speed and ability in a reefing breeze and a sea, our own opinion is that she carries her best conditions in smooth water and with first or second clubtopsail set, her advantage over Valkyrie, beginning, for instance, when the two cease to drift and begin to sail, as in the first part of the triangular race of Monday, and ending in such a strong breeze as blew on the last leg of the same race. In fact, the light air, the light breeze, the light wind down under her second topsail, Vigilant sailed very fast, and was probably near her best point of sailing. Under this range of conditions she beat Valkyrie fairly and very badly, about four minutes on each ten mile leg, and this in fair sailing and with no flukes.

There is in this performance, however, nothing to justify the popular assumption that she should do as well under the widely different conditions of Friday, a much stronger wind and more sea; on the contrary, the good performance of Valkyrie, with less beam, a fuller section and even more stability, is quite in accord with theory and practice.

It would be interesting to see more of this same work, nothing finer has been seen here in a long time than the hard close fight to windward; but at the same time it must be conceded that Vigilant, is very much faster in ordinary racing weather and over long straight courses.

It is quite in order that the annual agony over rules and restrictions may be renewed this fall on both sides of the water, and the questions of fin-keels and their allied types of racing machines vs. all-round yachts, and of a limit of crew in the larger classes, may be discussed with renewed vigor, and the usual failure to reach any definite conclusion, pro or con,

Although such quick working as Valkyrie displayed, is not called for on this side as in England, it has won the admiration of thousands of yachtsmen who have followed every race, and it is quite probable that this quality will be more highly appreciated than in the past, and greater effort made to obtain it.

On Saturday Vigilant, in tow of Commander and following by the triumphant Hattie, left Bay Ridge for New Rochelle, where her crew will be paid off. She will lay up at City Island. Valkyrie also will winter at the same place, Lord Dunsen having decided not to attempt the long passage home this fall.

### Miramichi Y. C.

The Miramichi Y. C. is the only one in New Brunswick. St. John has as large a squadron, but it is so badly tainted with professional organization and racing for sport's sake as to be impossible. The Miramichi Y. C. closed its eighth season on Monday, Oct. 9, with a splendid race. The addition of two yachts to the fleet gave this season's races a public interest they would have lacked if only the old ones had been in the contests.

Com. Miller's Maude, the champion of last year, easily beat Vice-Com. Stewart's new boat of equal size in the first three races, but was herself beaten by another new one of over 3ft. greater length, the Leairg. The latter, besides in all the earlier races of the season, but lacks the lead keel which makes Maude stand up to her work in the stiff squalls that roar down the gulches.

Oriana is a graceful, low-powered, narrow and deep centerboard, with inside ballast, designed by Mr. H. C. McLeod, of the Bank of Nova Scotia, Chicago, an amateur designer of considerable fame in Canada and Minnesota waters. She lacked power to carry her sail plan and was badly beaten in all the earlier races of the season. Her sails and masts were cut down and the bowsprit lengthened 2in., and she has not only led everything of her size in two races, but beaten the big new boat twice on corrected time.

The closing race was her greatest victory. The race was 13 miles, half of it windward work and half running. The wind was moderate, at times very light, with a few heavy squalls to give spice to the race. The start was made in the following order:

Oriana, J. L. Stewart.....	2 07 55	Leairg, A. Burr.....	2 08 15
Starling, B. Bouthillier.....	2 08 00	Kitchoo, A. Williston.....	2 08 38
Maude J. C. Miller.....	2 08 10		

Leairg got the lead a mile and a half from the start, and was three minutes ahead of Oriana, and four and a quarter ahead of Maude, at the turning buoy of Newcastle.

It was a run of 5½ miles to the lower mark and a beat of ¾ to the finish. Oriana gained steadily on the run down, particularly after the wind grew lighter, and was only 55 seconds astern of the big fellow at the finish, while she had led Maude 10 minutes in the rear. The following are the times:

	Last turn.	Finish.	Elapsed.
Leairg.....	4 19 00	4 28 45	2 20 30
Oriana.....	4 20 00	4 29 40	2 21 45
Maude.....	4 31 40	4 40 30	2 32 20
Kitchoo.....	Did not finish.		
Starling.....	Did not finish.		

As Leairg allows 4in. 30s., Oriana wins by over 3m. The finish was in a rain squall, but the wharves were black with cheering crowds. Mr. Stewart had tuned up his beaten boat until she had beaten everything, big and small, in a fair race; and his pluck, persistence and success were rewarded by the cheers of the people.

A bulb fin-keel, or a housing fin, such as the yachting editor of the FOREST AND STREAM has given in one of his designs, would give Oriana the power she lacks and make her a dangerous rival for anything of her size. She is non-capable with her half-ton board down, and answers the least touch of her helm. She will stay under either jib or mainsail aloft, and is the driest boat in a river chop that her owner ever sailed in. He has sailed her in the river, where wind against tide makes the water boil, and in the inner and outer Miramichi bays in dirty weather, and two small splashes of water are all that have reached him over her rail. She is 31ft. over all, 72ft. beam and 26ft. draft. Her designed waterline is 33.6ft., but her actual construction and extra ballast have put her down 3in. and lengthened her lead line to 25ft.

## Canoeing.

The selection of a site on salt water for the 1894 meet, which is demanded by many members of the Atlantic Division, is likely to resolve itself into a choice between Chimmon's Island, off Norway, where the Division meet of this year was held, and the site of 1899, at Jessup's Neck. Serious objections exist to each of these places, but out of the multitude of sites suggested, they are the only two which are not clearly out of the question. A final decision must be made by the executive committee on Nov. 4, and the time for further examination of sites is very short. This week Com. Dorland will visit Croton Point, above Sing Sing, on the Hudson River, which, though not on salt water, is in the Division, and will fill many of the requirements of a "back yard meet." Apart from the feeling of many that the meet should be held near New York, there are some obstacles to a return to the St. Lawrence, but in our opinion the continued success, if not the existence of the A. C. A., rests in the abandonment of the Division scheme in part, and a return to the original plan of one general meet, and that at a semi-permanent site.

CANOEISTS everywhere will sympathize with the New York C. C. in the great loss which has befallen it in the storm of Saturday, the club house being sunk and destroyed, and nearly all of the canoes badly wrecked.

### The A. C. A. Executive Committee.

With the first of the present month the new general officers of the American Canoe Association, Com. Dorland and Sec'y-Treas. Douglass, assumed office. Com. Cotton and Sec'y-Treas. Burns retiring. Com. Dorland has set Saturday, Nov. 4, as the date of the annual meeting, which will be held in New York. The meeting will be called to order at 10 A. M. at Clark's, No. 20 West Twenty-third street, and in the evening a dinner will be given at 7 P. M. at Club. Dorland has appointed the following dinner and reception committee, and tickets may be obtained of them:

Mr. William Whitlock, chairman, New York C. C.; Gilbert B. Crowell, Jr., Arlington C. C.; Robert H. Peabody, Bayonne C. C.; C. V. Frederick, Brooklyn C. C.; L. Kretzner, Hoboken C. C.; Barron Fredericks, Jantzen C. C.; E. C. Griffin, Kluksbocker C. C.; W. S. Elliot, Marine and Field Club; Schor or Schiller New York C. C.; Dr. Kitchell, Empress C. C.; Daniel W. Burroughs, Orange C. C.; Frank McLees, Rutherford C. C.; C. G. Goodsell, Yonkers C. C.; E. E. Boozie, Park Island Canoe Ass'n.

The incoming officers of the Association are as follows: Executive Committee, American Canoe Association, 1898-99: Commodore, Irving V. Dorland, Arlington.

Sec'y-Treas., Geo. A. Douglass, Newark.

Librarian, W. P. Stephens, Bayonne.

Eastern Division: Vice-Com., E. H. Barney, Springfield; Rear-Com., C. F. Shuster, Jr., Holyoke; Purser, E. C. Knappe, Springfield; Ex. Com., G. L. Parmele, Hartford; Paul Butler, Lowell; R. Appollonio, Winchester.

Atlantic Division: Vice-Com., C. V. Schuyler, New York; Rear-Com., Barron Fredericks, Newark; Purser, F. L. Duell, Brooklyn; Ex. Com., J. R. Lake, New York; F. W. Noyes, Philadelphia; J. K. Hand, New York.

Central Division: Vice-Com., W. C. Witherbee, Port Henry; Rear-Com., C. G. Belman, Amsterdam; Purser, C. E. Cragg, Port Henry; Ex. Com., J. H. Albany; W. R. Huntington, Rome.

Northern Division: Vice-Com., H. M. Molson, Montreal; Rear-Com., Geo. Schofield, Peterboro; Purser, H. R. Tild, Toronto; Ex. Com., W. H. Macnee, Kingston; W. L. Scott, Ottawa; C. E. Archibald, Montreal.

The above list may be shortened when the exact membership of each division, and the representation to which it is entitled shall be found.

Com. Dorland has appointed the following committees: Camp Site Committee, R. J. Wilkin, Chairman; Raymond Apollonio, Regatta Committee, H. L. Quick, Chairman; C. B. Vaux, Emil Knappe.

In order to be acted on at the meeting all amendments to rules and all proposals for honorary membership must be published in the next issue of the FOREST AND STREAM. The following candidates for associate membership have been proposed: Miss M. E. MacKerras, Miss E. Pauline Johnson, Miss Constance Braine.

On Saturday night the large house of the New York C. C. at Bensonhurst, on Gravesend Bay, was swamped by the heavy seas and sunk. The house itself was wrecked while under water, and the canoes and much other property of the club and its members were destroyed. On the following night the house of the Detroit Boat Club, at Detroit, Mich., was destroyed by fire.

### Palisade C. C.

At the regular meeting of the Palisade C. C. held on Tuesday, Oct. 10, at the club house, foot of 10th Street, Hoboken, N. J., the following committee was appointed to obtain estimates on a war canoe: P. Hildebrandt, H. Hall and T. Finn. The Palisade is a young club, having organized on June 1, with three members: P. Hildebrandt, Max Frazz and George Shields. These three members fought a hard battle for over a year, but at present the club is well organized, now having a membership of twenty, and enrolling eight new members at the last meeting. The members are all training hard and expect to make a fine showing at the canoe races next spring. Mr. P. Hildebrandt has received his new canoe yawl which he had built at the Enterprise Boat Works, Hoboken. She is a very handsome boat, 18ft. long, built of the finest white cedar, finished with mahogany and will carry a sail of 170 sq. ft.

### CANOE NEWS NOTES.

The canoeists' fall camp at Bend View, on the Passaic, was opened Friday about noon, and the committee was accompanied by the crew in the Orange war canoe to Bend View. The camp was located on the lawn south of Bend View Hotel, a very pretty portion of the Passaic. It was about one-half mile from Avondale Station. The river at this point is about one-quarter of a mile wide, and the camp was situated on a well wooded slope running down to the water's edge. There are no sand beaches in that portion of the Passaic, so the large float of the Bend View Hotel was placed at the canoeists' disposal. By Saturday noon there were twelve tents pitched and about fifty canoeists in camp. Saturday was spent in the general arrangement of camp and short cruises, and Sunday was spent very much the same way. On Saturday night a large camp-fire was burning, and it was midnight before the boys broke away from the camp fire. The mess was attended to by Mr. Orcutt the proprietor of the Bend View Hotel. The open canoe is the ideal boat for the upper Passaic, and a goodly number were fied to the float and scattered along the grassy bank. There were about three or four sailing canoes. Those who have not visited the upper Passaic made a mistake in missing this little wind up of the season, as the trees were decked with their fall coloring, making the river and its banks a very pretty sight.

## Rifle Range and Gallery.

### Cincinnati Rifle Association.

CINCINNATI, O., Oct. 8.—The Cincinnati Rifle Association held its regular practice shoot at its range to-day and made the scores as appended. Conditions: 200yds., off-hand, at the Standard target. Two weeks from to-day, this association will hold its annual prize shoot, to which all are welcome. Remember the date, Oct. 22.

Gindele.....	7 9 8 8 8 9 8 8 7-81
Payne.....	9 9 8 8 8 7 6 7 6-78
Weinheimer.....	6 8 7 9 8 8 10 10 7-78
Drube.....	8 8 7 8 8 10 6 8 9-79
Simon.....	7 7 8 8 9 8 10 8 8-78
Stegner.....	6 7 7 6 8 8 4 7 7-76
Topf.....	5 8 8 8 8 8 7 6 7-74
Martin.....	7 9 5 7 8 6 4 8 1-58

	3 0 0 5 5 5 5 5 4-48

### Greenville Rifle Club.

The attendance at the weekly shoot in Armbruster's Park Oct. 14 was light. It was expected that M. Dorrier would be on hand to enter the 50 shot race for the chicken dinner and other fixings. The 50 shot match was carried, with Messrs Collins, Chavart and Plaisted as the only contestants. The weather conditions were decidedly unfavorable for high totals. A heavy southwest gale was sweeping over the Newark Bay and across the range, sometimes at 30 miles per hour and at others at 80 miles. Collins with his little .32-15cal. was not in it with his competitors shooting their .38-300s: Plaisted, scratch.....1055 Collins.....896+60— 556 Chavart.....984+40—1024 Club scores, 10 shots, possible 250:

Plaisted.....	24 23 25 21 24 21 25 30 25—228
Chavart.....	25 21 23 16 23 17 22 20 23—183
Collins.....	23 18 17 21 23 21 18 21 20—199

The weekly gallery shoot for class medals Oct. 13 brought out the usual competition. Colin Boag was high with 243, but he is a little late to land with the winners in his class. One more shoot winds up the series. Geo. Purker is 15 points in the lead for first prize in the first class. The result of the season shoot will be forwarded to FOREST AND STREAM next week.

Scores, 10 shots, possible 250, distance 75ft.: Colin Boag 243, Robidoux 238, Purker 237, Collins 237, Dadds 231, Chavart 232, Spain 223, Agnew 220, John Hill 217.

### Turtle Bay Rifle, Gun and Pistol Club.

The annual outing took place at Woodside, Oct. 8. While the membership is light, the energy and vim of the members is of the heavy-weight order. Captain Geo. E. Jantzer as executive has to keep hustling in order to set the pace for his followers. On this occasion Henry Wolter pushed his leader hard for first position. His score in the 100 shot column of 59 out of a possible 60 was first-class, and speaks well for the gun and ammunition, as well as for the holding ability of the shooter. Five prizes, 5 shots per target, 3 best to count, distance 150ft., 22cal. rifle: Geo E Jantzer.....55 54 52—161 O H Plate.....42 43 39—124 Hy Wolter.....50 51 59—160 W Lubeck.....40 44 30—124 J Ochs, Jr.....51 51 49—151 J Eldt, Jr.....31 33 33— 97 G G Fuchs.....50 48 46—144 C Ulandherm.....33 33 30— 96 J Oberle.....52 48 44—142 H Zubiller.....30 30 30— 90 H W Tanner.....45 50 43—138

Champion (bronze) medal, 1 target, 5 shots, small 25 ring target, distance 150ft.: J. Ochs, Jr., 108, O. G. Fuchs 107, J. Oberle 107, C. Ulandherm 105, Thos. Fitzpatrick 105.

### Revolver Shooting in England.

The season at the North London Rifle Club is drawing to a close. There are only two more days for revolver shooting, ending Oct. 15, when the result will be known. The only one who can now catch Mr. Winans, that is, if he makes highest possible scores each day, and Mr. Winans does not compete any more, is Mr. Andrews, but such a contingency is very improbable, as the latter was only able to make a score of 37 on Oct. 4. Below are the leading scores for the revolver championship of the North London Rifle Club to date: Walter Winans, 41 41 41 41—205 T Andrews.....42 40 40 37 35—194 C F Lowe.....41 39 39 39—198 Capt Cowan.....39 39 36 26—189 Lieut Varley.....42 40 38 37 37—194 Maj Munday.....39 38 38 37 36—185 The scores for the South London Rifle Club's revolver championship competition are much lower, owing to its exposed range. Below are the leading scores to date: Walter Winans, 41 40 40 40—202 C F Lowe.....40 39 38 38—194 Lieut Heath.....40 39 38 38—194 F H Frost.....40 38 37 36—188

### Italian United Associations.

New York, Oct. 14.—I send you the report of the shooting match held by the Italian Shooting Associations of New York, at Lyon's Park, Oct. 12, for the better of the Italian hospital. Target of Honor, 3 shots, possible 64: First prize, Muzio, 32; second, Reali, 50; third, Gandolfi, 50; fourth, Selvaggi, 49; fifth, Albano, 48. Public Target—First prize, Selvaggi, 53; second, Reali, 51; third, Muzio, 51; fourth, Gandolfi, 51; fifth, Albano, 50; sixth, Henny, 49; seventh, Dr. Fanoni, 49. The Italian Shooting Association will hold a live bird, bluecock and rifle contest, open only to members, on Oct. 19, at Woodridge, N. J. ALFRED MAZZORATI, President.

who now say that they have given up advertising at least for the present.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

**You are invited**  
to visit the "Forest and Stream's"  
exhibit in the Angling Pavilion at  
the entrance from the main hall  
of the Fisheries Building, in the  
World's Fair.

## THE MINNESOTA WILDFOWL SEASON.

REFERENCE has been made to the blunder of the Minnesota Legislature in the last session relative to the close season for wildfowl. The framers of the bill intended to forbid killing "except between" Sept. 1 and April 25 following, but the text of the law when enacted omitted the word "except," and made the intended open season the close season and the close season the open season. However, the Commissioners, of whom Mr. W. P. Andrus, of Minneapolis, is the executive agent, did not propose to be balked even by a statute so seriously defective as this. They secured from the Attorney-General a ruling that the intent of the law would be to permit the killing of wildfowl from Sept. 1 to April 25, and they determined to observe such intent and to permit duck shooting in that period. But they gave it out early in the year that they should keep an eye on all persons who were inclined to take advantage of the legislative blunder, and that should any such persons kill game in what ought to be the close season they would not be allowed to kill it in the season actually forbidden by the statute. As a matter of fact, whether owing to the threat of the Commission, or because of the influence of the growing respect for game protection which now prevails in Minnesota, very little duck shooting was engaged in prior to Sept. 1. The intended close season was generally respected by all classes of gunners, and the sportsmen of Minnesota who have been with easy consciences shooting in the legal close season since Sept. 1 have enjoyed excellent sport. So the defective statute has not worked great harm after all.

The Commissioners report that game protection is gaining popularity in Minnesota. They say that they have found the sportsmen generally throughout the country—those resident in the State and, coming from outside—willing to co-operate with them in keeping down the quantity of game that could or should be killed, and in that way to protect the birds. Owing to the energy exerted in the past two or three years in

the protection of game, they now find that this season there is a greater abundance than at any time heretofore. The efficacy of a good law well enforced has been demonstrated in their work. The farming community, which heretofore was very much averse to the enforcement of the game law, now, since they understand what it means, are of the greatest aid in making the law effective. This is only another demonstration of the truth that a right public sentiment is more effective than stringent laws, and we see here that while without the support of such a sentiment good laws may accomplish nothing, with it even bad laws may protect game. It would be gratifying to know that Minnesota enjoyed a perfect game code; it is even more gratifying to be assured that public opinion in the State is growing for the conservation of the fish and birds and mammals.

## PORTRAITS IN INK.

### I.—THE MAJOR.

If you live in or near a certain little town and are one of the brethren in the bonds of the rod and gun, you must know the Major, for he is the self-constituted and generally accepted oracle in all matters pertaining to the ruder or the gentler craft.

His neat little shop is the place where those who would be considered true sportsmen most do congregate, and you, desiring such recognition, go thither also.

A huge watch hangs above the door, symbolic of the owner's regular occupation and modestly hinting that you may here find proper weapons wherewith to kill time as well as to mark its course.

It is not the place for cozy chat and is too neat to be comfortable, and without a seat to invite ease. There is but one, the stool at the window where the Major's assistant sits, mending and cleaning watches, and you cannot sit on the show cases which cover the counter.

Under the polished glass of these are displayed, besides watches, rings, pins, and trinkets, an array of shining trolling baits, gaudy flies, flimsy reels, hooks and coils of line, the one split-bamboo rod that is never sold, and some unsafe pistols. In a rack near the other window are a few choicely kept guns and jointed rods, cheap to look at, but dear to the purchaser.

There are a few stuffed birds here and there, which the Major will tell you casually were mounted by himself, but there are never any additions, though some rare specimens are brought to him for identification and he never hesitates to name them at the first glance of his twinkling eyes.

Standing behind the show cases, in immaculate linen, venerable with his bald head and white locks and neatly trimmed mustache, he smiles blandly at your ignorance while he benevolently enlightens it with his wisdom.

How learnedly he discourses of guns and charges, rods, tackle and bait, of game and fish and methods of taking them, exemplified by relations of his own phenomenal exploits.

But if you are so honored as to be permitted to accompany him on a fishing or shooting trip, you do not find him exceptionally skillful, only anxious to take all the fairest shots without regard to turn or courtesy, and to be first at the most promising points. These privileges, generally accorded him by reason of his venerable presence and position as first sportsman in the land, are likely to give him good scores to boast of, but however large, they are shared with no one else.

He is a wordy supporter of game laws, loud in his denunciation of violators of them, yet he never enters a complaint against such law breakers nor subscribes a cent to aid in their prosecution. It might injure his trade. He consorts suspiciously with well known poachers and it is inferred that he sometimes anticipates the open season by a day or two. Indeed, to whom but him should belong the cream of this sport?

The Major's chosen companion is some poor fellow, who, wise in the ways and haunts of fish and game, deems himself well paid for days of rowing or paddling or lugging a heavy bait kettle along a stream, by the honor of such exalted comradeship and a gift of a cast-off shooting coat or worn out wading boots or worthless reel or frayed line. This is a cheap arrangement for the Major and gives him all the tangible proceeds of the day's sport. Yet it may be that the poor comrade has the best of it after all, and takes home with him something that cannot

be possessed by the Major, to whom the woods are but cover for game, the streams and lakes only the homes of fishes.

Your cheeks tingle with the blushes that ought to mantle his serene countenance, when he tells without shame, nay with pride, how he and one of his brother sportsmen, wormed themselves into the confidence of an old farmer, partook of his hospitality and then sneaking into his orchard, drove his pet bevy of quail into some neighboring cover and killed them all.

As you look at his bland cunning face and take just account of him, you wonder how with his sham honor, sham wisdom, sham sportsmanship, sham title, all so transparent, the venerable old fraud can maintain his position. Yet you help him to do so. You go and listen to him, thinking that there is an air of respectability conferred upon the frequenter of his place, and you buy your sportsmen's furnishings there rather than at a shop where you could get as good for half the money, because it sounds well to mention incidentally that you bought your ammunition or your tackle at the Major's, though the one fouls your gun abominably and the other lost you the biggest fish you ever struck. And so you philosophically conclude that humbugs are a convenience, if not a necessity and shout with the others—"Long live the Major."

## SNAP SHOTS.

THE sportsmen of Georgia met in Atlanta last week and formed a State association, with the expressed purpose of improving the game law and securing its enforcement. The very first thing for the new association to undertake is to do away with the numerous county laws, which are as diverse as they are numerous, and to substitute for them a consistent law of general application to govern the entire State.

The purpose of a close season is to afford the game immunity from pursuit during the breeding, rearing and maturing periods. These periods do not differ, one from another, in adjoining counties; and no more should the periods of protection differ. The quail law, for example, should be uniform throughout all Georgia. If between the upper and the lower divisions of the State there is any perceptible variation of breeding habits, the birds should be given the advantage of this, the one uniform close season being provided to give ample protection throughout the State.

One of the funny incidents of the Atlanta convention the other day was the reading of a letter from the promoter of the National Sportsmen's Convention scheme. The notion that these Georgia sportsmen, who have not yet succeeded in getting a uniform game code for their own State, may, might, could, should or would do anything to help on the project of a uniform game code for the whole continent—this is very funny or very pathetic, just as you may view it.

The settlers of Uinta and Fremont counties in Wyoming are petitioning the authorities to abate the depredations of invading Indians, who stray from agencies in the vicinity and slaughter game for their skins only; and the Phoenix, Arizona, *Republican* finds something to clamor about in the hunting exploits of the Crown Prince of Austria; "it is about time," says the Arizona editor, "Americans grew tired of having foreigners come over and slaughter our few remaining representatives of the noble animals that once crowded the plains and filled the mountains." Game butchery is bad enough, whoever may be the agent of it; but the average white American is possessed of human nature enough to regard these outrages as particularly atrocious if they happen to be perpetrated by Indians or foreigners.

Now that the shooting season is in full sway, correspondents are invited to send notes from the game fields, reporting the success that crowns the day's pursuit and telling of good grounds for gunners to visit. It is by such interchange of experience and information that the FOREST AND STREAM can serve the greatest number.

What have been the practical results of quail stocking enterprises when the birds have been imported from distant States? Has the stock remained in the country where put out, or has it emigrated? We would like to have reports from some of the quail importers, for the information and benefit of others who are proposing to undertake such work.

## The Sportsman Tourist.

### THE SAGINAW CROWD.

Pilgrimage of 1892.—III.

(Continued from page 359.)

We got up that morning feeling stiff and sore. Before leaving camp we made our plans for the morning shoot. Henry, Paddock and the Kid were to take the saddle horses and keep abreast of those of us that were to beat the thickets. At the ford we were all to wait until Ferd, Bigelow and the Doctor could get to their stands on the upper side of the cover of the river's edge, for we were certain that this time in driving bend No. 2, coupled with the racket made yesterday, the deer would surely desert the cover and attempt to cross to the opposite patch of woods, that much resembled the one we were to drive.

Jack had cultivated a wind-gall on one knee, from his long ride on the broncho, and was too lame to beat the brush with the rest of us, and so claimed the right to join the fat men's contingent, viz., a good soft seat somewhere in the open or on the river, while we athletic sprinters drove out the deer for the sedentary marksmen to slaughter. To prove his lameness he had limped a great deal, and groaned more from the time he took in the lay of the land and saw the amount of manual labor needed. What he exhibited as a dangerous blister we promptly labeled "alkali dust markings of the purest type." As he could draw no sympathetic tears he devoted his spare moments in camp to the medicine chest. Arnica and vaseline, interspersed with liberal applications of Pond's Extract, soothed his injured joint for the time being.

Our plan was upset somewhat by Jack, who groaned and limped more than ever, and declared that he would not go with us; but after waiting long enough at the ford for the others to get their stands, and Henry not appearing, we started out to find out the reason, for we wanted all the help possible to do the driving, when Jack appeared on Henry's horse, having concluded that though he was too lame to walk he was not too lame to hunt if he could ride. We left him to pick out any place he wished, and went ahead without regard to where he would go. It seems he followed the bluffs; and, fastening his horse to a sapling, mounted the hill, where he could command a most excellent view of a large strip of the timber land below.

I had no sooner worked my way through the first patch of brush than a deer jumped up before me and disappeared in the opposite thicket. I did get a snap shot as he tore through the opening, not 20ft. wide, and, as usual, missed; but by the time we had worked our way pretty well into the thicket, cannonading became quite general along the line. We called to one another so that there would be no mishaps in the way of stray shots, and by the time we had reached the open glade in the center, seven or eight deer had been jumped. Those on horseback, and at the extreme right, had not come out yet.

Standing with Seib and Henry, we suddenly heard cannonading over toward the bluffs, and then the most unearthly screeching and hollering one ever heard. We could not make out who it came from, until we thought of Jack. We were uncertain whether he was being devoured by a bear or was simply trying his lungs to produce the echoes that reverberated from cliff to cliff and from gorge to gorge. He certainly was not lame in his lungs if he did have a lame knee. Knowing that something was wrong, we hurried in that direction, and when we arrived the balance of the party were there and having a drink with Jack. The pretty little flask, gold-lined, that his wife had given him for his birthday, held about enough snake antidote for a full-grown man for one snifter; but it demonstrated that Jack's heart was in the right place, if there was not enough to go round. The Judge, with sleeves rolled up, and arms covered with blood, was cleaning a nice big buck that had mounted the hill in Jack's face, literally attempting to run over the invalid marksman. He was a nice fellow, and we were glad of Jack's good luck, but cursed a little bit to think it had come to him so easily while the rest of us had been drawing ourselves through almost impenetrable thickets. Jack told just how he did it; he said he saw him break cover and come directly toward him. He put the rifle to his shoulder and kept sight of the old fellow until he started up the hillside, and when he came within 40 yds. he shot and hit him hard; this we found out to be true, for he shot him in one of the front feet and broke off a part of the hoof. He said the deer kept right on until he was opposite, when a second shot knocked him over. There was no doubt about the second shot being a good one, for it went through the buck's heart. It was the first deer Jack had ever shot at, and the inartistic attempt to bleed him with the fancy hunting knife was not a glowing success. He did cut his throat, but right at the roots of his tongue, disfiguring an otherwise handsome antlered head.

We were all in better spirits; we now had meat in camp, and Jack could have the best the earth afforded. Henry volunteered to pack it to camp, and we knew that that night, when we came in tired and hungry, Harrison would have a haunch of venison for us, roasted to a turn. New life was imparted to us, and we were ready again for the fray. Jack was not nearly so lame, but concluded he would wait until Henry came back with his horse, and then follow along the bluff so as to be on hand by the time we drove out the next deer. He stated this arrangement as a matter of fact, and the rest of us acquiesced. Forming into line again, we started back to go over part of the same ground diagonally, at the same time taking in a strip of territory we had not before driven, and that would, we thought, send some of the deer to the fat men we had guarding the runways by the river. This wooded island seemed to be literally alive with deer; they were like rabbits, and would run out ahead of us, circle round, and go into the thicket again; but it seemed im-

possible to make them leave cover. Strung out as we were in a long line, we could catch glimpses of a deer from time to time, as they stopped for an instant before going out of sight; and, in fact, they succeeded in keeping out of sight very fairly anyhow, for the thickets were dense, with small openings that the deer would cross in an instant. We all of us had several snap shots in the brush, with no result, and at noon we gathered at the far side of the strip in a nice open glade shaded by the cottonwoods that here were very large.

Our lunch was spread on the grass, and we were all enjoying it, when Jack jumped up and said he saw a deer pass a little way from us, and he was certain that he saw where it lay down in the tall grass. We laughed at him, but he took up his gun and hobbled in that direction. We paid no attention to him, but suddenly a report rang out, and then two or three more shots in quick succession, and then another of those wild Comanche yells broke the stillness of the forest, and we knew Jack had done something desperate again. We jumped to our feet in an instant, and found that Jack had succeeded in killing the doe that the day before I had wounded by breaking its foreleg. Sure enough, the deer was lying down where Jack imagined, and as it jumped up his first shot clipped a hole through one of its ears, the second shot probably missed, and the third was fatal. Here was this lame duffer, who had never fired a rifle or seen a deer before, doing all the execution. Two or three members of the party were old hands at deer shooting, and none of us were chickens in that line, and we felt rather chagrined to have a tenderfoot, with his new and unsold paraphernalia, do us up in this way. As Jack's thimble was empty one of the old stand-bys was produced, and we all drank to "old Section

had heard them but had not seen them. One big buck a little later came up in front of the Doctor, or, in other words, slunk out of the thicket and sneaked away through the tall grass as though he was crawling on his knees. They have a way of doing this if they think they are not seen, so that they crouch to half their height. Here was the Doctor's opportunity, and he regrets to this day that he did not count three, and see hair a little more plainly through the sights before he fired. Soon a shot near the bluffs, and a welcome "halloo" tells us that some one has bagged something. It proves to be a deer killed by Paddock, who, in company with Briggs, is hunting near the outer edge. As Paddock has the saddle horses near by, later in the day the deer is easily taken into camp. This is the third and last of the afternoon; in fact, we are all satisfied that we have enough, and know that, aside from having all we will want to eat, we have plenty of venison to take back to the car to gladden the hearts of some of those who have not been with us except in memory.

The Judge, Seib and myself had been through the cover toward the center, and in going through an especially thick piece of cover we suddenly come out upon an opening, and, lying in the center, are the remains of a full-grown steer that has recently been killed by the bears and devoured by them. What great big fellows they must have been. On either side they have scooped out hollows so that they could lie down and gorge themselves to their heart's content. They must frequent these covers during the night time, and at break of day go back into the mountains through the draws and cañons that everywhere seam the frowning crags back from the river. We have no desire to penetrate this solitude after a silver-tip, the impression in the sand left by "old Moccasin Joe" has cooled our ardor as bear hunters. Even the Judge, who has killed dozens of the black fellows in Michigan, has lost no bear. He had a good deal of conceit up to this time in what he would do, and what he would not do; he has not much to say on the subject now.

We came across runways every little while that denoted that the timber was full of deer, and at certain crossings of the river the tracks were as thick as sheep tracks in a farmer's barnyard. The country was literally alive with them, and it was simply a question of how many we wanted to kill, not how many would we see. That night, in camp, stories were told by all of us on the remarkable shots and misses of the day. If we had killed all the deer we shot at we should have had four times as many as we could use, and after all, we were better satisfied that it had turned out as it did, three deer in one day, and without dogs or "tracking snow," is good enough for a Michigan man.

That evening, lying on the grass beneath the fire-lighted trees, Paddock told us a few of the incidents of his life. Like most really brave men, he was reserved, and had very little to say regarding anything he had done himself; in fact, he had not commented on our shooting, or told us what he could do or had done; but, from the way he knocked over the one deer that day we knew he saw no good in wasting ammunition. We were in good spirits that night, and the feeling pervaded all in camp.

In substance the following is as I remember Paddock's story. The old man was quite a picture as he sat, weather-beaten and bronzed, before the camp-fire, with his back propped up against the saddle. Puffing away at his pipe, he started in with the remark that the Indians would not bother him much. "They always leave me alone," he said, "in fact we don't get along very well together, and consequently keep apart. I have not been west of the Mississippi for thirty years or thereabouts. I was quite a young man, living at a little town on the western frontier of Wisconsin, when news came of the massacre at New Ulm. My oldest sister had been married but a few years before, and had moved with her husband to that place, and I knew that I was needed at the front. I started at daybreak and rode till

I overtook General Sibley, in command of the militia, making the ride without a rest or barely stopping. As I rode down one horse I either exchanged with the consent of some farmer, or, if I could not do this, I took a horse anyhow; I was bound to get through in the shortest possible time. When at last I did overtake the soldiers I learned the story of the terrible affair. My heart sank within me, for my sister was among the captives, and her husband had been killed. The troops were moving as rapidly as possible to overtake the Indians. I helped bury over 500 of the victims of the massacre. One that has not seen the work of these red devils knows nothing about it. It makes my blood boil when I think of how some people in the East stick up for the Indians. Little children were found that had been nailed alive, with outstretched arms, to the sides of buildings, while their fathers and mothers, killed and horribly mutilated, were found around the burned buildings, and all we could do for them was to give them the best burial possible. Aged and infirm females were killed by the roadside, and those that were able to be taken along were carried off into a captivity worse than death."

I do not remember all the details; the number of troops or who was there, but his criticism of General Sibley's manner of fighting Indians was not at all favorable to him. He said: "He employed West Point tactics too much, and when the Indians found themselves hard-pressed, a few Indians would appear in front as if to make an attack. Immediately the wagons would be drawn up in a circle to be used as breastworks, and then, if the Indians did not attack, as they certainly would not, some of the soldiers would be sent out against them, only to find that it was a ruse to delay the pursuers till the main body, with all the camp supplies and captives, could get another start; and it would be several days before they could be overtaken. The militia chafed under this military restraint, and the volunteers, composed of farmers and settlers of the frontier, frequently dashed ahead, and had a skirmish on their own account. I believe it was a detachment from the Minnesota 8th, that was sent north with some prisoners of war; for this happened at the time of our little unpleasantness down

CAMP ON THE LITTLE MISSOURI.

37's" health. The Kid volunteered to take the deer to camp, and after resting, and smoking, and snoozing for an hour or two, we concluded to make a drive in bend No. 3, the next wooded patch further up stream. Jack said he had had glory enough for that day, and that he would take the beach and slowly wend his way back to camp. That night he told us his experiences, for we had hardly got under cover on the opposite river bank, nor had he more than got around the bend of the river when we heard two or three shots from him in quick succession.

It seemed that as he rounded the little point he saw a deer standing in the shallow water drinking. He said to himself, "Now, here's my luck. A dead open-and-shut on this one. Won't I have the boy's green with envy tonight?" The deer had not yet seen him; and, lying down full length on the sand, and taking careful aim, chuckling to himself all the time, he let go. The deer gave a sudden start, threw its head in the air, and came directly toward him on a slow walk. It was not 10 yds. away, and Jack plumped three more bullets at it before it turned. It then sprang into the woods; and, strange as it may seem, turned and looked back. Jack blazed away at him, seemingly near enough to touch him with his hand; but he had done his good shooting earlier in the day, and this was such an easy one that he missed it slick and clean. It took the conceit out of him a good deal, and, though the roasted venison that night tasted mighty good, there was a little unpleasantness in its flavor to Jack whenever we reminded him of the last deer.

But about our afternoon drive. More bear tracks were seen in the sand, and the bullberry bushes on bend No. 3 were stripped and broken more than at any other place we had yet seen. There must have been a dozen bears recently feeding on this ground. A mountain lion track, too, showing where, in the soft mud, one of these panthers had crossed the river, made it rather uncomfortable traveling in the brush that was higher than your head, and so thick that you could scarcely see an arm's length ahead. Once through the thicket, however, the ground was better, open grassy glades interspersed with growths of heavy timber. We knew we had started deer, for we

South, and, after leaving the prisoners at Fort Snelling, they were ordered to report to General Sibley. These regulars, fresh from Southern battle fields, did not relish the inactivity any more than the frontiersmen did, and after a skirmish, when some Indians had been captured, General Sibley sent them back to Fort Snelling under escort of these Minnesota soldiers, and they had been gone but a day when they returned with the information that the prisoners had all died on the road. Finally, the Indians were overtaken, and brought to a stand where they had to fight. My sister was re-captured; in fact, we got back nearly all of the women, and gave the Sioux a thorough thrashing, destroying their camp equipage; and not many of them got back across the Missouri River. The experience of that campaign I have never forgotten, and since then I have never been back to the other side of the Mississippi. I have a ranch down here on the Little Missouri that I like well enough, and even during troublesome times, somehow or other, the Indians stay away from me."

If I only could tell the story as Paddock told it, it would be very interesting reading. He said that he had known General Custer very well, and probably would not have been there to tell the story that night, but would have slept with the heroes of the gallant 7th, on the Little Rosebud, had he not been detained by some special business about two days behind the command, for he was to have been with Custer on that expedition, and was two days behind.

After this gruesome narrative, we heard more strange sounds on the mountain side, and Seib's mountain lion or old she wolf (whatever it was) screaming again, sort of sent cold chills up and down the spinal column of nearly every member of the party. The camp-fire was growing dim, and the sparks no longer whirled high among the quaking leaves, and as we had had a hard tramp and were all tired out, it was not long before we slept the sleep that the tired sportsman only knows how to enjoy.

W. B. MERSHON.

## Natural History.

### TAXIDERMY AT THE WORLD'S FAIR.

BY DR. R. W. SHUFELDT.

(Judge of the Exhibits.)

ON Sept. 13, 1893, the writer received the appointment of a judge at the World's Columbian Exposition at Chicago, and upon reporting for duty was at first instructed to examine certain collections of mounted birds and mammals that had been placed on exhibition by Brazil, New South Wales, New York, Maine, Colorado, Pennsylvania and other States and countries. This duty gave me ample opportunity to study and compare a great variety of exhibits that represented the various methods adopted by taxidermists of the present day of preserving animals of all kinds and the means employed by them of placing the same on exhibition for the public.

Among the lessons afforded by this experience was first the fact that as a rule the finest examples of the art of taxidermy came from institutions situated at civilized centers, where science, art, literature and culture had made the most progress, and where the great proportion of the people were interested in the cultivation of such pursuits.

One surprise was presented in the collection sent by Brazil, a country so rich in its natural resources, and which always has been and still is one of the great paradises of the earth for naturalists to explore in every department of nature.

It was represented by a miscellaneous collection of mounted mammals, birds, skeletons, reptiles, fish and other objects. As for the specimens themselves they were as a rule species most commonly met with in any

where conscientiously an award could be given. One was to the State of New York for a scientifically mounted and labeled collection, and including quite a number of very creditable pieces of taxidermy; and another to Maine, rejected by me at first, but reconsidered upon request, and finally given for the effort made by that State to show its mammalian fauna. The taxidermy and mode of exhibition were both objectionable. In the case of New York, the specimens are neatly mounted upon hardwood stands, and a clear label informs the student in regard to locality and name of specimen. They also showed many animals now extinct in New York, as the buffalo, the beaver, the elk and others. Good as it was as a whole, however, we even found in that collection a number of unnaturally mounted specimens. Maine has her collection of mammals, some hundred pieces in all, mounted on separate stands and surrounded by a rustic fence, or inclosure. A few loads of earth partially conceal the stands and is introduced with the intention of giving the animals the appearance of standing upon *terra firma*. In this object it signally fails. I saw but a single specimen in the collection that at all pleased me—it was the mounted one of a fawn of the moose. It was not badly done and was withal at least interesting. Professor H. A. Ward, of the Natural Science Establishment, of Rochester, New York, had, as usual, some magnificent things in his grand collection of fossils, skeletons, mounted animals and restorations. They are, with the other collections mentioned, in the Anthropological Building. New South Wales has her small collection of mounted mammals in the Woman's Building. Australia, as a whole, has a finer one to be found in the same place. Pennsylvania has made a very striking effort to present

But the collection of all collections of mounted animals of every kind—most excellent in every particular to be seen at the World's Fair, is the one sent thither by our own Government from the U. S. National Museum and Smithsonian Institution of Washington, D. C. This we say from our own unbiased convictions prompted by the truth only in the premises, and not intending any dis-

FIG. 3. PLASTER CAST OF A BOX TORTOISE (*Cistudo carolina*). Exhibited at the World's Fair by the U. S. National Museum.

courtesy or disparagement to others. There is every reason for it, moreover, inasmuch as no small pecuniary outlay was entailed to make it so, but what is more to the point skilled taxidermic artists performed the work under the supervision of some of the best biologists and naturalists our country has thus far produced. The accessories are all culled directly from the natural haunts of the animals, and where art has supplemented nature the coloring has been done by the brush in the hands of an expert.

As the saying goes, that collection must be seen to be appreciated. It is not only of a very considerable size, much varied in nature as to the kind of animals introduced, but represents a distinct and peculiar merit throughout.

In this article I introduce a few figures from photographs of different specimens in that collection, and although by no means representing the best of the work, they will at least serve to show the character of some of

FIG. 2. GROUP OF JACANAS. Exhibited at the World's Fair by the U. S. National Museum.

a grand display. The makeup intends to represent the side of a mountain, with trees, fallen trunks, rocks, caves and other accessories in the fore and backgrounds, with a running stream of real water in the valley. There are nearly 300 birds and 100 mammals in the piece, with a few reptiles, etc. From a taxidermist's standpoint the work is by no means up to the mark, though the idea as a whole is admirable had it been well executed. It was not considered by me as being entitled to an award. Indeed, in the consideration of giving awards to such exhibits one should not be controlled by either the size of the piece, the expense and effort it required on the part of the exhibitors to bring it to the Fair, nor even the idea it represents, for these all go for nothing if the workmanship is markedly indifferent. A parallel case would be that of an artist in oil colors who had placed himself at a great expense to transport an enormous piece of canvas to the Exposition, made a great outlay in material, had a fine idea, but after all reproduced it upon his great sheet of canvas in a manner absolutely calculated to paralyze its beholder, who is only able to find in it the violation of everything that is natural.

I saw the famous taxidermical exhibit in the Kansas Building by L. L. Dyche, of which so much has been said in the press. And in fact it has a great deal to recommend it. The pieces are principally mammals and fairly represent the mammalogy of the State of Kansas. In general both the effect and taxidermy are good, the latter being well above average. Moreover, the accessories or natural surroundings are worked in with a more or less pleasing effect, and from its study something can be learned of the habits of many of the animals. In execution it represents an idea that is fast becoming to be the one generally adopted by large museums and other educational institutions to show "regional zoology." By this I mean that it is not only possible for us to accurately show the nature of the country which our mounted specimens inhabit, but also, in the specimens themselves, the numbers and kinds found in any particular region, as well as their correct forms, and in many cases their habits.

Great government museums, commanding skilled artists, and with the requisite amount of space and an adequate appropriation of money, should now fully adopt this idea and put it into execution.

Many specimens of mammals, birds, reptiles, fish, and so forth, are to be found scattered throughout the exhibits of the various States of the Union, as well as in those of foreign countries. Some pretty good things exist in this line in the exhibit of Manitoba that have not generally been seen, inasmuch as the managers of the Fair crowded their very worthy collection off the grounds to a building they were compelled to occupy outside. In that collection I noticed a very fine skeleton of the musk-ox or sheep (*Ovibos moschatus*), well mounted and a very valuable specimen. It is from an adult male,

the smaller groups and pieces. In a general report upon this subject, which will appear some time this winter, I have nearly 100 plates which will illustrate the larger part of this exhibit. Those here offered do not form a part of that report, but are special photographs for which I have to thank Dr. G. Browne Goode, of the National Museum, they having been taken by his permission by Prof. Smillie at the photographic gallery of that institution.

Fig. 1 shows a pair of coons in a persimmon tree, and without exception is one of the most life-like things of the kind that I have ever seen. The fruit is so true to nature, that in several instances it has deceived the closest of observers. The attitudes of the two animals

FIG. 4. PLASTER CAST OF A TRIGGER FISH (*Balistes capriscus*). From the collection of the U. S. National Museum.

composing the group are absolutely correct studies from life, and it is unnecessary to add that the trunk up which they are climbing was cut from a persimmon tree.

The larger groups in the national exhibit are represented by various species of deer; mountain sheep and goats, numerous carnivores, opossums, walrus, seals and a perfect host of smaller mammals.

Among the birds we find an equally superb representation, and the objects being smaller greater latitude is allowed for surroundings and the exhibition of special habits. This has been taken advantage of to the fullest extent, and we find whole beves of grouse and ptarmigans in their native haunts; flamingoes on their nests; Carolina parakeets filling the hollow trunk of an old tree;

FIG. 1. GROUP OF RACCOONS (*Procyon lotor*). Exhibited at the World's Fair by the U. S. National Museum.

Brazilian collection of animals, and of the most abundant forms occurring in that region. There were no rarities that I saw. Objectionable attempts were made in the direction of the grotesque in taxidermy, as a sloth sitting in a chair playing upon a violin, and similar pieces. Whoever is responsible for the taxidermy it represents, certainly belonged to a school, as compared with the modern methods of that science, now nearly extinct, and which was at its height fully a century ago. No regard for anatomy, no recognition of habits; no attempt to properly portray nature. *Sans* this, *sans* that, *sans* everything; horrible throughout.

The taxidermy of the majority of the State collections was extremely indifferent, and I saw but two instances

woodpeckers at work; and many other most interesting species too varied and numerous to mention. I select here one of the smaller groups as an illustration, and one that I saw attracted universal attention at the Fair, as well it might. It is a group of jacanas disporting themselves on the lily pads of a placid pool. The reproduction of the water, the pond's bottom, the lilies and their leaves, are all masterpieces of that kind of work. The surface of the water is in glass, and gives a very realistic idea of the real element.

Many fish and reptiles are cast in plaster of paris, and two good specimens of these are given in Figs. 3 and 4. They but faintly give an idea, however, of the original, as the latter are so skillfully colored to imitate nature, that they are in many instances very deceptive. Fish, reptiles and many species of invertebrates are likewise cast in gelatine and subsequently colored, and such pieces have even a far more natural appearance than when made in plaster.

But it would be impossible in a short article like the present to pretend to enumerate even the pieces by name in the national collection, and the best way for the art student in taxidermy and the lover of nature is to repair to the great Fair and study them for himself; the Government Building alone is worth the journey to Chicago.

[From our Staff Correspondent.]

FOREST AND STREAM BUREAU, WORLD'S FAIR, Aug. 16. —Few things at the Fair are of more interest to the sportsman than the displays of taxidermy which show mounted heads or full-size specimens of wild animals. This art has now been brought to such perfection that to see it at its best is fairly to meet the actual animal in view. Too often the captive animal seen in parks or menageries has lost its character, its quality, if not its proper contour. Upon the other hand the mounted specimen, if prepared by artistic hands, upon lines established by measurements of the normal wild animal, is justly typical of that animal as it actually appeared when in the state of wildness and unreduced freedom wherein centers the chief interest of the sportsman. If you will stand in front of a captive deer, even in front of a captive lion, you will not feel the wish to kill it. Look at a perfectly mounted specimen of either, and your rambling eye is searching for soft spots for a possible bullet. Try this, and you will find the proof of what I have said, that a dead and mounted wild animal is wilder than a captive wild animal, and has more of a sporting interest. The interest in the captive is that of the naturalist, therefore largely one of curiosity. To trophies of the chase there attaches as great and also another and keener interest.

The sportsman who wishes to attain a knowledge of the actual appearance of wild animals never had so good an opportunity in all his life as he has at this World's Fair. Since it is not likely that another exposition of this magnitude will ever be held, it is probable that he will never again have a like opportunity. This is true especially in regard to the American and North American animals, but applies also in great measure to the wild animals of every country, as we shall duly show before leaving this interesting field of news. The branching head, the fierce front, the soft skin, the rugged coat, the stately form—any and all the shapes the trophies of the chase may assume—even to-day we are men enough to realize the value of these in the purposes of ornamentation. The artist spirit recognizes the hunter spirit dormant in nearly every man. Of this idea the most lavish use has been made at this great assembly ground of the nations. Never in the full history of the world has there been so varied and so complete a showing of the trophies of the chase as may be seen at the World's Fair of 1898.

#### The Greatest Exhibit on the Grounds.

Without any sort of question, the greatest taxidermic exhibit on the grounds, and probably the greatest one ever gotten together, is that of Ward's Natural Science Establishment, of Rochester, N. Y. It belittles this great exhibit to call it a display of taxidermy, or to call it a collection of trophies. It is far more. It is a display of the animals of the earth, not alone of this continent, but of all continents, not alone of the earth but of the sea, not alone of this age, but of ages gone. More than this one cannot say, and to describe the display fully would take more than a whole issue of FOREST AND STREAM, and more than whole books of natural history. Probably you never saw or heard of an animal which you can not find here. The total is astounding. To see it needs a week. To bring the exhibit, required a train of freight cars. To put it in place required months. To install it took the whole south gallery of the great Anthropological Building, and part of the space downstairs. These facts must be the excuse for brief mention, but nothing should serve as excuse for a brief visit to this interesting part of the Fair. College professors who have been glorying in the appointments of the "museums" of their institutions would better stay away, for it will make them feel very ordinary.

#### Start on a Mastodon.

You go up the stairs and meet a robust mastodon, full size but quiet. Suppose you start on this and go around toward your left. You will see a number of familiar American wild animals, some elk, whitetail deer, a gaunt gray wolf, a remarkably large puma, panther, cougar or mountain lion, a wolverine, a fisher, a fox, an army of small gnawing animals, and a rare thing, a white porcupine. Near by are a black bear, a big-footed bay lynx, a large elk, two grand specimens of the moose, some beavers cleverly shown at work, and a pair of buffalo, a six-year-old bull and a three-year-old cow.

Already you have had a good look at American animals, but here you strike exhibits of other firms. Let us pass on around to the left through these, clear around through the gallery, until we strike the Ward exhibit again at its further extremity on the other side of the building.

#### A Wilderness of Cases.

We are now in a wilderness of vast glass cases, twice as high as one's head, arranged parallel, covering thousands of square feet, and holding all the creatures of the sea and land. The lower orders of life have their full showing in their proper departments, but we must pass the low organisms, the sea things, the crustacea, the reptiles, and we must even pass with merest mention the great cases full of common, rare and foreign birds in all their wondrous colorings. We can mention only the things which strike us saliently as we go. Thus, one remembers the rare specimen of a mounted giraffe, and reverts with unusual

wonder to the great wild boar of France, high as a man's waist and six feet long, far more monstrous and more savage than an American would have thought this animal capable of being.

If one has a taste for further foreignism, he can find, arrayed beyond this specimen of our prong-horn antelope, many creatures foreign even to the literature of the circus poster. I am speaking now, let it be remembered, not of mounted or preserved skins, but of animals mounted entire, animals perfect and unpatched, complete and actual to the life. In procession come a gaur ox of southwest India, a zebra of Africa, a tapir of South America, and a sambar of India, the latter looking more like a thin-necked and inferior elk than anything I can think of. Then we have an alpaca (llama), a guanaco, a vicuña, and two more of this same llama family, marked llama plain. Then there is a full-sized dromedary, facial expression and all. Bear in mind these are all full-sized and entire specimens, showing the whole form of the animal.

A husky little goat is the ibex of Switzerland. Beside him is a "ravine deer" of Africa, and near by is a *Sus papuensis*, much like a peccary, but blacker. Then there is an ovis "nahoor," of the Nepal, much like our mountain sheep; and an oryx of West Africa, and a white-tailed deer of Uruguay, and two of the savage little Mexican hogs, peccaries. If you like not these, you may gaze upon a *Nemorhedus crispus*, from Japan, much resembling our mountain goat except in coloration, it being darker in coat. Then there is a European roebuck and a southwest Indian deer, and a little Mexican deer, and also a chamois (the second one I have found in the Fair. These are probably the only two here). Then there is an odd little creature, a coney, from Cape Colony.

#### A Region of Birds.

Now we have fallen upon a region of birds, but we can only touch upon the whole in general. The ordinary case of stuffed birds is one of the most tiresome things on earth. For instance, here you can see the great condor of Peru, of which you have read so much but know so little, and which you never saw before in all your life. Then there is the great Alpine eagle, and all our eagles; and a Japanese eagle, as big and vicious as any of them; and also the king vulture of Venezuela. But we fly hence, leaving hundreds.

#### More Quadrupeds.

Take a look at the 25ft. python, from Natal, Africa, and you will be ready to go on down among the cases and look at more quadrupeds—not that the python is one. There is a nyghau, of India, and a great anteater, and a fine case of marsupials, showing all the Australian animals. Then you meet a monkey-bear, with funny little wobbly ears, and a wombat, and a capybara, and a European porcupine, which latter, I am bound to say, is prettier than our porcupine, and has longer quills.

You are at the end of a case here, and you turn to the left and look over the fence and see a monstrous India elephant, a male, mounted perfectly, and near him a baby elephant, the two such a group as one will hunt long to see elsewhere.

You turn back to the cases and review a parade consisting of a fisher or "black devil," a Polar bear, a grizzly bear (and a great one), a mountain goat, a series of small bears, of wolves, etc. At the end of this case is a large white wolf (*Lupus occidentalis*), of snowy whiteness. Then you turn to a sun-bear of Borneo, with claws like those of a little grizzly, and look at a European badger, and a sea otter, which isn't like a cheap otter and a sort of ring-tailed marten-looking thing whose existence most people never dreamed, but which is marked as a *cacomixle*, of southern California. Near by this unknown is a *Nasua socialis*, of Central America, and a ring-tailed badger also. On the other hand one finds a spotted hyena and a striped hyena, and a beautiful big cat, an ounce (*Felis irbis*) of Thibet, and an African wild hunting dog, and a grand black leopard, a beautiful fierce creature, whose like we shall not see again, at the Fair at least. In the same case are a pair of superb Bengal tigers, and also a grand lion and a lioness. These are not stuffed animals, but mounted animals, and they show the distinctive quality of each subject. Beyond these again is a group of mounted lions, a male and female put up in spirited fashion, and a pair of kittens, which, however, from the difference in shade of their coats, I think did not come from the same actual litter.

#### Faults of Mounted Elk.

Just beyond the great musk ox which surmounts one case, you see a beautiful pair of very dark, nearly black, moose, which accord with the popular notion of moose very well. Near at hand are a pair of elk, nicely handled enough, and yet not good enough to suit the eye of our friend Mr. Hofer, the Yellowstone Park guide, who has charge of the Hunter's Cabin.

"These elk are pretty good," said Billy Hofer, "but they have a fault very common in specimens of mounted elk. You see the top line of the back is nearly straight, clear up to the base of the neck. Well, that isn't right. An elk has a sort of roach or raise just above the top of the shoulder blades. It isn't a hump, but is a distinct rise above the line of the back. Very few specimens show it right. Nearly all elk are mounted too full and round, too. Indeed the tendency is to stuff out the skins too full in nearly all animals."

This I submit to the taxidermists willingly, for Mr. Hofer has not only killed many elk, but studied them, photographed them, and lived among and with them.

Mr. Hofer also told me the ages of the group of four buffalo in a case near by, one old bull, one five years old, one yearling and one three years old. Near these one can study the difference between a Maine caribou and a Norway reindeer.

#### Department of Paleontology.

I was about to explain the difference between zoölogy and paleontology by stating that in the former you get bones and hair, and in the latter bones and no hair; but this is not strictly correct, for one of the first specimens in the department of paleontology has hair all over it, although it is artificial hair. This is the mammoth, or *Elephas primigenius*, before which there was no elephant, and whose footprints no degenerate elephant of to-day can fill. This original elephant lived before the age of billiard balls, and he wasn't scared to let his tusks grow. They grew to be 18ft. across, and curved out, northeast and northwest, after reaching the point where tusks stop

to-day. The height of this old-timer (by which term I mean to convey no disrespect) was about 20ft., and in load waterline he was in the neighborhood of 30ft. His feet were 3ft. across, and his trunk was built according, and was likewise corrugated and plenty hairy. In general, he looked like a circus elephant, only he was huskier and hairier. The hair of this one is perhaps made of mohair, but others have been found with real hair on them, and have been pronounced good to eat, too.

This specimen, which is really magnificent, is a reconstruction on the tusk and bones found near Stuttgart, Würtemberg. The outer covering is copied from the specimen in the Museum of the Imperial Academy, St. Petersburg, Russia. The card further says, "This was a mammoth among mammoths, at least one-fourth larger than the average mammoth." There were giants in quaternary days.

#### The Irish Elk and Others.

Now you shall pass a case of genuine mastodon bones and pause before the skeleton of a giant elk, the extinct Irish elk. The palmed antlers (actual) spread over 10ft., and the frame resembles that of our moose, though the head seems small. If you are not interested (as you should be) in the Irish elk, perhaps you might prefer the skeleton of the New Jersey hydrosaurus near by, or the tusks and skull, 16ft. long in total, of the Miocene representative of *Elephas*. Or would you prefer the dimorphism of the same day, or the *Mastodon giganteum* whose head and tusks rest near by? If hard to please, you may fancy the soulful-looking glyptodon of early Uruguay.

Ranged end to end are further cases of teeth, tusks, tracks, traces, bones and other properties of ancient animals, which set a fellow thinking. The skull of a virbas, from the Big-Bone Lick, Kentucky, reminds one that horned cattle were not always what they are, nor yet buffalo, for here is a buffalo head where the horns turned down. Cheek by jowl herewith junkets a megatherium come to see the Fair, and a *Colossochelys atlas*, which has shaken off the dust of Miocene times, and come from southwest India.

909 SECURITY BUILDING, Chicago.

E. HUGH.

#### Skin-Shedding of the Rattlesnake.

DOUGLAS, Wyo., Oct. 16.—In your issue of Oct. 14 I notice an article from El Comancho, describing what he calls a white rattlesnake. Allow me to suggest an explanation of the phenomenon other than albinism. In all probability the specimen was one of the common species of rattlesnake in process of moulting or shedding its skin. This shedding takes place at all seasons of the year and with no regularity as to intervals. Specimens under observation have been determined to shed their epidermis in almost every month of the year, if not in every one. When the snakes are on short allowance of food it is noticed that shedding is much retarded. When a rattlesnake is about to shed its skin the eye and the button are the first to whiten, then the whole skin becomes gradually paler and the markings less distinct, till just before shedding the general color is a dirty milky white. It takes a rattlesnake, as far as I have been able to determine, about twenty days to complete the process of moulting, dating from the time the eyes begin to change. The actual shedding, or getting out of the skin, I have seen done in less than half an hour from the time the first crack was seen at the back of the neck. If El Comancho's specimen was not killed I should like to hear whether it shed its skin, coming out in its true colors and dispersing the inference that it was an albino.

DR. JES.

#### Those Iowa Birds in the Woman's Building.

CORALVILLE, Ia., Oct. 14.—Editor *Forest and Stream*: Please accept my sincere congratulations on the success of FOREST AND STREAM in having been awarded the diploma and medal, in recognition of its excellence, by the judges at the Columbian Exposition. I am always interested in anything pertaining to the FOREST AND STREAM, as it has been a weekly visitor to our home for a number of years, and is enjoyed by every member of the household.

I greatly regret that I shall be unable to place my name upon your register or see for myself the exhibit of which all patrons of your paper are justly proud. I think I can say, however, that I have seen a portion of your exhibit though I have not visited the Exposition.

In the Science room, in one corner of the Woman's Building, there is a small collection of our native Iowa birds. These would never have been placed there had not the FOREST AND STREAM most graciously presented the writer herewith Hallock's "Sportsman's Gazetteer." This furnished the instruction, and the FOREST AND STREAM the inspiration which resulted in the exhibit.

If there is any credit in the achievement, I feel that we ought to share it conjointly, as it is all owing to the FOREST AND STREAM.

VIOLET S. WILLIAMS.

#### Greene County (Pa.) Summer Birds.

MR. J. WARREN JACOBS, of Waynesburg, Pa., has sent us a brief annotated list of the summer birds of Greene county, Pa. The list includes about ninety species, and the short notes which accompany it have to do principally with the breeding habits of the birds. We learn that the pileated woodpecker, which was formerly a common species, is now rare, but still breeds occasionally in the large forests. The worm-eating warbler is occasionally found here, and the Kentucky warbler is common. Greene county lies in the southwestern corner of Pennsylvania, and West Virginia forms the southern and western boundaries of the county. The elevation is not far from a thousand feet, some points reaching 1,300. Mr. Jacobs's list is not without interest.

#### A NEW-SUBSCRIBER OFFER.

A bona fide new subscriber sending us \$5 will receive for that sum the FOREST AND STREAM one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals. For \$3 a bona fide new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Fleet's handsome work, "Bird Portraits for the Young" (the price of which is \$3).

Game Bag and Gun.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

A TREED FOX.

BACK in the forties, "when I was a boy," in old Orange county, famous for its golden butter, and paper money of the same color, I was tramping home from the country school over my two-mile route through the mud and slush of a January thaw, when my meditations on the problems in Daboll's Arithmetic were scattered to the winds by the familiar voice of old Vick, announcing that he had a fox up and going along the red ridge.

As I had passed his master a half-mile back busy cutting his night wood, it was evident that the hound was having a little hunt on his own hook. The prospect was good for me to get a shot.

The remainder of the route was made at a pace never reached by a boy going after the cows. The "old gun," with its 40in. barrel and record of scores of foxes slain while it was in the hands of its former owner, a noted fox hunter, had come into my possession after long negotiations with his spendthrift heir, in exchange for my hoarded wealth of \$7, mostly in Spanish sixpences and shillings. It now came down from the hooks over the kitchen fireplace, and was loaded with powder poured from the horn into the palm of the hand, a charge of No. 1 shot measured in the same way and well rammed down with a liberal piece of the *Independent Republican* for wadding. A G. D. cap, pressed down on the nipple while rushing for the familiar runway, completed my preparation, and I was soon beside the big maple, panting to avenge the untimely death of my mother's gray goose and her five innocent goslings.

But the red-coated robber failed to put in an appearance. When the dog came along it was plain to be seen that he was running a back track. I called him off and turned him back. He slowly retraced his steps but would not go out of my sight. After following some half mile the dog came to a steep side hill covered with heavy hard wood timber where the snow was melted off.

Here he lost the track and could not pick it up again. About this time the owner of the hound appeared in the neck of woods, and after taking the evidence in the case, decided that as it was almost dark and as this was the third time he had lost this fox at this identical spot, we might as well go home. We had started to do so, when chancing to look up, I saw sly reynard in bold relief against the eveningsky, seated in the top of a straight black oak, 40ft. from the ground, looking down at us with a smile that was "childlike and bland."

At the crack of the "old gun" he tumbled from his lofty perch as gracefully as a gray squirrel; and we picked up a fine dog fox in full fur, as dead as Julius Cæsar; whether slain by the shot or the fall the intelligent jury could not decide.

On examining the tree we found that the fox had entered at a hole near the root and had come out at another near the limb on which he was sitting.

The owner of the hound claimed the pelt, and as I was "only a boy" his claim was good.

Much to my regret the market value (seventy-five cents) did not go to swell my ammunition fund for the ensuing campaign against the squirrels and pigeons. C. B. S.

ELMIRA, N. Y.,

"PODGERS" MORALIZES.

SAN FRANCISCO, Oct. 16.—*Editor Forest and Stream:* Not very long since I read a thrilling account how a gushing young thing of a girl, aspiring to be an Amazonian sportswoman, shot a deer, and drawing her hunting knife cut its throat in the most approved professional manner. The article made an impression on me from the fact that it seemed a terribly cruel thing for a presumed tender-hearted young woman to do.

I once witnessed the shooting of a deer and cutting its throat, and I shall never forget the agonized, pitiful, reproachful expression of its large, lustrous eyes as, held down by one knee of the hunter, the sharp blade entered its throat. The eyes plainly said, "You are human beings and I am a poor little wretched animal. You prate of humanity. How can you do it?" I turned away. I could not stand it. I felt as if I had participated in an atrocious murder. The pitiful last look of that poor thing haunted me for months, and although years ago I can see it as distinctly as if it had happened yesterday. It is needless to say that from that hour to this I have never pulled a trigger on a deer.

It is of course the proper thing to ridicule all such, as it will be called, mawkish sentiment in a person indulging in any kind of sporting, and inconsistent to select one kind of game for sentimental exception. Consistency is not the sort of jewelry I am after. I am only thinking about that cruel, hard-hearted female who could deliberately stoop down and cut the throat of the poor wounded or helpless animal. To have shot and killed the deer in the legitimate way I could reconcile to the accepted order of things. Why not stop there? Thus far she had in the eyes of the average sportsman done a very creditable thing. But what necessity of so unsexing herself—so departing from any claim to femininity as to emulate the butcher and proceed to cut its throat? I doubt if the animal was any better for it, and the woman was in my estimation a great deal the worse. It was so unfeminine. And so was the shooting, some will say. Granted, but that throat-cutting act. Ugh!

I should like to see the young woman. I should like to gaze on her and get an idea of what manner of young woman she was.

On general principles I would not care to have any personal differences with a young woman who carries a knife and cuts deers' throats. She might, or may, some day cut that of one in addressing whom in writing she would omit an e and substitute an a. I can't help thinking the young person must be of that peculiar breed and kind that reporters alone discover who are always a little "more so"—very remarkable, very stunning and always beautiful. The reporter's heroine is something unheard of elsewhere, and I am trying to make myself believe it was all a hoax, and that no such "nervy" young female

exists. I think the achievement came off "up country" where things are always coming off of a most remarkable character. "Up country" with us is equivalent to that with you vague location of "out West."

I observe that there is quite a falling off recently in the bear stories. How is that? Is the repertoire exhausted, and are bears becoming scarce? We will have to go back to that original first one, about the bad little boys that jeered at Eliza for his loss of hair and requested him to "go up, old bald head!" and the retribution that followed for such unseemly conduct, as scripturally illustrated by a bear standing on his hind legs with a paw on each boy's head. This speedy punishment as depicted in our Sunday school book was impressively pointed out to us boys as a warning, and a lesson for our guidance. It was a subject to me of grave reflection then, and gave me rather a poor opinion of two such foolish boys who had not more sense than to so conveniently put themselves into the bear's reach. We youngsters discussed the question, and the opinion was generally that if it had been our own case we would have cut and run. Such was the impression that original bear story made on me, I have read a good many since that did not impress me as much, not being on scriptural authority.

We have two shooting clubs here, one called the Cordelia, the other the Teal, that have each under lease a large tract of marsh land adjoining. Hitherto they have carried on their winter shooting in harmony, but have now got by the ears. The Cordelias have leased the ground previously occupied by the Teals. The lease having expired the Teals, seeking to obtain a renewal at a lower price, made an offer that the owners of the marshes declined. But the Cordelias offered it and obtained the lease. This stirred up the Teal people and the war commenced. The Teals owned a small strip on which their club house stands, that commands the entrance of the only means the Cordelias had of reaching their grounds by boats. Seeing this advantage the Teals promptly closed the entrance and shut out the Cordelias and gave notice that any one and every one who chose could shoot over the marshes. This brought out the fighters in the Cordelia Club, who hired a lot of roughs to paddle around from pond to pond wherever they saw any shooters and bang away at any duck that came that way long before he came within shooting distance. The consequence was that there was no sport for the interlopers. And so the fight goes on. The last phase of the conflict is the hiring of a party of "toughs" by both clubs to stand off the shooters of each. The result is likely to be serious and may result in some one or more of the hired sluggers becoming targets and getting peppered with duck shot, as there are men on both sides who are very careless with guns and are not over particular as to the size of the game. It is still a peculiar phase and condition of things in this country that you can hire more men at less price to take service that promises a scrimmage than for a legitimate object. They won't all fight, but some will, hence we who have no immediate interest in either club deprecate such a condition of things between sportsmen.

In the present instance the membership of both clubs includes men of means and high social standing, and we may quote from the old nursery lines:

"Children, your little hands were never made  
To scratch out each others' eyes."

OREGON NOTES.

*Editor Forest and Stream:*

Among our sportsmen the opinion prevails that Commissioner McDonald's recent brief visit will bring forth an abundant harvest of good results affecting the fishing interests of the Northwest. While from a business standpoint his visit was only in the interest of the economic species of fish, and ostensibly for the purpose of aiding us in the solution of some important problems concerning the same, the beneficent influences of his visit among all classes interested in the subject, whether they be cannerymen or sportsmen, are quite manifest. His presence among us seems to have stimulated and encouraged broader views, and possibly quickened our consciences a little. He was a very busy man while in Portland, but found time to pay an official visit to the salmon hatchery up the Clackamas River, and also to meet our State officials at Willamette Falls in consultation about the much needed and much talked of fishway at that point.

Our sportsmen had counted on entertaining him right royally, and had planned a banquet. But he came so unexpectedly, his stay was so brief, and so many things of a business characted monopolized his time that we were forced to forego all these pleasures and hope for a more favorable opportunity in the future when we may be permitted to manifest our appreciation of his conscientious devotion to our cause.

Many times heretofore, in the columns of FOREST AND STREAM, I have referred to the abundance of game and its close proximity to our city. What other city of a hundred thousand population in the whole world can boast so much and such a variety of game within its corporate limits? Ruffed grouse, blue grouse, quail, Mongolian pheasants and even deer have been killed right here in the city within the last year. Snipe are quite abundant in season along the south shore of Guild's Lake, which is entirely in the city, and during the winter months great numbers of ducks feed along the wharves in the business portion of the town. A week ago Mr. J. Roberts Mead, the three Murhard brothers and Mr. Crook within a hour's drive of the city killed a magnificent buck and a fine doe. Expert deer hunters estimated the weight of each at about 150lbs. I have never seen finer or fatter deer, and the boys have good reason to feel proud of their capture. The doe was shot right in the road leading from Portland to St. Helens. The buck took to the water and swam across the Willamette above the breakwater to Sauvie's Island, where the boys followed him by boat and killed him. Sam Douglass, our taxidermist, prepared the buck's head, and it now adorns the east wall of Mead's drawing room, and is a beauty. Of course the elk, bear and cougar no longer roam our streets. But reports from the outside districts show them to be quite plentiful this fall. Indications point to a wonderful flight of wild water fowl, and the boys are correspondingly happy.

When a good man dies we proclaim his good deeds and

perpetuate his memory. We extol his virtues and smother his faults under the silent sod. But then white man claims, and generously concedes to himself, both in life and death, superiority over other beings. Even the Indian is less selfish, for his dog and his horse go with him into the valley of death, and are given an equal chance to reach the happy hunting grounds over on the other side.

A dog died in our town the other day—H. T. Hudson's old Boss. He was just a plain, helpless, blind old dog. Being only a dog, of course, he had no soul, and so his virtues and his faults died with him. But the history of his life would be the history of field sports in the Northwest for the past eighteen years. There are solemn moments in every sportsman's life—moments when he loiters in the present to dream of the past and contemplate the future. What sportsman has not looked down into the honest eyes of his faithful dog and wished in his heart that there was a dog heaven where the simple love and devotion of such creatures might find eternal recompense. But "Out of eternal silence does he come! Into eternal silence does he go!"

Like many another good dog, Boss laid no claim to pride of ancestry. He was a sort of mongrel Irish setter without a pedigree, but his energy (indicated by the extreme age to which he attained) and other good qualities placed him in the front ranks of Oregon's practical sporting dogs. No one knew better than old Boss when the time arrived for the hunting boat to sail, and he was always aboard whether Hudson went hunting or stayed at home. If he had no master, he would invoice the gang and select one for the trip and stay right with him through thick and thin; and he could stand more hardship than any other dog I ever saw. He was the hero of many harrowing tales and hair-breadth escapes too numerous to mention. However, I would like to relate one of his escapades, which may be taken as indicative of his energy and perseverance under difficulties. Something like nine years ago Billy Newman came down from the hurricane deck of the old hunting boat Gold Dust one dark night, and, calling me aside, confided to me the secret that old Boss was dead. It seems that while we were steaming along at a good rate Billy had accidentally or otherwise ran against Boss (who was always under foot and not generally liked by the crew) and knocked him overboard and into the wheel. I distinctly remember how sad I felt until we reached Hudson's landing, five miles below, where we found Boss patiently awaiting the arrival of the boat and ready for business at the old stand.

But as the years multiplied he became rheumatic, almost blind, and toward the last entirely helpless. His end came. Chloroform, administered by his lifelong friend Jim Carraher, sent him peacefully and painlessly to his eternal rest. So ended the life of one of Oregon's best dogs; and I feel that even the great FOREST AND STREAM would not compromise its dignity in printing this humble tribute to his memory from one who for many years knew him well and loved him dearly. Poor old Boss! Your life and your death only exemplify the truth of the old stanza:

"When he is forsaken,  
Withered and shaken,  
What can an old dog do but die?"

S. H. GREENE.

PORTLAND, Ore., Oct. 13.

GEORGIA ASSOCIATION

A CONVENTION of sportsmen from various cities of Georgia met in Atlanta, Oct. 17. Dr. McHatton of Macon called the meeting to order and explained the object of the assembling. He expressed his pleasure at being present and said he hoped to see an association formed which would not only last always, but would be productive of much good to all who became members of it. He declared the object of the association would be the obtaining of laws by which game would be protected and by which the waters of the State would be protected from devastation by the trap and seine. Those present were: A. L. Waldo, G. W. L. Powell, H. C. Brown, H. M. V. Jones, A. A. Murphey, Atlanta; Dr. H. McHatton, Macon; J. H. Allen, Hal Morrison, Atlanta; Col. W. H. Luttrell, Waverley Place; F. L. Rousseau, Manchester; G. M. Corput, W. F. Moss, S. Z. Ruff, Alex. W. Bealer, Atlanta; G. H. Plant, Macon; H. H. Summerhour, Warsaw; M. W. Almand, Atlanta; H. A. Andrews, Ohio; J. H. Nunnally, Litt Bloodworth, Jr., Ernest Woodruff, Atlanta; R. F. Jones, Dan Joseph, J. P. Turner, T. M. Oliver, Columbus; F. H. Cook, Clarkston; J. S. Doyle, Atlanta; F. M. Akers, Nickajack; J. S. Baxter, Macon; R. B. Baxter, Sparta; B. H. H. Roan, Atlanta; Geo. C. Price, J. H. Burr, Macon; E. F. Colzey, J. H. Edwards, Columbus; W. Woods White, Atlanta; W. C. Edwards, Hamilton.

Captain Harry Brown, of Atlanta, was elected permanent president; Dr. McHatton, of Macon, vice-president, and Mr. T. A. Brown, of Talbotton, secretary. It was Captain Brown who has done so much to bring about the organization, and the association could not have selected a man who will give more time and attention to the work and who will do it better than he. His election to the position was only a just recognition of the work he has done.

The association was named "The Georgia State Sportsmen's Association." Messrs. T. W. Baxter, Mr. Hal Morrison, Mr. J. H. Nunnally, Mr. S. Z. Ruff and Mr. H. McHatton were appointed a committee to draft a constitution and by-laws.

Mr. Hal Morrison moved that the president appoint a vice-president in each county in the State, so that each of the counties might be more deeply interested in the matter. The motion went through. President Brown, however, did not make the appointments, but will take the matter under consideration and name the vice-presidents as fast as he can secure the names of persons in each county who will take an interest in the work.

The greater part of the afternoon session was given up to the discussion of the law which the legislature will be asked to pass, giving equal protection in all counties against the potters, but the paper could not be perfected, and President Brown was instructed to appoint a committee to prepare the bill, covering the points which he and the members of the committee may think advisable. President Brown will appoint that committee in a few days, and the committee will prepare such a law as the sportsmen of the State will want. The association will meet in Atlanta again next year.

## EXPERIENCE WITH PANTHERS.

*Editor Forest and Stream:*

I have had some experience with panthers or cougars, and submit a few of them.

In 1868, in company with two partners, I wintered on our mining claim on the South Fork of the Clear Water, Idaho, fifteen miles from the nearest settlement. There was quite a number of beaver along the river near our claim. I had a No. 4 trap, and one night I set it about a half mile below the house, just at the edge of a thicket of thorn briars and swamp dogwood. The next morning after breakfast I set out to take a look at the trap; and went up on the high bank, not wishing to go near the trap on the shore. I found that the trap was gone. I could see blood on the ice. I went down, and there lay my trap with a beaver's foot in it; and from the way things looked there had been a terrible struggle. I thought I could see other tracks, and concluded that a wolverine had found the trap. I started to go around the thicket to examine for tracks, and had gone not more than 10yds. when I saw some black object moving in the brush to my left. I thought it was the bunch of black feathers on the neck of the ruffed grouse, for those birds were very plentiful along the thickets. But in less than ten feet I came out face to face with a very large panther. He was crouched down flat, and I thought was just in the act of springing on me. It was the black tip on the end of his tail that I had seen as he moved it from side to side. I stopped, looked him in the eye, slowly drew my revolver, raised it and fired, but shot a little too high. The ball struck just above and between the eyes and glanced out between his ears. At the crack of the revolver he sprang high in the air and floundered back into the thicket. I ran out on to open ground and hollered for my dog, which for some cause had not followed me. He came running; and so did the boys, thinking I had caught a beaver.

I took the dog to where I had shot the panther and told him to catch him. He ran through the thicket and crossed the ice about 100yds. below, ran through a small thicket on the other side and up on to a small bench, where he treed the panther and began barking. We ran over to where he was; and there, in a small pine not more than 10ft. from the ground, lay the panther, an immense fellow, watching the dog. The boys wanted to go and get my rifle, but I told them no, I would take my revenge out of him with my revolver. I told them to hold the dog; and then I went up within about 10yds. and shot him in the eye. He rolled out dead. It was the largest panther I ever saw; and measured 9ft. 11in. from tip to tip; and although very poor weighed 130lbs. His neck was one mass of scars, his tusks were worn down fully one-half, and from all appearances it must have been very old.

The next time I met a panther was in that fall, when a party of four of us were up on the mountain back of the house. Roll Brown and I were together. Roll was then only fourteen years old, but a good shot. He and I started three deer, and as the snow was about 4in. deep it was nice tracking. We followed them to a white fir thicket. Here they had done some tremendous bounding around; and upon examining closely we found where a panther had made a spring from the root of an old upturned pine. But he had missed and had given chase.

I had a young dog, one that had never been after any varmints, but was fond of running deer or elk. We followed, and coming in about 200yds. to where the panther had given up the chase and turned quartering down toward the river, we put the dog on the track as soon as we got a little way from the deer tracks. Away he went and we after him as fast as Roll could go.

Pretty soon back came the dog. We kept on to where the panther had been treed, but when the dog had left him he had come down and kept on. I urged the dog on again and soon we came to where the brush was not so thick. Then we saw the dog trotting around as if hunting for a track. We went down and after looking around for a few minutes I told Roll I would go back about 100yds. to where I had seen the track last, and follow the track. As I was starting back the dog reared up on to a small fir, and on looking up it saw our animal lying on the limbs near the top. I went around to where I could get a good view, and saw it was a cougar instead of a panther, as we had supposed. I called the dog away from the tree and told Roll to shoot the cougar in the eye or head. He did not want to shoot, but I insisted, and told him if he missed I would shoot. He raised his rifle and fired, when out rolled the cougar, and when it quit wiggling its tail I let the dog go, and he was very fierce and fought it as long as we would let him. It was not more than two years old, and was not very large.

I was once up on Canvas Prairie and stopped at my friend Henry Johnson's. I was in a hurry, but nothing would do but I must go down into Rocky Cañon and take a Thanksgiving hunt with him, as a band of deer had been seen down there a number of times lately. So Thanksgiving morning we got in the buggy and drove down about three miles, unhitched our horses and tied them up, and I started down a small cañon that puts into the main cañon. I had gone but a short distance when I noticed quite a number of deer tracks, which had been made that night. Henry kept around to the right higher up. When I saw the tracks I motioned to him and he motioned back that they had been around where he was. I kept on down around, crossed a ridge to another small cañon and saw six black-tail deer run out of a small bunch of brush about one-half mile below me. They had got scent of me, but could not tell where I was. I slipped over a small ridge and ran down about half way to where they were. They wheeled around and tried to run back over the ridge I had just passed. As they were climbing a very steep hill I opened fire on them; I fired twelve shots, killed three dead and badly wounded two bucks. One was a fine fellow and had a splendid pair of horns, the other being small. One got away unhurt. I dressed the three I had killed and went up on to the ridge, when I saw the big buck lie down. I got within less than 30yds. of him, when he jumped up and passed out of sight before I could shoot. I saw the well one and I tried to get a shot at it. I kept following it until nearly back to the wagon. The time was then getting late, and I let the deer go and went to the buggy, when I found Henry waiting for me. When I told him my luck he said, "Good for you. We will go back home, and to-morrow we will come and get your wounded ones and pack the others in."

The next morning bright and early we were on the road to where we had left the buggy the day before. We

had brought along a saddle so we could pack our deer up out of the cañon; after we unhitched Henry insisted on our hunting a little while before we went to packing out the deer. He said he wanted to go down to his left. I told him I would go and follow up my wounded ones as I wanted their horns and hide, even should the meat be spoiled. So I went down to where I had jumped the big buck, and followed his track. He had made straight for a cliff about 20ft. perpendicular, and looking over I saw him lying on the rocks below. He must have been dead when he struck the bottom. Looking up to my right I saw the other buck lying near the cañon; and almost straight down, about 150yds., I saw an animal lying down, but I could not tell what it was. It was too red for a deer when they are red, but as deer were all in the short blue I could not tell what kind of animal it was. While I was sitting watching it, I saw two small animals playing about 50ft. from the mysterious creature in the cañon. They were about as tall as coons. I had never seen such playful things. They were spotted, the spots more square than round. I watched for a while, then I slipped back out of sight, made a detour and came up on the other side of the cañon, and about 50yds. from the two small animals. I crawled up carefully to the crest of the ridge, and had a splendid view of them as they were still playing.

I must have watched them for half an hour, and yet I could not make out what they were. Finally they stopped. I raised my rifle, fired and killed one. The other started to run in to the brush. I shot and wounded it, and it gave a little holler. When it hollered I saw the mysterious animal I had seen lying in the cañon rise out and jump up on to a large boulder. As soon as I got a look at her in her new position I knew it was a panther and that these were her kittens. I raised my rifle and intended to break her neck, but I shot her fair on the point of the shoulder, the ball smashing the bone all to pieces. She fell back off from the boulder and disappeared in the thicket, which was about 150yds. long. I ran out and around to head her off from the main cañon, but as she did not leave the thicket I went clean around it once, and threw rocks in and hollered, to try and get her to come out, but this was of no use. So I went down to the lower end and started through up under the brush keeping my rifle ready. I had gone up about 50yds. when I came to where some one had cut a small cottonwood which had fallen across the cañon and smashed down the brush. I crawled through up on to the tree, and just as I straightened up I saw, not more than 15ft. away, a panther rise up and growl. I raised my rifle very carefully and taking pains drew a bead on one eye and pressed the trigger. The panther rolled back under the brush and kept up a big threshing around for a little while, then all was quiet.

I tramped around on the brush, and made as much noise as I could, for I could not tell but what there was a pair, and one might still be unhurt. Finally I tore away the brush and there was her den. The dead panther was the one I had wounded. I dragged her out and skinned her, threw the skin on to the cottonwood log, crawled on up through the brush and found the wounded kitten, killed it, dragged them both to one place, skinned them, went and got the old one's hide, went to the buggy, got a horse, packed out two deer and was after the third one when Henry came back.

The two bucks were both spoiled. On Henry's coming up he said: "Well, Lew, what luck to-day?" I told him I had got my two wounded deer. "What luck did you have?" "Bad," he said, "I wounded a big black-tailed doe, but she got to Salmon River and I could not get her." "Well," said I, "how many deer are equivalent to a panther." "Oh, five." "Well then, give me credit for fifteen." "Have you killed three panthers to-day?" I told him of my fun. "Well," said he, "I am worse beat than ever." On examining the bed where the kitten had been playing, I saw a deer's foot sticking out from under some grass. On pulling it out, there was a yearling doe, and not a mark on it, except on its neck, and only a little had been eaten out of the back of that. Such was the last Thanksgiving hunt I have had with that prince of hunters, H. C. Johnson.

[What is a cougar as distinguished from a panther in the Northwest?]

## A Washington Cougar Hunt.

TACOMA, Wash., Oct. 12.—Below please find account of cougar hunt taken from this morning's *Ledger*. The four cougars are displayed at McNaughton Gun Co.'s store. I learn that two were killed with No. 7 shot, being hit from below between the forelegs. The animals making the hardest fight were shot with buckshot, but not so well placed as the light ones. Their stomachs contained a quantity of meat, tallow and deer hair. G. H. G.

John Northover and George Crate, a neighbor of his, killed four cougars last Sunday in the woods not far from the former's house. They were all of good size, but not as large as are sometimes found. Northover and Crate were hunting bear, three of which had been located by Crate in a densely wooded valley. On the way there their dogs crossed the cougars' trails and soon had three of them treed. Northover shot the first one, the cougar jumping 20ft. to the ground below. A lively scuffle between the beast and the dogs ensued, during which one of the dogs was badly used up. The cougar crouched once to spring at Crate. He fired at it but missed the animal, when an opportune shot from Northover killed the beast. The other two animals were found in trees near by and soon killed. As the hunters were returning in the evening from a fruitless bear hunt, the dogs started another cougar at the same place and ran it up a tree. It was a cedar tree and the cougar was about 35ft. up from the ground. The animal was springing from limb to limb in excitement and rage, and several times appeared to be on the point of springing on the dogs. Crate shot it in the breast. The cougar sprang up in the air from the limb. It was on and came whirling over and over to the ground. The four dogs jumped on it. The cougar clutched one of these and was killing it when Northover shot the animal again and it loosened its hold and sprang on another dog. It was shot four times before it would yield to its fate. One of the animals, when shot, fell straight to the ground, grabbing its own foot as it landed and nearly biting it off in the agony of death. This is said to be the best day's record for cougar hunting that has ever been made in this section. Mr. Northover said that he had never heard of that many being killed by any hunter in a day's time before. The animals were killed about twenty-five miles south of Tacoma.

## A BAY DUCK SHOOT.

THE black duck are beginning to come into the bay again, and good shooting is anticipated this fall.

Of course this "reminds" us of a shoot we took a couple of years ago. It was later in the fall, rather cold, and the ducks were pretty wild, having been shot at considerably. But Dan W., that famous Maine bear and lady killer, came into the office three times a day and teased so hard that we finally agreed to go.

"There is a fellow up the Seekonk who has the slickest little steam launch you ever laid eyes on, and we can get him to go easily enough, because he is a thoroughbred."

"Thoroughbred" was one of Dan's pet terms, and applied to anything that pleased him, be it dog, gun or man. We let him arrange matters. We were to be on hand at the wharf next to Washington Bridge early the next morning. The launch was to come from F—. When we reached the wharf with guns and duffle we found the blustering Daniel pacing up and down like one of those famous admirals we used to study about in school. Dan was taking the part well. No launch was in sight.

We won't attempt to describe the cold, crisp morning. Such was too true to be enchanting. We danced around and boxed until the bridge policeman woke up; and his sleepy eyes probably thought we had been up all night. But the launch at last "hove in sight," as Daniel said. She had been detained by high tide and a long smoke stack, which somehow couldn't agree, and the draw tender wouldn't open the draw for the launch, and she had to wait until the tide and smoke stack came to an understanding so she could come through. Such was the explanation of the "thoroughbred."

So we got under way, steamed swiftly down the river and out into the bay. The big red sun, just showing above the fog banks, gave promise of a good day, and like all outings of this kind, the little discomforts of the morning gave way to the pleasant anticipations of the day before us. A couple of big white gulls skimmed lazily across our bow, and one of us couldn't help reaching for the neat little 12-gauge that has done its work well beside its larger brothers. But we were after duck, and the challenge of the gulls passed unanswered. It gave us warning to limber up, however; and it wasn't long before the stubby Parker and the boasted slayer of countless bags, Dan's ponderous 10-bore English side-snap, with both hammers that drop when the uninitiated pull the wrong trigger, were ready with the 12-gauge.

"Now, John," began Daniel, "you are the biggest in the crowd, and the bow isn't big enough for two, you just situate yourself up there and keep your eye peeled for a flock. We will stay down here and take anything that comes our way, and, sonny (to the writer), don't you on your life fire across me."

Now, it happened that Dan was lazy and wanted me to load his shells the night before. His special request was that I put in plenty of powder, but it wasn't until I had loaded a half dozen that I remembered he said nothing about ramming down the shot. We did not tag these special shells either.

"Mark right," came from the bow, and a couple of ducks whistled past. Dan turned and fired the 10-gauge, or, plainly speaking the gun fired him. There was a confused mass of gun and Daniel in the stern, and the "thoroughbred" forgot his engine and indulged in a sort of hilarious encore, till the launch ran her nose into a big wave, and caused John to imitate Daniel in speech, and the rest of us to attend more to business.

"Just as soon as I get home you can bet I'll have that lock fixed so both hammers won't slip," was Daniel's quiet remark, as he righted himself, and without condescending to face his appreciative audience "situated" himself for a chance shot, for we were nearly to Prudence now, a good place, with its little coves, for a flock to be found.

"There's a flock," came from the bow, "start us for the middle and then shut off the racket."

Our launch was a neat little 25-footer, fitted with the kerosene oil apparatus for making steam, and the racket she would make when the power was on was enough to frighten the bravest duck that ever came into the bay; but give her a good start, shut off steam and she would glide upon a flock in good shape. Five hundred yards to the right and front was a goodly sized flock and for them we heeded. We were nearly upon them when Dan opened the ball, and up they got, making the air whistle. We tried to drop more as they rushed past, but if any of the readers have tried duck shooting from a little narrow launch in a heavy sea, they probably know why we didn't get more the first rise.

John brought his gun to bear on a loon that was coming down like a fire engine to join the flock, but he joined the dead instead, and Dan in his eagerness to secure the ducks, nearly capsized the whole outfit.

Like a slim black cloud the ducks rose and fell, headed for some of the little coves off Barrington; and then we started slowly around the island. Three more got up near by on Dan's side. He banged away and never stirred a feather; and as they came past the stern, the little 12-gauge spoke and one dropped, badly crippled. A shot with the left and he was picked up.

Dan was beaten in the boat, and suggested we go ashore and work around the shallows. We went, Dan to the point and the rest in various directions. After bagging a few we returned to where we had heard Dan cannonading.

Not a duck did he have, but a loon, bobbing up at a short distance from the shore, seemed to be the especial object of his attention. "I've shot at him a dozen times, but he only 'vaughooos,' dives and comes up again. There he is now, right by that rock," and Dan slips a couple of shells into the big gun, wades into the water and takes up his position on the rock.

With a loud, mocking cry, the loon springs up not 15ft. from the frightened Daniel, who half by instinct draws on him and falls off the rock and picks up the floating debris of the departed loon. "There, I've got all there is good of your carcass, anyway. You ought to be ashamed of yourself a-scaring gentlemen in that way. Any of you fellows ever see a loon?" he inquired, holding the mass up by the remaining leg.

"We're glad you know what it is," we replied, and it wasn't until we had gone down in Maine and seen Safford shoot spruce partridge with a 10-gauge, distance 10ft., that Dan could say he wasn't the only one who liked short-distance shooting.

"It shows the killing power of this gun, just as hard," was the retort, as he tenderly laid the battered specimen

on the sand, and we all went aboard the launch and turned toward the Warren River. Here we had good sport, Dan retrieving his old time "style" by a double on a black duck and a big white fellow that no one could tell the name of.

It began to grow late and the water was giving out, so turning toward the Point we obtained a supply and steamed home.

Lots of fun, a fair bag and—good day, brothers.

TODE.

## OCTOBER IN NEW ENGLAND.

THE most beautiful October weather has fallen to the lot of the hunter who is so fortunate as to have been in the woods. Not a drop of rain has fallen in New England since the 6th, and then only a mild drizzle. The trees have shed their coat of leaves unusually early, and in the mild mid-Indian summer air the hunter is abroad. If we read the Sunday papers, we shall be led to believe that the woods are literally running over with game, all eager to be killed. There is no such thing as disappointment, according to these papers. Not a spot or place is mentioned where there is not an abundance of game, and if the hunter does not get it, it is because he is no hunter. Such twaddle! No one at all familiar with the woods and accustomed to the uncertainties and the disappointments that beset the pathway of the man who goes forth after game, would write it.

In spite of these articles, I am aware that there are a number of sadly disappointed Boston gunners, who have been to a good deal of expense for hunting trips already this fall. Were it not that they do not care to have their misfortunes mentioned, some racy reading might be made. Some of them have met drunken guides and even drunken camp owners, and have had the only few days' outing they get for the year spoiled by this drunkenness. Mr. Charles H. Cook, with the dry goods house of Bliss, Fabian & Co., can tell a doleful story of this drunkenness, and there is nothing but Mr. Cook's kindness of heart that prevents the name of the camp where he went being published in full. He does not desire to hurt the reputation of a well-known Maine hunting and fishing resort, though he found a bad state of affairs there. The wife of the proprietor is working like a slave, and has been since early in the spring, and her husband is drinking shamefully. On the way to the camp the stage driver told Mr. Cook and his friend that if they were out of rum up there, the hunters would have a good time, but if the proprietor and others were on a drunk, they would have a hard time and get no game. Alas! They found the worst to be the fact. The proprietor was the worse for liquor. Their guide was drunk, and kept so for several days. When asked to go out and hunt, he would say that he would do so, but on attempting to start he would suddenly declare that he would not go, and again fall back to his cups. At last the hunters were discouraged and disgusted. They applied to the wife of the camp proprietor, apparently about the only sober person about the premises. She tried to get a man to go out with the hunters and show them to a pond some distance away, where they hoped to get a deer. She found a wood chopper who would go. He showed them the pond. Got into the boat in order to paddle them across. He proved to be so much the worse for liquor that he upset the boat, to the extent that he fell into the water, and the hunters had to pull him out and do all they could for him in order that he might not get chilled to death. They had to lay in the woods that night, the wood chopper being unfit to show them the way back to camp. Their trip ended in misfortune, as it had begun. They got no game, though the only man responsible for their troubles did apologize to them on their way out, after charging them full rates at his camps.

Mr. W. H. Fisher, another favorite in the Boston dry goods trade, and who shot the great moose in Maine last year, an account of which was in the FOREST AND STREAM, has returned from his trip to the Katahdin Iron Works region. But he got no big game this year. The falling leaves were too thick. Mr. W. B. Hastings has returned from the Megantic Club preserve with his three deer. Report says that he could have shot as many more. Mr. John Bartleman, of Boston, who has spent several summers with his mother at the Mountain View House at Rangeley Lake, has shot a deer this season at Kennebago. A letter from Mr. Phillips, superintendent of the Megantic Club preserve, mentions ten deer already killed there this season. Peter Jones, of Boston, is back from his hunting trip to Tim Ponds, in Maine. He brings home a deer. One moose was seen. He reports seeing the head of a moose that weighed over 50 lbs. being brought out from that section by a guide. The name of the sportsman who killed the animal he did not learn. Dr. W. G. Kendall has returned from the Megantic Club preserve with his full complement of three deer. He is a member of that club and also of the Massachusetts Fish and Game Protective Association.

As already mentioned, the record of big game killed in Maine this season is something for that State to be proud of. More than a dozen deer have already been brought over the Sandy River Railroad, with two or three moose. At Bangor the record is a most remarkable one, and exceeds anything ever dreamed of. Venison is very cheap in all the Maine markets. It is a little singular that it has not yet reached the Boston market. Doubtless it will soon begin to be smuggled through. Partridges are coming through to some extent. A deer has recently been shot by local hunters at Webster, Me., a town a few miles below Lewiston. There were three in the herd and the buck was shot. A deer has not been killed in that town probably for fifty years previous. A handsome doe is also reported to have been shot in China, Me., a town not far from Augusta, the State capital. The hunters of Maine are actually wild after the big game. Every man and boy has his gun, and he proposes to use it. The presence of deer in the settled farming towns, and near the cities has excited them. The trade in guns and rifles should be excellent.

Even Massachusetts hunters are fond of inviting their friends to share the sport in some cover they have kept in mind all summer, but have not dared to mention. Mr. John A. Falconer of Lowell, of the firm of S. W. Falconer & Sons, and always one of the Harry Moore party to the trout lakes in the spring, last week invited his friends to help him hunt a section in Lowell where he believed that there must be a good many birds. Harry Moore was there,

as ready for a joke as ever, and also Mr. Ethan Allen Smith, another member of the spring fishing parties. Mr. Geo. C. Moore, Harry's cousin, who is always on hand, was also with the party. Mr. Falconer had a fine, new setter, and all expected rare sport. They hunted a swamp some four miles from the home of Mr. Falconer, but in that very swamp Mr. Falconer, leaving the rest of the party for a moment, got turned around and finally wandered back to his first starting point, after he began to be aware that he did not know where was, anyway. Around he went, always coming back to the same point. At last he sat down to collect his senses. Then he heard a railway train and made a beeline for it. This was taking him directly from home, but it gave him his bearings and he trudged two or three miles home, where he met the rest of the hunting party a good deal anxious about him. It was 6 o'clock in the evening and they had begun preparations to raise a posse of men and search the woods.

Cases are numerous in the newspapers concerning the number of hunters that have been lost in the woods this fall. One man wandered miles and miles, in the vicinity of the Katahdin Iron Works, and it was a couple of days before he was found by his companions. He was exhausted, too lame to walk and had to be carried out of the woods. Money would not tempt him to go through another experience of the kind. One little rule is of great advantage for the hunter to stick in his hat. First, never suffer yourself to stray away alone. Secondly, if you have been so foolish as to stray away from the rest of the party and are lost, always remember that water runs down hill. Then the first running water you come to follow it down stream. Continue this and you are sure to come to your bearings or a large body of water, the lake or river of that part of the country, and once there you will find it easy to reach camp, or find other people who can take you there. When the sun is shining the direction can always be known by calculating the time of day. Always carry a compass, and in trying it take it away from the influence of your gun barrels. SPECIAL.

## MICHIGAN GAME AND FISH.

LANSING, Oct. 20.—Shooting and fishing on Grand River and Pine Lake is excellent. Pension Examiner Maxwell takes his tackle and boat about 4 o'clock most every afternoon, and after being out a couple of hours shows up with half a dozen fine bass of from 2 to 6 lbs. each. Maxwell is a great fisherman and he knows all there is to the business. He makes his own rods and tackle, and he has as fine an outfit as can be found in Michigan, and with all due respect to our good friend Herb, of the Bailey House, Ionia, we just think that Maxwell takes the cake. I don't want to whisper too loud about the matter, for if I do, A. H. Whitehead, the champion of Pine Lake, just walks me up to his friend Charlie Davis, and points with pride and keen delight to an 8 lbs. bass that hangs suspended over the mantel in Mr. Davis's dining room. I do not want to take it all back, so I just say, well, there is a pair of them, anyway.

At the Whitehead cottage, on Old Comfort Island, Mr. Farrand and Mr. Whitehead took thirty dozen frogs one day last week, and on Saturday last, in one of the most severe storms that has visited Michigan in years, Mr. Whitehead, Mr. Shank and Mr. Robinson shot eighty-one ducks, mostly lesser bluebills, with a few helldivers and three or four velvet scoters that chanced to be caught away from home.

Pap Fillmore is authority for the statement that while fishing at Oar Lake one day last week, one of the boys left his line for a few moments, and when he returned and hauled in the line he found a pike that weighed 8 lbs., and a blue gill that weighed 1½ lbs., had taken the bait; but the funny thing of it was that the blue gill had taken the bait first, and then the pike had swallowed the blue gill, which made a very interesting combination.

Mr. E. Jemison, one of the best shots in Michigan, shot an albino robin on the college grounds a few days ago, and the robin is now in the hands of Mr. C. J. Davis, for mounting. By the way, Mr. Davis has one of the finest collections of birds and animals in the State, and some day when opportunity presents I will tell you something of it.

Mr. S. T. Smith, of Detroit, is taking in the big Fair, but he has telegraphed that he leaves to-night for Aberdeen, Dakota, for a chicken hunt. If there is a man on earth who is entitled to a good thing, it is Mr. Smith, and we hope he will get it.

"Diamond Walt," of Exeter, Neb., in FOREST AND STREAM, of Oct. 7, gives us lots of light on the shooting ability of the .23 short rifle, but he is a dandy, and his rifle is a good one. I can take it all in but the penetration, and it does go a little hard to get that part of it down nicely. Yesterday I shot a yellowhammer with my .22-45, and there was not enough of the bird left to pick up, so I am prepared to believe that if my .45 had bored its way through an antelope as it did the bird, the antelope would have dropped on the spot. I can't quarrel with Walt about the .22cal. rifle, for I do think it is a very excellent gun, and I am going to test the gun thoroughly when I have time.

Grouse and quail are nearly ripe, and Nov. 1 will see the dance open in Michigan. Birds are scarce compared with what we had two or three years ago, and it will be hard work to get even a fair bag.

Senator Pascoe, of Republic Mine, Lake Superior, was in town last week. The Senator is one of the early pioneers of the great mining country. He is now retired from active service, but as a reward for faithful services his pay is to continue during his life time. He lives at the Mine, but his principal business is trout fishing and entertaining his many friends. He has enjoyed the past season greatly and reports that the fishing gets better every year. He has taken over 500 trout this season.

Senator Chamberlin, of Iron Mountain, also reports that trout fishing is excellent. The hard times in the mining country has driven lots of unemployed men to the trout streams, and a great many trout have been taken. I told the Senator of the great yarn told by J. B. C., of Ashland, in FOREST AND STREAM, of Sep. 9, and his experience at Thousand Island Lake, and his reply was that the atmosphere of that northern country was so rare that fishermen had no difficulty in getting all the big fish that they wanted—injuring their minds. I thought that explained the situation exactly.

The people of Grand Rapids are having quite an excitement over the pearl fishing in Grand River. A large number of pearls have been taken from the fresh water

bivalve, which is so common in the river. Hundreds of people are constantly wading the stream, and raking the bottom, searching for the hidden treasures. Several fine pearls have been found, but they are of little value generally.

Mr. C. J. Davis, of Lansing, has succeeded in getting a copy of the elephant edition of Audubon's great work. It is a work of great value, and very few are fortunate enough to own the work.

Mr. J. W. Teevin, of the City Marshal's office, Grand Rapids, was in town a few days last week. Mr. Teevin is a member of the Jolly Eleven Boat Club. They have a nice boat house at North Park, and one of the finest little steamers on the river. The club has been in camp this summer at Bailey Park, about four miles up the river, and they have had a great time. Fishing, boating and camping out is the object of the club and they follow out the constitution to the letter.

Mr. Perry, the Pontiac beagle man, also spent a day with us, and we enjoyed his visit hugely. We are going to visit Mr. Perry at his home and spend a day with him in hunting bunny, and in looking over his fine kennel. When we do, we will give you lots of pointers in the beagle business, for a man cannot talk with Mr. Perry for five minutes without wanting to buy about all of the beagles that he can get hold of. Mr. L. S. Hudson, of Lansing, is a great friend of Mr. Perry and a lover of beagles, and when the pair get interested on the beagle question they can make it red hot for outsiders.

JULIAN.

## NEW HAMPSHIRE'S ARMY.

MANCHESTER, N. H., Oct. 16.—"A nice day." How that phrase so commonly expressed strikes home to the heart of the unfortunate lover of field sports, who is obliged to toil at desk or bench fifty-one weeks out of every calendar year, for his own support and of those dependent upon him. How a pleasant October morning will bring to his mind the things that might happen, if otherwise situated in his business relations, and yet, when an exception in his routine of life does occur, and the birds or other game are not to be found as plenty as he had pictured to himself, how constantly, on the following morning, our same friend will resume the everlasting grind of existence, thankful that he is not obliged to shoot game in New Hampshire for a living, even though his salary may be small.

The hunting season thus far has been a disappointment. Birds were never so scarce here as now. Squirrels are more plentiful, though not as numerous as one year ago. Said a prominent wing shot the other day. "Where six years ago I could bag sixteen birds in a day, I think I am doing well this year, if by hard work, I secure four in a day's hunting, and although various reasons are advanced for the decrease in number, there really is but one—too many gunners. There must be something done toward restocking our game lands, as well as our waters with fish, or wing-shooting will soon be an unknown quantity in this locality."

Such is the whole story. When five thorough sportsmen and three trained dogs put in a full day in our best bird covers, around Winnipiseogee Lake, as they did last month, and get but two birds, the reason is obvious, and the end is near at hand. Laws for game protection are excellent, but what we need now, and the matter should be brought before our next Legislature, is restocking, that the laws may have something to protect in the game line. A complete prohibition of shooting, although a bitter medicine, would do good in a three years' dose, and I am not sure but what it will prove the only effective remedy. Expert handlers of the shotgun and bird dogs are so common that the chances of our feathered game to escape the bag and pot are reduced to infinitesimal proportions.

I am writing the feeling as frequently expressed in this immediate vicinity, and hope it does not apply to all other parts of the State, though I know it does to many localities, particularly where the work of legitimate sportsmen is supplemented by that of the summer boarders, who hunt in season and out, shooting everything that moves, from deer down to mosquitoes, paying no attention to law or regard for the property of others. A farmer living near where those of the latter class make their summer homes told me last week that during the past summer such vandals had on several occasions been within ten rods of his house and had shot his chickens, and once came so near hitting him as to put several shot through his hat. Who can blame landowners for posting notices excluding gunners? Such conduct, together with the black and inexcusable lies hunters and fishermen of the same class are guilty of concocting in reporting their doings, should be a complete bar to recognition by law-abiding and self-respecting sportsmen.

Coon and fox hunters are getting in their work quite successfully. Lovers of those sports will never see their wily game exterminated.

Assistant Marshal John F. Cassidy and Mr. Fred. James, of this city, have returned from a trip to the Adirondacks, reporting two deer killed by the former and one by the latter, and an excellent two weeks' vacation so well enjoyed that they say they are already making preparations to repeat the trip next season. One thing they speak of as particularly pleasing is that while there they were not being continually "jewed," charges being reasonable, and the hosts and their employees not being greatly offended if their guests succeed in having a dollar left in their pockets when coming away, as at most such resorts.

Considerable interest is being taken in the hunting match of the Franklin Fish and Game League, which takes place Oct. 25 and 26. Messrs. M. D. Woodward and G. O. Thompson choose for one side and Messrs. F. C. Hancock and G. G. Fellows the other. The losers pay for a supper. A mistake of their announcement is the counting of yellowhammers and woodpeckers, such birds being protected by the laws of the State. At the same time they offer a reward of \$10 for the conviction of any person who shoots a bird contrary to our laws. Evidently all the members of that league are not as familiar with the bird and game laws of their State as they should be.

PAYSON.

## Dingman's Ferry Game.

DINGMAN'S FERRY, Pa., Oct. 16.—Partridge, quail, squirrel and rabbit are very abundant. Deer very scarce.

P. F. F.

## CLIMBING FOR BLACKTAILS.

SOUTHERN California offers to the deer stalker or hunter after large game in general, certain peculiarities that would, perhaps, satisfy the most ardent or enthusiastic member of the Alpine Club. I have wandered over the White, Green, Adirondack, Rocky and other mountains, but the Sierra Madres for difficult climbing exceed them all, and what in other ranges is, perhaps, a pleasure, is here, to the pioneer at least, or the one who breaks the trail, labor of the most fatiguing kind.

From a distance of five or six miles the range presents the appearance of a great wall, cut into innumerable gulches that radiate one from another in an interminable manner, showing plainly the work of the rush of waters in the winter seasons. The wall of the smaller cañons is a divide or "hog's back" which, to the eye, seems a gentle rising slope, a natural pathway from the valley to the summit of the range. Nothing could be more deceptive; once upon the ground the slope is found to be covered with a growth of greasewood, scrub oak and other brush about 4 ft. in height, little less than impassable, while in the underbrush you have the yucca, or Spanish bayonet, with its lance-like leaves, to spur the horse and rider at odd moments, a quiet reminder of *Crotalus* that lurks in the rocks hard by. The divide which appeared so easy to climb, is now seen to be in many places almost perpendicular, and if followed for any length of time ending in a blind lead, bringing the climber to a deep cañon, to enter and reascend which would occupy two or three hours, and weary a strong man. In short, the Sierra Madres are an almost endless maze of cañons stretching away in every direction, crossing and recrossing each other and presenting a labyrinth unequalled, at least in my experience.

Water must be carried by the would-be hunter, as it is found only in the cañons, so that besides the rifle a canteen is an absolute necessity. Thus accoutered and mounted on a horse that was known as a "butter," a term, it should be explained, which means that the animal will lower its head and butt through the bush, I entered the narrow cañon of the Verdugo Hills and commenced the ascent, for it is in the upper regions where the manzanita flourishes that the blacktailed deer and large game is found. Hunts are organized here on a principle that affords the animal the best opportunity for the display of its powers. The Verdugo Cañon is about a mile long, and forms at its upper end a basin, around which, sentinel-like, are several peaks. Each of these is occupied by a hunter, while the dogs are sent into the cañons that branch in all directions to drive the game up.

The sun was just creeping over the mountains from Arizona, its rays starting the shadows in the cañon, as we reached the foot of the trail. It had been a cold morning ride even in this perpetual summerland. My own mare was a good climber, but not quite heavy enough for the work, so I exchanged her for a horse whose climbing powers are not excelled by any goat living. The trail assigned me led directly through the cañon through a most attractive bit of scenery, a silvery thread of water winding its way upward, skirted by low trees and bushes, with here and there a lofty sycamore. The path followed the stream for a while, then branching off skirted the mountain until I stood upon a little shelf over the cañon. Down into it again, across, and the main trail was reached that led in a most extraordinary manner directly to the summit. My companion, who preceded me on foot, an old Virginia hunter, had been up before, but the rains had washed away all evidences of his visit, and it was indeed a butting process, the horse lowering his head and taking things literally as they came. One moment I was lying flat to avoid a branch of manzanita, the next slipping off quickly to hold the animal and prevent him from going backward down the steep incline. Progress on foot was almost impossible except to the trained climber. The dry soil rose in clouds at every step, and the trail finally became so steep that I was about to give it up, when the horse gave a rush—slipped, and I slid off just in time to see him roll partly over. For a few seconds what I deemed the wreck of horseflesh was hidden in an impenetrable cloud, but in the parlance of the ring, the animal came up smiling, and as the dust blew away stood two or three yards down the mountain patiently waiting for its rider. I now led the way myself, and soon was upon a spur at an altitude of perhaps 2,000 ft., and directly between two cañons.

"Here," said my companion and guide, wiping the dust and greasewood leaves and twigs from his face, "is one of the best spots for shooting I know of in the hills. Just look at it! You can fire into this cañon, wheel and let go into the other. I've done it before this. Now, I'll put the dogs down in here, and you take the rise just above."

The "rise" was a small hill above the one upon which we were standing—a huge mound or rock jutting out into the abyss. I had almost reached the top when I heard the welcome, quick, oft-repeated bay of the dogs, such music to the ears of the lover of sport. A final scramble and we were on the mound. I had just turned toward the cañon when the sharp report of my companion's Winchester echoed down the gorge, and my own Colts was soon sending back echoes as fast as the magazine would work. In the East it would never have occurred to me to attempt the shot, as the deer was so far away on the other side of the cañon that it appeared about as large as a foxhound, and was dashing along the almost perpendicular side, sending a perfect avalanche of stones and earth down to the lower level, where the dogs were making music loud and furious.

Shooting at so small an object in rapid motion and at such a distance was a matter of chance; but the deer went down, and I could just see it lying beneath a yucca, occasionally moving its head. "That new dog will eat it up if I don't go down," shouted my companion. "Keep it in sight, and fire if it moves," and with that he dashed into the bush and went falling, rolling and leaping down the almost-perpendicular descent.

To take my eye from the deer would have been to lose the spot, so I sat with my rifle sight an inch above it, expecting to keep it up, or until my companion had reached the bottom; but the deer hearing the approaching dogs was soon again dashing along the side of the cañon, seeming to my excited imagination to dodge the bullets I was sending after it. I could hear every one hit the rocks, but finally rounding a jutting corner the gamy animal went down, this time out of sight, to be found by the other hunter a short time after, and shot again in a desperate effort to escape. It was a fawn weighing under 100 lbs., and its beautiful skin was penetrated by

five or six shots of a .44 Colt and Winchester, telling of the animal's tenacity of life. That it had been hit so many times at such a distance, off-hand, firing as fast as the magazine could be emptied, was somewhat surprising to me, and while my guide constantly insisted that it was partly due to my Colt, I am rather skeptical, and only claim a single shot made when the animal started a second time. My guide and companion was one of the finest shots in this way I have ever seen. There was no time for careful aim in his work; it was intuitive, and in firing at a deer so far away that it looked like a dog, and at full speed, he could hit at nearly the first fire. Rabbits at full run were taken by him with a rifle, quite as difficult shooting as one can conceive. The game was shouldered and taken to the lower cañon, the news shouted from peak to peak, and an hour later the dogs were started over the west side of the range. But a broad track on the trail soon explained the lack of game; a grizzly had stamped the herd.

My horse had taken me to the very summit of the range, and as I had scored a point, I sat there and watched the others follow the hounds down the hog backs. The view alone repaid me for the labor of the climb, as the whole of southern California seemed at my feet. To the west and south sparkled the waters of the Pacific, Santa Catalina Island rising from it like a grim sea monster thirty miles off shore, and sixty away as the crow flies. Beneath me to the west was Los Angeles, the city of the angels, looking like a scattered town rather than the large city that it is. Turning to the east I looked down the fair valley of San Gabriel, environed on one side by the Puente Hills, and rising imperceptibly to meet the lofty Sierra Madres. Pasadena, El Monte, Duarte and the ranches of many towns were spread before us like a map, the rich greens and browns telling of orange grove and vineyard—a veritable checker board in the flashing contrasts of color, while above all loomed, sentinel like, the lofty peaks of Santa Ana, "Old Baldy," San Jacinto and San Bernardino.

"I'll never forget," said my guide, who had again joined me, "the last time I looked off the main range. I had been over ten miles in following up the yarn of the lost mine, and came out just above the tallest peak you see over yonder. The black spot is a clump of trees that are three feet or more in diameter, though it don't look it from here. I was coming down, and had just got where I had a view of the valley, when as fine a buck as I ever clapped my eyes on came trotting out of the bush in front, and before he knew what the trouble was I had him."

"Well, I packed him to where I had left my burro. You know they call them narrow-gauge mules over in Arizona, but this old burro was rather the pride of my heart, the light of my eye, so to put it, and the pet of the band. I packed the buck on her and started down the trail, having a long rope fastened to her neck wound about my waist. I reckon we had gone a third of the way down when we came to a place where the trail was cut in the solid rock, a big piece hanging over and in the path. When the old burro came to that she stopped short. I gave her a push; then I took the stick and talked Spanish to her, but it wasn't any use, and go she wouldn't. She evidently thought she couldn't get around the place with the buck and concluded not to try. It was a fall of perhaps a thousand feet there, but I went ahead and began to pull, and the more I pulled the madder I got, until finally I hauled her on. She made a rush, and—well, it all came in a minute. I saw the buck hit the rock, and over she went. How I got the rope off my waist I don't know; but as I chucked it over the burro was out of sight and I fell back trembling on the rock. I never even looked over, and never went down, and I never drove a burro on a bad trail after that. That was my last deer on the main range, and the coyotes got that and the burro, and had a close call on me."

The black-tailed deer (*Cervus columbianus*) is the one most commonly found here, ranging the greasewood and manzanita patches of the cañon slopes, and its trails along almost inaccessible regions show it to be a timid and retiring animal. In size it resembles the Virginia deer. The tail is ornamental, cylindrical and conspicuous, black above and white beneath. The face is strikingly marked with a horseshoe in front of the eyes, certain old hunters considering it good luck to kill them on this account. Some of the natural histories state that the meat is poor, but the finest venison I have ever eaten was black-tailed deer, the flavor being of extreme delicacy.

The black-tailed deer ranges all over California and is found in the Oregon Mountains. The Mexican or Sonora deer (*C. mexicanus*) is sometimes, though rarely, found in southern California, while the whitetail or mule deer are others more or less frequent in the State.

The black-tailed deer has few enemies in the Sierra Madres except the mountain lion and the human hunter. The former lies in wait, and often gives chase to the agile animal, and at one of the falls in Millard Cañon a friend of mine found a fine buck in the stream. It had taken the terrific leap of 40 ft. over the fall.

C. F. H.

PASADENA, Cal.

## Rhode Island Ducks.

PROVIDENCE, R. I., Oct. 16.—Ducks are coming in, and the boys anticipate some good sport in this line. Game in general, especially the little Bob White, is pretty quiet. A party went down near Westerly a short time ago, but returned nearly empty-handed. Our new preserve club is well started, and we anticipate some good from it. The boys are all taking hold well, and as the majority of them are already members of the Rhode Island Game Protective Association, we have no doubt but that it will be a great success. The *Journal* reports: "During the past week sportsmen of this vicinity have been afforded ample opportunity of enjoying sport in the lower bay. It is reported that below Rocky Point, especially in the vicinity of the islands, there are large flocks of coots, canvasbacks and black ducks, numbering several thousands, which as yet have not been rendered shy by innumerable sportsmen, although the past week has witnessed the visitation of large numbers of marksmen in row boats, yachts, launches and small steamers, and many large bags have been obtained. The ducks have arrived in local waters nearly a fortnight earlier than last season and in considerably larger numbers, and the sportsmen are highly elated at the possible indication of the revival of a sport which for several years has been possible in only a limited degree in this vicinity. Last fall a very large flock made their favorite feeding grounds just above Fuller's Rock Lighthouse, near Field's Point, favoring the east shore at the mouth of Bower's Cove."

TODD.

## A POT-SHOOTING POT-POURRI.

WHILE there was an unlimited supply of mutton at the ranch table, it was occurred in our sight from this very fact. Too much of a good thing makes it proverbially a bitter pill ere long. Hence, to come at the gist of the matter on the instant, we decided for a change; and domiciled in the wilds as we were, of course pot-shooting of the more indiscriminate order became our readiest resource for the securing of this end.

If, according to the super-sensitive way of looking at it, this proceeding was declared to be somewhat irregular and wanton, let it be duly affirmed that we were not disciples of this particular school of reasoning. According to the natural run of things, the scrimped inner man and a tender conscience pull apart without any great regard being paid to formalities. It was not for us to dispute the propriety of this. We dealt with the case with unreserved frankness.

The site of the ranch is on the shore of Big Klamath Lake, in southern Oregon; and consistently with the general topographical make-up of the district at large, wooded mountain slope, arable plow land, intervals and marsh are all included within its area. Marked amplitude is a distinguishing feature of the property of course, as otherwise its titular appellation of a ranch would never have been its boast. In fact, its spaciousness is such that our field of operations covered but an insignificant fraction of it; a feature of the situation that took the mete and bound-harried Easterner immensely, and which he enthused over with unsparring breath.

Almost every afternoon while the period of our stress lasted saw us abroad, guns in hand. By "us" a trio is signified, consisting in addition to the writer of two urchins, one Walt, his associate shooter, and the other Cholly, on whom devolved the work of retrieving, carrying the bag and whatsoever other plunder more legitimately proper to the occasion the child could be persuaded to lumber himself with.

Summer was well advanced, and in due order the wheat harvest was over, leaving us free to range the stubble, a broad expanse of which adjoined the ranch dooryard. Here we could count on a never-failing tussle with the blackbirds and turtle doves, as well as an occasional bout with the quail.

The turtle doves, I need not say, were the same identical creatures going by this name in the East. They were somewhat chary as to the selection of their associates, rarely being seen in aggregations numbering over four or five individuals. It seldom paid us to attempt to get within range of them by stalking, as they were too sharp to be approached in this way. We tackled them to the best advantage as they flew by us or over us as seeking fresh resting places subsequent to being put up, and which was wont to result from a drive being made at them by Cholly, who was liable, among the multifarious offices he was called upon to fill, to be made to perform this function.

Under these circumstances the birds were now and again so reckless in their reading of the points of the compass as to come within striking distance of us and so drew our fire. It would be a delightfully gratifying thing to be able to say that we dropped every bird that we shot at. But super-swift as this particular style of shooting is we could not brag of so doing. "Super-swift? Bosh!" one hears the boss shooter of the gun club exclaim. Unanswerably true nevertheless. Turn to Wilson and see what he says of the wild pigeon as a speeder and then recall the fact that the dove is nearly related to the wild pigeon. If the winner of money at competitive shoots—tossed-up coop pigeons and clay chunks being the targets be it remembered—has never had actual experience in this department of marksmanship, the discovery of its deeply exacting character will astonish him not a little, and his clod-hopping rural brother who is master of it is his master also, incredible as it may seem to him.

Being as we were shooters of a quite unpretending grade our success in this line of endeavor was but moderate. If we brought down three or four birds during one outing we counted ourselves quite lucky. As for the eating furnished by the creatures it was genuinely of the strain of the race a little dry, but aside from this fault very good.

The blackbird world here went in for amity and good will in a way that another bipedal kingdom believing itself to be ilimitably its superior in the disposition to honor the finer dictates of the spirit might creditably pattern after. Intertribal differences had no place in it whatever, and all its members met on the common ground of an easy-going and familiar comradeship. If one could trust his powers of identification there were some five or six sorts of the creatures thus lovingly mingled, the chief and most conspicuous kinds being the red-winged, the red and white-shouldered, and the yellow-headed.

The family, as all know, has a strong predilection for meadow lands and low swampy coverts, and in keeping with this innate proclivity, the birds in whose pursuit we were enlisted, located their quarters in a patch of cat-tails adjoining the wheat stubble, where they lodged, loafed, gossiped, and in short fulfilled every function of their lives save that of replenishing themselves inwardly. For this purpose they turned, of course, to the most convenient source, and just now the wheat gleanings met their need in this direction to a charm. Several times a day they fortified themselves with the delicacy in question, and when the multitude was fitly represented at the banquet it was a multitude in very fact.

As with the doves we did for the creatures to the best purpose and effectiveness when they were on the wing, and hence whenever we came upon them, whether on the stubble or in their cat-tail retreat, our preliminary step at the juncture was to flush them. The first move made by them as thus routed, was to withdraw to a willow thicket some 200 or 300 yds. distant, where they passed a good little interval in villifying and berating us in a polyglot chorus and all they knew how. While this was going on we took the precaution to hide ourselves at convenient points awaiting the next proceeding in their programme. This, with more or less meandering and uncertain tacking hither and thither on their part, was to return to the cat-tails, and at the last stage of which maneuver we rarely failed to be given the chance to pepper them soundly.

As the birds were of different lineage so they were found to be of diverse flavor. The yellow-headed variety was the least taking in this particular of the entire lot. The red-winged and the red and white shouldered were far more savory. Still, when all is said, the pie in which

## A VIRGINIA TURKEY HUNT.

SYCAMORE LODGE, Va.—Thinking that one of your many readers might be interested and some of the unitatad instructed in one of the sports that is so fast becoming rare, I give a short account of a turkey hunt which took place in Brunswick county near Lawrenceville, the county seat, on the southern border of the State. There is an abundance of large game, deer and turkey, as well as quail, all through that section. Accompanied by three friends I started out one December morning, our intention being first to bag a buck. The weather was crisp and clear (just suited for the sport), with frost to make it damp enough for the dogs to scent well.

We found no trouble in starting the game, but as all deer hunters will testify, the buck often runs the wrong way—which was the case with us, the deer coming nearly close enough for a shot to two of our party, and the hounds taking it to the river in short order. So at 1 o'clock we turned our attention to turkeys with more success. We hunt turkeys with setters or pointers, which are the best because they do not open on the track, and are able to get well on to a flock of turkeys without being heard, so that they can the more effectually flush and scatter them, which is absolutely necessary for success.

We started out on horseback, separating in a short while, and going two and two, more easily to cover the ground, and giving our dogs a wider range. We had proceeded a little over a mile through woods and fields when we heard our friends call to "look out." We knew they had found the game, and about the same time our dog started a flock of five gobblers close to us in another direction. Our friends had come up with about 20 hen turkeys feeding in a cornfield, and as a turkey needs never to be told of your presence when you are in sight, they immediately rose and flew across a field about 400 yds., and not scattered, coming down all together. We quickly put our dogs, Bob and Topsy, after them, and they got them up again in fine style, putting them up in the big pines in every direction.

It being then about 4 o'clock, and knowing the birds would not call together before morning, we began preparing for that time by making new blinds for our visiting friends, in the direction we thought most of the flock had flown. Our friends did not know the use of a call, so we purposed placing them so as to get shots at turkeys coming to the calls of Mr. B. and myself. After finishing the new blinds we made arrangements for our meeting the next morning. Just as we separated a very fine turkey dashed out of a tree almost over our friends, but it being so unexpected he got out of range of successful shot, though one of us fired at it as it went off.

The following morning we met our friends at the appointed time, 6 o'clock sharp, and went to the positions chosen the previous evening. I made a blind on the line of a fence in a corner, stopping the cracks with dried leaves and pine bark. Mr. B. went on about a quarter of a mile from me on the same fence. I had not been in the blind more than five minutes before, making a call, I was at once answered by a young hen, which ran up in easy range, and which I bagged after a little run with my dog. I broke a wing, and without a dog would have had to give a lively chase.

I continued calling at intervals, and in about half an hour was again put on the sharp lookout by hearing a well-known *cluck* or *put* close at hand. Looking carefully out I discovered two turkeys coming rapidly toward me, but so far apart as to make a single shot kill both impossible. Quickly deciding (as must always be done in turkey shooting), I shot down the one furthest off, intending to get the other on the rise; but there was so much smoke that I could not see; and both turkeys got off together. Knowing that the range had been all right, and seeing feathers, I listened for a fall and thought I heard it. I had then had two shots with nothing heard from my friends; and it seemed that they "would not be in it." But I did not have to wait long before a turkey flew directly over one of our visitors, about 30 ft. above his head; but being engaged in eating his lunch he missed it. After another short interval I heard a shot in the direction of Mr. B., and counted on another turkey, and not in vain, as he had called up and killed the old hen of the flock. After waiting patiently for half an hour I heard another call; and quickly answering laid down my call and got ready to start, which I had to do in about a couple of minutes, another hen coming up directly in front, which I killed dead in her tracks.

I then had two turkeys in the blind, and after waiting some time and hearing no more calls, we whistled ourselves together and began search for the turkey which had flown off after being shot. Having gotten the course pretty well and feeling confident that she had not swerved, we went straight for about 150 yds., when one of our friends a little in advance called out: "Here she is." And sure enough to my delight there she lay, having fallen dead, as I thought I had heard at the time.

After dividing spoils, having a turkey each, we made our way home, well pleased with our day's sport, and promising to repeat the same about Christmas.

Some of your readers may recognize my friend Mr. B. and his dog Old Bob, as their companions in some of their past visits to our parts.

VIRGINIAN.

## One of the Incidents that Linger in Memory.

FOREST AND STREAM has had many accounts of first shots at game. The fond recollection of that event in my own experience is as fresh in my mind to-day as if it had occurred but yesterday.

My musket was not a celebrated one, in fact it was *sans* tradition, *sans* pedigree, *sans* almost everything—even a ramrod. This I remember distinctly; for I could not load the old thing until I had manufactured one with my old "Barlow." If that particular gun had been through any celebrated battles I never heard of it; but it possessed just as many attractions for me then as if it had been a relic of Bunker Hill. But this it might have been for all I know, 'twas certainly old enough.

I lived near the little town of Camden, Ohio, and was about ten years of age at the time of this exploit. That was many years ago—I don't just like to tell how many, for fear I might be considered an old man now, and I had been brought up, as most well-regulated boys were in those days, to keep my hands off firearms of all kinds. But, like all boys, my memory was very short when my mother's back was turned, and I lost no time in sneaking that old musket and making for the woods. I loaded it with great ugly slugs of my own make; and the ramrod,

as a matter of convenience in carrying, was left inside the barrel. As I went marching up the lane and feeling very big and very brave, I soon spied a solitary yellow-hammer and quickly squared myself into position to fire. As the musket was entirely too heavy for me, big as I was, it had to be supported across a rail of the old worm fence. Then I pulled. In the excitement of the moment I had forgotten to remove the ramrod, and when I pulled the trigger the gun refused to go in the right direction, but set up a mighty back-action sizzle that frightened me nearly out of my skin, and, throwing the thing upon the ground, I went off myself, and I was not at all slow in doing it either. I waited a long time to make sure that it would be safe, then went back and picked up the musket. But the yellowhammer wasn't there; I never saw him afterward. The ramrod was all right, just where I had left it, inside the barrel, and it required the services of the village blacksmith to extract it. H. R.

## SEEN AT THE FAIR.

YOUR very good Mr. Hough has much to say about the Fair, but may a word not be said by some of your readers about it? He says So and So has been at the FOREST AND STREAM exhibit, annexed to which is the Fisheries Building, but of course he cannot know what So and So has been a-doing. Now, when I left home Mrs. Kennedy who had already been to the Fair, said to me, "Now George, keep off the Midway." And so, as soon as I got inside the grounds, I went to see what there was about the Midway that made my presence there inimical to it. I found nothing. I mean that I found nothing that I could harm or destroy. I was put out at about 12 o'clock that night, and before seeking my cot (N. B.—Recent visitors to the Fair will understand this is no poetic allusion), I snatched time to write a postal home to assure my family that I was off the Midway. I also observed that as I was only to remain a week I hoped to finish that department of the Columbian celebration in time to devote the last day of my stay to what was on the other side of the track.

I believe I have never yet put my awkward pen to paper in the interest of anybody's firearms, and I never will, because I have nothing against any of them. But wandering through the gun precincts my eye fell on one of the repeating shotguns, the merits of which you devote some space to in your paper, possibly for hire, and I feel called upon to warn all your "gentlemen of the hunt" against them. You can put one up to your shoulder and pull a little on the pistol grip after you have pulled the trigger and the miserable thing gets itself loaded and cocked again and you never get off your aim a fraction of a second. All a person (I say a person) would have to do would be to wave the muzzle around a little while he was working it and it would cover all the territory in range of his vision. You could turn an organ-grinder's bald-faced monkey loose with an arm like that and he would be killing jacksnipe and green-wing teal with it in two days' practice. I can't see why some real intelligent man don't patent a wood duck twine binder that can be driven along the township roads and harvest all the wood ducks on either side for two miles back and do them up in family and restaurant bunches. Separate gear wheels for total quail or chicken extermination. Fellow Foresters (and oh, the alchemy of the name of our national patron saint of the gentlemen of the hunt), I speak in seeming jest, and yet I leave it to each of you to decide how much foolishness there is in my thought. You have in a few short years killed the destructive 10-gauge as dead as though you had used an ounce and a quarter of shot and five drams of powder. Kill the magazine shotgun.

Hunting rabbits with ferrets; chasing deer into lakes with hounds and then shooting them while the guide holds them by their tails; making glue out of eggs stolen from mother wild ducks; shooting prairie chickens in July—are all characteristic methods of slaughter by that vandal called by the more truly distinctive title of game hog. He needs two things more—an electric motor to hurry him from one holocaust to another and a shotgun mitrailleuse. It is not my province to speak for the FOREST AND STREAM, nor its to apologize for me. It advertises guns. It caters to sportsmen. But it is not to its advertisements it owes its prestige, nor yet to its catering to sportsmen. It owes it to its adherence to certain principles; and it will not let go of them if it knows it. One's principles are the essence of one's vitality. But if we are to have a perpetual class of American sportsmen to keep alive the blessed gospel of rest, we must try and enable the general public to properly categorize the game hog and his weapons. Sometimes he is a foreigner to our soil, in his fatherland accounted too low caste to be intrusted with a gun, whose swelling New World freedom finds vent in prowling the suburbs with a fowling piece and killing a rabbit in season and all things else out of season. Sometime he is a titled and gentlemanly-appearing foreigner who leaves elk to rot in Colorado cañons or a barrelful of grouse on the platform of a Northern Pacific station.

Sometimes it is a pure and free-born American who says in his heart, "There is no law, or at least nobody obeys it." And about as often as not he is of high degree. I recant that. He is as often as not a rich man. But whether the ignorant emigrant, the enlightened aristocrat from Europe or the misguided son of our own beloved country, he is of earth earthy, and his name is game hog. You cannot poison him, as you do the wolves that pursue the timid deer. You cannot trap him, as the weasel that steals the eggs of the grouse and woodcock. You can fine him, but you cannot refine him. You can only scorn him and his methods and his means, until he understands that the world is looking at his deeds with disgust and aversion. I have no fight with the proprietors of these new guns, only I don't care anything about them one way or the other. If it is as good as I think it is as a repeating arm, and if they confine it to the legitimate and reputable field of magazine arms—the military and hunting rifle—they will sell them as fast as they make them. If they are, on the other hand, in the business of manufacturing exterminating fowling pieces, then God help the fowl, unless we can give their exterminator a bad name in decent communities.

GEORGE KENNEDY.

## Long Island Ducks.

DUCK SHOOTING has been the order of the day in the Great South Bay, and parties from Sayville have made some great strings.

the birds figured, needed a plentiful admixture of thinly sliced salt pork—that *magnum bonum* in the seasoning line—to fill the bill perfectly.

Gorgeous swells in their way, the quail here were indeed something very fetching to the Easterner. And it was the distinguishing boon of the locality to be stocked with both sorts of the representatives of the race common to our middle Pacific Coast, and which as all men know, head the quail roster in point of grace of contour and charm of costume under the names of the mountain and the valley quail.

Of these two exquisites the former was the more plentifully met with, the generally sub-alpine character of the district suiting its idiosyncracies to a dot. But the latter was no stronger in the locality, although the lead numerically was decidedly with its rival; lower latitudes and regions of the true valley stamp (as its name would imply) being its special choice in the residence line. Both species were emphatically birds of the cover. If they sought the open it was in furtherance of some fresh scheme edible or potable in its bearing, which in a way took them out of themselves. It was of course while on their rounds undertaken in this spirit that they took the stubble in. But in doing this they kept their minds well on the alert to study prudence in connection with their comestible venture, and so restricted their visitations to the place to one particular part of it where a closely contiguous thicket of plum brush afforded a readily reached secure asylum from inimical attack.

As yet the bebies of either species were made up of the old birds and their progeny for the year. In point of growth, however, the juveniles were almost the equals of their elders. It was only when their attire was studied, that the young fry were observed to figure in a less telling way than their papas and mammas.

The quivers of the mated pairs of either breed were abundantly full in the true family fashion, the broods numbering at the lowest from twenty to thirty buds and sprigs. Strict non-intercourse was the abiding rule with these tribes and on which score the blackbirds read them a signally improving lesson. Sociability of the franker sort, as it must be conceded, is a flower needing a trustier form of gentleness to give it birth. The subjects of our present notice had evidently a long road before them to travel ere they would have done with feral offishness and distrust.

Whether as runners or flyers, there was no shortcoming on the part of the birds of either kind, of whatever age. But be the reason what it may, they preferred to leg it in parting company with us as we sought to entreat them cartridgewise. This unaccommodating and foxy mode of dealing with us as good as spoiled our game. What we were required to hit might be likened to a lightning streak fleeting across a few yards of the earth and then suddenly breaking off and vanishing utterly. Is it any wonder, then, that we came out a long way scold best in the tussle? Yet in spite of the fearful odds against which we strove, we now and then succeeded in making a shot count, and scored even the smallest of these triumphs with not a little hullabaloo, as the eating afforded by these bipeds at this particular stage of the season was simply ravishing.

Our quest usually wound up with a side stretch of about half a mile in length, made from the stubble to the lake shore. The hopes of getting in a little telling work among the blue-winged teal was the incentive by which we were moved to this proceeding. The fowl in question as everybody knows, is a genuine delicacy, gastronomically speaking, more particularly when its development is due to fresh-water influences.

The species is an abundant summer resident in Big Klamath Lake, being seen here in all stages of its career, from a small ball of yellowish fluff to the well known suit of buff and blue. In these ripper summer days the juveniles of the race were just passing out of the flapper stage, which is equivalent to saying that they made a first-rate dish, if not altogether as good as they would be later, when they had reached their full growth and were fatter.

Our pursuit of the creatures gave us lots of fun. The scene of the chase being the body of the lake, we took after them of course in a boat. The labor of rowing fell to the lot of the boys, the writer putting this job on them very coolly, holding it to be his special privilege to take his place majestically at the stern and do the popping.

We generally found the birds feeding among the lily pads; abundant growths of which were distributed in many parts of the lake, and constituting a singular interesting feature thereof. As the creatures noted our approach they, of course, scuttled off. The old birds withdrew in due order on the wing, while the younger fry sought to be rid of us by a natorial scramble.

It was most generally the latter that were to be most opportunely attacked by us. The closing in upon them of necessity involved a deal of racing on our part, and which always had its hot incidents of turning the boat in the space of its own length in a hurry, being stranded on a snag and getting off again all in a fume, partially upsetting, and so forth. When the quarry was at last brought within range, as it offered a mark zig-zagging in every conceivable direction, and at the best with but its head in full sight, a direct crisis, as is obvious, was reached, that in a small way, but decidedly for all that, put the shooter on his true nerve to make good his aim.

Now and then in the pursuit of the teal here, we came across other ducks—the spoonbill and ruddy ducks among them—but none in sufficient plentifulness to invest us with the honor of a genuine acquaintance with them either prandially or in any other guise. The lake was also the summer home of other fowl not generally held in esteem as a form of sustenance with civilized humanity. These were gulls and terns of sundry sorts, cormorants, and over and above all pelicans. These latter dignitaries are worthy of an amply free notice commensurate with their breadth of character and bodily bigness. But here is no place for the work, and we have no option but to conclude.

W. L. TIFFANY.

## Arkansas Promises Well.

LITTLE ROCK, Oct. 15.—Our quail crop is unusually large this year, but birds are small yet. Our fall flight of ducks is on now. Also large flocks of geese are seen going south. Have enjoyed some fine wood duck shooting, and have bagged a number of mallards, teal, sprig-tail and bluebills. We have good mast this year and expect good duck shooting.

JOS. IRWIN.

### Partridge, Gray Squirrel and Ducks.

BROOKLYN, N. Y., Oct. 14.—I presume that many of your numerous readers are desirous of obtaining information where a reasonable amount of game may be found. I have been in doubt on the subject many times, and that I have been misled by articles in the papers which I found to be untruthful. Very few places within 200 miles I have not visited, and in the majority of instances only to meet with disappointment. Now it is my purpose to give to our hunting friends a locality where they can obtain the best all round hunting of any place I have found. It comprises partridge, gray squirrel and duck shooting, and even fishing if taste tends in that direction. In reference to partridge, it is possible that the number will be very much scattered as the past winter was so severe, but quite a number will be found by a good dog. This will be an off year on partridge in every place with but very few exceptions, and besides, the game law permits the shooting of these birds altogether too early in this State—Aug. 15—when the young are only little more than two-thirds grown, but I presume the summer hotels must be supplied, or at least their guests so inclined must have amusement.

I have recently returned from my short vacation and I desire that all good people may have a chance to get rid of their dyspepsia.

Take the cars of the D. & H. Canal Co. for Delano, Lake Champlain. It is only about seven hours' ride from New York. This stopping place is near Ticonderoga. About a quarter of a mile south of the imaginary depot is a hotel kept by Henry Blomhard, who will be found very kind and obliging. He supplies very good quarters and meals furnished at a very reasonable price, also boats, decoys and guides. It is my opinion that the guide I had is the best I ever had. His word can be depended on and he never gets tired of hunting, and he would rather hunt than eat. His name is Charles H. Morrison. He has a good boat which is perfectly safe even if there is a little wind. When I was there last week it was too early in the season for good shooting, but from this time on ducking will be in full bloom. The kind of ducks to be obtained are the black, green and blue-winged teal, redhead, lakera (local name), canvasbacks, butterballs and whistlers. Some large snipe on sandy beaches are to be seen, which the natives call plover. On the hills near by there is good fox hunting, and good foxhounds can be obtained at "Ti." Blanchard will attend to all the sportsman wants in that direction. J. CORBIN.

### Little Reelfoot.

CINCINNATI, Oct. 16.—Word has been received here that a section of land, about a quarter of a mile, caved in not far from Reelfoot Lake, Union City, Tenn., several nights ago. People who viewed the terrible slide next day were astonished almost beyond belief to see the land sunken out of sight, the treetops and water about 100ft. below what had been dry ground the day previous. The sink was partial on the northern extremity, gradually getting deeper and deeper toward the southern side until it obtained its greatest depth. It appeared as though this tract of land had been resting on a shelf rock, which, having been partially destroyed by the action of the water for an untold length of time, had suddenly given way and formed this lake. The strangest thing concerning the occurrence is that there are hundreds of catfish, perch, buffalo and other fish swimming around among the débris. It is almost impossible to be convinced that such a body of land could fall without producing something on the order of an earthquake that would have alarmed the surrounding country. When Reelfoot Lake was formed in 1812 the occurrence took place in almost exactly the same manner as described above, except heavy earthquake shocks preceded the sinking of the land. WICK.

### Game in Georgia.

ATLANTA, Ga., Oct. 19.—The hunting season is now open, and the outlook is indeed very good; notwithstanding the heavy winter, partridges have done very well, though they are yet very young. Squirrels and turkeys are very plentiful in the northern part of the State. Rabbits abound everywhere and there are more this year than ever before; the hard winter must have done them good.

There is one class of sport I never see mentioned in FOREST AND STREAM. That is possum hunting. Of all the hunting I ever indulged in, the pursuit of the opossum is in my opinion the greatest. Except chasing the wily fox I know of no sport so exhilarating as to go out at night with a good pack of hounds, torch in hand, and follow the sullen possum till he is tired. I was out Friday night with four hounds, and caught six averaging 9lbs. each; that is considered a pretty good catch for one night.

The Georgia State Sportsman's Association met here yesterday, and after transacting business adjourned to meet in Atlanta next year. Georgia will soon be as well protected as any State in the Union, and then woe be it to the pot-hunter who is now the curse of the State.

W. L. H.

### Much Game in Nebraska.

EXETER, Neb., Oct. 16.—All the birds with the exception of the robin, and a few meadow larks and snipe have left this section. Bob White was never more plentiful; every hedge, thicket, or any place offering the least shelter has its covey, riding in the country one can hear the little fellows calling on every side.

Yesterday a flock of sixteen flew into my corral and stayed quite a while round the straw stacks. Ducks and geese have not shown up so far, although they would not probably stop on account of the water holes being nearly dry.

One can get a jack rabbit by just walking across the fields, while the little cotton-tail can be shot from one's doorstep. Chickens are also quite numerous, more so than for years past. Five wolves were seen about two miles south of here yesterday. DIAMOND WALT.

### Rhode Island Game Birds.

ALL reports this fall are not very encouraging. Woodcock are fair, partridges scarce and very wild. Few bags are being made. Of quail there are scarcely any to speak of. Of the several hundred turned loose hereabouts last year, but very few are being bagged. It is thought probable that our last severe winter killed them off. Some of our best men went off a week ago and were gone several days in the southern part of the State, but bagged scarcely enough birds all told to speak of.

We don't see so many snared birds in our Providence

markets this fall, thanks to the good work of the Game Protective Association, but we still see that they are snared. Keep at them, boys, and you will not regret your hard work.

When the boys go into the brush why don't they knock over all those little sinners, the red squirrel and chipmunk, they come across? Did it ever occur to the majority of our shooters that these little rascals are sometimes the cause of the scarcity of birds? Well, they like fresh eggs as well as the fox, and we might as well wage war on all the tribe. Give the grays a chance, weed out the reds and it will help a little.

If you want to make sport of it, try them with the little .22 rifle. Don't despise the game or the gun. We may have to come to it some day round these parts.

We shot a cock partridge up in northeastern Rhode Island yesterday that appears to have been the original partridge settler of this State. He is a big one and flew several hundred yards after being hard hit. We would have lost him if it hadn't been for old Sam, that old veteran of a dog. The bird was marked down as dead and Sam came near getting a licking because he insisted on going further on. But he had his own way and later came down the cart path with the old settler in his chops. The old dogs know a thing or two. TODE.

### "Chained to Business."

WHAT a joy (and one, too, that never cloy) is the dear old FOREST AND STREAM to one chained to work, day after day. And on Saturday night, after reading it through, I sit in my easy chair and through the tobacco smoke gaze dreamily at shotgun and rifle, fishing rod and spurs, that hang on the deerhorn rack facing me. Again I see the buck bounding past and hear the crack of my old rifle. He's down! No, up he gets again, but only to fall for the last time. What memories, O, FOREST AND STREAM, do you recall; I cannot wring them from my heart. Years may roll on, hand weak and heart grow old, but never till both grow cold can I forget the past pleasures of the chase. I would not, for these would I remember. In reading your columns my spirit mounts upon the wings of fancy and once more I stand with gun or rod in hand. But the clock strikes ten; the dream is broken. In passing to my room I cannot help holding the light close to the shining barrels and giving them a loving glance. The portrait of the moose recalls old memories. I was once so fortunate as to kill a bull moose, but unfortunately I spoiled his horns with a 55grs. ball. Your animal portraits in neat frames add a good deal to my dining room. BRIAN THE STILL-HUNTER.

### What Should the Squirrel Season Be?

THOMPSTOWN, Pa., Oct. 20.—In a number of your journal three or four dates back I was gratified to find one writer protesting against the open season date for squirrels, Sept. 1. Why have not decent, intelligent squirrel shooters written in support of the view expressed. At that date and for weeks the squirrel is lean, has fleas, and as many females are suckling young, there are of course many baby squirrels. Forty years ago I shot squirrels—a few last and this season. I cannot realize that it is sport, but many do enjoy it, and I am sure every decent one would be in favor of a later date, if his observations correspond with mine. Speak out, squirrel shooters. Oct. 15 I should say was the earliest date allowable. Each season I am more emphatically convinced that but one date for opening and closing on all game would be the best for Pennsylvania. Then the lawless would have no pretext for hunting, and the law abider no temptation to overcome. JUNIATA.

### Florida West Coast Resorts.

BRISTOL, Conn.—In "Answers to Correspondents," "C. B. N." asks for a pleasant, healthy spot near some village on the Gulf Coast of Florida, to camp this winter and get a fair share of salt and fresh-water fishing. I would advise that he go to Indian Beach or Sarasota. This, I think, is one of the best places to camp on the Gulf Coast. Sarasota Bay is the paradise for an expert fisherman, and there are many streams flowing into the bay that are well stocked with fresh-water fish. This is also one of the best places for game in Florida. Deer, wild turkey and grouse abound in great numbers. C. S. Y.

### Michigan Is Over Shot.

IRVING, Mich., Oct. 20.—Quail and partridge are not very plentiful. Squirrels and rabbits ditto. Hunting in and out of season, and the ferrets will soon play out the best game. As you remark, the closing of manfactories in city and village fills the fields and woods full of men and boys, while in every place are those who kill, kill, kill. I have not found the time thus far to use my old Remington and see no chance in this month. Y.

### The Winchester "Take-Down."

THE new Winchester "take-down" model of '92 repeater fills a long felt want among sportsmen, and is sure to prove very popular. It can be taken apart almost as easily as a shotgun, and as it only requires a trifle over 2ft. of carrying space, can easily be put into a trunk or large valise. A simple readjustment guards against looseness of the joint and inaccuracy resulting from wear of the mechanism.

### Gray Squirrels in West Virginia.

PHILADELPHIA, Oct. 19.—I see in your issue of Oct. 21 a letter from H. B. C. asking for information as to some locality where he can get good gray squirrel shooting. I have just returned from Capon Springs, W. Va., where I found the squirrels very plentiful. Two of us got 18 in one morning. Rabbits are abundant and the quail shooting promises to be good also. Capt. W. H. Sale, of Capon Springs, can give any information desired. T. W.

### READY NEXT WEEK.

## "The Complete Sportsman."

BY HOWLAND GASPER.

A manual of scientific and practical knowledge, designed for the instruction and information of all votaries of the gun. Price \$2.50. Forest and Stream Publishing Co., 318 Broadway, New York.

### Sportsmen and Farmers.

FLINT, Mich., Oct. 10.—I do not wonder that farmers "kick" at sportsmen. I have seen hunters go across farms, and when they came to a pine board fence or large wagon gate they would empty both barrels through the boards and spoil the gate. I cannot see for my life what could be their object in this except for "pure devilry."

I cannot afford to pay 40 cents a pound for powder and then use it up in that way, besides making the farmer look daggers at me the next time he sees me. I have seen hunters throw down the rail fence and never stop to put it up. Well, I don't put it up either, for I am too lazy to throw it down. I crawl through a hole in the fence; that saves throwing it down; then no one "kicks" at me. W. H. W.

### Grouse in Town.

SOREL, Can., Oct. 15.—On Sept. 30 a ruffed grouse was shot in the public square here, about 30yds. from the express office. On the 14th inst., another was seen in same locality, which accommodatingly awaited the arrival of a man with a gun, who made short work of it. Sores is a city of nearly 7,000 people, and the square, which is 400×400ft., is in the middle of the town. The appearance of ruffed grouse in such a place is the more noteworthy from the fact that these birds are very scarce in the immediate vicinity. I have been out for them frequently, but have only killed some fifteen or twenty in the past four years (of course, I didn't think of hunting so near home as the square). F. W. G. J.

### Game at Umbagog Lake.

BETHEL, Me., Oct. 20.—Sheriff C. M. Wormell, with a party of Portland friends, have just returned from a deer hunt on the Magalloway. They shot five deer and brought out four of them in the hides. Birds are fairly plentiful. Dr. C. D. Hill, of Bethel, has shot a large lot of woodcock this fall, and partridges are abundant. Around Umbagog Lake bear, moose and deer tracks are seen every day, and it only needs a sharp, persistent hunter to secure a good share of large game. This place is reached by Grand Trunk R. R. from Portland, Me. J. G. RICH.

### Minnesota Moose and Indians.

RICE LAKE, Wis., Oct. 18.—Looking over FOREST AND STREAM of Oct. 14 I came across the article "Minnesota Moose and Indians," by Mr. Shields. He certainly speaks the truth when he says the moose of those parts are being butchered. I spent July and August at Grand Rapids, Minn., and think I am safe in saying that not a few of the inhabitants of that country make a living by killing game, and selling it to hotels and boarding-houses the year around. OBSERVER.

## Sea and River Fishing.

### THE HURRICANE AND THE FISH.

THROUGH the kind invitation of friends on Murrels Sound (or "Swash" as it is locally called) I found myself one bright morning on the way to the coast of South Carolina, where, several years ago, I have enjoyed rare sport with the rod and deep sea line. The great storm of August, which caused such widespread devastation and loss of life among the Sea Islands, had been over for about two weeks, but I little thought that its effects would influence the sport that I eagerly looked forward to.

My course lay through the historic little city of Georgetown, on Winyah Bay, and from that point I proceeded up the Wacamaw River about thirty miles to Watchasaw, where a conveyance met me and carried me to my destination on the Sound, a distance of about three miles. The Wacamaw River takes its rise in North Carolina, in Lake Wacamaw near Flemington, and its short course of about 200 miles, including its many curves, lies at no time more than ten to fifteen miles from the ocean, after approaching as near as one and one-half miles. A careful survey of the river, from the shores of the lake, which are thickly covered at certain points with oyster and clam shells, to its mouth, leaves very little doubt that it was at one time a sound with many openings to the ocean. At present it is affected by the tide for nearly 100 miles from its mouth. Along the banks are the rice fields, which prove a paradise to the duck hunter during the winter months.

The first object that attracted my attention to the late storm was the extremely high tides which prevailed, and as I proceeded up the river the sight of mullet jumping around in the fresh water was a sight I had never seen before. I then noticed that, though only September, the vegetation had all the appearance of the dead of winter, not a green leaf being visible on the beautiful cypress trees that line the rice field banks. And this state of affairs, I was informed, prevailed far inland, where the salt spray from the ocean seems to have acted on the vegetation as boiling water might have done.

From the point where I left the river steamer to proceed across the neck of land separating the river from the ocean, the effects of the gale were evident in the thousands of uprooted pine trees, which in many places were piled 10ft. high. These trees had been a source of revenue to the owners, as they formed an extensive turpentine farm; but now all that was destroyed. So densely were the fallen trees packed that it would be next to impossible for the turpentine hands to get about among them, even had there been enough left standing to operate upon.

Arrived at the coast, the scene of desolation was still more heart-rending, for the giant live oak trees, of which every resident on our coast is justly proud, looked as if their last day had come. Such as were not uprooted, had their mighty limbs torn and twisted from the parent trunk, and here again the salt spray had destroyed everything green except the salt marsh grass.

While regretting all this, and rejoicing that the lives and property of my friends and their neighbors had not met the sad fate of the people around Beaufort, S. C., we consoled ourselves with the belief that though the wind might ruin the trees on the land, it could not hurt the ocean and the fishing therein. But, alas! there we reckoned from ignorance.

Every day (Sundays excepted) for ten days, with choicest bait and carefully prepared tackle, we scoured the sound from inlet to its furthest points, and nowhere could we find anything but the smallest kind of blackfish and

"pig" fish. Where in times past, and up to the time of the gale, it was no trouble to capture hundreds of fine whiting, weakfish, bluefish, cavalli, and in fact, all the varieties for which our coast is famous, nothing was now to be found but the small fry mentioned. Not even the excitement of a fight with a shark, or the strong pull of an ocean cat, which have hitherto proved a nuisance to anglers, occurred to vary the monotony.

Now, what was the cause of all this? Where had the fish gone? This we were unable to determine; but one thing we certainly did know, that whereas the waters of the ocean and sound have always been of the clearest, being far removed from the mouths of any of our great muddy rivers, they were now so thick (and the yellow mud boiled and churned in them as thoroughly as it does in the Mississippi during a flood) that nothing but accident could cause a fish to stumble on our bait. For a brief fifteen minutes at dead low water the ocean would clear up, and then the advancing tide would sweep in yellow mud like the overflow of a "clay hole." And this, too, almost four weeks after the gale. Reliable information reached me that the clear coral reefs five miles to sea had taken on a thick coating of this same mud, and of a consistency that would adhere to the lead of a deep-sea line. Where did this mud come from? Could it be possible that while the winds were spreading destruction over the land some submarine eruption was going on?

One noticeable result of the storm was that hundreds of thousands of sea fish found their way far up the Wacamaw River, where they died and rotted in the swamp. In the disturbed condition of the ocean they undoubtedly mistook the river mouth for the sound inlet.

After ten days of hoping for better luck next day, without that hope ever being realized, it became necessary to bid farewell to my kind friends and the unkind ocean, but before leaving I had the satisfaction of seeing nature reasserting herself and the apparently blasted oaks putting out their bright yellow buds for another coating of green. It was certainly a strange sight to see spring in all its glory at the latter end of September. But there it was, trees budding, weeds springing up through the dead leaves, and peach, apple and plum trees in blossom; and so ended my fishing for this year.

Before closing, it is with regret that I have to relate that the last storm of Oct. 13 has swept from the face of earth the many beautiful homes of my friends and acquaintances around the sand, and caused the death by drowning of fifteen of them. Happily the family with whom I spent my fishing trip escaped with their lives, but their beautiful summer home is a ruin.

SOUTH CAROLINA, October.

W. M. BROWN.

## ANGLING NOTES.

### An Editor.

The biped man is a natural kicker! Some men kick from what they consider principle, some kick because they are made that way, some kick for exercise, and some kick—just to kick. Some kick a feeble, one-legged kick, some kick with both feet, some kick with their "hind legs" only, and some kick as if they were centipeds instead of bipeds. Some men kick at their dinner, some kick at the moon, some kick at the weather, some kick at their luck, and everybody kicks at the editor. Not all kick for the same reason, but all kick, just the same.

If there is any living man, who can read, who has not had his kick at the editor, it is because his turn has not come yet; but it will if he will take the papers, read them, is patient and in readiness to kick when, in his opinion, the occasion is ripe. Most bipeds kick with their "hind legs," and for the same reason that a long-eared quadruped kicks—they were built that way, ground plan and hind elevation. The kick may not be sighted for the editor, but if it is aimed at the proof-reader or fired at the compositor's range, the editor gets it finally. The editor who edits a paper for sportsmen gets fewer kicks, perhaps, than his brethren, because very few sportsmen have "hindlegs" to kick with, and if anglers kick less than dogmen or gunners it may be because they are a sort of amphibious animal that, if they develop anything, develop wavy, yielding, soft-rayed fins, like the wings of a cherub, instead of rudimentary hindlegs. I shall not pretend to deny that a properly adjusted, perfectly calculated kick, if applied at the right time, in the right place, and in a proper frame of mind on the part of the kicker, may not do the kicke a world of good. Few kickers ever become artistic as such, and great care should be exercised that the habit may not prove chronic and as incurable as the opium habit, for I have read:

"But as some muskets so contrive it,  
As oft to miss the mark they drive at,  
And though well aimed at duck or plover,  
Bear wide, and kick their owners over."

This train of thought was started from reading what an angling editor said very recently about himself and his newspaper. The editor was Mr. R. B. Marston of the *Fishing Gazette*, and he was on a fishing expedition with Mr. G. Yarde, of the Fly-Fishing Club, London. This is part of Mr. Marston's story: "I fished with G. Y. long before the *Fishing Gazette* was heard of; I first saw it at his house. 'My dear sir (a favorite expression of his, even when talking to an old angling chum), if you took up this paper you'd make a fortune by it.'

"Well, I took it up, and if I have not made a fortune I have made countless friends, which is far better, for if you have enough to struggle on with and pay the poor's rate it's all right. I have, as our friends across the water say, 'run' the *Fishing Gazette* simply from a deeply-rooted love of angling, and a keen enjoyment of the companionship of the lovers of angling. I have endeavored to give offense to no man, but, as dear old Isaac Walton said, over two hundred years ago, 'there are offenses given, and offenses not given but taken,' and I long ago found that it was a sheer impossibility as editor of *Fishing Gazette* to please everybody." For *Fishing Gazette* substitute the name of any other paper, and in the last quoted sentence I imagine the experience of every editor will be found, given in a nutshell.

### Ouananiche.

Last summer my friend, Mr. E. T. D. Chambers, of Quebec, asked me if the ouananiche of Lake St. John had ever been examined by our ichthyologists, and if not he would send specimens to whomever I might suggest, "for life is too short to be spent in wrangling out the question of identity." It is so well known that the

ouananiche is the landlocked salmon, so-called, and that the landlocked salmon is no other than the sea salmon, *Salmo salar*, with its home in fresh water, that my first thought was that the ouananiche had been examined, but I could not find that any of our authorities had ever passed upon this particular fish from the waters of the St. John region. It is true that Mr. J. G. A. Creighton, of Ottawa, in perhaps the best paper that has been written upon "The Landlocked Salmon or Wananishe," has said, "Nothing in the range of observed facts relating to the *Salmonidae* is better established now than the existence in certain parts of the United States, Canada and Sweden of a salmon which inhabits lakes and is anatomically indistinguishable from the salt-water salmon." It is quite proper to note in this connection that Mr. Creighton also said in the article from which I have taken the above extract: "In British Columbia, too, a lake salmon is found concerning which my information is at present too meager to enable me to say more than that it is highly probable that under similar circumstances some of the Pacific salmon, admittedly quite distinct species from *Salmo salar* of the Atlantic, have acquired a fresh-water habitat." A year after this was written Dr. Jordan described a new landlocked species of salmon from Kamloops Lake, B. C., and Mr. Creighton wrote me that this was the fish referred to. Dr. Bean has also described a new landlocked salmon on the Pacific coast, *O. kennebecensis*, distinct from *O. kamloops*. As Mr. Creighton's article is found only in an expensive book, I thought, with Mr. Chambers, that it might be well to have a Lake St. John ouananiche examined by one of our ichthyologists for the benefit of such anglers as maintain that this particular fish is different from the landlocked salmon of Maine, and at my suggestion Mr. Chambers sent two fine specimens to Prof. Samuel Garman, at the Museum of Comparative Zoology, Cambridge, Mass. Prof. Garman writes me briefly that the ouananiche of Lake St. John is not different from *Salmo salar* of New England, or to quote him more specifically: "In regard to specific identity, I see nothing by which to distinguish the fish of Lake St. John from *Salmo salar* as represented by specimens from New Brunswick and Maine, or other New England States. It may prevent misunderstanding if it is explained that I take the fresh-water individuals, including of course those truly landlocked as commonly designated, to be the better representatives of the species *S. salar*. As you are well aware, no distinctions are made between young born of parents that have returned from the sea and those of others which have never been there. Propagation takes place, so far as now known, only in the fresh waters, and the fact that some individuals leave them for a time, becoming somewhat modified by so doing, neither gives rise to a different species, not even a different variety. The change is simply variation of an individual, which variation is not at all a necessity for the continued existence of the species." Referring to the landlocked salmon of Maine which are known as *S. salar*, var. *sebagus*, Prof. Garman says: "In reality there is no variety *sebagus*, it is the species itself; the variation occurring in the individuals that get to sea, but being individuals that do not reproduce the variation—their offspring being the landlocked—there is no variety." In other words, it will be well for anglers and others to bear in mind that the life history of the sea salmon begins in fresh water and ends there, except for such individuals as cultivate a desire for salt water.

A. N. CHENEY.

## ANDROSCOGGIN ANGLERS.

### Angler's Protective Club.

RANGELEY, Maine.—*Editor Forest and Stream:* The Angler's Protective Club of the Androscoggin Lake, has been engaged in rearing salmon and trout for these waters for a long enough time to convince us that the restocking of these waters can be accomplished if proper support is given to the undertaking. The club has now a hatching house, large enough to hatch annually 1,000,000 fish. The water supply is satisfactory in flow, purity and temperature. During the past season we hatched, with a very small percentage of loss, something more than 200,000 salmon and trout. Our facilities for rearing the young fish after they are hatched, are yet too limited to permit us to rear more than one fourth of this number. We were therefore compelled in June last to plant three-fourths of our young fry in the brooks, though it would have been far better to have kept all our fish until fall, had we been able, as one fish 2 or 3 in. long is worth more than ten 1 in. in length. The fish now in the hatchery, all salmon, are in the best possible condition, are growing fast and the average daily loss at this time, does not exceed seventeen fish in all.

We should be in a position to hatch and rear till fall not less than 1,000,000 fish. To do this we would be compelled to construct small ponds or troughs on the open grounds in which the young fry can be placed as soon as they are old enough to be removed from the hatching troughs. There they must be carefully tended and fed daily. To provide a flow of water for these troughs or ponds a second dam must be built on the stream. It is essential also, if we would secure tangible results, that we should have constantly in our employ a competent man conversant with the business, and personally interested in the success of the enterprise. Such a man could be obtained at once if we were in a position to pay the necessary salary. Our income, about \$500 a year, is derived from the voluntary contributions of guides, business men in Rangeley and its vicinity, the railroads and visiting anglers. Of necessity, our receipts are variable and uncertain and the managers do not feel inclined to make any expenditures or engagements without the prospect of being able to meet the expenses from the income. Clearly it is better for us to do our work thoroughly for a short time rather than to do it poorly for an indefinite period. We should spend \$500 on increasing our hatching plant.

To provide a fund for this purpose it has been deemed best to ask the friends of fish propagation and protection in this region, to become life members of this club on the payment of a fee of \$25. If one-hundred members respond favorably to this call, we will be able to make all necessary improvements, to secure the services of a competent man and to be assured of an adequate income for two or three years to come. With this fund we would be able to put 3,000,000 well grown fish in these waters within three years, and with the streams closed to all fishing and the fishing in Rangeley dam maintained as at present, we may confidently expect as a result of our ex-

penditure to see better fishing in this locality than has been known for a generation. Brief as has been our existence, and hampered as we have been in many respects, good results may already be observed. The spring fishing of 1893 was undeniably better than it has been in five years or more, and more large fish have been seen and caught in these lakes during the early part of September than for some years past, while Hinkley Brook, at the hatchery, never tenanted before but for a few small trout, is now full of fish, some of which weigh certainly not less than 4 lb. Surely it is worth while now to make a systematic effort to place this worthy enterprise on a business basis.

We are sending out a form of subscription which provides that payment of the life membership fee is not due or payable unless at least fifty members subscribe thereto. A prompt reply to this appeal will enable us to accomplish much during the present season.

All subscriptions should be sent to Mr. Arthur L. Oakes, Treasurer, Rangeley, Maine, to whose order all checks and drafts should be made payable.

THE ANGLER'S PROTECTIVE CLUB.

FREDERICK S. DICKSON, President.

ARTHUR L. OAKES, Sec'y and Treas.

## "FISHERMAN'S LUCK."

HAVE your readers ever studied the problem of "Fisher-man's Luck"? Can they guess why fish do not always bite? Why they bite one day and not the next? And why small ones almost invariably come to the creel and big ones are the exception? Is it because the wind is easterly? because the day is cold? or the sun too bright? or the weather disagreeable? It has been so argued by those who have observed the phenomena. But are there not more cogent reasons?

Quite recently I have observed the habits of fishes in the public aquaria, and I notice that the black bass and various other game fishes feed most freely at early morning, which is a suggestive pointer for the somnolent angler who goes forth tardily. And I have observed how the fishes in the tanks are apt to gorge themselves to repletion, and how they often lie off after a surfeit, frequently for days at a time. Bass no larger than 2 lbs. in weight will swallow from ten to fifteen 2-inch shiners at a meal. Do the small bass have equal chances with the big ones? Not much! They have to stand one side until the heavy fish have fed. Again and again the big ones will charge on the smaller ones to hold them back until their own wants are satisfied. So the big fish are pampered and the small ones are always hungry. It is the little fish that anglers for the most part catch; for while the big ones are sluggish with repletion, they are on the alert, improving their opportunity. This is a wise providence in nature, too, because the intervals of quiescence give the shiners and other live food a chance to develop and multiply. At least they improve by accessions from other localities, for it is notorious that they do not seem to diminish from year to year as a rule. Another reason may be added to explain good fishing one day and poor fishing the next, to wit: The nomadic habits of the minnows, which shift their locality from time to time, the big fish of course following them. Good judgment would, therefore, instigate an observant angler to try a different stand in another part of the fishing ground, if he gets no bites to-day where success was signal the day before. And as to morning fishing, I will say that of late years I have wasted no hours between 11 o'clock A. M. and 3 or 4 o'clock P. M. There is usually a good evening spurt about sundown when the fish bite freely.

CHARLES HALLOCK.

## Canandaigua Rod and Gun Club.

THAT very flourishing organization the Canandaigua Rod and Gun Club held its annual election last evening, and selected the following admirable staff of officers: President, F. D. Crandall; Vice-President, C. B. Lapham; Secretary and Treasurer, Frank Christian; Shooting Master, Lewis H. Adams; Assistant Shooting Master, A. P. Wilber; Chief Angler, Herman Van Vechten; Assistant Chief Angler, Wm. H. Fox. The executive committee comprises all the above, and in addition Messrs. Wm. M. Spangler and Alex. Grieve. The president and Prof. J. C. Norris act as an auditing committee.

After the election the members to the number of about seventy-five repaired to the Canandaigua Hotel and partook of a sumptuous dinner, served by "mine host" Murphy. The tables made a very pretty appearance, being profusely and artistically ornamented with flowers in great variety. The intellectual part of the feast was most enjoyable. T. C. Parkhurst acted as toastmaster, and was both graceful and happy. The speeches were of a high order and greatly enjoyed. Space will not permit even a synopsis of the "pat" remarks, and it must suffice to say that Hon. John Raines, Judge Metcalf, Homer J. Reed (a poem full of pith and points), Dr. Chas. A. Vanderbeck, Frank Christian, ex-Senator Hicks, as well as F. J. Ansdens, of Rochester, all contributed much to the pleasure of a most enjoyable evening. An alarm of fire (which did not materialize into much of a blaze) unfortunately brought the festivities to a close at about midnight, and deprived the happy diners of the privilege of hearing from Royal R. Scott and Dr. Charles T. Mitchell, which circumstance was greatly regretted.—*Rochester Union and Advertiser*, Oct. 20.

## Does Freezing Kill Fish?

In your issue of Oct. 14 Mr. Hallock writes on this topic.

Some years ago I kept in a large foot-tub a small golden perch. One day of a very cold winter I left home and was away several days. On my return I found the water in the foot-tub solid ice, and I was told that the fish had been frozen fast the first night of my absence. I placed the tub by a fire and thawed the edges of ice loose, then upset it in the yard. The perch was in the center of this cake of ice. I broke the cake with an axe without injury to the little fish, and my sister took it in her hands and letting it lie in the palm of one hand gently stroked it. She must have held it thus half an hour, admiring its beauty of shape and colors. She said she was sure that she had felt a slight tremor pass over the little fellow. I laughed at this, but she insisted; and sure enough in about an hour our perch came to life in her hands, and after being placed in water was none the worse, so far as we could see. It lived several years with us, but fell a victim to a cat at last.

J. C. Y.

## A WEEK IN THE TRITON TRACT.

On the last day of June, in accordance with plans made when together at Lake St. John the previous year, our party of three met in Quebec, en route for the grand fishing in the Canadian Adirondacks. Bert and I were prepared to remain a month, but poor Clarence had only a week to spend with us.

During our meetings in the previous winter, when July seemed a visionary myth too far distant to ever materialize, we had arranged and re-arranged the programme for the month. How great was the anticipation; but how much greater the realization of our trip.

During the early spring my friend Mr. A. L. Light, president of the newly formed Triton Club, had extended a pressing invitation for myself and friends to visit this great tract, and test the quality and quantity of sport that it afforded. As this was our nearest point, and easily reached, we concluded to go there first. Leaving Quebec at 8:30 A. M., on the Quebec and Lake St. John Railroad, we reached Skroder's Mills, where the temporary club house is situated, at 1 P. M. We were warmly welcomed by the president, and secretary, Mr. Seaton, and found guides, provisions and camp equipment prepared for us. Mr. Seaton advised us to go to Lake Trois Cariboux, making our headquarters there. This lake is located about ten miles from the club house, and has a fine trail leading to it. The trail intersects some six or seven lakes of fair size, all of which are crossed by canoe, giving us a good opportunity to rest off the effects of the fifteen to twenty-five minute portage intervening.

A few rods distant from the club house, and paralleling the railroad, runs the Batiscan, the western boundary of the tract, a large, fine trout river, the outlet of Lake Batiscan, a large lake included in the tract, and affording magnificent trout fishing. Fish of 8 and 10lbs. weight have been taken from this lake.

We made our start down the Batiscan in mid-afternoon, and soon reached our first portage, twenty minutes in length. Fresh from our desks, how this first tramp did pull on us. It was a warm day and the perspiration came in streams, and our load increased in weight with the miles. That is, the twenty minutes seemed to represent as many miles. Then came a rest, and a welcome one, crossing Lake Coteau, followed by a fifteen minute portage, and Lake Caribou. Here we camped for the night. We spent half an hour on the lake with our flies, and returned to camp with 36 of the most beautiful red brook trout that I have ever seen. Average 1lb.

Early the following morning, we commenced the day with a fifteen minute portage to Lake Licht. In crossing, we picked up a few trout trolling our flies, and Bert secured the largest loon I have ever seen; a good shot with a .44cal. at 400yds. Another twenty minutes portage and another lake. Here also we had good success trolling our flies in crossing. A lunch in the shade, and another portage of twenty or twenty-five minutes, and Lake Trois Cariboux came into view.

This is a beautiful sheet of water about three miles long, with two long arms extending to the west. Midway down, on a beautiful point, in the midst of spruce and birches, is located an eighteen-foot-square log camp. Securely and warmly built, it is provided with a log floor, a small stove, tables, benches and all things necessary for comfort. Log camps of this description have been, or will be, placed at various points through the tract, so that comfortable quarters can be had at any location desired.

With our arrival commenced our first rain storm, the forerunner and a foretaste of rank humidity that we experienced almost daily through the entire month. All this, too, on account of a blamed owl that commenced its carols on the opposite side of the lake as soon as we arrived, and kept up his monotonous tune for a week. What a pity it was that we did not make a sortie and kill the rainmaking *hibou*.

Plenty of boughs were procured for our bed, mosquito netting stretched, everything arranged handily, and then arose the question of where to fish. July is a peculiar month for fly-fishing in lakes, and the fish must be found. A few were secured at a small *l'eau froide* (spring hole) across the lake before dark. The following morning we all started in different directions to find the best fishing. Acting on the advice of one of my guides, I took a course across the lake to the outlet, through which we paddled for a few rods, and came out into Lake Travers, a lake about two miles long. We started to search along the shores for a large inlet, and experimentally I trolled my flies back of the canoe. The result was astonishing. A perfect succession of strikes followed, and numberless were the trout I secured of about 1lb. weight. This was indeed sport; but I wanted size as well as quantity, and requested my guides to go faster. Even then the speed interfered but little with the fish being hooked.

We made nearly a tour of the lake before we found the inlet wanted; it was fully a rod wide and came in from the east. Entering the lake through a bed of lily pads it formed an ideal spring hole. I cast my flies with but moderate success, and I became convinced that the fish were in deeper water and must be gotten by deep fishing. We went into shallow water and with a small net soon secured a quantity of small outouche, or chubb. I had been using No. 4 flies, and hooking on an outouche let the cast sink without a sinker in some twelve feet of water. In a moment I had a good strike and after a ten minute battle I brought to net a 2½-pound trout. In a few moments I had another of 1½lbs. For two hours this sport continued until my bait was exhausted and I returned to camp at 5 P. M. with 24 trout taken from this hole, with an average weight of fully 1½lbs. Bert and Clarence had not succeeded as well, securing 24 between them by trolling their flies in various parts of the lake. For the morrow we planned a trip of a couple of days to visit Hunter's and Stonewall Jackson lakes. That "man proposes" but does not dispose was true in our case, as we awoke to find a heavy rainstorm in progress. In fact, we were not able to make this trip at all, much to our regret. The daily rains were too heavy. Fortunately, they always let up late in the afternoon so that we could have the evening fishing. Mem., the owl continued his rain-making cry.

Between showers Bert made a trip to the spring hole across from the camp, and observed two caribou feeding. As the law and club rules forbade shooting he was obliged to finger his rifle nervously, imagine what he could do, and let it go at that. Fresh moose signs we found on several occasions, notably on Grant Lake. This lake, about a mile long, is connected with Lake Travers by a stream about a quarter of a mile long, and is a fine body

of water full of trout, and is, I believe, a great resort for moose. In fact, the guides advised us that they never made a trip to any part of the tract that has been opened, but that they saw moose, caribou and bear. It was not our good fortune to meet bruin in the flesh, but we found his tracks on almost every portage that we crossed. This occurred probably because we were always prepared to meet him.

Being prevented from making the trips mentioned, we confined our fishing almost entirely to Lake Travers, and during the five days at Lake Trois Cariboux, the weather allowed a total of only 10 hours' fishing for the party, with a grand total of 283 trout. The last day at the lake we had 2½ hours of good weather. Result, Curtis 28, Clarence 40 and the writer 25.

Mosquitoes we were not bothered with, and the black flies were as numerous as they always are in July and early August, but no more so than at any other point either in the American or Canada woods. After fully twenty years of experience, I find a solution of tar and vaseline, 60 and 40 parts respectively, will if applied twice a day, afford perfect immunity from their bites.

From our own experience, and from the knowledge of others who have fished the Triton tract, I have yet to hear of anything except brook trout (*Salmo fontinalis*) being taken in any of the waters. Lake and mountain trout as reported to exist in the tract by "Silver-Doctor" in FOREST AND STREAM's issue of Sept. 2 are not "in it."

On July 7 we made our return trip to the club house, and with much regret, as we wished to see more of the tract.

On the return journey we took another trail leading northwest. This we found fully as easy to cross as that followed on our journey in. We made five portages, in length from ten to twenty minutes, crossing four lakes, three of which were alive with trout. The fifth portage brought us to the Batiscan River, at a point some six miles above Skroder's Mill. Here the river widens out, forming a small lake, simply perfect in its surroundings, an ideal spot, and one that has been selected for a permanent club house site. It is but fifteen minutes' trip from the railroad by canoe via Indian River that crosses the railroad and flows into the Batiscan at this point.

Our trip down to the temporary club house was beautiful, varied by shooting two rapids, and a stop for lunch. At 3 P. M. our trip in the Triton tract was ended, and we could not otherwise claim but that we were more than satisfied with everything except the weather. A good cleaning to get the tar coating off, and we sat down to talk about the tract. We entered the tract as guests and left as members of the club. The president advised us that the original tract had been increased from 162 square miles to 750. Truly, a magnificent preserve, and over three-quarters of it virgin territory and waters. We were also advised that there are more than 500 lakes over a mile long contained in the tract. Smaller ponds are numberless, and all full of trout.

Owing to the great length of the tract, it has been thought best to erect two club houses, one at each end. Both are near the railroad and easy to reach. Any point in the tract is readily accessible, and can be reached in less than twenty-four hours from the club houses, and that by canoe and easy and short portages.

Clarence left us for civilization on the night train with an immense box of trout to show our prowess with the rod. Bert and I accepted the hospitality of the club, remaining over night, and on the morrow took the train for Lake St. John to continue our outing in seeking for more trout, and the wonderful ouananiche in that vicinity.

EUGENE MCCARTHY.

## FISHING IN CANADIAN WATERS.

SATURDAY afternoon, Aug. 5, found the writer leaving the windy, smoky city of Chicago on the C. & G. T. R. R. for a several weeks' outing, which I had decided to spend in Canada, my native land. My life-long friend and old partner Mr. Stanley M. Clapp, of Toronto, had extended a kind and urgent invitation to join him in the season's pleasures. It is needless to tell with what impatience I covered that thousand miles, for my mind was constantly reverting to the pleasures I had experienced in more youthful days. Nine years ago in August, this very month, I had taken between twenty-five and thirty muscalonge and hundreds of black bass in the waters that I was now hastening to. How vividly I recalled the day, when after a fifteen mile cruise (for we trolled from a sail yacht then) we returned to camp and displayed five beautiful muscalonge. The largest of those fish weighed 37½lbs. and the smallest 19½lbs. The figures I personally had forgotten, but obtained them recently from my old friend Mr. E. K. Bowen, of Napanee, Ont., who was with me at the time.

I cannot refrain from relating a portion of our experience in landing the "big fellow." Our gaff, which was the best we could purchase at that time in our country stores, had a way of straightening out on us or nearly so when we were landing a muscalonge, but we would bend it back again and go on prepared for the next. When this "whale" struck he took the hooks in such a way that he could keep his mouth closed, and after towing him around the bay for nearly an hour we decided that it was impossible to drown him, as he was apparently as lively as ever, so we concluded to risk the gaff the first chance we got. It came soon. E. K. B. got him alongside the yacht, where he lay sulky and quiet for a few seconds close to the keel. I reached over very carefully and quickly put the gaff in him from under, near his forefins. One mighty spurge and away he went with about 100ft. of line, also about half the malleable iron part of that gaff, which had become weakened from so much straightening and bending. We were in a query now how to land him, and on looking around the boat I found that the only weapon we had was a 12ft. pole used for pushing off shore. The fish was still fighting, but showed signs of weakening, and I proposed to Ed to get him alongside if possible again, and I would try hard to hit him in the right spot with the pole. He acquiesced and shortly had the gamy monster parallel with the stern and about 8ft. out. I stood ready with uplifted pole and as he rested a few seconds, his head and back partly out of water, I gave him a mighty and fortunate blow across the neck, breaking the hooks from the line, but turning our game belly up, where he floated serenely. We came about alongside and lifted him into the boat. After eyeing the beauty with much pride, Ed asked me if I could do that every time. I replied, "Certainly, that's nothing." Then he insinuated that I must have been taking lessons in the

stockyards at Chicago, for he said that such a blow would certainly have killed an ox.

But now to come back to this summer's outing.

Monday afternoon, the 7th, found me at the pretty little town of Napanee, Ont. My friend Stanly and one or two companions of former years were there to meet me with a beautiful little steam launch; and they told me that old "Camp Comfort" was waiting and ready, as they had been out for two weeks.

Tuesday morning early, we were steaming down the beautiful Napanee River, which empties into the Bay of Quinte. As we glide swiftly along this lovely August morning, out of the river and into the bay, my heart is thrilled with nature's charm, and it seems that during my nine years of absence the wooded shores and islands have grown more picturesque and beautiful still. Fifteen miles we have passed, drinking in the grandeur of the scene and breathing the fresh pure air, while we round Sherman's Point and enter the head of Hay Bay. Stanly points to the opposite shore and announces, "Camp Comfort." I look and descried about a mile distant two white tents glistening in the morning sun. A few more minutes and we land. Surely the appellation is no misnomer, for we find everything to make camp life a joy, and comfort included. A commodious tent for sleeping (12×16ft.) and one for dining (10×12ft.), are situated in a beautiful shady grove, on the farm of our genial friend, Mr. Chas. Curlett, who for the past ten years has given my companion the sole right of camping on his land, and would be offended at an offer of remuneration. He is a big-hearted, whole-souled gentleman, who enjoys fishing and appreciates a true sportsman.

Dinner time soon came, and such a repast I have not enjoyed in years. Fried black bass, baked pickerel (or pike, as they are called in the United States), evergreen corn, new potatoes, tomatoes and cucumbers. Dinner over, we lounged about, talking of bygone days, of pleasure afield with dog and gun, and of duck shooting trips, waiting for 4 o'clock to come, when George would steam up and we would start for a favorite cove, where Stan had a muscalonge "marked down," which he said would weigh 40lbs. He had had it hooked over a week ago and within 20ft. of the boat when it had broke loose and disappeared; the fish broke water twice and he had a good opportunity to judge its size. He says, "I have tried every morning and evening for a week since to get that fellow or his mate again, but I cannot persuade him to reciprocate my affection."

"I'll give him a twirl this afternoon," I said, and proceeded to select from my kit a double spinner, two spoons size 2-0, which play one above the other, and have always been a favorite bait with me. Presently George's "all aboard" sounded pleasantly on our ears, and we lost no time in getting there. I had just seated myself nicely in the stern, when glancing up I saw Stanly walking out the plank, tackle in one hand and a hammerless gun in the other. To my inquiry "What are you going to do with that gun?" he replied, "Shoot the stuffing out of that fish if he strikes again to-day. I'd have had him last week if my gun had been in the boat." I emphatically declared he'd shoot no fish that I got hold of, as I wished something more than the head to bring back with me.

We ran four lines, one from each side of the yacht and two from the stern, I attending the left and Stan the right. One trip up the cove was a blank, but on our return, and when half the distance had been traversed, I felt a faint tug and then a stronger one at my stern line, and I knew in a few seconds that I had hooked a large fish and began playing him. I remarked to Stan that I had his fish, and he at once got the other lines out of the way and George shoved on more steam. In thirty seconds the fish broke water 150ft. below and I saw that he was only about 18 or 20lbs. Stan went for his gun and stood on the stern deck ready, when I bade him put it away and get the gaff, which he did. In five minutes I had the fish coming straight in on top of the water without a kick. But here comes the ridiculous part of it. I supposed that Stan knew how to gaff a muscalonge and did not instruct him; but he told me after that he had shot every one taken for years back after tiring them out and had really forgotten how to handle the gaff. Well, I had scarcely got the fish alongside when Stan made one mighty overhand grab, and actually yanked the fish from my hooks and let him slide off the gaff and disappear in the depths. He looked around, a sickly grin on his palid features, and said, "I told you so, why didn't you let me shoot him?" and gave the gaff one big pitch overboard and vowed he'd never take another one in his hands.

Well, I enlarged on his stupidity considerably, for he had gone at that fish as some farmer would at a hill of potatoes with a hoe. I gave him a lesson in gaffing a few days later on a 15lbs. one, and he readily admits his error now, but he is still the object of much ridicule.

A word about black bass fishing. We are having great sport with the gamy fellows. Every morning from 5 to 7 o'clock and evenings at the same hours we repair to one of the many splendid bars which abound in Hay Bay, and only a few minutes' sail or row from camp, and here catch them until we are nearly weary of the sport. One week ago Friday evening my friend and I landed forty-two black bass in one and one-half hours, weighing from 1½ to 6lbs.

Yes, this is a paradise for fishermen indeed. We use for bait green frogs, minnows, crawfish and grasshoppers, any of which can be procured in close proximity to our camp. I have taken some very large fish this season on angle worms also. We have kept our farmer friends and acquaintances in neighboring towns quite well supplied with fish of late. We never return from a still-fish after bass without a good big string. I am using a 7oz. Bristol steel rod and an aluminum automatic reel for my bass fishing, and when I hook on to an old "slab-sider," as Stan calls the big fellows, I have sport indeed.

If some of my old Pennsylvania friends chance to read this article, and doubtless they will, for many of them, like myself, are lovers of FOREST AND STREAM, I would say to them, don't waste your time whipping the old Susquehanna as we used to do, day after day, and often return home with an empty creel, but get over here for only a couple of weeks, and you will return home much happier and more contented fishermen.

There are hundreds of acres of rice beds and marsh in some portions of the bay, and wildfowl abound and breed there in countless numbers. My friend killed forty-eight ducks from 4 o'clock in the morning to 10 o'clock A. M., with one gun, on the opening day last season, and indications are good for splendid shooting this fall.

Our fleet consists of a steam launch, a large sail skiff with centerboard, etc., and two rowboats. We have a couple of wheels in camp, and in the lovely moonlight nights my friend and I often take a run of eight or ten miles to get the kinks out of our legs.

Altogether the days are passing only too quickly, and it is with earnest regret that I think of my departure. Even now, as I write, an American steam launch passes the door of our tent and salutes us with three shrill whistles. They are bound further down the bay after the gamy mascalonge.

Since the advent of the shiner or shad in our waters mascalonge fishing has been sadly impaired; yet for any reasonable-minded angler a goodly amount of sport can be had here yet. During the month of August, 1884, an American yacht from Clayton, N. Y., with a party of four, took in one week over 100 mascalonge from these waters, and thousands must have been taken that season, for the bay was full of boats almost constantly.

I may write up an account of our success at duck shooting later on. Old Sol has dropped behind the horizon; insect life is at its highest; I hie me to my comfortable bed, where I am lulled to sleep by the dreary monotone of the crickets. Good night. Good night. J. W. S.

NAPANEE, Ont., September, 1893.

A Rubber-Banded Mackerel.

GLOUCESTER, Mass., Sept. 23.—*Editor Forest and Stream:* I inclose the tinte picture of a fish which represents a literal curiosity. I received the picture through the courtesy of Mr. Fred L. Stacy, manager of Cape Ann Fish Market, Gloucester, Mass. It represents a mackerel with a rubber band around the body. The band had been put on when the fish was quite small, a tinker probably. The fish's body under the band did not grow, which caused, depression in the full-grown body of about three-quarters of an inch in depth. The depression was covered with a healthy skin, in no ways unlike that on the rest of the body. I measured the fish and the figures are: Length, 14in.; diameter of body each side of depression, 7 1/2 in.; diameter of depression, 5in. The fish was undoubtedly in a healthy condition. The rubber band was sound and could be stretched like any other rubber band. Now, if the person who put this band on a young mackerel will report to FOREST AND STREAM the date, etc., it will add interest to this singular case.

HERMIT.

Perch and Bass in Bay of Quinte.

OTTAWA, Oct. 14.—A party of three, consisting of Mr. Alexander Salvini, Mr. William Redmund and myself, had a good day last Wednesday with the yellow perch and rock bass in the Bay of Quinte. Although by the inhabitants of Belleville such small fry are looked upon with eyes of scorn, they gave us all the sport we wanted hauling them in, and caused our long bamboo rods to bend almost double. The rock bass fought right gamely, and as they generally came two at a clip, it was very exciting. Yellow perch were more than plentiful, and I have yet to learn that they lack gaminess. The day was a perfect one, the bay just rippling enough to break the sunlight into myriad gems. Our catch amounted to 135 all told, about 50 being rock bass of small size. For sport let me commend the Bay of Quinte. W. A. D.

Dingman's Ferry Pickerel and Bass.

DINGMAN'S FERRY, Pike Co., Pa., Oct. 14.—Mr. and Mrs. Meeker, guests of the High Falls Hotel, were out on the river fishing this morning, and brought in one pickerel weighing 3 1/2 lbs., and 7 black bass, one weighing 3 1/2 lbs., 2 4 lbs., 2 3 1/2 lbs., and 2 1 1/2 lbs. They were caught in the eddy almost opposite the hotel. They were fishing 4 hours. PHILIP F. FULMER.

"FOREST AND STREAM" AT THE FAIR.

In the "Forest and Stream" Corner.

Mr. L. B. Smith, Great Falls, Mont., says that most of the hunters in his country assert that the panther does scream, and to his own personal knowledge it wiggles its tail when prepared to attack its prey. His name is duly enrolled in the list of FOREST AND STREAM's admirers.

Mr. H. C. Culbertson (of the "Kingfishers") of Cincinnati, O., was the first one to inscribe his name in the register on Friday, the 17th inst., which is against all superstitions of Friday being an unlucky day. His friend, Mr. P. E. Roach ("Ned") of the same city, set his autograph next thereto. Some inquiries in respect to others of the party and a mention that still others of it would grace the FOREST AND STREAM nook later on, and they were gone.

Mr. A. K. Keating and wife, of Fon du Lac, Wis., chatted pleasantly of duck shooting. The latter enters into the spirit of the sport with all the enthusiasm of her husband. Mr. Keating is a member of one of the clubs which own the shooting privileges of the Horicon marshes. He made a charming little woman glad by giving her an invitation to shoot on the club's preserves. Who is she? Why, Miss Annie Oakley. He gave me an invitation, too, but while I felt deeply thankful and grateful, I will have to remain here and help the World's Fair along. By the way, an invitation to shoot ducks on that ducking Bonanza, the Horicon marshes, is never given to other than distinguished people. Nor are they given with oppressive frequency to even such people.

It is the unexpected which always happens—sometimes. While riding in the street-car to the World's Fair I happened to hear a voice which had a familiar ring. Glancing down the row of gentlemen who were standing like myself in the middle of the car with a hold on the hand straps, I saw in conversation with an aged gentleman Dr. R. I. Hampton, of Athens, Ga., a gentleman quite prominent in field trial matters a few years ago. The last time I saw him he acted as judge at the field trials at Amory, Miss., in 1883. His dogs all died recently, but with commendable energy he will try again. He still loves sport with the dog and gun.

B. C. Hinman, secretary of the Southern California Field Trial Club, a resident of Los Angeles, Cal., dropped into our corner on Friday, the 13th, and we have him on the list. He spoke of good prospects in sportsmen's events in California. He promised to call again.

Jos. Hemphile, West Chester, Pa., has taken FOREST AND STREAM since the very first number. He gave some most interesting accounts of fishing.

Mr. D. F. Stillman, of Westerly, R. I., mentioned the death of the two capercaillie which he had endeavored to preserve and perpetuate, his intention being to stock his section of country with them if possible. He is not dismayed nor discouraged at the failure, but will probably make another effort to accomplish his purpose.

Mr. G. W. Rexroat, of Virginia, Ill., whose proceedings with the shotgun have been many times chronicled in these columns in connection with trap-shooting events, left his card at the corner where all true sportsmen's feet turn toward.

Mr. J. N. Porter of Salt Lake City, but recently of Denver, Col., inscribed his name on the register, a name which is mighty in the annals of wolf slaying and coursing. Mr. Porter was dismayed at the great magnitude of the Fair, and said that it could not be done justice properly in three months, much less in three days he had to devote to it. He was right. Goodland and the coursing meeting thereabouts drew him Westward on Saturday, 14th.

Mr. J. B. Battelle, editor of *Business World*, Toledo, O., stepped calmly into the exhibit of FOREST AND STREAM and in a deliberate and careless-like manner spread his name over the register. He was disappointed in not meeting Mr. Hough and left his regards for him. The latter gentleman forgot that he was dealing with a newspaper man when he said Mr. Battelle daresen't come and went again.

Mr. Geo. J. Atkinson, Columbus, O., gave some information of the Castalia waters.

Frank Campbell, St. Paul, Minn., put himself down as one who admires FOREST AND STREAM.

Under date of Oct. 14 I find in the register the name of W. R. Post, Detroit, with the legend, "Fishing too good at St. Clair Flats to come to the Fair before."

I observe a goodly sprinkling of the autographs of clergymen in the register.

Mr. John D. Losecamp, Billings, Mont., with his friend, Mr. J. W. Vaughan, of the same city, called on Saturday, the 14th inst. The former is active in the cause of big-game protection, and has been a contributor to the columns of FOREST AND STREAM. The descriptions of the bountiful trout fishing near their home are enough to make any trout fisherman look to it as the trout Mecca of the guild.

Words of earnest praise for the excellence of FOREST AND STREAM were bestowed by Mr. Frank E. Davis, of Baltimore, Md. He said that participation in healthy field sports made a man morally and physically better. FOREST AND STREAM is his favorite journal. So earnest and yet so gentle a sportsman cannot fail to bring honor on the fraternity. B. WATERS.

New York's Innings.

Oct. 22.—Yesterday was Manhattan day at the Fair, and it was a great day, as one need not say. The Old Guard was here, and it surrendered. All the old Knickerbocker families were here, and the 400 were a prominent feature of the parade. They were just ahead of Buffalo Bill in the procession, an honor not granted to many. The New York building was the home of music and oratory, and 318,283 persons passed through the gates and filed by the building, and claimed that they either came from New York, or wished they did, or had relatives who lived in New York, or best girls who bought or wanted to buy their hats there. FOREST AND STREAM, being published in New York, was a great feature of attraction on Manhattan day, and was affected very much by the crowd, who recognized it promptly as an old friend.

New York has long arms and no American need feel out of reach of New York so long as he keeps on the Continent. New York is Chicago's elder sister, and yesterday she borrowed Chicago's new hat, and gloves, and gown, and showed that giddy young thing that she could go a pace or two herself when she felt like it. And Chicago, with true family pride, looked on approvingly. On account of its being Manhattan day the FOREST AND STREAM men put on brand new neckties and invested in bright, new, glittering shines for their shoes. FOREST AND STREAM presented an imposing front and was right in it at every stage. In this way the day was brought to a pleasant and successful close.

Fish Commission Congress.

The World's Congress of Fish Commissioners, which has been in session during the past week, met for a very *recherché* banquet at the New York Building on the evening of Oct. 20. President T. W. Palmer presided, Mayor Gilroy, of New York, being unable to attend. They had a very fishful menu, as follows:

Blue points.		
Celery.	Clear green turtle soup.	Olives.
	Duff Gordon sherry.	
	Hors d'oeuvres.	
Sea urchin paste sur canapé.		Japanese porphira.
Puget Sound sardines.		Japanese sardines.
	World's Fair sardines.	
	California sauterne.	
	Bolled striped bass, sauce Victoria.	
Pompano au Vin Blanc.		Red snapper au Gratin.
	Japanese oyster sauce at discretion.	
Parisian potatoes.		Cucumbers.
Lobster farcie.		Lobster à la Newburg.
	Japanese sea ear à la poulette.	
	Moët & Chandon (white seal) champagne.	
	Filet of beef à la Chéron.	
	Sorbet au kirsch.	
	Breast of partridge with truffles.	
Salad.		Mishmer Nori.
	Japanese kan-ten jelly.	
	Japanese papyrosa miriflora.	
Ices and creams.		Fruit.
	Cakes, assorted.	
	Coffee.	

The following, from all over the world, were present, commissioners, fishermen and gents:

Don F. Atristain, Dr. S. P. Bartlett, Dr. Tarleton H. Bean, Eugene G. Blackford, A. Booth, W. H. Bowman, James H. Breslin, D. R. Cameron, Morton Chase, Capt. J. W. Collins, Robert Dunlap, E. P. Doyle, R. Edward Earl, Dr. Ernst Ehrenbaum, William Edwards, R. E. Follett, Mr. Foley, John Ford, Herbert A. Gill, G. Brown Goode, T. J. Griggs, D. G. Hackney, Edward Hamilton, Robert Hamilton, Carter H. Harrison, L. W. Harvey, J. C. Hendrix, Lewis M. Howland, Dr. W. M. Hudson, L. D. Huntington, Calvin J. Hudson, Dr. S. J. Jones, George F. Kunz, K. E. Lewis, Mr. Macdonna, C. Matsuetaira, Col. Marshall McDonald, Frank Muir, T. W. Palmer, Ferd W. Peck, Fernando F. Perez, Dr. Emile Ponissie, Anton

Pregler, J. J. Quelch, W. deC. Ravenal, Dr. J. E. Reighard, Frank R. Sommins, Sakaye Sawatari, Edward Schultz, J. B. Schoffel, Harry G. Selfridge, Mr. Shears, John T. Starin, Capt. E. N. Symonds, C. Swartz, C. H. Taft, K. Tawara, R. O. Taylor, J. W. Titcomb, C. H. Townsend, H. B. Vincent, W. C. Williams, H. D. Wyllie, John C. Wyman, Y. Yambe, P. T. Wall and J. Balfour Murray.

Visited.

Mr. John W. Titcomb, State Fish and Game Commissioner of Vermont, from St. Johnsbury, of that State, paused and made examination of the attractions of FOREST AND STREAM's display of record fish.

Mr. Fred. Mather, of Newark, N. J., assistant to the U. S. Fish Commission, etc., flew down the Appian way which leads to the FOREST AND STREAM exhibit, and asked if the lady of the house was in. Mr. Mather, of course, is here at the congress.

Mr. Frank M. Gilbert, another member of Congress, proprietor of the *Tribune*, of Evansville, Ind., and for ten years game warden of first district of Indiana, also left his card with us. Mr. Gilbert constitutes a combination which certainly ought to do good in the world, and I hope he may long continue to succeed in both his hard jobs, of warden and newspaper man.

Mr. C. O. Bingham, of Toledo, O., ex-president of the Erie Duck Club of that city, and a subscriber to FOREST AND STREAM ever since the first six months of its existence, made a brief, but very pleasant call. "The paper has improved every year of the time," said he, "and shows no sign of faltering in its purpose. I have watched its Western work with much pleasure and can't approve enough of the paper at the Fair."

"The Kingfishers."

A pilgrim from Cincinnati blew in the other morning, a man with blue government coat, and a cap, and an innocent eye, and a quiet manner, and a low tone of voice. He set these down in the exhibit, and said he was J. H. Hickman. I asked him if he was "Kingfisher," and he allowed he was, and I didn't like to tell a stranger he lied, so we let it go at that, although I was clear in my own mind all along that "Kingfisher" was a man about 10 feet high, with a bass (pronounced "base") voice, and a laugh like the sound of thunder in the hills. As corroboratory of his assertion that he was "Kingfisher" Mr. Hickman later introduced Col. H. C. Culbertson, president of the Currier Club, of Cincinnati, (the "Colonel" of the Kingfisher yarns), and Mr. P. E. Roach, secretary of that body (the "Ned" of Mr. Starbuck's North Shore stories), and also spread documentary evidence in the shape of a card showing a boat and a lone fisherman, sitting under a tree surmounted by a kingfisher bird rampant. Finally we concluded Mr. Hickman was "Kingfisher" and then we all had a good time. The party left too early in the week to see their friend "Bill," of Grand Rapids, who asked for them later. Colonel Culbertson took home with him a \$20 Swiss coffeepot, made of carved block tin, of which we may hear later; and "Kingfisher" himself bore away from the FOREST AND STREAM exhibit one of its chief gems, the Col. Gay brown trout (*Gayenusus finnan haddius*), which has illustrated so long and well the taxidermic skill of the FOREST AND STREAM Western staff. May these folk ever know only halcyon days.

Others.

Mr. A. R. Mead of Ashland, Wis., attracted my attention when he came in because he carried a lunch in a trout creel. I have seen a camera carried in a newspaper, and a baby carried in a strap, at the Fair, but this was the first time I had seen a lunch carried in a trout creel. Mr. Rose reports good trout fishing not far from his town, and says deer are abundant to the south of that point.

Com. G. Harry Gardner of Cleveland, O., paused long enough to say good morning and to look at the boats and say good bye. The Commodore was waiting elsewhere for him, and he was under orders.

Mr. Ezra E. Howard, of Edgar, Neb., sends his two boys, 10 and 12 years old, bright, hearty young fellows, albeit a bit shy, and they leave their father's card, which says, "Chained to business. Can't come, but send the youngsters." Fraternally and paternally, Mr. Howard is all right, I know, though I have only a white paper acquaintance with him.

Mr. Paul Irving Clarke, of New York, who signs himself an admirer of FOREST AND STREAM, was with us only briefly, but there is no law against wishing he could have stayed longer.

Mr. John F. Randall and Mr. A. T. Hawley, Jr., both of Alton, Ill., left their names and got away when I didn't know it, though I discovered their footprints early. Mr. Randall has long been interested in the acclimatization of Mongolian pheasants and other foreign game birds. He must love his Excellency, with a little x; John P. Altgeld, Governor of the State of Illinois, the World's Fair Governor who doesn't believe in protecting any wild thing, or in leaving a murderer in jail.

East and West.

Mr. Henry E. Mayo, of Salem, Me., might have shaken hands with a sportsman friend from the other side of the country, for the very next registry below his reads "C. J. Waldman and wife, New Whatcom, Wash."

The Old World.

On this same morning Mr. Benjamin Fordham, of 130 Kilburn lane, Queen's Park, W., London, England, left his name only about four inches from that of Mr. George H. Draper, of 39 rue Galileo, Paris, France. Mr. Fordham is a fancier of dogs, and Mr. Draper was inclined to favor boats and fishes. E. HUGH.

Her Great Trouble.

"What a love of a dog!" exclaimed a caller at a Jefferson avenue mansion, as a bundle of hair and ribbons trotted into the room. "Yes, but he is a dreadful care," sighed the mistress of the household sadly.

"What do you mean?" asked the visitor in surprise. "Why, you know I bought Bijou in Paris last summer and he doesn't understand a word of English, so I had a French maid for him all winter, but last June she insisted on marrying some horrid creature, and now we have a French Canadian girl and she worried me dreadfully."

"Does she abuse him?" asked the visitor indignantly. "Oh, dear, no; she's as kind as can be, but these Canadians speak such poor French—suppose she should ruin Bijou's accent. It makes me sick to think of it."—*Detroit Free Press.*

## The Kennel.

### FIXTURES.

#### DOG SHOWS.

Nov. 23 to Dec. 1.—New Jersey K. L., at Newark. Dr. W. F. Seidler, Sec.  
Dec. 12 to 15.—R. I. Poultry and Pet Stock Ass'n, at Providence.  
Dec. 20 to 23.—Northern Ohio Pet Stock Association, at Akron, O. H. F. Peck, Sec'y.

#### FIELD TRIALS.

Oct. 30.—National Beagle Club trials, at Nanuet, N. Y. Geo. Laick, Secretary.  
Nov. 6.—United States Field Trials Club's Fall Trials, Bicknell, Ind. P. T. Madison, Sec'y, Indianapolis.  
Nov. 7.—New England Beagle Club trials, W. S. Clark, Linden, Mass., Secretary.  
Nov. 7.—International Field Trial Club's Fourth Trials, Chatham, Ont. W. B. Wells, Sec'y, Chatham.  
Nov. 15.—Ohio Field Trial Club's Second Trials, Canton, O. C. V. Lellinger, Sec'y.  
Nov. 20.—Eastern Field Trial Club's Trials, at Newton, N. C. Members' Stake Nov. 16. W. A. Coster, Sec'y.  
Nov. 27.—Irish Setter Club's Field Trials, at Thomasville, N. C. All-Age entries close Nov. 1. G. G. Davis, Sec'y.

1894.

Jan. 1.—Southern California Field Trials, at Ontario, Cal. H. C. Hinman, Los Angeles, Cal. Sec'y.  
Jan. 29.—Southern Field Trial Club's Trials, New Albany, Miss. T. M. Brumby, Sec'y, Marietta, Ga.  
Feb. 19.—United States Field Trials Club's Spring Trials, Grand Junction, Tenn. Second payment in Derby due Nov. 1. P. T. Madison, Sec'y, Indianapolis, Ind.

### United States Field Trials Club All-Age Entry.

Editor Forest and Stream:

Inclosed herewith I hand you a list of entries to this club's All-Age Stake, trials A. Pointers 29, English setters 29.  
P. T. MADISON, Sec.-Treas.

#### ENGLISH SETTERS.

DAVEY W.—Gen. W. B. Shattuc's lemon and white dog (Gath's Mark—Daisy F.).  
MAIDA—J. C. Irwin's black, white and tan bitch (Gath's Mark—Paxie Maid).  
PAUL DOMBEY—Glen Rock Kennels' black, white and tan dog (Chance—Nettie Bevan).  
LADY GAFFETY—C. P. Mingst's black and white bitch (Gath's Mark—Queen Blade).  
COLUMBIA—C. F. Hartmetz's chestnut and white bitch (Gath's Mark—Queen Blade).  
BONNIE BONDHU—L. Rausch's black, white and tan bitch (Count Wakefield—Pearl Bondhu).  
SPOT CASH—H. K. Devereux's black, white and tan dog (Vanguard—Georgia Belle).  
DAN'S LADY—Theo. Goodman's black, white and tan bitch (Dan Gladstone—Lilly Burges).  
LITTLE MISS—Poindexter & Maclin's black, white and tan bitch (Vanguard—Rhet).  
FLEETY NOBLE—Grand River Kennels' black, white and tan bitch (King Noble—Elsie Belton).  
PAUL REVERE—Grand River Kennels' black, white and tan dog (Gath's Mark—Paxie Maid).  
CECIL H.—J. L. Adams's black, white and tan dog (Dr. Maclin—Cosette).  
DIRECT—Jack Adams's black, white and tan dog (Gun—Victoria Lavarock).  
LILLIAN RUSSELL—Jackson & Denmark Kennels' black, white and tan bitch (Phillip Gladstone—Lou G.).  
CAP TOUGH—A. J. Gleason's black and white dog (Roderigo—Dashing Dixie).  
COUNT GLADSTONE—Avent & Thayer Kennels' black, white and tan dog (Count Noble—Miss Ruby).  
CHEVALIER—Avent & Thayer Kennels' black, white and tan dog (Jean Val Jean—Lucy Avent).  
KINGSTON—Avent & Thayer Kennels' black, white and tan dog (Chance—Bessie Avent).  
LOCHINVAR—Avent & Thayer Kennels' black, white and tan dog (Chance—Bessie Avent).  
BETTIE S.—Avent & Thayer Kennels' black, white and tan bitch (Roderigo—Bo Peep).  
CRICKET GLADSTONE—Robt. M. Riley's orange and white bitch (Rusk Gladstone—Quail).  
DASHAWAY—Edward W. Watson's black and white dog (Leo—Julia).  
MISS RUBY—P. Lorillard, Jr.'s lemon and white bitch (Gladstone's Boy—Ruby D.).  
LAVERNA—P. Lorillard, Jr.'s black, white and tan bitch (Count Noble—Emma B.).  
GLEAM'S SPORT—Manchester Kennel Club's lemon and white dog (Vanguard—Georgia Belle).  
GLEAM'S PINK—Manchester Kennel Club's black, white and tan dog (Vanguard—Georgia Belle).  
TEAL SCHWINGE—Henry Schwinge's black, white and tan dog (—).  
DAN BURGES—J. M. Freeman's black, white and tan dog (Dan Gladstone—Lilly Burges).  
NELLY HOPE—J. M. Freeman's lemon and white bitch (Gath's Hope—Lady May).

#### POINTERS.

RENA B.—E. M. Barkley's liver and white bitch (Volney Hall—Leta).  
BOUNCE—G. W. Amory's liver and white dog (Bob—Sal).  
MAINSTAY—G. W. Amory's black and white dog (Main-spring—Barmaid).  
SPOTTED BOY—Chas. Proctor's liver and white dog (Trinket's Bang—Nellie Bow).  
BROWN BANG—Lawrence Pointer Kennels' liver dog (Devonshire Sam—Nellie Bang).  
MAME S.—R. L. Shannon's liver and white bitch (Brown Stout—Pearl's Pride).  
WINOWING—Will Laird's liver and white bitch (Ranger Croxteth—Cannie).  
DUKE OF KENT II.—Glen Rock Kennels' liver and white dog (Tempest—Nadja of Naso).  
BESS B.—A. Boyce's liver and white bitch (Ossian—Devonshire Jilt).  
FANNIE RUSH—J. T. Barron's liver and white bitch (Rush of Lad—Topsy L.).  
DAME BANG—W. W. Peabody, Jr.'s liver and white bitch (Trinket's Cash—Van Bang).  
JINGO—Charlotteville F. T. Kennels' liver and white dog (Mainspring—Queen II.).  
WILD DAMON—Charlotteville F. T. Kennels' liver and white dog (Damon—Flora).  
FRANKLIN—Allen P. Houston's liver and white dog (Robin Adair—Blossom).  
ROD GRAPHIC—N. T. Harris's liver and white dog (Lord Graphic—Winning Ways).  
LEHMAN—Jackson & Denmark Kennels' lemon and white dog (Gordon—Fanny).  
LITTLE NED—W. N. Kerr's liver and white dog (Ridgeview Dazzle—Kate Claxton).  
FLOCKFINDER III.—Maj. J. R. Purcell's lemon and white dog (Old Staunch—Flake of Flockfinder).  
LADY MARGARET—Maj. J. R. Purcell's black and white bitch (Dick Swiveler—Countess Bang).  
PRINCESS II.—C. C. Paddock's lemon and white bitch (Shot—Forest Queen II.).  
MAD OF OSSIAN—J. B. McGuffin's liver and white bitch (Ossian—Pickwick).  
TUXEDO—J. B. McGuffin's liver and white bitch (Ossian—Cornelia G.).

KENT ELGIN—T. T. Ashford's black and white dog (King of Kent—Vera Bang).  
MIDGET—J. H. Kerr's black bitch (Harrop—Frankie).  
HOPS II.—P. T. Madison's liver and white bitch (King of Kent—Hops).  
HAL POINTER—B. E. Quick's black and white dog (King of Kent—Daisy).  
MAXIMUS II.—Grand River Kennels' liver and white dog (Maximus—Jane).  
PLUTE—Castleman Kennels' lemon and white dog (Fritz—Tilly).  
NELLIE S.—Castleman Kennels' lemon and white bitch (Fritz—Tilly).

### Another Original Dog.

WHEN the sealing schooner Columbia arrived at Seattle Sept. 26, in addition to a cargo of skins it brought an interesting curiosity in the shape of a dog. According to the Seattle Telegraph, "It was found on an island in the North Pacific Ocean that was not inhabited by any human beings and never had been, from all signs that could be found. While the Columbia was cruising off Whale Bay on the Alaskan coast the fresh water supply ran short. A small boat was loaded with barrels, and three men sent to one of the neighboring islands in search of water. As they landed they noticed an animal that resembled a fox in appearance running up and down the shore. One of the men had a gun with him and took a shot at it. His aim was bad and he did not hit it, but the animal did not run away, and came directly up to the boat and expressed delight at their arrival. The animal was evidently a cross between a fox or wolf and an Alaskan dog. It would play around them, but it would not allow itself to be caught. They found a spring of water, and after they had filled their barrels they were ready to return to the Columbia. A storm came up suddenly, which drove the sealer out to sea, and it was three days before she could return to take the men on board again. During these three days this strange wild animal became their constant companion. The next morning after their arrival the quadruped, after

RUSSIAN WOLFHOUNDS FROM THE EMPEROR'S KENNEL.  
From Le Chénil (France).

having disappeared for several hours, returned covered with blood. It jumped around them and then started up the bank into the woods. They followed it out of curiosity for some distance, and less than half a mile away they found it over the body of a recently killed deer, which it was viciously tearing to pieces. The next morning the animal acted in the same way, and following it again they found another deer. The third morning the Columbia cast anchor near by and took them on board.

They had by this time made good friends with the animal and had little trouble in taking it with them. For some days they had trouble in keeping it from jumping overboard, but finally it became reconciled to its surroundings. Several weeks afterward they had to go ashore again and took the animal with them. It started away in great glee as soon as the boat reached shore. One of the sailors, fearing it would not come back, ran after it. As soon as it reached the cover it began to act like a hunting dog. Suddenly it lay down on its belly and began to creep through the grass like a snake. After going a short distance in this way it made a spring and caught a grouse in its mouth. Within half an hour it caught a number of grouse in the same way. When they returned to the Columbia the animal went with them without any persuasion. The animal is now called a dog and is a fixture on the Columbia. It is perfectly gentle, and from an examination of it made by several gentlemen it was pronounced principally dog with a cross grain of wolf or fox.

### On the Chesapeake Shores.

Editor Forest and Stream:

I have been on the shores of the Chesapeake Bay and adjoining rivers for the purpose of securing some good specimens of the ducker's friend, i.e., the Chesapeake Bay dog, with a view of honoring the standard and securing a type principle in their progeny.

I am sorry to see the careless form in which most of all the seemingly leading breeders select their stock for the purpose of breeding.

This careless, haphazard way of mating will never produce a uniform type, and the quicker the start is made in the systematic way of breeding with a view of a type principle the quicker the breed will attract a world-wide reputation.

Their working qualities have been exemplified ever since the year 1807, and at this recent date have spread far westward.

I have made my selections in regard to type from advices obtained of the active members of the Chesapeake Bay Dog Club, and find that body very amiable and accommodating; and I should advise all Chesapeake Bay breeders to seek their advice in regard to type, should they chance to come that way to select stock, as they should regard type as well as working qualities.

I hope to see the day when the Chesapeake will be bred to show standard requirements, but not, however, to lose his noble working faculties.

NORTH ATTLEBORO, MASS.

### The Irish Setter Club's Derby Entries.

Editor Forest and Stream:

The Derby Stake of the coming Irish setter trials closed with six entries. They are as follows, all whelped in 1892: BROWN II.—Jas. B. Blossom's dog (Manus—Rye Lily), Sept. 13.

NUGGET II.—Jas. B. Blossom's bitch (Finglas—Betsy Crafts), January.

GEM—Geo. H. Thomson's bitch (Shaun—Nora), January.

IRISH BOY—Geo. C. Nutting's dog (Blue Rock—Romaine), May 11.

PATRICIUS—J. J. Mannions's dog (Duke Elcho—Red Rose), May 23.

HATTIE—C. B. Rutan's bitch (Redstone—Lady Alice), March.

### Newark Dog Show.

THE premium list of the New Jersey Kennel League's first annual dog show to be held in the Industrial Hall, Newark, N. J., lies before us. We have already outlined the form the list would take, and our suggestion that a third premium of cash should be given has been followed in some cases. The principal challenge prizes are \$10 and diploma and others \$5 and diploma, and in the principal breeds the open prizes are \$12, \$6 and \$4. Puppy classes are confined to mastiffs, \$8 and \$4; St. Bernards and great Danes \$7 and \$3, and fox-terriers \$3 and \$2. Other breeds get \$10 and \$5 and diploma in open classes. Rough terriers, the toy spaniels, poodles, pugs, Italian greyhounds, Mexican hairless, Boston terriers, Clumber spaniels and dachshunds get \$7, \$3 and diplomas.

The classification is liberal, most of the challenge classes being divided by sex. The League offers a kennel prize of \$10 for best four in mastiffs, rough-coated St. Bernards, smooth-coated St. Bernards, great Danes, Russian wolfhounds, greyhounds, pointers, English setters, Irish setters, Gordon setters, beagles, cocker spaniels, collies and fox-terriers.

Spaniels get classification No. 1. Mr. Radel offers \$10 for best dog or bitch in the show and the club will have a picture of the prize winner taken at its own expense, which picture shall be used as the League emblem. The best mastiff bitch with three of her get will win \$25. Mr. Reick offers \$15 for best rough St. Bernard barring Sir Bedivere, and Mr. Radel encourages protection by giving \$10 for best of that breed owned in New Jersey. The Pointer and Collie clubs have done well, and the American Fox-Terrier Club offers prizes to the amount of \$40. A number of other specials are donated and the list will be materially increased by the time the catalogue is issued.

The show bids fair to be one of the best held this fall and as those connected with it have expended much enthusiasm and worked hard to give Newark a good show, we sincerely hope their efforts will be so well rewarded that the fixture will become, in reality, an annual one. The show will be held Nov. 28, and three following days. The entry fee is \$3, and entries close Nov. 18, with Dr. W. F. Seidler, 784 Broad St., Newark, N. J. In the additional rules we find this proviso: "In the event of Thanksgiving Day not being Nov. 30, as anticipated, the dates of closing of entries and of the show will be one week earlier." The League might have made a popular move if it had acted on FOREST AND STREAM's suggestion to grade entry fees according to prizes. It is too much to pay \$3 for a \$7 prize in the smaller breeds; \$2 would have been better. The following railroads will carry dogs free when accompanied by owners or caretakers: Central Railroad of New Jersey, Pennsylvania Railroad, D. L. & W. Railroad, Erie Railroad, Lehigh Valley Railroad, Reading Railroad, B. & O. Railroad.

The judges were announced last week.

### International Field Trials.

Editor Forest and Stream:

Although you have had nothing from these parts lately, do not imagine that things are at all dead in the dog and gun line. Arrangements are about completed for the international trials beginning Nov. 7.

The past severe winter was very hard on the birds, except in a few places where they were well looked after. On our old trial grounds up the river, birds were not found in sufficient numbers to warrant the trials being held there, and it was thought the club would have to accept the invitation of the Big Point Club to hold the trials on their grounds. There was considerable objection to this on account of some of the dogs being worked there. The difficulty, however, has been overcome, the club having secured permission from the farmers in the vicinity of Mitchell's Bay to run the trials on their lands; 1,200 acres have been secured. Mitchell's Bay is a great duck resort and has two good hotels; it is about twelve miles from Chatham.

Twenty-five out of the thirty-four Derby entries have paid their second forfeit. The All-Aged Stake closes on Nov. 1, and everything points to a good entry.

Word has just been received from Mr. Thos. Johnson that he has a cable from Mr. Lonsdale to send his two crack pointers, Ightfield Musa and Ightfield Dogwood to the International; they will be sent down in charge of "Sef" Hallam, who ran them at the Northwestern Trials.

There has been a call from a number of amateur sportsmen for a renewal of the Amateur Stake, and the committee have decided to run a stake after the regular trials, open only to dogs broken and run by amateurs, provided a sufficient number of entries are received. The names of the judges will be published next week.

Ducks and snipe are in good numbers. The redheads are coming in for the first time in a number of years. The low water in the marshes bordering on Lake St. Clair for the past few years seems not to suit them. On the Big Point preserve, seven or eight hundred were usually killed, but of late years only a few were seen. The big ducks, however, have been plentiful and this year more so than ever.

W. B. WELLS, Sec'y I. F. T. C.

CHATHAM, Ont., Oct. 16

### The Ashmont Trophy.

Editor Forest and Stream:

I beg to announce that the Ashmont diamond trophy, which was won by my Irish setter champion Tim, has been delivered to me. It is without doubt the handsomest special prize of its kind ever offered in the dog world. It must be admitted by all that the rivalry that the competition for the trophy occasioned certainly brushed up interest in dog matters, both among the regulars and amateurs, and in this end fulfilled the wish of its most generous donor.

L. C. SAUVREUR.

CHESTNUT HILL, Pa., Oct. 16.

### How is This?

Editor Forest and Stream:

In reading your report of the Danbury dog show I notice you give my Newfoundland second and special, first withheld, which is correct according to the records. I went into the assistant secretary's office to see about my prize money, and he (Lewis Reed) told me that Ben Lewis of Philadelphia took second and he (Reed) took special. Mr. Reed's dog is not eligible to enter.

JOHN CALHAN.

DANBURY, CONN., Oct. 18.

### Death of Champion Bellegarde.

St. Bernard breeders the world over will regret to hear of the death, Oct. 9, of this well-known St. Bernard. Some time ago, according to *Stock-Keeper*, she showed signs of suffering from an incurable internal complaint and her owner, Mr. Norris-Elve, mercifully had a term put to her suffering by a painless death. Bellegarde was born July 10, 1885, and was by champion Bayard out of Crevasse II., a winner at Crystal Palace, etc. Bellegarde had a distinct influence on the St. Bernard breed in England, though peculiar to relate only her female progeny survived, her most promising dog puppies being born dead, excepting one by Sir Bedivere, which afterward died from distemper. Among her distinguished daughters may be mentioned the noted champion Alta-Bella, who once beat Princess Florence, and Abess, and her granddaughters Beautiful Abess and Albulia. Bellegarde was noted for her gentle and affectionate expression. Her winnings include premier honors at the best shows and once she was reserve for the St. Bernard Club's 100 guinea cup.

## DOG CHAT.

## The Irish Setter Trials.

All field sportsmen, whether English setter men, pointer men or others, will regret that the efforts of the Irish Setter Club in trying to show what the Irish setter can do in the field do not meet with better response. Six entries for a Derby seems almost ridiculous. Still, as Dr. Davis tells us, there is some excuse for this. Messrs. Perry and Hamilton lost their five Derby entries through McLin's dastardly work. Mr. Bishop, always a mainstay where Irish setters were concerned, was compelled through ill health to dispose of his kennel, and, adds the energetic secretary, "hard times, lack of time on my part, and the lack of interest on the part

ment is that now the dam and granddam feed each other's lots indiscriminately.

Instead of saying that the news of Bedgebury Lion's death "reaches us from New Jersey county," it would perhaps have been more correct in the *Stock-Keeper* (Eng.) to have given FOREST AND STREAM the credit, as the news appeared in this paper alone. For three weeks previously it was known to only the owners, kennelman and FOREST AND STREAM.

The story comes from Camilla that John Joiner and several others were out hunting some time ago when Mr. Joiner's dog fell into an old well. It was not known at the time where the dog was, and no hunt was made for him, Mr. Joiner thinking he would come home in a short time.

IO, THE WINNING ST. BERNARD AT CHICAGO AND LEXINGTON, KY., 1893.

of the owners of eligible puppies will, I suppose, account for the poor showing." The All-Age Stake, we are pleased to note, promises better. Irish setters hold their own in English trials in mixed competition, and the owners of Irish setters here are alone to blame for the poor showing of their breed. The dogs have shown they can do good work, all they need is more attention on the part of the best trainers, and this will be accomplished when a trainer finds that it is as much to his interest to get the Irish setter to the front as it has been to place the English setter in the prominent position it now occupies.

## U. S. Trials at Bicknell.

The number of entries in the U. S. Field Trials Club's All-Age Stake produces a peculiar result, one that is without precedent in this country. That the pointer entry should be equal to the English setter marks an advance in which pointer men should take especial pride. The club's enterprise and daring in holding two trials in one season seem to have struck the public fancy, and we trust that their conduct of the trials will be such that they will always merit the good opinion they now seem to hold among field trial men. The outlook for successful trials at Bicknell seems very bright, Mr. Madison informing us on his return from Bicknell that they will have plenty of birds. He found seven large beavies on 200 acres.

Mr. E. O. Damon, whose interest in kennel affairs has hitherto leaned toward setters, has purchased from Hon. John S. Wise the young pointer Soult II, by Robert Le Diabole out of Poms, by Romeo out of Nebula. Romeo is a son of Graphic and Seph G., and Nebula a daughter of Meteor and Beulah, so his breeding is *sans reproche*. This young dog combines, we are told, high class bench form with exceptional speed, and as Mr. Damon's ambition tends toward the sort of dogs known as "high class" and not "plug hunters" he intends to develop and run Soult in the U. S. trials for pointers at Grand Junction, Miss. Mr. Damon is now looking out for a light weight dog that is a field trial winner and also a winner at the best shows in England. This blending of merit may be difficult to find, still we applaud Mr. Damon's resolve, and trust he will be successful.

## Bulldog Stud Book.

We have received copies of "Bulldog Pedigrees," which is a list of all known bulldogs and their reputed ancestors complete to Aug. 1, 1893, by Messrs. Cyril F. W. Jackson and E. H. Bowers. This is a volume which no bulldog breeder should be without. The names of almost 6,000 bulldogs are indexed in this volume, comprising the particulars of every bulldog registered at the English Kennel Club since registration was required 12 years ago; of every bulldog exhibited at any one of the Kennel Club's 36 shows, at the 30 shows held at Birmingham and at the 19 Bulldog Club shows, as well as of most bulldogs exhibited at less important shows. It also contains the particulars of every ancestor entering into the pedigrees of any of these dogs. The price of the work is \$3.75, and can be obtained from this office.

## Surrey Janet Arrives.

Mr. H. W. Smith tells us that Cribbage is now in perfect health, and the same may be said of his other wire-hair fox-terrier importation, Surrey Janet, which arrived on the Paris last week, through Spratts Patent. The advent of these two crack wire-hairs should be followed by both an increase of interest in the breed and a general improvement in the home bred stock. Surrey Janet about a week before she sailed visited Carlisle Tack, and the result of this union should enhance the value of Mr. Smith's kennel. Imported so soon after mating, there should be no danger of losing the litter, as has happened so frequently before when shipment has been delayed.

## The Maternal Instinct Strong.

A curious incident is related by *Stock-Keeper* (Eng.), about two St. Bernard bitches in the kennels of Mr. F. Stewart Sandeman, Stanley, N. B. "A 17mos. St. Bernard bitch had a litter of six puppies. Shortly after they were born, whilst the mother was away from the litter for a little while, the grandmother of the puppies, who had not had a litter since the mother was born, went to the pups and commenced suckling them, her milk having returned. When the mother came back there was a fight for possession, but the old dame would not give way, and eventually for the sake of peace, she received three of the puppies which she continued to suckle. A further development in this dual family arrange-

ment is that now the dam and granddam feed each other's lots indiscriminately.

## Important.

Our friends seems to forget that FOREST AND STREAM goes to press on Tuesday now instead of Wednesday, and all communications intended for insertion in "Dog Chat" or other columns in this department should reach us not later than Monday. Such letters should be marked "Kennel," so that they may be opened in the kennel editor's absence at shows, field trials, etc., and the news be published in proper season.

## Business.

To insure prompt attention, all communications of a business nature should be addressed to the Forest and Stream Pub. Co. When sent to members of the staff, who are frequently absent from the office, considerable delay occurs before such business is attended to. In the case of advertisements especially would we draw the attention of our friends to this fact; also, to insure insertion in the current week's issue advertisements should reach us not later than Monday morning, and Saturday would be still better.

## Akron, O., Will Hold a Show.

The Northern Ohio Pet Stock and Kennel Association claim the dates Dec. 20 to 23 for their dog show at Akron, O.

THE WINNING KENNEL OF FOXHOUNDS, AT LEXINGTON, KY.

Owned by the Strodes Valley Kennel Club, Winchester, Ky.

The association intended holding its show in February next but changed their plans at their last meeting. Mr. H. A. Peck, Mr. John A. Logan, Jr.'s, late kennel manager, is the secretary.

In its issue of Oct. 7 the *Toronto Globe* published several pictures of winning dogs at the late Toronto show. They are half tones and are better than anything of the kind yet published in a daily paper, and reflect great credit on the manipulator of the camera, in this case a lady, Mrs. M. G. Bowman. The Irish setter Tim occupies the place of honor, surrounded by collie Wellesbourne Charlie, bulldog Lady Winnie, great Dane Lord Wolverton, bull-terriers Edgewood Robin and Katherine Mavourneen, Scotch terrier Tires, St. Bernard Lord Dante. English setter The Sultan, beagle Royal Krueger, and mastiff Lady Coleus. Such illustrations are educative and worth a cartload of the pen and ink abortions one generally finds in the newspapers.

The fair owner of the Mount Zion Kennels, Mrs. J. M. Nicholson, of Albany, has been following the fashion of late and reducing her stock, but reports prices at panic rates.

Mr. Munhall, whose distressing accident we chronicled some time since, writes us that the great number of letters he received from his many sportsmen friends throughout

the country assisted greatly to pull him through the trying ordeal which he has just passed. He is now at home, and with good care is gaining rapidly. "I hope soon to be out, and with a foot that won't get cold hope to be myself again." And this wish we know his friends will echo.

## A Time for Everything.

Mr. A. W. Smith, of Buffalo, known to the fancy as an enthusiastic black and tan terrier fancier, thinks his business demands all his time and he cannot afford to devote any more time to dogs, etc. In informing us of this decision, he remarks that as he cannot keep out of dogs if he reads the FOREST AND STREAM, he must give it up. This is one of the things we can never understand. Are we returning to the old days when the iron bands of business held men so chained to the desk that no moment could be spared for relaxation in the way of sport? We see no reason why a man cannot devote sufficient time to his business, and still, if his inclination tends that way, take pleasure in the companionship of a few dogs. Mr. Krueger probably travels further during the week than any man in the fancy, still he finds time to return home at the end of the week and take the pleasure that a large kennel of beagles affords him. Take August Belmont, for instance, Thos. H. Terry, Clarence Rathbone, H. W. Smith, C. S. Hanks, L. C. Whiton, H. W. Huntington, J. H. Winslow—we could name a score—all men who are "up to their ears" in business, as the saying goes; still they find time to devote more or less attention to breeding dogs and presumably derive benefit from it. Pleasure should not interfere with business, nor should we let business interfere with our pleasure when the time is up; and the FOREST AND STREAM exists just to show and teach men how they can best employ such leisure time as they have in a way that will bring them the health to better bear the chains of that business they seem so devoted to. Our apologies are perhaps due to Mr. Smith in using his case to point a moral, but this is how the thing struck us when we read his letter of resignation.

Messrs. Luckwell & Douglass have sold the red cocker spaniel Gold Ring to Mr. H. Herbertson, of Detroit, Mich.

## Fits or Hydrophobia.

No better example of the ignorance through which the poor dog is made to suffer can be advanced than that given by a correspondent in our query column. He describes very intelligently the symptoms which led him to suppose his dog had hydrophobia, and the dog paid for the mistake with his life. Such a fit as this dog seems to have had is familiar in different degree to those who have kept large kennels of dogs. There is little doubt but that the fit was caused by worms, and the dog no more had hydrophobia than the nearest gate post. Some cold water thrown on the back of the head at its juncture with the spinal column would, as is usually the case, have quieted the pup, and a dose or two of bromide and afterward treatment for worms would probably have saved to Mr. H. C. DeP. a useful member of the English setter family. Of such happenings as this are the mad dog scares of our cities generally manufactured.

## Mr. Tulk Selling Out.

We trust that the desire of Mr. W. J. Tulk, Mr. Stewart's able coadjutor in his duties as secretary of the Hamilton Kennel Club, to sell out his kennel does not mean a desertion of the fancy altogether, but simply to make room for something better. Last Monday he sold his greyhound Master Memnon, well known in Canada, to Shirley Stewart, of Toronto; and also a black dog pup by champion The Scavenger out of Bed of Stones, to A. Fraser, of Ottawa. The same day Mr. Tulk shipped a brace of cockers to Mr. W. H. McCord, of Omaha, Neb., a red bitch by champion Red Roland out of Golden Duchess and a black dog by champion Red Jacket out of Topsy. These he had purchased previously from Mr. W. B. Palmer, of Woodstock.

We have received a picture of the champion cup won by Mr. Thos. Johnson at the Northwestern field trials. The trophy seems to be quite a work of art. At the base is a model of an English setter on point, and this is surmounted by a handsome vase. Chickens are also represented on the base of the trophy, and the handle of the cover of the vase represents the Manitoba game bird. It is a handsome trophy and Mr. Johnson should feel proud in claiming it.

A winner of the National Greyhound Club's medal inquires: "Did the custom authorities admit the English pro-

duction; if so, what are the medals like and when are they to be distributed to the long-waiting owners of the lucky dogs?" We understood from the secretary and so stated some time since that the medals had been received by the club and that they had been sent to the winners.

Mr. R. B. Morgan is located at Humboldt, Tenn., with his string of dogs, and tells us that he has never seen such a large crop of quail in Tennessee as he finds this year.

On the front page of *British Fancier's* issue of Oct. 13, which we find on our desk a couple of days sooner than usual, is a capital picture of a fox-terrier. Oakham Veracity is the dog's name. He was lately claimed by Mrs. E. Lawrence, a lady residing in Wales, at \$500. This fair fancier has not been at all shy in her bargains, for previously to this she had given \$1,000 for Rowton Warrant, an evidence of pluck and enterprise not usually found among fanciers of the fair sex. In the above journal's notice of Oakham Veracity we also find something which can be indorsed by experiences over here. We have not so many fanciers among the fair sex as one could wish, but the sentiment expressed by our contemporary is equally applicable on this side of the water: "The fancy nowadays, fortunately, is rich in the possession of a large sprinkling of the fair sex, which fact we cannot but regard as an unmixed blessing, for the softening influence of

woman is a source of the greatest good in whatever walk of life that influence is exercised. Passing, however, from the sentimental to the serious side of the matter, women who have espoused the fancier cause have invariably made their mark, and while among the males we could mention many weak-kneed devotees who have given up the pursuit, some in disgust, we cannot recall a single failure among the fair sex."

A dog may trespass on one's land and incur due penalties, but according to a decision recently given by Judge Van Wyck in the City Court in Brooklyn, trespass on one's legs doesn't count. A Miss Williams was standing outside McCormick's large store waiting for a car, when Mr. McCormick's cocker spaniel ran out, jostled against her legs and upset her. She alleged that she suffered much from the fall. Suit was entered for \$10,000 damages, but the judge took the same view of the matter that Mr. McCormick did—that the dog was not a trespasser, and that there was no negligence on his part, and dismissed the case.

#### Gordon Setter Field Trials.

The FOREST AND STREAM exclusively announced the week after the Rhode Island show that the Gordon setter men in New England intended holding some field trials. Now we are pleased to say that the inaugural field trials of the Gordon Setter Field Trials Club will be run at Freemont, Mass., on Monday, Nov. 20. The All-Age and Derby entries close Friday, Nov. 10. The forfeit is \$5, which must accompany each nomination, and \$5 additional to fill. The judges are Mr. J. W. Lawrence of Providence, R. I., and Mr. A. R. Sharp of Taunton, Mass. The secretary, to whom all entries must be sent, is Mr. Chas. R. Taylor, whose clever and intelligent articles on field sports in the Providence Journal have done much to help this branch of sport in Rhode Island and Massachusetts. His address is Box 1,313, Providence, R. I. There are many men who still think the Gordon setter the equal of any breed in the field, but will not run their dogs at open field trials, believing judges are prejudiced. Here is an opportunity in a country adapted to the pace and range of the Gordon, and there is no excuse why a good entry should not be made by Gordon men from New York, Baltimore, etc. The entrance is low, the judges are practical sportsmen and the country is suitable and conveniently situated, so there is no excuse. If the Gordon men do not come forward on this occasion they must henceforth hold their peace, but we do not believe they will allow the flags of their favorite breed to trail in the mire this time.

#### Raby Palissy Changes Quarters.

The manager of Mr. Hanks's Seacroft Kennels, W. T. Turner, in sending us a batch of kennel notes, which are, however, too late for this issue, shows that the kennel is doing good work. Recently they purchased Raby Palissy from Mr. Harris, together with three pups by that dog. Palissy will shortly be advertised at stud, and as he is strong in Pitcher blood and has already done well as a stock getter, his services should be in demand. They send notices of sixteen sales alone of fox-terriers and wolfhounds. They have sold the well-known fox-terrier bitch Seacroft Myrtle, served by Warren Duke, Sept. 20, to Mr. E. Holden, Los Angeles, Cal., also a brother of his by Raby Palissy ex Damson, to Mr. A. C. Bradbury, of the Maybrook Kennels. Seacroft Boaster goes to Mr. H. C. Cutter, Hull, Mass. We note also that the wolfhound bitch Obrouga was mated to Servantes Oct. 5, and the noted Svodka to Leekhoi Oct. 2. The well-known fox-terrier bitch Grouse II. visited Blemton Stickler Oct. 7. All things considered, these seem to be busy days at Manchester-by-the-Sea.

We have not had space lately to chronicle the many new advertisements in FOREST AND STREAM, but we should have drawn attention to Rhinada Pointer Kennels' list of bargains in the way of pointers for any purpose. This week Shrewsbury Kennels offer some well-bred beagles; A. P. Griswold, choicely bred pointer pups; R. L. Smith, rabbit dog broken to ferret; L. Dart, English foxhounds; E. W. Fiske, cocker spaniels; Forest Kennels, coon and fox dog; Thasmo Kennels, pointers. At stud: Meadow City Kennels offer The Corsair and Rod's Chaff; E. W. Fiske, St. Bernard Hamlet and cockers Jay Kay, Bambo, Brantford Rufus, all well known. Wants: A. J. Thomas, good English setter; D. A. Wells, Jr., foxhounds.

#### Collie Club Sweepstakes.

It is the intention of the Collie Club to have a grand collie sweepstake, open to all, at the New England Kennel Club show, next April, provided sufficient support can be guaranteed. The conditions will be \$50 for each dog, and to this the N. E. K. C. is expected to add \$50, for collies whelped during 1898.

The September issue of the A. K. C. Gazette contains no mention of the coming A. K. C. meeting.

The new Ashmont trophy will be offered for the first time at the Newark show held by the N. J. K. L., that is of course, supposing the entries number 400. The Boston Terrier Club also offer their silver medal.

Dr. Heffinger has presented a July pup by Wheeler out of Kate to Mr. L. O. Dennison.

#### "Fancy" at the Fair.

It was our good fortune on "Chicago Day" to see the largest crowd ever gathered in an enclosure, and while we rested in the cosy corner of the FOREST AND STREAM's exhibit several well known dogmen dropped in from the crowd that steadily passed the railing from morn till night. We were pleased to meet Mr. N. T. Harris and his wife. Mr. Harris was fresh from a hunting trip near the Cherokee strip, where he had made one of a party of gentlemen in a special car. He reported lots of sport, but a great lack of water, which made it hard for the dogs. The party also saw the grand rush of "boomers" that entered the strip last month. Mr. Harris will attend the Southern and United States trials and enter some dogs.

Another dogman was Mr. Beck, of Scranton, Pa., who used to own Othello, a cocker spaniel that won several prizes in 1887. Another was Mr. Line, of Providence, who showed the setter Prince L. Of course Roger Williams could not pass us by, and he dropped in for a few minutes' chat and a review of the coursing the previous week. Judging from the way the Register has been patronized, FOREST AND STREAM must have many, many friends, and the majority of the names we found to be of readers in the West.

In the United States Building we found, in the osteology department, an interesting exhibition of dog skeletons, among them a skeleton of Mr. James Watson's collie Clipsetta, by Eclipse out of Nesta. It is beautifully set up and is quite a lesson in collie formation though "a little short of coat." There was also a skeleton of a great Dane, though unfortunately yclept a Siberian bloodhound. The skeleton of a dachshund was also an interesting study, and the battered frame of the Esquimaux dog showed every evidence of the cruel treatment these poor animals experience at the hands of their squatty masters. Several ribs were broken. The heads of a number of breeds, such as a bulldog, pug, Newfoundland, different breeds of terriers, etc., were interesting as showing how poor the specimens must have been from a fancier's view when in the flesh.

#### KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

##### NAMES CLAIMED.

##### Prepared Blanks sent free on application.

**Joanhoe and Talieman.** By F. K. Pidgeon, Saugerties, N. Y., for liver and white and ticked pointer dogs, whelped April 12, 1893, by Wary (Fleet—Lady Pearl) out of Chloe (champion Tammany—Bertie).  
**Small Floes.** By F. K. Pidgeon, Saugerties, N. Y., for liver and white pointer dogs, whelped April 12, 1893, by Wary (Fleet—Lady Pearl) out of Chloe (champion Tammany—Bertie).  
**Saddleback.** By F. K. Pidgeon, Saugerties, N. Y., for white, black saddle, black ticks pointer bitch, whelped April 12, 1893, by Wary (Fleet—Lady Pearl) out of Chloe (champion Tammany—Bertie).  
**Banshee.** By F. K. Pidgeon, Saugerties, N. Y., for white, lemon ticks, spotted ears, pointer dog, whelped April 12, 1893, by Wary (Fleet—Lady Pearl) out of Chloe (champion Tammany—Bertie).

##### BRED.

##### Prepared Blanks sent free on application.

**Chloe—Graphic VI.** F. K. Pidgeon's (Saugerties, N. Y.) pointer bitch Chloe (champion Tammany—Bertie) to his Graphic VI. (champion Graphic—Daisy II.), Sept. 3.  
**Lina K.—Hundesport's Bergmann.** W. Loeffler's (Milwaukee, Wis.) dachshund bitch Lina K. to his Hundesport's Bergmann, Sept. 18.  
**Little Olga—Diamond Joe.** W. Loeffler's (Milwaukee, Wis.) dachshund bitch Little Olga to his Diamond Joe, Sept. 27.  
**Milwis Hilda—Hundesport's Bergmann.** W. Loeffler's (Milwaukee, Wis.) dachshund bitch Milwis Hilda (Windrush Roter—Lina K.) to W. Loeffler's Hundesport's Bergmann, Sept. 19.

##### WHELPED.

##### Prepared Blanks sent free on application.

**Princess Avon.** Grand View Kennels' (Danbury, Conn.) rough St. Bernard bitch Princess Avon (Prince Barry—Countess Sequa), Oct. 12, thirteen (six dogs), by McCarl & Cattaneo's Milton (Tartar—Lady Gair).

**Ivy.** Miss Marion E. Bannister's (Springfield, N. J.) pug bitch Ivy (champion Bob Ivy—Yuma-Yuma), Sept. 23, four (two dogs), by her Saxon.

**Cricket.** F. K. Pidgeon's (Saugerties, N. Y.) cocker spaniel bitch Cricket (champion Jersey Rockland Belle), Aug. 4, four dogs, by C. G. Browning's Cherry Boy (Ebony—Fanny), Sept. 27.

**Chloe.** F. K. Pidgeon's (Saugerties, N. Y.) pointer bitch Chloe (champion Tammany—Bertie), April 12, seven (five dogs), by John A. Hartman's Wary (Fleet—Lady Pearl).

##### SALES.

##### Prepared Blanks sent free on application.

**Barney B.** White bull-terrier dog, by Barney O'Hea out of Grove Duchess, by W. D. Brereton, Allegheny, Pa., to J. C. Mahler, Pittsburgh, Pa.

#### ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Howard, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.

H. C. De P., Minton, N. D.—I was the owner of an English setter puppy four months old, which, prior to yesterday, was the strongest of the litter and had never shown any signs of illness. Yesterday morning I noticed that he was uneasy and picked head foremost, crying piteously. Instead of falling at once, for several moments he remained with the side of his head lying on the ground, while his hind parts were erect and perfectly rigid. He then fell over on his side and his legs stiffened out, in which position he remained some little time, when his limbs relaxed and he commenced working his legs as though he was running at the top of his speed, still lying on his side. While acting thus he suddenly gave a number of short, sharp barks, after which he remained a few minutes comparatively quiet, still lying on his side and shaking from head to foot. He then struggled to his feet and staggered around in a circle, when he again fell on his side and commenced snapping his jaws, while his legs twitched violently. At this time a white foam gathered about his mouth. Throughout his sickness his eyes remained wide open. Having observed other dogs around, and fearing the disease to be hydrophobia, I shot him. Will you kindly explain this sickness? Ans. Probably a fit, but certainly not rabies (hydrophobia).

G. M. B., Arkadelphia, Ark.—I have a fine setter pup 6 mos. old. The inside of his flews on one side are literally covered with excrescences like warts, even extending to the gum about the roots of the teeth. They are of various sizes and seem to be increasing in size and number. When the lips are parted, a fetid odor escapes, though there is no visible evidence of tumefaction or abrasion. What is the trouble, is it dangerous and what can I do for it? Have read "Ashmont," but find nothing that touches the case. Ans. Cut off the warts and touch the stumps with nitrate of silver. Remove a few each day; give the following mixture:

Sulph. precip.	3 li
Liq. sodii arseniat.	3 li
Mucilage	3 iss
Aq. ad.	3 vi

Mix. Give two teaspoonfuls twice a day.

E. H., Marietta, O.—Will you publish a cure for mange in dogs? I have a Gordon setter that has it bad and it is of some 15 months' standing. The skin is dry and has the appearance of dandruff. The disease appears in red blotches about the size of buckshot to that of a one-cent piece. Hair is thin on the ribs and dry to the touch as if there was no oil in it. Dog is poor in flesh, although he has all he wants to eat; has acquired the habit of running away from home for a day at a time, sort of "tramp" dog, as it were. Ans. Rub sulphur and whale oil all over the dog every other day for two weeks, then wash off and repeat in a few days if necessary. Treat the dog for worms.

G. D. B., Boston, Mass.—You will find working beagles advertised in our business columns. We should advise you to attend the coming beagle trials, where you could possibly pick out a pack that is properly trained and see for yourself how they work.

R. M. P., Northampton, Mass.—At the time of registration in A. K. C. Macd. was owned, in 1886, by Dr. L. R. Taylor, Elsie, Mich., and probably he sent a photograph of the dog. Paucy Mason was also registered by Dr. Taylor in 1887, but his address is given as Bancroft, Mich. We should advise you to write to him.

F. W. C., Brooklyn, N. Y.—The Laverack setter is a strain of setters originally from the kennels of Mr. Edward Laverack, Whitechurch, Shropshire, England. It comes under the head of English setter, and a Laverack would be registered under that head.

W. S., Germantown, Pa.—Can you give me the name and address of a good man to break in a young setter dog, who lives near Philadelphia? Ans. We do not know of one and attention is drawn to our paragraph relating to this in last week's issue.

E. S., Oswego, N. Y.—We do not know of any one who trains and sells dogs for treeing partridges. A few lines in our kennel special columns would probably bring you the desired information.

J. W. P., Wilkinsburg, Pa.—The breeding of Rip Rap from a field point of view compares favorably with any pointer now in the stud.

RICHMOND JOCK, Hoosick, N. Y.—If the local authorities have an ordinance that dogs shall be licensed, you will have to abide by it.

## Hunting and Coursing.

#### FIXTURES.

Oct. 24.—Northwestern Beagle Club's Trials, at Whitewater, Wis. L. Steffen, Sec'y.

Oct. 30.—National Beagle Club Trials, at Nanuet, N. Y. Geo. Laick, Tarrytown, N. Y., Sec'y.

Oct. 31.—The Cowley County Coursing Association, Winfield, Kan. J. R. Ballard, Sec'y.

Nov. 1.—Western Kansas Coursing Club's meeting, at Leoti, Kan. W. D. Alphin, Sec'y.

Nov. 7.—New England Beagle Club's Trials. W. S. Clark, Linden, Mass., Sec'y.

#### KENMORE COURSING MEETING.

OUR report of this meeting did not arrive until just as we were going to press, and the full report of the running must lie over till next week. The meeting seems to have been a great success in every particular. The grounds were good, and the citizens of Goodland enthusiastic in the sport. At the business meeting of the club the officers elected were: President, Dr. Van Hummel; vice-president, M. B. Tomblin; secretary, C. F. Weber; treasurer, H. C. Lowe; Ex-committee, J. Hubert Watson, H. C. Lowe, T. W. Bartels. The constitution and by-laws of American Coursing Club were adopted. They also adopted the rules of the National Greyhound Club, with this alteration that instead of using that name the National Coursing Board is named, composed of the following:

From the American Coursing Club, Dr. N. Rowe and J. Herbert Watson. Cowley County Coursing Club, J. R. Ballard and Ivan A. Robinson. Western Kansas Coursing Club, W. O. Alphin, R. Howard. Huron Coursing Club, John Longstaff, E. H. Alphin. Kenmore Coursing Club, Dr. Q. Van Hummel and H. C. Lowe. This puts the authority of the management of all matters to be referred in the hands of practical coursing men, where it should be.

Mr. E. H. Mulcaster judged satisfactorily and Mr. Ralph Taylor, Emporia, Kan., performed well with the slips.

Touchwood, who ran at Huron, after his course with Battle Royal was taken ill and died in a few hours. He was imported and owned by Nelson P. Whiting of Minneapolis, Minn. Mr. Bradley lost the pup he bought from Mr. Mulcaster at Huron, through an accident. The running was as follows:

##### SUMMARY.

GOODLAND, Kan., Oct. 17.—Goodland Stakes, for sixteen or more all-age greyhounds; \$100 of citizens' cash and 50 per cent. of entrance money to winner, \$50 cash and 50 per cent. of entrance money to runner-up, balance of entrance money to be equally divided between dogs equal at the finish; entrance \$10.

##### I.

American Coursing Kennels' light fawn dog Laughed At (Norwegian Bueretere) beat Goodland Kennels' black dog Book.

American Coursing Kennels' red dog Light Foot (Major—Chipper) beat Landseer Kennels' brindle bitch Viola (Babazon—Verdure Clad).

Goodland Kennels' black and white dog Rear Admiral (Lord Gledyn—Lady Allie) beat J. Herbert Watson's fawn bitch Drytime (British Still—Haytime).

H. C. Lowe's black and white dog Battle Royal (Lord Neversettle—White Lips) beat Nelson P. Whiting's fawn dog Touchwood III. (Thornwood—Burning Shame).

H. C. Lowe's black and white bitch Princess May (Lord Neversettle—White Lips) beat American Coursing Kennels' black bitch Lady in Black (Trales—Dick's Darling).

St. Patrick Kennels' black and white dog Boomerang (Lord Neversettle—White Lips) beat Sam'l W. Vidler's brindle bitch Bennarita (Norwegian—Bueretere).

J. Herbert Watson's black dog Royal Crest (Green Tick—Royal Rate), beat Goodland Kennels' black and white dog Jeff (Don—Nell).

Maybrook Kennels' brindle bitch Miss Dollar III, beat Allen & Rew's brindle and white dog Woodford Boy (Lord McPherson—Jessamine).

Goodland Kennels' white and brindle bitch Rhea (Major Gledyn—Daisy Dublin), beat American Coursing Kennels' white dog Living Yet (Trales—Dick's Darling).

Landseer Kennels' red dog Van's Peter (Babazon—Carmine) beat H. C. Lowe's black and white dog Voltaire (Lord Neversettle—White Lips).

Maybrook Kennels' brown dog Greenshine (Mullingar—Green Finch III.) a bye.

##### II.

Laughed At beat Greenshine.

Light Foot beat Rear Admiral.

Battle Royal beat Van's Peter.

Princess May beat Boomerang.

Royal Crest beat White Lady.

Rhea beat Miss Dollar III.

Nancy a bye.

##### III.

Nancy beat Laughed At.

Light Foot beat Battle Royal.

Princess May beat Royal Crest.

Rhea a bye.

##### IV.

Light Foot beat Princess May.

Nancy beat Rhea.

##### Final.

Nancy beat Light Foot and won.

#### Kenmore Derby.

For puppies under 13 mos., \$50 cash and 50 per cent. of entrance money to winner, 50 per cent. of remainder of entrance money to runner-up, balance of entrance money to dogs equal at finish.

##### I.

St. Patrick's Kennels' brown and white dog Beau Brummel (Dingwall—Miss Kitten) beat Scout's Rest Kennels' brindle bitch Miss Cody (Babazon—Daisy B.).

H. C. Lowe's white and brown dog St. Lawrence beat Goodland Kennels' brindle and white bitch Fanny (Jeff—Jessie).

St. Patrick's Kennels' red bitch Bitch Bitch (Babazon—Blue Belle) beat Nelson P. Whiting's brown dog Willis H. (Lights o' London—Lila Nell).

Scout's Rest Kennels' brown and white dog Billy Taylor (Dingwall—Miss Kitten) beat St. Patrick Kennels' black and white dog Border Rufian (Dingwall—Miss Kitten).

Scout's Rest Kennels' brindle bitch Boal's Hope (Babazon—Daisy B.) beat E. H. Shaw's red dog Beconsfield (Babazon—Daisy B.).

H. C. Lowe's brown bitch Melitta (Lord Neversettle—White Lips) beat St. Patrick Kennels' brown and white bitch Bonny Bell (Dingwall—Miss Kitten).

St. Patrick Kennels' brindle and white bitch Bon Bon, a bye.

##### II.

St. Lawrence beat Beau Brummel.

Bird's Eye beat Billy Taylor.

Bon Bon beat Boal's Hope.

Melitta a bye.

##### III.

St. Lawrence beat Bird's Eye.

Melitta beat Bon Bon.

##### Final.

H. C. Lowe's St. Lawrence and Melitta (Lord Neversettle—White Lips) divided.

There will also be held a large open meeting at Winfield the week following Oct. 31, and we understand that there will be a meeting held in Corticiana, Texas, Nov. 7. At the Leoti meeting, Oct. 24, Mr. Mulcaster will judge and Mr. Cockran slip.

#### Brunswick Fur Club Field Trials.

NORTH ACTON, Mass., Oct. 23.—The fifth annual field trials of the Brunswick Fur Club will begin here to-morrow morning with the running of the Derby. Many sportsmen have already arrived, and among the hounds present are representatives of the Portsmouth (N. H.) Hunt Club, the Popple Camp pack, of Phillipston, Mass., the Firgrove pack, of Digby, Nova Scotia, the Oxford (Mass.) pack, and the Sandy Spring (Md.) pack. Others are expected this evening, among them the pick of the White Oak Hill Kennels' pack, of Poland, Me.

As I write the rain is falling fast and there is every prospect of a northeast storm, but the weather-wise predict clear skies for to-morrow, and all are hoping that the prophets are not mistaken. The entries will be made and the judges selected at the club meeting this evening, too late to catch the last mail from this little village. With good weather the trials promise to be a success.

BRADLEY.

Mr. W. F. Lamony, who is the keeper of the Greyhound Stud Book, is the well-known coursing reporter who covered Scotland and the North of England for the Field up to 1882 (seventeen years in all) under the nom de plume of "Skiddaw." After this he went to Australia on an engagement which lasted ten years, finally returning to England he accepted an appointment on the Field, which was followed by his election as keeper of the Stud Book on the death of Mr. David Brown (Maida).

### New England Beagle Club All-Age Entries.

Editor Forest and Stream:

Inclosed find All-Age entries of the N. E. B. C., which closed Oct. 14 with 21 entries, which, with the 11 Derby entries, make a total of 32 in all classes:

CLASS A, DOGS AND BITCHES, 13 TO 15IN.

LONGE FITZ LEE—H. A. P. Smith's dog (Fitz Hugh Lee—Maid).  
DAISY—Thomas Shalleross's bitch.  
KITTY—E. O. Comfort's bitch (Rowdy—Music).  
SNOW—Ed Marshall's bitch (Stormy—Lucy).  
MODEL—Ed Marshall's dog (Stormy—June M.).  
JACK BANNEHMAN—H. L. Kreuder's dog (Bannerman—Kate).

GRAYBURN DAISY—H. L. Kreuder's bitch (Joe—Grayburn Gyr).

FANNY RACER—H. L. Kreuder's bitch (Racer, Jr.—Nellie).  
GYSEY A.—F. W. Chapman's bitch (Kenneally's Lee—Tone).

MARGUERITE—F. W. Chapman's bitch (Fitzhugh Lee—Dido).

JENNIE OF ORLAND—F. W. Chapman's bitch (Spot of Orland—Fannie S.).

VICK R.—H. V. Jamieson's bitch (Fitzhugh Lee—Neil).

CLASS B, DOGS AND BITCHES, 13IN. AND UNDER.

ADAM—Ed Marshall's dog (Sport—Trill).  
LADY NOVICE—A. D. Fisk's bitch (The Rambler—Lady Vic).

CHAMPION LOU—H. L. Kreuder's bitch (Keno—Fly).  
MOLLIE DEAN—F. W. Chapman's bitch (Sam—Baby Dean).  
LITTLE LEE—F. W. Chapman's dog (Fitzhugh Lee—Dill).  
GYSEY FOREST—H. V. Jamieson's bitch (Frank Forest—Sue Forest).

CLASS E—CHAMPION CLASS, 13IN. AND UNDER.

ZILLAH—H. L. Kreuder's bitch (Racer, Jr.—Nellie).  
CLYDE—B. S. Turpin's dog (Frank Forest—Sue Forest).

CLASS F—BASSETS AND DACHSHUNDS.

ROCADER—F. W. Chapman's dog (Mauprat—Lottie).

W. S. CLARKE, Secretary.

LINDEN, Mass.

### Make the N. E. C. a Coursing Club.

Editor Forest and Stream:

I notice your paragraph in regard to a proposed National Coursing Club and also your remarks about coursing men not being inclined to have their affairs controlled by officers of a club which has little affinity with coursing. The idea seems just, too.

In England the principal coursing meetings are held under the jurisdiction of the National Coursing Club, whose officers are men identified with coursing. We find the same thing in racing circles. I don't think it right that a party of men in New York who are not conversant with coursing in the West should be a court of last resort and adjudicate upon important points, which are bound to crop up when coursing becomes more general. I would suggest, instead of organizing a new club, that the name National Greyhound Club be retained, but at the annual meeting elect only such officers as take part in coursing and let the list be largely composed of Western men, such as the Bartels, H. C. Lowe, C. G. Page, Dr. Van Hummel, and other men connected with the coursing clubs out West, together with Messrs. Nelson and Watson in the East.

To preserve the bench element in the club I would suggest that a dog show executive committee be elected composed of those members who are principally interested in dog shows and who take no practical interest in coursing. In this way the whole ground could be covered, the club be kept intact and its membership greatly increased. At one of the principal coursing meetings the club could hold its annual meeting, etc. The dog show end of the club could hold its meeting any time in New York and attend to what little business there is in this connection. The club could issue its own stud book and conduct its affairs exactly on the lines of the National Coursing Club of England.

The reports of coursing meetings past and notice of those to come show that we may expect a boom in this particular sport, and I think it would be well to take time by the forelock and organize now. I have only given my own impressions on the subject, but perhaps some other greyhound man or courser can suggest something better.

CORSAIR.

BROOKLYN, N. Y., Oct. 19.

### Northwestern Beagle Club of America.

MILWAUKEE, Oct. 18.—The following entries were made for the Northwestern Beagle Club's field trials, which take place at Whitewater, Wis., on Nov. 1:

Class A.—Dillingham & Rummele enter Base; G. A. Buckstaff, Royal Rover and Ilvaco; Chas. Niss, King Lead.  
Class B.—Dillingham & Rummele, Panic; Chas. Niss, Queen Singer; Truman Sears, Nannie; F. W. Bender, Lottie.  
Class C.—Truman Sears, Rags; Theo. Zschetzsch, Judy.  
Class D.—G. A. Buckstaff, Ilvaco; Edward Bender, Little Conny Duke; Dillingham & Rummele, Mayfly and Dot D.; Louis Steffen, Tony W.

Hotel accommodations have been secured for all that wish to attend the trials. LOUIS STEFFEN, Sec'y.

### HUNTING AND COURSING NOTES.

James Ellis, Hyannis, Mass., one of the best known fox hunters in southeastern Massachusetts, is dead at a good old age.

Mr. H. W. Smith, of Worcester, Mass., is at Mount Morris, where he is staying to indulge in ten days' hunting with the Genessee Valley hounds.

An adjourned meeting of the new San Francisco Coursing Club was held Oct. 13, Dominick Shannon in the chair. Ten new members were elected and the whole membership is now twenty-three, instead of fifty as stated last week. An open meeting will be held at Newark Park on Thanksgiving Day for all-age dogs with a \$5 nomination, also a puppy stake for members at \$2.50 entrance. The stock of hares already in the park will be increased by a strong lot from the plains of Alameda.

## Yachting.

THE letter from Col. Norton in another column is interesting in bringing to light a certain foundation of which we, in common with many others, were ignorant, for the story told after every international race. At the same time the fact remains that the origin of the Cup is unknown to most Americans, and they still cling tenaciously to the royal davor with which Time has incrustated the Royal Yacht Squadron Cup. The letter, which we reprint from the *Sun*, gives a new and picturesque version, for which we believe there is not even the foundation of a comic cartoon.

In view of what we have repeatedly written about the America and the first race, Col. Norton's charge of belittling the part played by the American yacht is hardly called for. Leaving aside all heroics and patriotic feeling, the first race was on its technical merits a drifting

match, and no fair test, *ohé* way *or* the other; and it would have been nothing out of the common if one of the small cutters had drifted in an hour ahead of the big schooner. The mere story of this one race gives no proof of the America's superiority, and no justification for the buncombe which has been printed for nearly half a century. Even if she had lost the race, the fact would have been none the less patent that she was years ahead in design of the whole British fleet. In order to understand fully the America's superiority, which was fully conceded in England, it is necessary to follow her history from the time she arrived at Havre until she was finally sold after the race. On this showing it will be found that she represented a new departure and distinct advance in designing. Important as they are, the great points of difference between the America and her British competitors are unknown to most Americans, and her fame rests on one drifting match and on the fondly cherished delusion that the America's Cup was once touched by the hand of Royalty.

THE America's visit to England, her great superiority of model, her freedom of speed, and the immediate attempts to imitate her, all mark an important epoch in yachting. The winning of one drifting race sailed without time allowance at the request of her owners is of itself a trivial incident that in no way merits the fame which has attended it.

THE question of the merits of Valkyrie and Colonia has been raised in the course of the Cup races, and the Atlantic Y. C. even went so far as to offer a prize of \$500 for a race between them, which offer, however, was not accepted. After the last Cup race, however, there is little ground for doubt that Valkyrie would easily defeat the Herreshoff keel.

DURING the week the *Sun* has published two contributions to history, which we allude to elsewhere, both being incorrect. The best story of the America's visit is that told by Mr. G. L. Schuyler many years ago, a story that is presumably correct.

How easily errors occur in matters of history is shown by the letter of Captain Beckwith to the New York *Herald*, which we reprint this week. Twenty years hence this same letter may be unearthed from dusty files of the *Herald* as conclusive evidence concerning Vigilant and Valkyrie. The letter in itself is a curious instance of inaccurate observation, but what is most remarkable is the *Herald's* course in the matter. After publishing a statement which could not fail to arouse general denial, it disposes of the whole matter as follows: "The *Herald* is in receipt of scores of letters taking exception to Mr. L. F. Beckwith's communication, 'Won Fairly by the Vigilant,' published in the *Herald* of Oct. 20. While the *Herald* would like to oblige all its correspondents, it does not care to open a controversy on the subject."

VOLUNTEER is now at Lawley's yard, where she is being altered back to the cutter rig which she carried before being lengthened in 1890. It is not known whether Com. Forbes will race her regularly next year, but with a full racing rig her possible performances with the fleet of 1893 would be of the highest importance.

### THE INTERNATIONAL RACES.

NOT only are the races for the America's Cup finished, but the two competing yachts have been laid up, their crews have been disbanded, Lord Dunraven and his friends have left for home, and the yachting world, with a feeling of relief that the excitement is at last over, has settled quietly down to talk first and think afterward through the winter. The contest has been marked by the best of feeling on each side, the visitors have made many friends here and no effort has been spared in making their stay in New York as pleasant one. The Atlantic Club, with its very convenient house and station at Bay Ridge, has been in a position to render special courtesies to Lord Dunraven and his party, and by invitation of the club they have made their headquarters during the races at the club house. Messrs. Watson and Ratsey staying there all the time, while Lord Dunraven slept and dined there very frequently.

The New York Y. C. has not been lacking in its accustomed hospitality, and after Lord Dunraven's arrival the committee at Belmont, tendered him by Mr. J. D. Smith, of the Cup Committee, at Belmont. There were present the Earl of Dunraven, Marquis of Ormonde, Vice-Commodore Royal Yacht Squadron; Lord Wolverton, Hon. Hercules Robert Laughrishe, Hon. Arthur Paget, Com. E. D. Morgan, N. Y. Y. C.; Vice-Com. W. Butler Duncan, Jr., N. Y. Y. C.; Rear-Com. Archibald Rogers, N. Y. Y. C.; Sec'y J. V. S. Oddie, N. Y. Y. C.; Latham A. Fish, Jr., Tams and Canfield, of the America's Cup Committee; Charles Kerr, brother-in-law of Lord Dunraven; ex-Com. S. Nicholson Kane, Chester Griswold and Irving Grinnell, the Regatta Committee, N. Y. Y. C.; Gouverneur Kortright, Fleet Captain, N. Y. Y. C.; C. Oliver Iselin, Charles J. Payne, R. Suydam Palmer, H. Maitland Kersey, Fleet Surgeon M. J. Ash and E. T. Gerry.

On the following Sunday Admiral Belmont, of the Corinthian Y. C., gave a dinner on board the flagship Ituna to Mr. Watson, at which were present Messrs. N. G. Herreshoff, A. Cary Smith, Geo. A. Stewart, Wm. Gardner and John B. Paine. On Oct. 10 Messrs. Watson and Ratsey were the guests of Mr. John Macrea, of Bensonhurst, at the Montauk Club in Brooklyn, there being present J. Rogers Maxwell, Col. Ketchum, vice-commodore Atlantic Y. C.; Major J. Fred Ackerman and H. J. Ghelow. On Oct. 12 Vice-Com. W. Butler Duncan, Jr., gave a dinner at the Union Club to Lord Dunraven and his friends. On the evening of Oct. 17 Lord Dunraven was the guest of Mr. C. Oliver Iselin at the Knickerbocker Club, a number of yachtsmen being present, and after dinner the party repaired to the New York Y. C., where a reception in honor of Lord Dunraven was held. On Oct. 14 three of the visitors, the Marquis of Ormonde, Lord Wolverton and Hon. Hercules R. Laughrishe, sailed for Liverpool on the Lucania, and on Oct. 18 Lord and Lady Dunraven, with their daughters, and Mr. Charles Kerr sailed on the Majestic. Messrs. Watson and Ratsey have been on a trip around Lake Ontario during the past week, and will sail on Oct. 25.

On Oct. 21 Captain Cranfield and Valkyrie's crew spent the evening at the Union Square Theater, by invitation of Mr. Keith, the manager. On Monday night a grand dinner was given in their honor by the Yachting and Engineers' Association, of South Brooklyn, and on Wednesday they sailed on the Teutonic.

On Oct. 16 the New Rochelle Y. C. held a reception in its club house in honor of Mr. Iselin, a large number of yachtsmen being present. In spite of the modesty of Vigilant's designer, it is quite probable that an attempt will be made to do him honor through a public reception in Providence.

Lord Wolverton is reported as a part owner with Lord Dunraven in Valkyrie. The full list of the Vigilant syndicate has only lately been made public, as follows: E. D. Morgan, C. Oliver Iselin, Perry Belmont, August Belmont, Oliver Belmont, Charles R. Flint, Chester W. Chapin, George C. Clark, Henry Morris (representing the late H. Astor Carey), E. M. Fulton, Jr., Cornelius Vanderbilt, Dr. W. Barton Hopkins, A. Iselin.

In the races Mr. Charles Kerr, Lord Dunraven's brother-in-law, sailed on Vigilant as the representative of Valkyrie. Rear-Com. Archibald Rogers sailed on Valkyrie in the first four races, Mr. R. S. Palmer representing Vigilant in the final race. Mr. Lloyd Phoenix was originally requested to act as referee in case of any dispute, but declined to do so and no other was chosen.

The management of the races was entirely in the hands of the regatta committee, Messrs. S. Nicholson Kane, Irving Grinnell, and Chester Griswold, but with them on the May were the four members of the Cup committee, Messrs. J. D. Smith, A. Cass Canfield, J. Frederick Tams and Latham A. Fish.

Vigilant was taken to New Rochelle on the Saturday after the last race; she was gaily decorated with colors from truck to boom and bowsprit end, and both of her tenders, the Commander and the Hattie Palmer, were similarly attired in her honor. All the way from Bay Ridge to the Sound she was greeted by whistles and lowered colors. It has from the first been Lord Dunraven's intention to send Valkyrie home as soon as the races were over, but at the last moment he changed his mind and decided to lay her up here for the winter and to fit her out in the spring for the regular races on this side. This decision is likely to prolong the brief life of the four American boats, or at least of three of them, and to lead to the racing of the class in the club regatta of 1894, a matter for general consolation, as in the ordinary course of events the class would probably have disappeared even more rapidly than after former races, the various syndicates

naturally having no interest in racing other than for the Cup. As matters now stand it is probable that Jubilee will be properly rigged and that Colonia will be deepened in some way, by more keel or a centerboard, while Vigilant will be kept in her present form.

With them and Valkyrie, the racing next year should be far more exciting than in the present season. Thus far the four Cup defenders have been handicapped by late completion and faulty construction, and all will be in far better condition next spring. It is very doubtful whether any attempt to improve Pilgrim will be made.

It was decided by Lord Dunraven to lay up Valkyrie at City Island, hauling her out on Hawkins's ways, but thus far she has laid at Tebo's, beside the new wharf, where she has been stripped by Capt. Cranfield and her crew.

There is so much to be learned from the series of races, each yacht displaying so many points of excellence, that any waste of time over idle excuses is to be deprecated as obscuring the real facts, but each side seems intent to have its say. Lord Dunraven has made a most favorable impression by his conduct throughout the whole negotiation and the subsequent races, but this good opinion has not been improved by the following statement, left by him to be given out after he had sailed:

"The first races, which ought to have been to windward and back, were reached. On the first day the Valkyrie had a fluke and came out ahead, but the second day the Vigilant had a fluke and came out ahead, winning the first race."

"The first day's race was void and the second day's was won by Vigilant. That made a vast difference in the contest for the Cup, but the merits of either boat were not determined. Looking at it from that point of view the first and second races should not be considered in judging the merits of the ships."

"As a total result, Valkyrie was fairly beaten, but Valkyrie was out of trim and had not enough of ballast. In our desire to conform to the 85-foot limit we sacrificed too much. We need not have been so sacrificing, for Vigilant was practically 57ft. long and we should have increased the length of our boat. This would have helped us much. Further, we were greatly interfered with by steamers, not being able to sail Valkyrie at times as we wanted to sail her. But Vigilant would have won anyway, it is my opinion, yet if it had not been for all this the difference in time at the close would not have been necessarily so great as it was."

"The fourth day's race was a single-reef breeze race and I think Valkyrie would have fairly won the race if our two spinakers had held out. This was very unfortunate, and it was very singular, too. Such an accident seldom happens. In fact, I have never known it to happen in England."

"As a total result, I don't consider that the relative merits of the two boats have been determined. I shall leave Valkyrie over here with the intention of racing the yacht next spring in America, if I can make arrangement for yacht races. I understand quite a number of cups were not raced for this year. For these I will try. The course from here to Marblehead is most excellent and Valkyrie, I think, would do more than well on them."

"I have been asked if five out of seven races would not be fairer in the matter of contest for the Cup. To be sure the element of chance would be lessened in five out of seven races, but I consider this of insufficient importance."

"To refer to the recent races again, I think the majority of them should be to windward and back. Only one race complied with that condition, and that was the last one. But nobody was at fault. Permit me also to say that I was never over-confident, although I thought Valkyrie had a good chance, and I think so still."

"Jubilee, Colonia and Vigilant—any one of them, or all—should come to England to race. In fact, I am anxious that they should do so. I do not know which would win, but it would be splendid sport, and it is for the sake of sport that I desire it."

On the other hand, while many Americans are willing to give Valkyrie credit for her performance in the last race, there are some who are busy making excuses for her coming so close to Vigilant as she did. The following letter to the *Herald* from a member of the New York Y. C. deals with one important point of the race:

To the Editor of the *Herald*:

In to-day's issue of the New York *Herald*, in the editorial article entitled "We Shall Keep the Cup," you say most correctly and appropriately:

"It is claimed that the Valkyrie would have won but for the splitting of her spinaker. While this is not certain—for only nine minutes elapsed between the splitting of the sail and the final setting of the balloon job as a spinaker—it does not detract from our victory. If the spinaker had not been so light it would not have split, but it was made light purposely for such advantage as might be gained thereby, and if Lord Dunraven chose a light sail when a strong one was needed he must take the bitter with the sweet."

With the single exception of the splendid article in your valuable paper of the 19th inst., the account of the races, the entire daily paper of New York has been hastily taken the ground that the accident to the Valkyrie's spinaker lost her the race. This universal inference could only come from people who did not see the race, as it is false as to the facts and hasty as to the erroneous conclusion.

I was present on the steamer St. John during the whole race and carefully observed every course of the two boats. When the accident occurred the Vigilant had some time previous to it passed the Valkyrie, taking the lead which she kept to the end of the race. She was about a mile ahead of the Valkyrie at this moment, and the accident to the English boat in the rear could not have any possible action whatever as affecting the Vigilant, which had already taken the lead in a glorious victory.

It is absolutely necessary to dispel at once the erroneous general impression of the public, and I respectfully ask your assistance in setting forth its correct and calling the attention of the public to it through the editorial columns of your great paper. It cannot be done too soon before the wrong impression becomes established.

Every person who attended the race cannot, if his testimony is called upon, do otherwise than support my statement of the facts, and as a yachtsman myself, owning a sailing yacht, the sloop Vixen, I am fully competent to give my opinion.

NEW YORK Y. C., Oct. 18.

LEONARD FORBES BECKWITH, Captain sloop yacht Vixen.

Unfortunately for the observer who would correct so many others equally well placed and equally competent, his statement of the occurrence is contradicted by well-established facts; he is doubtless perfectly honest in his belief, but he saw very imperfectly the various incidents of the race. Our own observation is borne out by many printed accounts, as well as by the testimony of many spectators. Referring to notes taken with great care from a position just abeam of the two yachts, we have recorded that at 3:30 Vigilant ran to windward of Valkyrie, the latter's spinaker coming in as Vigilant came on her beam. At 3:32 a spinaker was set on Valkyrie which instantly split, falling into the water and dragging under the bow, and not until 3:38 was the third spinaker set. From our position to leeward of the big jibtopsail, it was not possible to distinguish just which spinakers were set, and the tear in the first one was not visible, though the whole performance of taking in the first sail and setting the second and third was distinctly seen.

The exact order of events, as determined afterward by careful inquiry was as follows: The first spinaker, set at the turn, was of heavy Scotch linen, and very strong, quite the equal of anything used on this side. The sail was set flying, in English fashion, a serious mistake in so strong a wind, and the foot caught on the steel bowsprit blits, mauling two men, and sent a yard long, and close together. Each of these tears was hastily lashed with two at the beam and the sail sheeted out, but one lashing slipped off, and with such a strain on a raw edge of cloth, the sail could not be properly sheeted down, but was constantly lifting and belling far out.

Valkyrie ran for some 50 minutes with the sail holding, but when Vigilant covered her the spinaker lifted and went over the stay, catching in a twill hank and starting a tear half way up the lead. When the sail filled suddenly after Vigilant drew ahead, this tear ran across, rendering it useless. It was instantly taken in and the only other spinaker, the very light one, of a finer grade of Scotch linen, was set in a manner that does credit to the crew, but almost as a matter of course it burst under such a strain, for which it was never intended. Some time was lost in getting it aboard, and in all nine minutes after the first spinaker was set, the "bowsprit spinaker," or what is called here a "balloon jibtopsail," was set.

This we believe to be the true statements of the facts; but if any proof be needed of the incorrect judgment formed by Captain Beckwith it may be found in his estimate that Vigilant was about a mile ahead when Valkyrie's spinaker split. The average speed of Vigilant down wind was 12 knots, or say 13 for the last few miles, at which speed she would have made a mile in about 4½ minutes. She crossed the line 2 minutes and 18 seconds ahead of Valkyrie, and it took her a mile in distance, and yet Captain Beckwith claims that when Valkyrie's spinaker split, some twenty minutes before, Vigilant was a mile in the lead.

The mere winning or losing of a race by a few seconds more or less speaks little for the merits of a yacht, and the present question has received no more. We believe thoroughly that Valkyrie would have won had her spinaker held. While we are justly convinced of this, putting, it does seem that 40 seconds might very easily be lost to a yacht for 9 minutes without a spinaker, a torn sail dragging under her bows for a part of the time and her crew running about the deck. The *Herald's* statement that the first spinaker split because it was too light is all nonsense; the two sails were probably confused by the *Herald's* writer. We believe thoroughly that Valkyrie would have won had her spinaker held. While we are justly convinced of this, putting, it does seem that 40 seconds might very easily be lost to a yacht for 9 minutes without a spinaker, a torn sail dragging under her bows for a part of the time and her crew running about the deck. Floating a Stranded Yacht.

A PECULIAR case of wreckage and of clever salvage was that of the schooner yacht *Priscilla*, of New York, which went ashore two miles west of Watch Hill, Conn., in a fog on Aug. 23. The yacht had a draft of 9ft., and struck on the rocks at Napatree Point, dragged over them and went ashore on Napatree Beach, inside the point and toward Watch Hill. The ladies were landed through the surf by the lone captain of the life-saving station, as he then had no crew, and on the following day a severe storm landed the yacht well up on the beach, where it was supposed she would become a total wreck. Being a strong vessel, however, she stood the "racket" first rate, but the wreckers wanted a large sum to get her off.

The owner, Albert A. Wright, of Plainfield, N. J., with the aid of implements furnished him by Messrs. Maxson & Co., of Westerly, and others, decided to save her himself if possible, and on Sept. 28 she again slid into the water apparently as sound a yacht as ever, but at a point 1,000 ft. away from where she had landed and into the Narragansett Bay instead of the ocean. By the use of jacks she was raised and a cradle placed under her, and by means of rollers she was moved over the bank to the bay side of the beach and along the shore 1,000 ft. to a convenient location, where she was righted up and launched into deep water. Before launching, her seams were recalced where necessary, her bottom painted and sails again bent, and the following day she was ready to start under her own sail to have her cabin refitted. No little credit for the work is due Mr. J. Irving Maxson, who took a very practical interest in its execution. —*Marine Journal.*

Canoeing.

Secretaries of canoe clubs are requested to send to *FOREST AND STREAM* their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to *FOREST AND STREAM* their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

More About Camp Sites.

*Editor Forest and Stream:*  
If "all roads lead to Rome," and the Thousand Islands is the canoeists' Rome, as your correspondent "A Radical Conservative" would have us believe, then there are many A. C. A. men in the Eastern Division who will never see "Rome." The Thousand Island district presents many pleasant features to the tourist, or cruiser, but it is far too remote for the majority of the A. C. A. men in the United States. The ideal camp site for a camping and racing meeting should be up rivers without tides or currents, and without islands to chop up the winds. Lake Champlain has every advantage that the St. Lawrence enjoys, and has none of its drawbacks. Your correspondent before alluded to remarks that Champlain, among others, is reached practically by only one road. On the west side this is true, but that one road reaches the north fairly well, the south excellently, draining, as it were, the most populous portions of the Eastern Division. From the Eastern Division there are three distinct roads at least, covering that entire division. The "narrow and selfish" policy has never obtained in selecting the sites for previous meets, and probably never will. Champlain is on the extreme boundary of the Eastern Division, ditto of the Central, and is entirely away from the Atlantic Division. Canada has never been better represented at an A. C. A. meet than at that held at Jessup's Neck, excepting, of course, those held in her own waters. Champlain is central. Champlain is desirable in itself, and it is easily reached without transshipment except when the Eastern men cross the lake. My word is for Lake Champlain, and my fellow men in the eastern limits of the A. C. A. will not go five or six hundred miles to a meet when the necessity does not exist. Our radical-conservative friend must be a mugwump, as the two terms do not go in the same breath, any more than Champlain and St. Lawrence are to be mentioned in the same category. The former is "in it," the latter is "not in it."

Now, a word about the camp. I will give my reasons for the decrease in canoeing interest at the meets, if you will have it. The deadly "dude" is responsible for it, and the women in camp are responsible for the presence of the D. D. "We don't look gay in our camp array," but we're dudes when we're in town," as that charming camp song puts it, that's a pretty sentiment, but the trouble is that "dude" look gay in our camp array. Canoeists are, as a rule, fond of getting away from the conventionalities of city and summer hotel life. Your real canoeist likes to "wear a grease spot on his pants," and when he strikes one modern meet with its spotted flannels, its "clean shaves," and its hotel mess, he never goes to another. I am speaking now of that which has fallen upon my ears about the healths of several clubs in the Eastern Division. "We're in town," "I want no one will find fault with, but as for going to a 'swell' A. C. A. meet the idea is incompatible with true canoeing sentiment. I want no more of it, and as it seems likely to continue as long as the women run the camp, my face will long be absent about the camp-fires of my fathers. Sorry? Sorry is no name for it, for no more enjoyable time can be imagined than a true canoeists' camp. Joy is unconfined at such, and entertainment is spontaneous and contagious. Why, we will be having printed programmes for camp-fires if this state of things continues. Stop it!

*Editor Forest and Stream:*  
In connection with the matter of a camp site for the '94 meet and your recent remarks as to the objectionable features of both Jessup's Neck and Champlain, I would seem a difficult matter to find a suitable site for a salt-water meet. My first A. C. A. meet was at Jessup's Neck, and though I had trouble getting there, I enjoyed it from beginning to end. I have always thought that with good transportation facilities and a good caterer, I should be glad to go there again, and I have heard other A. C. A. men voice the same sentiments. It surely was a big meet in regard to attendance, and the interest in the racing was not much less. I am sure it would mean lots of work for the officers, but I am sure I spent two weeks. Jessup's Neck was had enough and the other wasn't; but I enjoyed both so much that I cannot tell which pleased me the most. Every one was good-natured even in the rain—for Winnie was there—and appreciated the good weather which followed; and even the "pirate" at Jessup's caused no more excitement than many of the squalls which came and went so suddenly on the lake. I received a letter from a well-known canoeist recently, and venture to quote his ideas: "We're in town," "I want no one will find fault with, but as for going to a 'swell' A. C. A. meet the idea is incompatible with true canoeing sentiment. I want no more of it, and as it seems likely to continue as long as the women run the camp, my face will long be absent about the camp-fires of my fathers. Sorry? Sorry is no name for it, for no more enjoyable time can be imagined than a true canoeists' camp. Joy is unconfined at such, and entertainment is spontaneous and contagious. Why, we will be having printed programmes for camp-fires if this state of things continues. Stop it!"

*Editor Forest and Stream:*  
Having read with a good deal of interest the discussion of the next A. C. A. camp site in the last few numbers of the paper I would like to say my little say in the matter. Though an Atlantic Division member, I have not the water meet, and Jessup's Neck was had enough according to description (I wasn't there), but if anything worse can be imagined than a bald, uninhabited island like Chimmons, with no shade, a bad beach, 6 or 7 ft. rise and fall of tide, and mosquitoes galore, as a place for a canoe meet, I haven't seen it. The St. Lawrence, to my mind, cannot be beaten, especially in the neighborhood of Clayton or Gananoque. I have been there, and I know. It is a pretty far cry from anywhere south or east of New York city, but it is a case of go further and fare very much better.

I like the idea of a semi-private place for the camp very much. Going back to the same place, while it may lack novelty to some members, will be an added attraction to others, especially to the racers, who will be better acquainted with the waters. Add to this the greatly lessened cost and trouble to the division having the meet in charge, and the better arrangement, possible, and you have such an array of advantages as completely offsets anything to be said against the idea. —*Maurice D. Wilt (Red Dragon C. C.).*

PHILADELPHIA, Oct. 12.

The Racing Rules.

*Editor Forest and Stream:*  
Although a recruit in the ranks, I am now ready to concede the truth of the unwritten law that all canoeists are cranks, and with a desire to gain another step toward the 32d degree, I beg to express my opinions upon the subject of racing and the amelioration thereof. In the columns of the recent editions of your paper have appeared various articles from the pen of a man, who by virtue of his years and experience possesses the ability to discern the causes of the present lack of interest in canoe racing and who is also good enough to suggest the proper remedy. I mean Vaux. His arguments concerning the changes in the A. C. A. racing rules and the gentle manner in which he handles the men who have long and loud complaints to make at the meet, and still make no effort to right the evil, are certainly to be commended.

I have never had an opportunity to attend any of the meets, but it seems to me that additional interest in the racing programme at camp

can best be attained by stimulating the racing at home. The point has been raised by many that the cost of the present racing machine is enough to discourage the junior element from building. This is true enough to a certain extent, but what about the reputable canoeists of to-day who are building cruisers? La Gloria, Scarecrow, Infanta, et al. Now, Mr. Editor, I personally knew a gentleman who admitted that he could not possibly have squandered (if that expression may be permitted) more money on his cruiser unless, perchance, he had utilized gold or that much abused metal, silver, for fittings.

As a matter of fact, these men are evidently not the individuals who have complained of the cost entailed in building a *fin de siècle* canoe; neither have I any desire to speak disparagingly of these rakish craft now becoming so popular. But I do contend that the genial owners of these boats are responsible for the evil, as it were, resulting from their inviting canoeism on board. Three men can be comfortably accommodated on one of these new creations, and it is easy to understand how few men, if any, are left for scrap canoe races after the various cruisers have been manned.

I am now dwelling on the affairs of the New York Canoe Club as the conditions exist to my eyes, and while I do not wish to be personal, I cannot help expressing my belief that the cruisers of this type are not a little to blame for the absence of racing men from the club house this summer. Nor does the interest in this style of craft show any signs of diminishing. On the contrary, within the last few days, I might say, there was an animated discussion at the club as to the difference between an 18-footer and an 18-rater, and as to whether or not unanimity of action in the establishment of an 18 ft. class would not be advisable. It is quite possible that I am wrong as to the correct definition of the class, but the enthusiasm aroused certainly had nothing to do with canoes. What will become of canoeing if all of our racing men encourage this style of building?

Now, if I am mistaken in my theory that home racing will incite active competition at the meets, I hope some one will be kind enough to give me the tip and I will subside. In the meantime I must express my belief of regret that interest in racing has reached that point when it becomes conspicuous by its almost total absence in such a representative organization of canoeists as is the New York C. C. And this is particularly discouraging to new men, more so in view of the fact that the location of the club at Bensonhurst affords its members every opportunity to increase their experience in sailing under such conditions of weather as exists on the St. Lawrence. Gravesend Bay is a superb body of water; the New York C. C. has among its members many prominent racing canoeists, a fleet of boats embracing the old type of cruising canoe and the modern racing machine, and still there has been no meritorious work done this year. Verily, therefore, instead of scoring the regatta committee of the A. C. A. why not start up the regatta committees of the individual clubs and give us some inducements at home and then see what happens at the meets, A. C. A. rules to the contrary. And will not the races outlined by the regatta committees keep canoeists on their sliding seats rather than on board the cruisers? —*J. C. Mowbray.*

New York, Oct. 2.

The New York C. C.

THE accompanying picture shows the house of the New York C. C. on Oct. 15, and the damage done to it by the recent storm. The damage, though serious, is much less than at first estimated. The house has been raised, the

scoop, framework and roof being in good condition, and the chief damage being to the siding. The house is now at the Erie Basin for the winter. The chief loss is to the individual members, the property in the lockers being damaged or totally spoiled, while many of the canoes are more or less damaged.

Canoeing as an Amateur Sport.

WHEN you have become discouraged over the prospect of amateur sport maintaining the hale vigor of other days, with the pernicious influence of racing bicycling on one side and the danger of degenerating into a mere tail to fashion's kite on the other—when, indeed, you have been taking yourself rather seriously, and reached the conclusion that your droll is all sawdust—pack up your grip instantly, and make a bee-line for the camp of the American Canoe Association. If you happen to have this attack at a time of the year when there is no meet, hunt up the nearest canoeist of your acquaintance and "talk it over" with him.

If there is any surer or more thoroughly delightful manner of driving dull care away than idling a few days at the canoe camp, it needs no discoverer. Here the sportsman revels in the races, and rejoices that for at least a couple of days he has escaped the element of greed, becoming, alas, too apparent in so many branches of our sport; the layman saunters about the camp, attracted hither and thither by the picturesque flag decorations and the trim, graceful canoes, wondering, perhaps, at the uniform good nature that prevails everywhere. A visit to the camp is a wholesome tonic of which our draughts cannot be too deep. It is one big family of from two to three hundred men and women on the very best of terms with one another. No one seems to have a thought for the morrow, except that it may bring forth successful races in the day, and a jolly camp-fire at night. If these enviable canoeists have cares—and where is the happy mortal free of them?—at least they are not *en evidence*; they are put aside until after camp breaks up.

And these are pure sportsmen, these canoeists; none of your mug-hunting, rule-evading variety we all know too well. No occasion here for elaborate definitions of what constitutes an amateur. Every man is a sportsman, and a sportsman requires no legislation to prompt him on such questions, any more than does an honest man need an officer of the law to keep him from stealing. As a matter of fact, the honest man is the same whether posting accords in a banking house, paddling a canoe, riding a bicycle or playing football; the athlete who is dishonest in his sport only lacks the opportunity, or fears the consequences, to be likewise in his business. The bicyclist who evades the amateur law, makes false affidavits that he may continue to hoodwink the League of American Wheelmen officials, and the public, would tamper with his employer's accounts with equal complacency were the occasion offering.

The only legislation touching an amateur in the American Canoe Association official book is where it provides that "any member who is guilty of ungentlemanly conduct, or of racing for money, shall be liable and may be expelled from the A. C. A." and it is enough. I had come near saying that canoeing is the only competitive sport absolutely pure, but while I will not go so far, I will certainly assert that it is the farthest removed from any unwholesome tendencies. Every man pays his own expenses and the trophies are flags presented by different members of the Association, sometimes provided for by subscription among the more enthusiastic, and not infrequently the wives and sisters of the canoeists make and present them to the A. C. A.—*Caspar W. Whitney in Harper's Weekly.*

A. C. A. Membership.

CENTRAL DIVISION: Fred L. Smith, Rochester, N. Y. The following ladies are proposed for associate membership: Mrs. A. Arnols, Miss Lou Bond, Miss Katherine F. Smith; Mrs. Howard Gray, Lowell, Mass.; Mrs. C. G. Belman, Amsterdam, N. Y.

How Dr. Douglas Won the Victoria Cross.

THOSE members of the A. C. A. who have attended the meets are acquainted with Dr. C. M. Douglas, of Lakefield, Canada, the famous canoe cruiser and paddler, and inventor of the Douglas folding boat. It is generally known that Dr. Douglas is the possessor of that coveted trophy, a Victoria cross, but the story of how he won it, told as follows by a fellow canoeist, will be new to most of our readers:

When the 24th Regiment was in Burma a detachment was dispatched to the Little Andamans Islands to rescue the captain and some of the crew of a British vessel who it was too truly surmised had fallen victims to the savages. About 20 men formed the small force under Lieut. Mudd, who was accompanied by Surgeon Douglas and Lieut. Glassford, the last named as a volunteer. On arriving at their destination they landed under a discharge of arrows, and soon found conclusive evidence that their unfortunate countrymen had been barbarously murdered. When they wished to return they found that their boats were so seriously injured as to be useless. Efforts were made to get off on a raft, but the nature of the coast made this impossible. Seeing the evident plight of their companions Dr. Douglas and Privates Murphy, Cooper, Bell and Griffiths, of the 24th, manned the second gig and made their way through the surf almost to the shore. Finding their boats half filled with water they returned, but only to make a second attempt, which proved successful, Dr. Douglas and his crew managing to convey five of the party which had landed safely through the surf to the boats outside. On a third trip he removed the remainder, all being rescued except Lieut. Glassford, who was drowned. The official report eulogizes the "intrepid, cool and collected" manner in which Dr. Douglas and his comrades achieved their heroic task, and it is satisfactory to record that the statutes of the order were for this occasion strained a little to enable these five gallant men to receive the gaudon of the "Victoria Cross."

Amendments to A. C. A. Rules.

In order to be voted on at the coming meeting of the A. C. A. executive committee on Nov. 4, all amendments to the constitution and sailing rules must be published in the present issue of the *FOREST AND STREAM*. The regatta committee offers the following suggestions: A rule is needed for defining whether a man may use more than one canoe at any meet, as in a special race, say for open canoes. The rule in the combined race should be made more explicit, so as to bar all standing rigs that do not permit of the sail lowering on the mast, or in which the mast has to be unshipped to lower the sail.

The retiring secretary-treasurer, Mr. Burns, calls attention to the limitation to the centerboard in Rule I, as now printed, and suggests that it be removed.

The following amendments have also been suggested: Rule IX., third line, after word "appeal," strike out words "and the decision, if unanimous, shall be final; if not unanimous."

Rule XII., second line, after word "disabled" add "for back strokes."

Rule XIX., second line, strike out words "with the wind free."

Rear-Com. C. G. Belman suggests the following amendment to the constitution, Article 4, Section 1: "Honorary members may be elected by a unanimous vote of the executive committee, providing that they have been in attendance at a regular A. C. A. meet no less than three years."

A proposal is made by Mr. F. R. Webb to correct an error in the boundaries of the Atlantic Division, making the reading, "Along the middle range of the Alleghany Mountains."

Rifle Range and Gallery.

Zettler Rifle Club.

THE Zettler Rifle Club brought its summer shoot at Wissel's Cypress Hills Park to a close on Oct. 22. The attendance during the season has been rather unsatisfactory. Only 13 members filled out their scores, leaving three prizes to fall back into the treasury. When the programme was made up it was expected that there would be an average attendance of at least the full number of the prizes on the programme. But bad business and want of interest upon the part of the members, has caused the unsatisfactory results. On the last shoot Fred. C. Ross made the brilliant score of 234 points out of a possible 250. Henry Holges was also in good form, and shot himself into the second position on the prize list. Chas. C. Wissel, the proprietor of the park, after the close of the shoot invited those present to partake of a venison dinner which he had gotten up for the occasion. The energy with which these hungry shooters attacked Mr. Wissel's layout showed that these same shooters were at home with the knife and fork as well as in front of the target. The scores are appended, 10 shots, 3 scores to count:

Rifle Note from the Golden Gate.

SAN FRANCISCO, Cal., Oct. 8.—In issue of your journal of Sept. 23, it is stated that a report is in circulation that the California shooters would like to have another go with the Zettler Club, who defeated the 15-man team of the California Schuetzen Club, two years ago in a match at 200 yds., 50 shots per man. I was one of the prime movers as well as a participant in that match. The contest was very close; 750 shots were fired by each team on the German 25-ring target. The Zettlers won by a very small margin—73 rings only. If it were possible for teams from each club to meet on a common range, I think the Californians would "try, try again;" though this proposition has not been agitated here, notwithstanding the aforesaid rumor.

The San Francisco Schuetzen Verein, our local oldest rifle organization, has recently decided to put up a couple of thousands to be shot for during the continuance of the coming "Mid-Winter Fair." The final details of the programme are not yet definitely decided upon, though I am informed the objectionable system pursued by Chicago will be adopted here, viz., two shooting days of each week (Sundays and Mondays) during February and March, '94. However, as the round trip rates from eastern points are to be very low, we confidently expect that some of our eastern fellow-riflemen will visit us.

The Rifle and Pistol Club, held its monthly medal contest at Shiel Mound Park to-day. This is the second shoot of the rifle department and much friendly emulation was shown among the riflemen participating. Scores were as follows:

All comers' 10 shot record, re-entry; distance, 60 yds. Standard American target, any rifle: W. Glinderman 90, E. Hovey 88, Dr. L. Rodger 87, J. Utschig 85, A. Heeth 83, F. O. Young 82, P. Bohr 81, Col. S. J. Kellogg 80, H. Heeth 76, F. Fay 70.  
Rifle, 200 yds. Standard American target, medal for members only, no re-entry: E. Hovey 86, A. Heeth 83, Dr. Rodgers 80, H. Heeth 80, F. Gehret 79, A. Mocker 79, F. O. Young 75, Capt. Klein 73, F. Fay 70, H. Hellberg 70, Col. Kellogg 68, P. Bohr 57.  
Pistol, 50 yds., standard American target, medal, 10 shots for members only, no re-entry: H. Heeth 83, C. M. Daiss 82, F. G. Young 87, E. Hovey 80, Dr. Rodgers 82, A. Heeth 81, T. Bohr 79, F. Gehret 77, Capt. Klein 76, G. Ungerman 75.  
All comers' pistol record match, conditions as above, re-entry: F. O. Young 92, E. Hovey 92, H. Heeth 87, C. M. Daiss 85, F. Gehret 84, Dr. Rodgers 82, P. Bohr 64.  
Thirty-shot, all comers' State championship pistol match, no re-entry: E. Hovey 257, F. O. Young 255, F. Gehret 243, C. M. Daiss 234, Col. Kellogg 234. —*Roezer.*

Empire Rifle Club.

THE Empire Club held its regular weekly shoot for medals at headquarters, No. 12 St. Marks place, on Thursday, Oct. 17. Wm. Rosenbaum was in good shooting form and led his competitors with a score of 243. The scores are appended, 10 shots, 25-ring target, distance 100 ft.: Wm. Rosenbaum 243, B. Zahn 239, H. Zettler 238, C. Bayer 235, Wm. Miller 233, Chas. Zettler 229.

Turtle Bay Rifle Club.

THE members of the Turtle Bay Club held a 3-men team match at headquarters of the club on Thursday night, Oct. 19. The scores are appended: J. Ochs Jr., 248 246 245—739 H. Walter.....241 245 244—730 J. Oberle.....240 242 242—724 J. Kranpert.....239 242 243—725

Shooting at South Hatfield.

SOUTH HATFIELD, Pa., Oct. 11.—This is a new place for a shooting match, but Lukens Swartz, the prime mover in this match, is an old shooter and one of the good ones, too, and the fine lot of birds that he got together to have a match this afternoon for a fine pair of three-year-old ponies were good enough to make any shooter's mouth water and trigger finger itch just to look at them. It would be hard to find a better lot even in midwinter, and when they were put into the traps they showed that their looks did not belie them; for as soon as the traps were opened most of them were off in a hurry, as if they had an errand in some distant town. For one I am sorry some of our good pigeon shooters were not on hand so that the pony match could have come off, but as there were not enough shooters on the grounds, it was decided to have a few sweeps. Two miss-and-out sweeps were shot off when the dinner bell at the South Hatfield Hotel sounded, and as boys will eat every one adjourned to the hotel; and many a straight score was made at the table, where a good country dinner was served.

After dinner and a smoke all were again ready to try a shot, but the way Thomas, of Ambler, was cutting down the birds discouraged the shooters from around here, and very few of them would go into a miss-and-out. But Pop Miles was on hand and ready to take the lead, as he always is at a shoot. Whether he is shooting good or bad he is always ready to shoot a match. He is not made of the stuff that the water makes him miss a bird, but when he misses again, and says if he does not kill his birds he does not expect to win. Some people want the purses fixed so they can win whether they kill or not.

The traps were set in a large level field, about 200yds. from the hotel, and the boundary staked off with white flags. All shooting was under Hurlingham rules, with 30yds. rise for both 10 and 12-gauge guns.

Among those present were W. H. Thomas and A. Clements of Ambler; D. Aimen, one of the crack shots of the Jenkintown Gun Club; M. L. Moyer, G. Hunsburger, W. A. Freed and Dr. Ritter of Souder-ton; J. Hildebittel of Telford; W. B. Moyer and E. K. Dowling of Lans-doer; P. Slough of North Wales; H. D. Geo. B. and Wm Rous of Hat-field, three brothers, as fine built and as genial fellows as could be found in any family; three of them would make 18ft. if laid out head to feet, and can pull the scales at almost 600lbs.; they are great bicy-cle riders, and one of them tells me he has ridden all over this part of the State this summer, and riding here among the hills is not as easy as some places I know of. They are also great game hunters during the season and own some of the finest dogs in Pennsylvania.

The shoots were all miss and out, \$1, birds extra. No. 1: Thomas 3, Moyer 2, Kile 0, Swartz 0, Clements 0. No. 2: Thomas 4, Moyer 3, Swartz 3, Clements 0. No. 3: Mills 0, Thurman 3, Thomas 2, Hildebittel 1, Aimen 2. No. 4: Mills 2, Thurman 3, Thomas 2, Hildebittel 1. No. 5: Mills 1, Thurman 1, Thomas 2, Smith 0. No. 6: Mills 1, Thomas 2, Thurman 1, Aimen 0, Swartz 1. No. 7: Mills 1, Thomas 2, Thurman 2, Swartz 1, Moyer 0, Slough 0. No. 8: Mills 0, Thomas 3, Thurman 6, Swartz 5, Moyer 0, Smith 0, Hildebittel 1. No. 9: Mills 4, Thomas 4, Thurman 4, Hildebittel 2, Cramer 0, Moyer 2. No. 10: Mills 1, Thomas 9, Thurman 1, Hildebittel 2, Cramer 0, Moyer 3, Hunsburger 8. No. 11, last event, miss and out, last bird at 40yds. rise, all others at 30yds., Hurlingham rules: Mills 3, Thomas 7, Thurman 6, Ruth 0, Tredway 6.

West Newburgh vs. Boiling Springs.

NEWBURGH, N. Y., Oct. 21.—The West Newburgh Gun and Rifle As-sociation has just finished its fall tournament and has chosen the fol-lowing dates for its spring and fall tournament of 1894: May 17 and 18 and Oct. 4 and 5. Scores of team match:

Answers to Correspondents.

No notice taken of anonymous communications

J. L. S., Chatham, N. B.—So far as we know, there is no difference, but there is a popular belief that a vessel is faster with hatches off.

T. S. R., Salem, Oreg. n.—A scow of 45ft. waterline, 12ft. beam and 5ft. depth of hold would be large enough. The Ketch rig, a modified yawl with a larger mizen, would be preferable to a schooner.

SARELAULT, Eddy, New Mexico.—1. What tools and materials are the best for taking lead and rust out of shotgun and rifle barrels? 2. What remedy is effectual for removing the pitting in shotgun barrels? 3. Are nitro or newer smokeless powders injurious in any way to shot-guns? 4. Are rifle cartridges loaded with any of the smokeless powders obtainable in the market? 5. If not, of whom can I obtain infor-mation as to the loading of the same? 6. Am I right in supposing ex-plosive bullets are not adapted to repeating rifles? 7. What is the con-struction of explosive bullets and the material employed? 8. Have they ever proved successful in as small calibers as .32? 9. Can the amateur make his own explosive bullets with any chance of success? Ans. 1. To remove lead use mercury, plugging up the barrel to pre-vent its escape and shaking so that it will come in contact with all parts of the bore. For rust use any good gun cleaner. 2. Send your gun to a gunsmith and have it cleaned. 3. If properly loaded, no. Ex-plosive bullets must be taken, however, to clean thoroughly after shooting, as nitro is more corrosive in their action than black pow-ders. 4. Not that we know of. 5. Write the manufacturers of smoke-less powders. 6. Explosive bullets are not used in repeating rifles. 7. The bullet is hollowed out and the cavity filled with some explosive compound, commonly black powder, which is ignited by a percussion cap or detonating powder. 8. No; their use is almost entirely confined to the very largest calibers. 9. An explosive bullet may be made by taking the bullet from a .32cal. b. c. cap and inserting the cap and charge of fulminate into the hollowed point of the bullet. We would recommend rather the use of split or hollow point bullets.

SAVE YOUR TROPHIES.

Write for Our Illustrated Catalogue  
"HEADS AND HORNS."

It gives directions for preparing and preserving  
Skins, Antlers, etc. Also prices for Heads and  
Rugs, Birds and Fish, and all kinds of work in Tax-idermy.

WARD'S NATURAL SCIENCE ESTABLISHMENT,  
ROCHESTER, N. Y.

This is to explain that just now we are not advertising the Game Laws in Brief, be-cause of a dearth in the land. The last edition has run out and the new one is not quite ready.

FROM the first issue of this paper it has been used, and for nearly twenty years this particular space has been occupied by  
**ABBEE & IMBRIE,**  
who now say that they have given up advertising at least for the present.

Sportsmen's Goods.

ESTABLISHED 1858.  
**E. OCUMPAUGH & SONS,**  
SHOOTING AND YACHTING

SWEATERS	
Boy's Best Wool	WHITE OR BLACK \$2.00

**Answers to Queries.**

do this not only by his precept and his example, but also by informing others of less experience where information on these points may best be obtained.

## PORTRAITS IN INK.

II.—THE TRAPPER.

BILL, the trapper, is a figure so out of place in the midst of the civilization that has swept away forests and game, that you almost wonder if he is not an Indian who happened to be born with a white skin, fair hair and blue eyes, or a pioneer hunter who drank at the fountain of youth in middle age and so has been preserved since the old wild days when the unmeasured wildness stretched out into unknown lands and sheltered countless game. He has many of their traits, many of the qualifications that would fit him to live their lives amid their befitting surroundings; and is as out of place as they would be in this latter day tameness of men and nature.

His tall, spare form, full of inert vigor and strength, clad in garments that befit his calling and that bear odorless witness of it, shacking leisurely among restless, busy men, on whose incessant bustle he casts wondering eyes alert through all their dreaminess, is as incongruous here as would be a tailored, becurled dandy in the heart of the wilderness.

He has that instinct, or sixth sense, possessed by few except Indians and dumb animals, which enables him to make his way to any desired point without any apparent guidance, though, save of dark night, he has little use for it in these narrow and many pathed woodlands.

He treads their rustling carpet as silently as a panther, the sere leaves do not stir, nor the dry twigs snap beneath his feet, the bent boughs sway to their places behind him without a sound. You are not aware of his coming till he appears before you like an apparition, nor of his going but as you watch him like one dissolving in the shadows of the woods.

His casual glances discover things which are not revealed to directed gaze, and he translates records that you cannot read.

Where you see only a knot or wisp of brown leaves, he discovers the bird under the grouse's disguise of movelessness; on what is to you only a blank page, he reads the story of some remote or recent presence or passage.

He knows every kind of tree and its varieties, all the medicinal and poisonous plants by odd and homely names that often have a tang of folk lore or hint of forgotten use; and it is as instructive as a professor's discourse on natural history to hear him talk of the habits of wild things, for all his quaint superstitions concern some of them.

You could find no arguments to shake his firm belief that eels are generated in mussels or that skunks have power to absorb their own spent effluence, nor do you care to.

He would not kill a nesting partridge or trap an unprime fur-bearer, yet he holds all legislative protection of game and fish to be an infringement on his rights, and is as cunning as a fox in persistent violation of all such statutes. All wild things are his by natural inheritance, and what does a week or month matter, and whose affair is it if he desires fish, flesh or fowl to-day?

He is somewhat conceited and boastful and envious of another's renown in his craft, to be foremost in which is his highest ambition.

You confess it is a poor ambition to be most skillful in a trade that is obsolete and unrequited. With a slightly different bent, with one omitted trait, he would have had a higher aim and have been an Audubon or Thoreau, performing useful if ill-paid labor work, making a name honorably remembered.

But as he is what he is, he slouches into old age and down to his last sod-roofed shanty, a shiftless, lazy, good-natured, disreputable old trapper, hunter and fisherman, who will be only by a few kindly and briefly remembered.

Yet as you see him stealing through the second growth woods, tame and puny successors of the wild, majestic forests, or plying the noiseless paddle of his skiff in the nakedness of a shrunken stream, he is so like a lingering spirit of the old days, that you are thankful for the picturesque figure which gives one touch of remote half savage past to the commonplace present.

THE "Saginaw Crowd" have returned from their 1893 outing, and Mr. Mershon promises to tell us of it.

## SNAP SHOTS.

For the past week the FOREST AND STREAM has been receiving from many points in foreign countries complaints that its subscribers were not receiving their copies of the paper on time. An investigation showed that our foreign mail was being tampered with, and we have reason to believe that a portion of it failed to reach the post-office for some weeks. Steps have been taken to remedy this irregularity, which occurs now for the first time in the paper's history. We have also duplicated their copies to all those who may have failed to receive FOREST AND STREAM in the regular mail and at the usual time. We greatly regret the inconvenience that has been caused to our foreign readers through these irregularities.

Too late for its place in another page comes this timely message from our Chicago staff correspondent, written Oct. 29: "The last words for the Fair are still to be said, and are not out of place even in these columns. Last night Carter H. Harrison, Mayor of Chicago, was shot and killed in his own home by a crazy assassin. This closes the career of one of the most prominent figures before the Western public. The Harrisons were vigorous men always and sportsmen, the family being especially well known in this capacity among the gentlemen of Louisiana and the South."

The World's Fair is over. Our corner in the Angling Pavilion has been dismantled. The Pavilion itself will soon be a memory. But the satisfaction of the FOREST AND STREAM over its part in the Exposition will be lasting. Among all the exhibitors at the Fair, we verily believe, this journal has held a place altogether unique; for its representation in the Fisheries Building has been taken advantage of by thousands of friends old and new to put themselves into closer touch with their favorite paper. May the pleasant relations thus manifested never be broken.

Our pages this week admirably illustrate the successful use of the camera in the woods. To have secured such admirable pictures of one's moose, as those which accompany the story of "L. C. I.," affords satisfaction second only to that which attends the final capture of the game sought for so many seasons. One of these days some enterprising amateur photographer will go into the moose bogs with a birch-bark call, a camera and a flash-light outfit, call up his moose and take a snap shot which will astonish the world.

The fact is that no one can ever tell just when a sportsman's outing really begins, nor when it really ends. He would show himself an alien to the craft, who should reckon only from time of start to time of return. For the beginning may have been weeks and months before the actual going; and as for the ending—does not the vision of the camp present itself so vividly amid the pauses of every-day humdrum and prosaic routine, for weeks and months afterward, that one actually lives his woods life anew?

The day of profitable trapping has not gone by, particularly in parts where tending traps may be combined with killing game for market. A Cascade Mountains skin and meat hunter is said to have taken in about \$3,000 for his last season's work of trapping mink, otter, sable and gray fox, and killing elk and deer for market.

A glowing grate fire, a fire engine and a shotgun are all excellent in their way these frosty autumn days. But the fool who pokes his hand into the fire will get burnt, the fool who stands in range of the hose nozzle will get drenched, and the fool who draws his gun muzzle foremost will get shot.

An item is going about the press that two sons of Andrew Carnegie have been hunting in Wyoming and report game plenty. What about that Wyoming law which prohibits the killing of game by non-residents? Does it amount to anything?

It strikes us that the name of Mr. Charles Piscator who runs a gunsmith shop in this town is a misfit. If Mr. Piscator dealt in sandworms for bait or in fishing rods or other piscatorial supplies, the appropriateness of his patronymic would be more pertinent to his occupation.

For Prospectus and Advertising Rates see Page viii.

Because of Election the next issue of "Forest and Stream" will go to press on Monday, Nov. 6. Advertising copy should be in hand by Saturday, Nov. 4.

## GOOD LITERATURE.

NOTWITHSTANDING the hard times which have prevailed during the past four months, the FOREST AND STREAM has sold during that time more books than ever before in a like period. This increase in its book sales is no doubt due in part to its exhibit at the World's Fair at Chicago, which enabled a vast number of people to make personal examination of volumes which up to that time they had never seen and knew only by name.

There can be no doubt that this wider diffusion of sportsman's literature is a good thing, nor that it has a tendency to elevate the standard of sportsmanship throughout the country. While all books are not equally good, it is yet true that in each one of the publications issued by a reputable house there is to be found a certain amount of good either in the way of positive additions to, our knowledge or in a general elevation of tone. This is an age of progress, of development, and this development, on the whole, is in the right direction. Examples of this are seen on every hand, and one of the most striking of these, in the line of sportsmen's books, is to be found in "American Big-Game Hunting," the recently published book of the Boone and Crockett Club. We venture to say that there has never been published a volume on big-game hunting which dealt so little with the coarser aspect of this sport, the mere butchery of game, and whose tone as a whole was so decidedly in favor of the rights of others. For this, after all, is what game protection means; a little putting aside of self, a keeping in mind that there are other people in the world besides ourselves who will want to shoot and fish, a recollection that there are others to come after us.

The FOREST AND STREAM, as is well known, is the largest publisher and importer in this country of books on the outdoor sports with which it concerns itself, and while, as a business concern, it conducts its book business on business principles, it is a well recognized fact that the tendency of the publications issued from its press is good, and that a wider distribution of this literature not only gives pleasure to those into whose hands it comes, but also teaches the gospel of game protection to those who stand in need of such teachings, and encourages and strengthens those who are already workers in this cause.

As the interest in outdoor sports increases, the importance of such work is constantly becoming more fully recognized by the public, but this recognition does not keep pace with the additions to the ranks of the anglers and gunners; and as novices in sport—like all new converts—are full of enthusiasm, they are likely, from their very ignorance on many points, to prove far more destructive to fish and game than men of more experience, even though the skill of the latter may be much greater.

It is worth the while of every man who takes a sincere interest in the better forms of sport to do what he can to inculcate in others just ideas on these topics. He should

## The Sportsman Tourist.

### THE SAGINAW CROWD.

Pilgrimage of 1892.—IV.

(Continued from page 359.)

We did not make a very early start next morning. It was Sunday and we felt more like exploring. There was lots of meat in camp and we knew it was not necessary to get game to prevent our going hungry; so about half of the party stayed in camp. We concluded to go into bend No. 3 on an exploring expedition. Bigelow and the Doctor took turns in riding the horse, and as we had but one pair of saddle bags the lunch for the party was carried in them, and the plan was to meet at the upper end of bend No. 3 for lunch between 1 and 2 o'clock. Separating, Paddock, Briggs and Seib were to hunt through the river side (for the bend was a large one), and I went with the Doctor and Bigelow from the other direction.

The thicket was almost impenetrable for some distance, and bear tracks and trails abounded. After getting into the thicket we kept track of each other by frequent calls. Once, when I was in a place so thick I could scarcely stand upright, I was suddenly startled by hearing a terrific crashing some distance in front of me, and listening, heard that it was coming in my direction. Some large animal, that I could only conjecture to be a bear, was tearing along at a great rate before me. The cover was so thick that I could not possibly see to shoot until the animal, whatever it was, came directly on me, and my feelings were none of the pleasantest, I can assure you. I looked for the best opening I could find and made all ready, and it seemed as if the next bound would bring the creature right on to me. It had veered a little to my right, and, not 20 ft. from me, passed, at as great a speed as it could make through the tangled thicket—a full grown steer that had wandered away from some herd, and had been feeding in the open glades beyond, and, frightened by the Doctor and Bigelow, had bolted in my direction. I breathed easier when I saw what it was, and was soon out in the more open part of the woods. One or two deer sprang out ahead of me, but it was so thick I did not get a shot. The same thing happened to the Doctor.

On coming into the thicket the Doctor had tied his horse near the bluff, leaving the lunch and his vest fastened to the saddle. It was but a few steps across from the point where we intended to take lunch by following the open. After thoroughly beating the cover without success we came out on the river bank and threw ourselves down under the spreading boughs of an immense cottonwood to await the arrival of the rest of the party. Paddock could be seen, not a great way ahead, coming up on the river bottom; and the Doctor concluded that he would go back for the lunch. We smoked and took it easy for nearly an hour, and the Doctor did not appear, neither did Briggs nor Seib. We began to be anxious, for he surely should not have been away more than half that time. Thinking that something must be wrong, I fired my revolver four or five times and waited. Another half hour passed, and yet no Doctor nor lunch, and nothing was seen of Briggs or Seib. Then we began a general fusillade with the rifles and revolvers, and another wait of half an hour. Pretty soon, far down the bank, we could see Briggs and Seib hurrying along. The sun was high in the heavens, and the day was frightfully hot, and they seemed to be hurrying as if they had business. When at last they reached halting distance Briggs wanted to know what the trouble was, and when, warm, tired and cross, he had climbed up the bank, and we explained the situation, he was about as mad a man as one ever saw. He thought surely we were in trouble, had struck a nest of bear or something equally dangerous and ferocious, and were signaling for help. He had missed his bearings in coming out and had struck the river about a mile from where he intended to, and, as it was so warm, had given up the idea of having lunch with us. Seib said he had come across the Doctor's horse; and, pointing in the direction, we judged it must have been a good way from where the Doctor had fastened him. He said the horse was loose, and he had fastened him to a tree on the river bank, and had also left his vest with the Doctor's on the horse. We now knew that if we had anything to eat we would have to get it in camp, but we were a little alarmed at the non-appearance of the Doctor. It seemed, however, that our firing had had some effect, for he thought we had found the horse; and soon he appeared, puffing and sweating, out of the thick chapparal.

There was plenty of water and plenty of tobacco; so we spent another hour smoking and drinking the pure water, and telling stories. It was too warm to hunt, and we concluded we would wait till the sun sank a little lower before starting back to camp. Paddock said that some years before he had been nearly down to that point on the river where we were then lounging. He said that he and two others were out after some lost horses, and it was at a time when the Indians were a little troublesome. One or two men had been killed in that country, and several horses stolen. He had helped bury one of the men who had been shot on O'Fallon Creek a few weeks before. In each case they counted the tracks of seven Indians; and as they were looking for their horses they also kept an eye out for suspicious characters. They were careful to camp at night in some secluded draw; and after they had cooked their evening meal they would move a mile or two down the river and go into camp for fear that some lurking, horse-stealing Indian had seen their camp-fire.

At one point where they stopped one of the party went up on the high bluffs to see what could be seen, and came back with the information that a white pony was feeding on a little patch of prairie some distance beyond, and he was going to catch it. Paddock cautioned him and said he knew no stray horse was there and that it was a ruse of the Indians, who undoubtedly had been watching them, to draw them into ambush if they should go after the horse. The young fellow, though, was new at the business and would not believe what Paddock told him, but was bound to go for the horse; but Paddock convinced him by going up to the top of the bluff with him, and carefully looking over the ground with the field glass, they soon discovered that the horse was picketed and that there was no doubt but that the Indians were near by.

They moved camp that night after dark, and took a

good long stretch of it. The next morning they went up to the crest of the butte again, to look round to see what was going on; and they came right into the Indian camp. There they were, seven of them; and they were just saddling their horses. Paddock said they concluded to give the Indians a scare, and all three of them were to fire at once, "over their heads," as he put it, "just to see what they would do." My impression is that they were not intending to fire very far over the Indians' heads; but the old man never admitted that he had killed an Indian in his life, and may be he never did. He said that the report of the three rifles caused about as lively a scampering on the part of the horse-thieves as one could imagine; they did not stop for anything, but there was a streak of dust, Indians and horses' feet going out of sight. He remarked that they had no more horse-stealing to contend with from these fellows after that; and it was the end of finding a dead ranchman minus a scalp. I often wondered whether Paddock and his two companions had shot into the air, and if so, why the horse-stealing should so suddenly cease.

A little patch of woods near by suggested that there might be deer in it; and as it covered but a few acres, we concluded we could breast it, and see what we could find. Briers and chapparal were thicker and thornier than ever, but only about waist high. A deer broke cover and made for the bluffs. It was the first blacktail we had seen. It got away safely, for it somehow or other seemed to keep some of the trees and thickets between it and us, though two or three of us fired at long range as it scurried away. Seib knew right where he had hitched the horse, and we reached the place in the course of the next half or three-quarters of an hour. There was nothing left but the bridle; the horse had gone, and the Doctor and Seib were bemoaning the loss of a vest apiece. When we reached camp at dusk, we learned that the pony had come in some time before minus bridle, saddle-bags, saddle and everything; and it seemed almost like hunting for a needle in a haystack to look for the missing articles. Next morning, however, the Kid started out; and as luck would have it, found everything on a sandbar, where the horse had evidently stopped to drink.

The camp that night was a repetition of the previous one; a steaming hot supper on our arrival, a rousing

SUNDAY MORNING IN CAMP.

camp-fire that was reflecting its ruddy hues on the baked-clay sides of the neighboring buttes, the shower of sparks that eddied and whirled high among the leaves and branches of the overspreading cottonwoods, the lonesome howl of the timber wolf and the echoing answer from his neighbor on the next hillside, the hooting now and then of an owl, and the fluttering of a bat as it passed through the firelight, all made an ideal camp scene; and stretched around the fire, in nearly every imaginable position conducive to individual comfort, was each smoking his pipe in full contentment and happiness, as you all have probably done many times.

Jack's knee had limbered up a good deal and we planned to hunt near by the following day, which was to be our last on the bottoms. The very bend in which our camp was situated Paddock said was full of deer. We had seen tracks in the morning where they had been in the night not ten rods from our tents. In the soft dust of the road, as we followed it away from camp, we always came upon tracks where two or three deer had trotted along the night before. So this morning, sending the heavy men to guard the river in front of us, we spread out, fan-shaped, directly from camp to drive the thickets. At the furthest point, where Briggs was guarding, the distance was not over half a mile from our tents; next Jack was stationed, then Ferd, then Bigelow and the Doctor, and the rest of us were to do the driving. Paddock was near the bluffs on the left and I was next to him, and the others were strung out toward the river. We started seven or eight deer that morning in going through that little piece, and I will guarantee there were five times that number in there that we did not see or hear. A shot on my left as we neared the edge denoted that Paddock had seen game, and we were pretty certain he had bagged it. Later on we learned he had. This was the second shot he had made since he had been with us and in each case had killed his deer. Pretty soon a rapid fusillade on my right denoted that Jack had had another streak of luck, and as we came out on the river bank we found him and Humphrey skinning the deer that he had killed. Two deer had come along and Jack had killed the first one, which blatted so that he had not shot at the second one. He says now he has not the heart to shoot at another deer, for as he went up to bleed it he blatted and looked up at him with those melting eyes that he swears he can see to-day. We were but a little way from camp, so the game was soon taken in and hung up.

We concluded to make one more attempt in the opposite direction; that is, we were to beat the thicket on the other side, but equally near. Some of the boys hurried along the river bank, where they could watch for anything that came out; the rest of us went through the thickets. Crack! and Paddock's gun speaks; and an instant later, another report; and as we come up to him, we find him with the deer. He had missed with the

second shot; but, strange to say, his first had gone completely through the deer's heart, but it ran as much as 50 yds. through the thicket before falling. As it disappeared after the first shot, he took a second snap at it, which we afterward found a little bit high, where it had splintered some of the twigs. Continuing on, some more deer were started, but none of us had shots, owing to the unfavorable ground. Going in this direction, we came upon bear tracks; and, a little later, two wolves slunk away ahead of us.

About noon the others returned to the camp for dinner, but I was desirous of climbing the high buttes on the south side of the river. I knew there must be blacktail up on the mountain side; and the day before one of the party had seen a mountain sheep in that direction. Seib decided to accompany me, and we started out for a long and hard climb. The buttes and bluffs were rugged and steep, but we enjoyed it immensely. Everywhere we came upon paths where the deer had gone up and down the mountain. We expected every thicket we came to to start blacktail. Once a stone rolled down the hill ahead of us; and on reaching the summit fresh tracks were found, where the deer had evidently scurried away unseen.

At last the crest was reached; and far down in the bottom we could see the tents and the men moving around them like specks no larger than flies. The view to the northward was grand in the extreme, butte after butte, cliff after cliff, as far as the eye could see, and as varied in color as the hues of the rainbow. Shapes most fantastic had been seamed and woven through the hard clay by the storms of time. Looking in another direction a great stretch of level prairie extended as far as the eye could reach. A flock of sharp-tail grouse started from the juniper bushes in a little crevice near by, but scattered at our approach, and now we could see them ahead of us, first one and then another popping up its head and looking at us with curious eyes, with seemingly no fear of danger.

So far no game, but we had been repaid by the glorious view and the exhilarating air, and know that we will have appetites for dinner when we reach camp. We take another route to descend that will bring us a little nearer camp. Down we go, from ridge to ridge, and across one craig to another. Suddenly, from the thicket far below us, a blacktail deer bounds down the hillside, appearing and disappearing as it turns hither and thither among the cedars. It is several hundred yards away when it starts, and the distance rapidly increases, yet both of us shove up our sights and take snap shots, and really two or three of them are very good ones, for the dust is thrown seemingly against the fleeing game, but it gets away unharmed and we continue the descent. It has grown cold as we near the bottom, and some heavy clouds are coming up in the west. When we reach camp about 4 o'clock all is bustle and confusion. The tents are down and nearly everything packed. We are met with the information that Paddock had decided it was going to storm, and that if it should rain or storm before we reached the plateau top, we would have hard work getting our teams out of there all winter.

Certainly this was not a pleasant prospect; we have families at home and do not care to stay in this place during a long, cold Dakota winter, you can rest assured.

The hillside, as I said before, is very steep and covered with this fine clay, which, when once wet with a hard rain, or still worse, by snow, would be so slippery that it would be impossible to drag the wagon to the top. It is just as well to start to-night anyhow, for if we reach the top in safety it will make a much better drive home to start from there at daybreak on the following morning.

Harrison has left a good, square meal out for us, the rest is all packed in boxes. Seib and I enjoy our repast, and by the time we have finished, the cavalcade is ready to start. It is after dark when we reach the top; it has been a tedious, hard pull, and we have had to double up on the teams, sending one back to help another. The buckboard is gotten up quite easily compared with the others, and we have been ahead and picked out a camping-spot about half a mile from the hilltop at the edge of a little bunch of cedars; but as the grass is high, it will have to be cleared away for some distance before it is safe to light a fire. The wind has risen and the clouds thickened, and it is already dark as midnight and growing cold. The tents are gotten up after we have lighted a fire, which has been no easy task. Standing around with our coats, forming a circle, we have beaten out the fires that ran back in the grass, and at last have burned a spot sufficiently large to render it safe. From the mess chest supper is brought, beds are made and we turn in.

Whether we are nervous from Paddock's stories, or are made anxious by the oncoming storm and the rushing wind, I cannot say, but suddenly there rings out on the night air three reports in quick succession, like the booming of a heavy cannon. We are all out of the tents in an instant, but nothing more is heard. The Judge swears that it is artillery we have heard; even Paddock wonders what it can be; the rest of us are guessing as well, but finally conclude that some of the bluffs must have fallen into the river bed below and made the noise. It certainly was very much like heavy guns, and not a great way from us, either. What occasioned it we probably will never know. It was not long, however, before we were all snoring, and aside from the pattering of the rain and the flapping of the tents nothing disturbed us till Harrison's call for breakfast aroused us the next morning.

W. B. MERSHON.

### Some Thoughts.

LOCKPORT, N. Y., Oct. 23.—I was much interested in Mr. Hough's notes in your last week's number on the editorials of newspapers. I have often had "some thoughts" on this subject, but could not put them in writing so happily as Mr. Hough has done. I always read the editorials of *FOREST AND STREAM* entire before looking the paper through. I recall to mind a Christmas editorial published some eight or ten years ago, that was an honor to the best sportsman's paper published, and would have been to any religious paper. *FOREST AND STREAM* without its editorial page would be to me like forests and streams without birds and fishes.

J. L. DAVISON.

### "Danvis Folks."

EXETER, Neb.—Am glad to be associated again with our old "Danvis" friends, as my wife and I have been with them from "Uncle Lisha's Shop" and "Sam Lovell's Camps" down to the last Danvis chapter, and are still waiting for more.

W. B. F.

## Game Bag and Gun.

### MY FIRST MOOSE.

SEVEN or eight years ago, late in the month of August, I called at the office of a friend in the Mills Building, and found him writing to his guide up in Maine. Our conversation naturally turned upon hunting, and my friend told me that in about two weeks he would be off to the Maine woods for his annual fishing and hunting trip, and he extended to me a cordial invitation to join him.

Now, from early boyhood, I may say from babyhood, there has always been something about a fishing rod or tackle, wherever seen, that chained my attention, and as to a pistol, gun or rifle—well, the mere sight of these has always stirred to life a something within me that I cannot quite describe, but certainly a feeling quite different from that aroused by the sight of other familiar implements. I think my very earliest recollection of and love for a gun (I could not have been more than eight or nine years old at the time) was a long single barrel 10-gauge gun, which had been altered from a flint lock to a "percussion cap," and which we used to keep "loaded for hawks" upon the farm where my boyhood days were spent. I recall the day I crept along a fence, armed with this weapon, which was far too heavy for me to poise at my shoulder, poking it through the rails and firing at a crow which was industriously un-planting our newly planted corn. The result is vivid in my mind to-day. The gun almost kicked my head off. I went one way, the gun another, and the crow another. It hurt me, but not the crow. Well, from that day to a few weeks ago, when I again found myself prostrate—this time in a black muck ditch after firing my .45-90 Winchester at the grandest game on this continent—I have loved a gun.

And so the invitation of my friend to join him on his trip immediately stirred to life that old love, and having obtained a two-weeks' leave of absence, a fortnight later saw me on my way to the Maine woods, to try my hand at "big game." I must not here trespass upon your space to tell you of that first trip, for this paper is simply to answer your question of how I got "my first moose." It is sufficient for me to say that a new world, and a new sphere of pleasure was opened to me by what I then saw and learned.

Our destination was Danforth's Camp on Parmachenee Lake. I shall never forget my arrival at that quaint little town of Phillips, after a ride over the odd little 2ft. gauge Sandy River Railroad from Farmington. Something in the very air of the place tells you that here is the dividing line between the artificial customs of society and the broad, honest, untrammelled life of nature's domain. You feel that behind you is left progress, with its books and newspapers, its telegraph, its steam whistles and its hurry, bustle and toil, and that just beyond is nature, with her lakes and streams, her mountains and forests and dense solitude.

The picture we looked upon the next morning as we drove from Phillips to Rangeley Lake, was something entirely beyond my powers of description. The early autumn frost had just begun to tint the wooded hills, the maple and birch vieing with each other as to gorgeousness of apparel. The air was crisp and clear, an indefinable woody odor pervaded the atmosphere. Often a strutting partridge would appear in the roadway, eyeing critically the invaders of his domain, and then whirl away into the thicket. On such a morning the weak feel strong and the depressed feel buoyant. Here I was introduced to the guide and his ways, to the birch-bark canoe, the lakes, with their musical but often unpronounceable Indian names, to the "carries," and to life in camp. With what wonder I beheld the skill of the guides in the use of the paddle, with what superb grace they cause the canoes to glide like things of life through the clear waters of the lakes, and with what wonder and amazement I saw them direct their frail craft through the "quick" water and "rocky rips" of the rivers, for skill and muscle, too, here come into full play, where a single false stroke of paddle or pole means an upset into the rushing waters, and possible serious consequences. How my imagination took flight when I beheld in Danforth's Camp the deer, caribou and moose heads with which his place was adorned. Each told its tale of the skill, endurance and patience of the hunter. Each said to me, "You can do it, too."

Can I ever forget that first experience up at Rump Pond, when I went out at night to "jack" deer? The evening twilight falling upon the camp as we carefully made all snug in the canoe. The jack lamp on its stick in the bow lighted, but closed, and not a ray of light shed from it, but ready to open silently and flash its bright beams upon the deer. I in the bow, the guide in the stern. My rifle across my knees and everything in readiness for a quick shot. How noiselessly we glide up the stream! What deathly stillness! How we listen for a sound in the bushes. A muskrat leaps from a log just ahead, and with a splash dives into his hole in the bank. How loud it sounded! We glide into Rump Pond and silently, stealthily start along its shores. How awfully still! You breathe and hear the folds of your coat rub each other. You never heard the sound before. You never before knew stillness could

be so still. Not a word nor a whisper passes between you and your guide. The canoe moves, but you are hardly aware of it. The skill of the guide with the paddle is consummate. Not even a drop of water falls from it. A reed rubs along the side of the canoe. How loud it is! You never dreamed that a single reed could scrape so loud. It tells you, though, that the canoe moves. A beaver starts from shore, and with great flaps of his tail upon the water, swims away. You are sure he will scare the deer you are listening for.

And so the minutes and the hours pass. Not a word has been spoken, not a sound made by yourself or guide, your feet are numb, a mist has risen from the surface of the water, cold chills begin to creep down your back and you feel that you are covered with "goose flesh," but you never move. Your ears have strained for a sound until you begin to imagine them. A twig snaps. What is it? A bush swishes—no "goose flesh" now! A dead stick cracks, no numb feet now. You know it is an animal. Will he hear us? Your heart begins to thump so loud you think the deer, or whatever it is, must hear it. Will he come into the water? Yes, you hear a step in the water, you hear the swash of two or three steps. Now is the time! The canoe has swung around, bow pointing toward the noise. Now open the "jack!" Noiselessly the string is touched and the padded lid falls. A path of light shines dimly through the mist and reaches the bushes on the bank. But it takes a practiced eye to discern the deer. He is there though, you only see two balls of fire about six inches apart. They do not move. Now if you have a good nerve, a steady hand and a true eye, and hold your rifle so that the sight rests about ten inches under and on a line directly in the center of those two balls of fire, and press the trigger, you ought to bag your game; but I shall never forget that I tripped it on that

that a better all-round man, in my opinion, never espoused his profession. Fortunate, indeed, is the sportsman who secures his invaluable services. Our other guide was a young Indian, also of Mattawa, named Seymour, though where he received his patronymic was a fruitful source of conjecture both to Walt and myself, and as he spoke very little English, and as one must occasionally exchange an idea or two with one's guide, our conjecture as to the origin of his name was very soon coupled with regret for our "rustiness" in regard to his vernacular. He was a hunter, however, and, as he is young yet, let us hope he will improve some of his spare hours in an endeavor to master our "mother tongue."

Joe LeClaire was the name of the man Mr. Rankin furnished us as chef. Joe proved to be an excellent man; handy with the paddle, whether it was applied at the stern of a canoe or in the batter pan, and the extraordinary quantity of his flap jacks and most excellent bread (baked in his little pan in the hot ashes of the camp-fire) consumed by Walt and myself, is the best testimonial I can give him as to his proficiency in the culinary art.

Deux Rivieres is a small village on the south bank of the Ottawa River in Ontario, the river being the dividing line between the Provinces of Ontario and Quebec. There is a small hotel in the place, kept by Joseph Richardson, and here on Sept. 11 we left our trunks, doffed our store clothes, and donned our woods attire, which by the way always should be, everything, all wool. Heavy, hob-nail, natural tanned leather shoes, and a rubber coat are also indispensable. A large mackintosh bag affords the most convenient mode for carrying a change of underwear, and the score or so of "necessities" one must have in camp. Such a bag will keep everything dry, and it is "a place for everything and everything in its place."

From Richardson we procured two teams to take our camp outfit, canoes, etc., into Hurdmann's lumber camp, sixteen miles north from Deux Rivieres, at which point we were to put the boats into the water. There is no bridge across the Ottawa River at Deux Rivieres, and no regular ferry, but what they have there is certainly very picturesque—a scow, large enough to transfer across the two teams and our belongings. The current is very swift and the river is full of floating logs. The mode of propulsion is to row with two mighty oars. A third oar pivoted upon the stern is used as a rudder, and at this our landlord, Richardson, took his place, the rest of us manned the side oars, and the voyage commenced. All went well until midstream was reached, then came that mighty current and those wayward logs. We got across, but how I shall never be able to tell. At one time I thought we were in a fair way to strike the opposite shore about down at Ottawa. And Richardson's language as he shouted his orders to us, well, I simply decline to record it here, and let us hope, for his sake, that it is recorded nowhere else. Walt secured a very good picture of the boat with its load and crew.

From Deux Rivieres to Hurdmann's, as I have said, is sixteen miles, and I further say without hesitation or fear of contradiction from any truthful man that they are the worst sixteen miles of road on the habitable globe. It was my intention, and I believe

"WE AGAIN STARTED NORTH."

first trip and failed. But that first trip, as I have said, taught me new delights, and my natural instincts for rod and gun were quickened, and each successive year has found me, during my short vacations, somewhere in that vast wilderness of forests.

It is a good many years since I missed that crow with the old single barrel 10-gauge, and it is seven or eight years since I missed that deer on Rump Pond, but since the Rump Pond failure I have always had one object in view, and that has been to get a bull moose. Various parts of Maine have been tried during this time, and many a good day's sport has fallen to my lot. With my 6oz. "Leonard" I have had some rare hours of fun with the trout. Armed with my 5x7 camera, I have "spoiled much glass," but secured some very good pictures of camp life, and hunting and fishing scenes. I have also to show some nice deer heads from among the Pistol Lakes. But still the one object uppermost, has been to get that bull moose. "Walt"—my camp companion, friend and chum, Mr. W. L. P.—but whom we will call "Walt" for short—called down a fine bull moose three years ago, on Spider Stream, Churchill Lake, but lost him through a defective rifle. This is the nearest we ever came to bagging our moose until this season.

A year ago we were advised to try the country northwest of Ottawa in Canada, and accordingly we opened a correspondence with Mr. Rankin, the agent of the Hudson's Bay Co., at Mattawa, a point on the Canadian Pacific Railway, about 200 miles west of Ottawa. It has been our practice heretofore to buy all our supplies and camp outfit in New York, and ship them to the railroad station nearest to our intended hunting ground, but fearing trouble and delay with the customs authorities of Canada we concluded to ask Mr. Rankin to furnish everything—canoes, tents, camp utensils, etc., and we sent him a detailed list of the supplies needed, all of which, let me say, *en passant*, he filled to our utmost satisfaction. The guides, three in number, one for each of us, and a cook and "general utility man" were also furnished by him, and, together with the supplies, were at Deux Rivieres, a station fourteen miles below Mattawa, where we met them.

George Crawford, a half Indian of Mattawa, was our chief guide, and it is but justice to him for me to say,

lieve it was Walt's also (though he has never admitted it to me) to ride in one or other of the wagons, but when it comes to driving over stones and logs and things two or three feet high, of going up hill at an angle of 45°, and of seeing horses squat and slide down from shelving rocks, to see one wheel up on a stone and the other down to the hub in the mire, one changes his mind about riding, and walks, and walk we did the whole long seemingly unending sixteen miles.

We reached Hardman's at about 6 o'clock, a little foot-sore, perhaps, but a good night's rest repaired all physical damages. Unfortunately one of our canoes had been broken on the way in; is it any wonder? and part of the next day was consumed in mending it. At 3 o'clock, however, on Tuesday afternoon we put our boats in the water and started for the woods, leaving, at last, all signs of civilization behind us. It being already late in the day we made camp for the night at the foot of the first lake we came to, which is Russel Lake, about four miles from Hurdmann's. At this point an incident occurred which had the effect of greatly encouraging us. It was nothing less than that a moose had actually passed within a rod of our tent during the night. There were his tracks, unmistakable and plain, when we arose in the morning. By sunrise we were at breakfast, and by 8 o'clock our tents were packed, canoes loaded, and we again started north, our destination being Hamilton Lake, some twenty miles in that direction. To reach this point several carries are necessary, as the way lies through a number of disconnected lakes of varying sizes, and which are mostly nameless upon any maps that we were able to procure. The weather, which had been almost perfect, now became stormy, and continued so, almost constantly during the two weeks we were there. I think we had not two consecutive days of fair weather during the whole of the time. Occasional nights suitable for moose calling did, however, come, and these, you may be sure, were utilized to their utmost. On such nights we always separated, one of us going off to some promising place in one direction from camp, the other in the opposite direction or at least to such distance that danger of interference would be avoided. We always tried to arrive at the place selected to "call" at or before sundown, for I have

noticed that very often what has been a blustery day, becomes a perfect evening for moose calling, the wind going down with the sun. It was so the day I got my first moose. Probably a more unpromising day could not have been imagined. A strong east wind had prevailed throughout the morning and cold rain was intermittent until afternoon. The lakes were lumpy and at times quite a "sea" was running. Crawford and I had spent the day paddling about the lakes, looking for fresh moose tracks, and incidentally to make selections of likely places to "call," when a favorable evening should come. We had paddled many miles, but saw but few signs, and no places that we thought suitable for "calling," and it was therefore with not a little fatigue, and considerable discouragement that we arrived at camp about 4 o'clock in the afternoon. We were encamped on Line Lake at this time, and as we approached camp, Crawford with his canoe over his head, and I, with my rifle across my shoulder, we met Walt and Seymour similarly equipped, striding through the carry. In answer to my interrogations Walt informed me that he was tired of waiting for suitable weather, and that he was going to paddle across Hamilton Lake to a place he had spotted, and there should call, wind or no wind. This may have seemed to me, for the moment, like folly, but Walt's courage never flags, and like a true hunter that he is, he never allows a chance to go by, and so this windy, un-

outlet I had the satisfaction to note that the wind had gone down and the lower part of the lake was as smooth as a mirror.

Somehow I felt that fortune was with us that evening. The fact that within the short space of time it had taken us to paddle from camp the wind had gone down seemed to argue that things were going our way; and when at last we ran the nose of our canoe silently on a little sandy beach and I stepped out, I felt that we had not come there in vain. Crawford pulled the canoe carefully up upon the shore, while I made sure my rifle was all right, sure that the cartridge was in the barrel, sights right, and everything clear and in perfect order. Then I advanced about 20 ft. to a slightly rising piece of firm ground covered with bushes waist high.

Let me describe the spot as I stood there. Behind me, Line Lake, some eight or nine miles long, dotted with many islands. A most beautiful body of water, as pure and as clear as crystal—ahead of me—looking south, an impassable bog of many hundred acres in extent, across which nothing in the shape of man or beast could possibly make its way. To my right and left tall mountains covered with a hard wood growth well up to their summits. But for a hundred paces immediately in front of me, and extending from mountain to mountain on either side, was a sort of natural dam to the lake, and across this bit of *terra firma* any animal in going from one mountain to

deretone. "I thought I did, over there on the left," he answered. "Yes, yes, that's right," I whispered, and immediately I called again. Listen! There is no mistake this time. Sure as there is a sound upon earth, that is the deep guttural grunt of a bull moose. I could feel my heart leap and the blood rush through every vein in my body, but the sound was far off, to the left of the bog, and up the mountain side. I knew considerable time must elapse before he could come within rifle shot of us. A thousand thoughts chased through my mind at this moment, but I think the foremost of these was as to where I should first see him.

A thick growth of alders fringed the bog, and back of them a dense growth of small fir, mountain ash, birch and tamarack extended well up upon the rising ground. Somewhere through these he must approach. Would he come where I could get a fair shot, or would he scent us, and with that keen and wary instinct for which these animals are so famous, turn and seek safety in retreat? But listen! Now we can hear the thrashing of the bushes as he rushes down toward the bog. I would never have believed that a single animal could make so much commotion. It was as if a whole drove of cattle were rushing toward us. Then stillness again. He has stopped to listen. I call again, not so loudly this time, and with a short quick grunt. Great heavens, hear him now! He is only a hundred rods away, hear the snapping of the

"WE ADVANCED SOMEWHAT CAUTIOUSLY."

promising afternoon he was willing to tramp and paddle several miles for the mere chance of an opportunity to call. I think his example and resolute purpose really were the cause of my going out that evening, for when I reached our tent I found myself thinking about Walt and pondering over his words. Did he think the evening would be a still one? The fact of his going so far argued that that must have been his idea or at least his hope, despite his defiant words about "wind or no wind." "Then I'll go too!" was my mental decision. "Crawford," I said, "if it is just the same to you, unlikely as it looks at present, I think I should like to go down to the foot of the lake and 'call' for a while this evening." "Very well sir, just as you say," replied Crawford, as he laid down my rifle, through which he had been running a greased rag, and looked up at the sky through an opening in the hemlocks, which were then swaying and moaning in the stiff wind. "It don't look good, but may be the wind will go down—can't tell, might try it." "Yes, let's try it anyway, Crawford," I replied. "You get yourself a little 'snack' if you feel hungry, and we will start at once, for I would like to get there by sundown, we will take our regular supper when we return, for if this wind continues we will be back here by 7 or 8 o'clock." I don't know whether Crawford took his "snack" or not, I slipped a half dozen cartridges (carefully greased) into the magazine of my rifle (and incidentally a sardine sandwich into my "Department of the Interior"), pulled on my heavy shoes which I had hung before the camp-fire to dry, handed my .44cal. Smith & Wesson revolver to Crawford, and in a few minutes we were upon the lake heading for the outlet.

I should say the distance from camp was about two or two and half miles, and we both put our muscle to the paddles with a firm determination to cover the distance in the shortest possible time, for the sun was fast approaching the mountain top to the west of us, and night comes quickly among those mighty hills. Our little birch bark fairly flew through the water, and at every stroke I could feel upon my face the spray from her pointed bow, as she split the waves with which the surface of the lake was ruffled, but before the first mile was covered I noticed the spray was less frequent, and before we reached the

the other must necessarily pass. An ideal place, truly, for calling moose, for, should you be fortunate enough to call your animal down he must pass within rifle shot. I had "called" here the previous evening, but a light wind was stirring the trees and bushes, and getting no answer, had returned early to camp.

Selecting a stout bush against which to lean my rifle, I raised my moose horn for the first call. I have forgotten, by the way, to describe this instrument, which I may say is simply a horn made from birch bark by twisting it into shape very much as a confectioner makes a cornucopia by winding a sheet of paper about his hand. Mine is about sixteen inches long, five inches in diameter at the large end, tapering to a diameter of three-quarters of an inch at the small, or mouth, end. With one of these horns, upon a still clear evening, among mountains and across lakes, I am quite sure a good caller can send his voice (which must imitate the "calling" of the cow moose) a good three miles or more. To my first call there was no answer, Crawford was just behind me crouching in the bushes. Our ears were strained to catch the faintest sound as the echoes died away among the mountains. Stillness reigned. A small bird fluttered in a bush near at hand, a trout rose to the surface of the lake, just back of our canoe hid in the bushes, gulped his poor victim of a fly and with a little splash was gone, leaving a swirl upon the smooth water, glimmering, but silent.

A second and a third call, reverberating echoes, then dense stillness. Nature seemed hushed in slumber. I thought as I knelt there listening to the echoes of my calls from far across the bog and lake that surely I must be answered. But not a sound broke the almost painful quietude. A pair of ducks came with a whir just over our heads and settled in the water a few yards away. They had not seen us, but at the next call of the horn rose with a great splash and flutter and rapidly flew off up the lake. I think it was the fifth or sixth call (I had been calling at intervals of about five or six minutes, and a half hour or so had passed) when I thought I heard a sound not quite like an echo. Could it be an answer? I felt, rather than saw, Crawford half rise to his feet. Ah, he too had thought he heard it.

"Did you hear anything, Crawford?" I asked in an un-

trees and the thrashing of the branches as he carries everything before him in his wild rush! Hear him grunt and snort, and hear the blades of his antlers ring against the trees! He is coming with a thundering rush, and it is a moment to fill a hunter's soul with delight.

Crawford whispered just one sentence, as the moose came tearing toward us, it was this, "Golly, he's a big wan, hear them shovels agin the trees," and the words were scarcely uttered, when I saw the moose come to a full stop just to the right of the nearest bunch of alders.

What a magnificent sight! There he stood in all his glory, antlers thrown back, nose high in air, his nostrils dilated and his great mane erect, uttering quick, short grunts, and occasionally looking from one side to the other for that cow he had heard calling! "A full minute he stood thus," I was about to write, but I presume it was actually some five or six seconds, while I gazed upon the sight I had so long wished to see, and for which I had spent so many patient hours. Now had my supreme moment come! Was I excited? When I first heard him answer, yes. Now that he stood before me, no. I had had time to think what to do, and in another instant I was prepared to do it.

Some moments before the moose had appeared from behind the alders I had laid down my moose horn and taken my rifle from its place against the bush. Again I carefully but quickly looked it over to assure myself it was all right (I have had two friends miss their moose through defective rifles, and Walt's experience on Spider Stream flashed through my mind), and then rising to my feet I quickly brought my rifle to my shoulder, and settling my eye carefully into the sights aimed for his heart and pressed the trigger. I do not think the animal saw me, and I had a fair shot into his right side as he stood broadside to me.

At the report of the rifle I saw him rise upon his hind-feet and, as I thought, fall to the ground behind the clump of alders, and I started to run forward, but had advanced but a few paces when I saw him moving back in the direction from whence he came. As he passed an opening between two bunches of the bushes, I again had a fair shot, though necessarily a quick one, this time into his left side.

The smoke had not cleared from the muzzle of my piece before Crawford was past me like a flash, and clearing with one bound a ditch of soft black muck some 8 or 10 ft. in width, fired two shots from my revolver through the bushes in the direction of the retreating moose. Crawford is a fine specimen of an athlete, and his splendid jump across the ditch must have aroused within me a spirit of emulation. However this may be, it is a fact that while he cleared it at a single bound, my attempt was a most miserable failure. At a single bound I landed plump in the middle of it. I may be wrong, but from the way I settled down in that muck I shall always believe it to be the veritable channel leading to the "bottomless pit." I think I should still be settling in that slimy ooze had not a friendly tree trunk, which had fallen long years ago into the inky channel, offered me a little temporary assistance, and over it I was fortunate enough to hook my right arm, in the hand of which I still held my smoking rifle.

Crawford heard the splash and turned to see what had happened. I am of the opinion that the spectacle I presented struck him as unsportsmanlike and undignified, but to his credit be it said he displayed no emotion of any kind. He reached for my rifle, and with the simple remark, "Let me give him one or two with this," quickly fired two shots through the alders at what I think we both feared was an escaping moose. Then to lend me the grip of his brawny hand was the work of an instant, and the next moment I was once again on my good pair of legs with comparatively dry land under my feet. I say "comparatively dry land," but the comparison refers only to the ditch, for we had now advanced toward the edge of the bog and were in mire almost knee deep; but with whole pocketsful of the contents of the ditch, I was in no mood to be critical or particular about the spotlessness of my clothing, and with all possible speed we pushed and splashed our way through the alders that grew thickly along the edge of the bog.

Crawford was the first to emerge on the other side and after a single glance he turned to me with the glad shout, "He's down!" Sure enough, there he lay in the grass a hundred yards from where we stood. We advanced somewhat cautiously, for as he had run some two or three hundred yards after being shot we were not certain that he might not again take to his feet. Crawford advised a bullet through his heart from the revolver or rifle to make sure, but I had by this time approached his head and looking into his eye saw he was dead. Yes, dead; and as I looked at the noble fellow stretched there upon the grass, helpless now, but a moment ago so full of life, so magnificent in his strength, I confess to a momentary feeling of regret. How handsome he was, how mighty in appearance even in death. He had never harmed me, not even in the remotest degree, and yet I

had slain him in cold blood. Tricked him, too; and now he lay lifeless at my feet. You will call it weakness, perhaps, but I here confess that as I stood there in the fading day, looking upon that noble form, my triumph over this poor brute was not without a shadow of pain. Examination proved that my first shot had been fatal.

natural desire, however, to see the moose I had killed, together with my earnest request for his assistance in photographing, caused Walt to first visit the scene of my conquest, resulting of course in great delay to the resumption of his hunt for his wounded animal, and it was nearly 10 o'clock when he and Seymour arrived at the spot where they had abandoned the trail the evening previous. Signs showed that Walt's shot had broken, or at least injured, the animal's right foreleg. This was indicated by the absence of that particular footprint. The trail also showed considerable blood upon the bushes on that side and four separate and distinct pools of the red fluid told where the moose had lain down as many times during the night. Walt's theory is that the animal did not move from where he last laid down until daybreak, which is probably correct, and that if they could have been there at that time, the chance seemed favorable that they could have readily bagged their game. In this theory I am certainly inclined to share. At all events I shall always feel regret that circumstances were as they were, and shall believe that I might have closed this sketch with a record of two moose for the trip instead of one, for although we had one or two suitable evenings for calling afterward they were without result.

Two black bear were shot by Walt a day or two later, and I had the pleasure (?) of seeing one at a very long distance, but as I was moose calling at the time, considered it unwise to pursue him.

It took Crawford and me a whole day to properly prepare my moose head for shipment to a taxidermist in the city, where I am having it mounted, and a large part of the work I did with my own hands, for when one secures a head such as the one of which I write, it becomes very precious to the owner. Upon our long journey back to Hurdman's I found there was a sentiment attached to those horns which would hardly permit of their being touched by "profane hands," and certain it is that I lugged them on my own shoulders every inch of the way out. Thus does sentiment ever attach itself to trophies of the chase, for who that has ever tasted the delights of the hunt has not some trophy in his possession upon which his eyes love to linger as he recalls days of freedom from care spent in the pursuit of game? Thoughts such as these I suggest will, I am sure, often occur to me when I look upon the proud head of the subject of this narrative, and, imperfectly as I have related them, the mere recall of the incidents connected with this trophy has been to me a renewed pleasure, and I will only add that the primal object sought has been attained if, by that recall, I have satisfactorily answered your question of how I got "my first moose." L. C. I.

New York, Oct. 12.

"SAW HE WAS DEAD."

The ball penetrated his right side, just back of the fore-shoulder, passing clean through his body but missing his heart and lodging under his skin upon the other side, where I found it when we were skinning him the next morning. I have it in my pocket at this moment, and, battered as it is out of all semblance to its former shape, it is, to me, quite "a thing of beauty."

Crawford suggested taking the antlers and head with us to camp, but to this I could not consent, for, as I explained to him, for the amateur photographer here was a subject of a lifetime, and I must "spoil some glass" on this fellow in the morning, just as he lay, and in truth I must say he was a worthy subject. His antlers, which are the best balanced set I have ever seen, measure 3 ft. 7 in. in spread, with 10 prongs on one and 13 on the other. Crawford said he was a seven year old animal, which is a full grown moose, and though thin in flesh, as is usual during the rutting season, we estimated his weight as fully 1,200 lbs., an estimate I should say rather under than over the true figure. He stood full 7 ft. high at the shoulders by actual measurement.

Next morning after an unusually early breakfast we started out to photograph and "dress" my moose. We were accompanied by Walt and his guide, and several good pictures were secured, a few of which are inclosed for your inspection, and for the better illustration of the events, describe should you wish to use them. It is to Walt I am chiefly indebted for the photographs: for while we both carry our cameras upon all of our hunting trips, on this particular occasion I had left mine many miles below (we having come up to Line Lake "light"), and not to have photographed "my first moose" would have been a calamity second only to missing my shot. These same pictures I fear, however, have cost my friend Walt another moose. Upon the night of the happenings above narrated it will be remembered that Walt and Seymour were off in another direction moose-calling, as were Crawford and myself. I was fortunate enough to secure my moose while there was yet daylight sufficient for accurate marksmanship. Not so, however, with Walt. He called a moose the same evening, but not until near 9 o'clock, and the darkness was such that accuracy of aim was impossible. The result was a wounded animal which, they followed as far as possible in the darkness, but pursuit of which was finally abandoned for that night.

A return to camp followed, the intention being to renew the pursuit at daylight the following morning. A

CRAWFORD.

"I LUGGED THEM ON MY OWN SHOULDERS."

## A TRIP TO THE GURNET.

BOSTON, Oct. 26.—My friend Brann and I not having succeeded in getting many quail up to date, we thought a trip to the Gurnet might afford us some shore shooting. So we checked our baggage for Green Harbor, which is not far from Brant Rock. Half an hour's drive from the station brought us to the Webster House, whose jolly proprietor, Mr. Ma Dan, is well versed in shooting lore. Before our traps were unpacked he told us we would find some quail just back of his hen house.

Four A. M. found us on the beach with our dory, with decoys to imitate the dusky coot, and just as effective as a more expensive article. We thought we were early and likely to obtain a good position, but we found that dozens of boats were anchored long before our arrival. We were forced to take an outside position and not a very favorable one. The boats inshore clearly had the best of it, as the gunners were keeping up a running fire. The coots seemed inclined to follow the shore line that morning. We anchored for three hours and brought in 19 birds—butterbills and graywings.

We lost quite a number of cripples, the birds diving and causing us some very lively work when giving chase. A retriever would have been of good service to us, but our dog had been left at the hotel, we thinking he would be a nuisance in the boat.

We had arranged for a sailboat for the afternoon, hoping for better shooting. In the meantime we started for the Gurnet, which is about seven miles from Brant Rock and is very hard tramping. We saw just one flock of white-breast plovers and they were so wild we could not get within gunshot. We found a few ring-necked and some peep, and three beetle-heads. The birds have disappeared, and the tramp over that beach was a dreary and lonely one.

One o'clock found Ben—who was formerly on the Gurnet light—waiting for us. We were not long in running out under his skillful handling of the boat. Soon we located a bunch of butterbills and ran up to within easy gunshot before they began to dive. We had some of the best and most exhilarating sport all the afternoon, running on to the ducks in this manner, that we ever enjoyed. We would lean far over the side to pick up a cripple, when just as we were about to seize him by the neck he would dive; then we would have to wait for him until the next tack. Thus it was all the afternoon. And to say we enjoyed it would be very tame. Thirty-seven ducks made our score for the first day.

The next morning we heard the quail back of the hen house but thought we would leave them for later. We went to the beach at high water and found the ducks scattered all along in small bunches feeding. By careful maneuvering we picked up eleven more for our string. Right here is where our Irish setter came in on the scene. Without him we would not have got one bird. The wind was off shore and was almost a half gale, so that it was almost impossible to get what you would kill. Old Flash was battling with the rollers and high winds for over twenty minutes at one time before he captured his crippled duck. When he brought the duck ashore we bestowed enough praise and pats upon him almost to turn his head.

On our way back to the house we knocked over seven ewellows, but began to fear of having a chance at the quail. The trip was an enjoyable one to us. We had all the ducks we cared about and we intend going again next week. The quail will hear from us next. We also found an abundance of loons, but they were high and shy.

JOHN P. WALLACE.

## BOSTON GUNS.

BOSTON, Oct. 30.—I have to mention a good many unsuccessful sportsmen if I keep on the side of truth. Indeed among all the hunters who have been into Maine from the section of Boston this fall, not one in ten has succeeded in getting large game, so far as my knowledge goes. Mr. W. P. Tenney and his brother, Harry Tenney, and Mr. William Gray have just returned from a hunt in Maine. They are usually successful hunters and get their share; but good fortune was not with them this time. They went some thirty miles back from Houlton into a good game section, but they got no four-footed game whatever, though they hunted very faithfully. They got a fair showing of partridges, but even these birds they did not find as plenty as they expected from the reports they had read in the papers.

Mr. Geo. H. Lamphier has recently returned from a successful hunt in Maine. He is reported to have killed a cow moose and a dozen partridges on a hunt at King and Bartlett lakes. A party of six Boston hunters have made a successful trip into the woods of Washington county, Me. They are reported to have killed a deer a piece. The papers say that Game Commissioner T. H. Wentworth, of Bangor, Me., has just returned from Sebols Lake with a fine deer. He was accompanied by his son. This is the gentleman who was appointed to take the place of E. M. Stillwell, deceased. He is very highly spoken of by his colleague in office and by all who have had to do with him in fish and game protective matters. There is one feature of deer hounding that it is very hard for these commissioners to control. The State of New Hampshire permits hunting deer with hounds. There is a very long border between Maine and New Hampshire, heavily wooded, and a natural home for moose and deer. The very worst sort of advantage is taken of this border by those who desire to hound deer. In fact the whole Magalloway region is badly infested with hounds running deer this season. On certain waters in Maine, but near the borders of New Hampshire, guides are regularly employed to put out hounds, ostensibly in New Hampshire, but they run the deer into Maine waters where they are shot. In fact there are already a number of suspicious cases of deer taken at these waters. Dogs have come this fall clear over the mountains to the borders of Richardson Lake and the ponds above. The only remedy for sportsmen and the owners of camps on Richardson Lake and Umbagog, who do not believe in the hounding of deer, is to take the law into their own hands—which thing they have a legal right to do—and shoot the dogs. The game laws of Maine empower any person to destroy any dog found hunting deer in that State.

Another deer has been killed in the town of Durham, Me., but a short distance from Lewiston. So much for game protection and the non-hounding of deer in Maine. It is within the recollection of thousands of the older residents of that section of the country when a live deer

in the woods about there would have caused about as much excitement as would the advent of a live wolf in the streets of Lewiston or Auburn. Venison has been cheap in the markets of both those cities of late. Local and resident hunters have killed a good many deer and brought them home, and having more venison than they could use in their own home it has found its way into the markets.

A Mrs. Dwyer, of New York, has beaten the record of lady sportsmen this fall. She has shot a caribou at Portage Lake in Maine; at least, so the guides say. They came upon the animal apparently asleep and the rifle was handed to the lady. Her husband, who was with her, was greatly pleased with the trip. A party of Worcester sportsmen are in the Moosehead Lake region. They are Messrs. A. L. Gilman, T. M. Harris, M. H. Roche, O. C. Ward and W. B. Gage.

Some of the Boston hunters are having pretty good sport in New Hampshire this fall. Mr. A. S. Atkins has killed 8 partridge and 4 woodcock in the vicinity of Newmarket. Mr. William Lunt has shot 75 birds, including 20 woodcock, during a two weeks' hunt. These gentlemen are very careful about mentioning the locality where they have their success, and who can blame them?

Quail shooting on the Cape this fall is not yet much of a success. A number of good shots have been hunting in the vicinity of Wellfleet for several days, but they got very few quail. They complain that local gunners have broken all of the coveys, and they darkly hint that this must have been done before the open season begun. Good shore bird shooting has lately been reported at Chatham. The gunners have been few there since the recent gale, while residents mention good flights of birds. SPECIAL.

## DUCK SHOOTING NEAR MONTREAL.

MR. D. DENNE writes thus in the Montreal *Star* of a September day's duck shooting not far from that city:

At 2:30 we were aroused, our lamps lighted and in a quarter of an hour we were dressed and looking out to find which way the wind came. There was little of it and the worst we could have had, but enough to lift the mist. A good drink of milk and a slice of home-made bread and butter composed our first breakfast, and very soon we were in our boats, each accompanied by his favorite guide and dog. There was just light enough on the water to enable us to direct our different courses up or down the river. The blackbirds in the rushes were just beginning to welcome the coming morn. A cock crowing on the shore, a bell at the village church, a splash of a fish or sometimes a muskrat, were the sounds we heard as we paddled along under the still starlit sky. In about an hour we are all hidden away in our various "blinds," our live decoys quacking as innocently as possible, and feeding away quite contentedly, being well accustomed to being anchored out as lures.

The "roseate streaks of dawn" were appearing in the east. The finishing touches were just complete about the blind, I was preparing to load my gun. My guide sitting behind me had just got one shell of No. 3 in his, and was feeling in his bag for another, when we heard the ducks coming, and from behind. Joe did not hesitate. Up went his gun, a No. 10, and how it did speak right over my head, then down splashed three black ducks out of the twenty-five or more who took that early peep at us. I was more than disappointed at losing my chance at this flock. They were so near, but it's always that way with duck shooting. Be off your guard at any moment, filling your pipe or something else, just then you lose the best chance of the day. However, it's no good "crying over spilt milk." We are both ready now. Our dog has brought in the ducks, and we are pleased with the result of the first shot. In a few minutes five black ducks are seen coming up the river; our decoys quack well. Nearer and nearer they come; up goes my 12-bore for a right and left. Down drops one almost among the decoys, another falls well over the other side of the river, and being only wounded, goes ashore there, and hides till our retriever looks him up later on in the day. Then follows a flock of teal, a long shot, but we get one bird. Then a bittern's curiosity costs him his life.

Afterward a long wait, and nothing moving we start for breakfast with astonishing appetites considering we had not gone out fasting. The other boats also return, finding the day too fine for duck shooting. They bring a few birds and relate their experience while we enjoy our second meal. About 10 o'clock it is suggested we try the different snipe grounds in the neighborhood. We are soon ready again, but only to be disappointed; the birds are not to be found near the river. They must be up in the fields, but where, none of the party can say. Then it is proposed we try for three woodcock, known to be in a certain cover just outside a big swamp. These woods are so thick, and the walking such hot work this lovely bright day, that we are not over-quick in responding to this last suggestion, but we do go and have a walk that we won't forget in a hurry. We hear the birds as they rise and fly toward the middle of the swamp. We cannot follow them, so return to the farmhouse to await the evening's flight of ducks. This does not amount to much, the weather is not favorable. We are too early in the season for fall ducks, and the summer ducks won't fly till too late on this particular night.

Once more we return to the house, change our "things" and that gladly, as rubber boots were uncomfortable to walk in, especially on a hot day. We have some good roast chickens, pies, etc., for dinner. Then drive back to the "station," and in a desperate hurry, for we have taken too long over our meal listening to some wonderful stories of the day's sport. My guide, Joe, is a marvelous raconteur and amused us by telling us that last week he had a fine fat heron for dinner. He liked it better than duck. The only fault he could find with it was that his wife could not wash the smell of this "gamy" bird off the knives and forks, although she had tried her best ever since. "Chacun à son goût."

## Montana Doings.

PIEGAN, Montana, Oct. 24.—The water fowl have been going south in immense flocks for the past ten days, and the flight is nearly over. Capt. Cooke, Dr. Martin and the writer were out a few hours last evening and bagged twenty-five geese, five ducks and twelve sharp-tail grouse. Twenty-one of the geese were waxies (*Chen hyperborea*) and four were the rare Ross's goose (*Chen rossii*).

In comparing these four I find that the warts on the base of their bills are of irregular size and shape, no two

birds having them alike. When going north or south, to or from their breeding grounds, these geese are always found mixed with the waxies, and never in flocks by themselves. They seldom alight in the lakes here, preferring the open prairies, where they eat the tender shoots of the prairie grass. They, of course, do go to the lakes for water, but only remain in them a few minutes.

John Monroe came in yesterday from the headwaters of Badger Creek, and brought with him the head of a very large bull moose which he killed up there. He says there are quite a number of elk, deer and bear in that vicinity, and is going back there to-morrow to have another hunt. Monroe is said to be the best moose hunter in the Northwest. In the early days, when he was employed by the Hudson's Bay Co., way up in the Saskatchewan country, he was far and away the most successful hunter of this game. He is getting pretty old now, and his eyesight is poor, yet it seems he still knows how to "get there."

No one in this country, Indian or white, knows how to call moose, and they are not much hunted. As near as I can learn, Monroe finds the track, and then instead of following it he keeps circling until he locates the animal.

Our Indian police and several employees of this agency had a hunt after a band of train robbers the other day. They were a desperate set of men and killed one white man and wounded one policeman. A party of Kalispel people were also out after the robbers, and as they had a reporter with them, the press despatches gave them all the glory of the affair. I take pleasure in stating here that Wm. Jackson, well known to many FOREST AND STREAM readers, was the leader of our party, and chased the robbers up over the summit of the mountains, exchanging shots with them every few minutes. Jackson drove them so fast that they had no time to eat, and finally the men were headed off by the Kalispel party, two of them killed and two captured. J. W. SCHULTZ.

## Game Notes.

DUNBARTON, N. H., Oct. 23.—Shooting in this section has been poor this season. It has been unusually dry all the summer and up to the present time, and the woodcock have left. There are some grouse, but most of those I have found were old birds.

In Nova Scotia the moose hunting has been poor as far as I have heard. Several parties who went in from Bear River returned without any game. A gentleman to whom I gave some points regarding grounds I had hunted in the Province, recently returned from a three weeks' trip. During that time they saw the sun on two days, and had no weather fit for calling. The party killed one three-year-old bull moose and got shots at some caribou.

From the northeastern part of Maine I hear that big-game hunters have been unusually successful. Several men I know have each killed a bull moose. From the grounds, where I usually go every winter, I hear that caribou have been plenty. Quite a number have been killed, two of them having exceptionally fine heads. I hope to start for this region about Nov. 20. I had a companion who intended making the trip with me, but owing to sickness he will be unable to go, and it looks as though I should go it alone. After reaching the grounds I prefer to hunt alone, but it is pleasant to have a companion on the trip. I happened to find this place one winter when cruising about in Maine, and I think it a good place to spend a few weeks each season. I stay in a comfortable house, and often find deer and caribou tracks within a quarter of a mile. It is not a place where deer are as plenty as I have found them elsewhere, but there are a fair number; generally caribou are quite numerous, and with good still-hunting weather I am quite sure of getting shots. It is also much cheaper than going to any of the hunting camps, and in the present financial condition this is quite an item to some sportsmen. C. M. STARK.

## Texas Quail and Ducks.

VELASCO, Tex., Oct. 25.—Though we have had no frost yet, the weather has been and continues perfect for field work, and contrary to the prognostications of some local nimrods, who saw last season's tremendous slaughter by nomads from far Northern and Western cities, quail and prairie chicken are as thick as "in Indian times" or "durin' the war."

The three Ohio shots, W. L. Gardner and C. H. Stewart, of Norwalk, and John A. Waite, of Toledo, who during three mornings last January bagged 980 quail near Velasco (and most powerfully astonished some of the natives with their "trick dogs," for which the Buckeye sportsmen refused liberal offers of mustangs and cows on the range), write J. W. Moore and W. P. Morrissey that they will return next month and take in the Brazorian and Matagordian lakes neighborhoods, a few miles distant, the greatest winter resort in Texas of ducks and geese, and already black with flocks of birds. The long dry spells of central and western Texas, where the first frocks touch, have made mud holes of the shallow prairie ponds and streams up there, and have hurried the returning Arctic voyages to the coast, where lakes and creeks are wide, and forty feet deep, with plenty of rushes and seed grass on their shores, and where skilled sportsmen are yet few. R. MCC.

## Florida West Coast Resorts.

TARPON SPRINGS, Fla.—You may refer any one making inquiries about hunting and fishing in Florida to me. I will take pleasure in answering all letters inclosing stamp. I think I am competent, as I have spent the most of the past ten years in looking up the hunting and fishing, and locating the desirable camp grounds. Quail are more than plenty here. Please accept my congratulations on FOREST AND STREAM's record at the World's Fair. You are not only always doing well, but continually doing better. All of which pleases no one more than yours fraternally, S. D. KENDALL.

## Pennsylvania Game.

SCRANTON, Pa., Oct. 28.—Pheasants are more numerous on the hills around the city than usual this fall. I heard of a Frenchman who bagged twenty-one woodcock and ten pheasants near Newton. Clem. Marsh shot over forty pheasants in three days' shooting west of Dunnings. A two hours' drive from the city will take one among pheasants almost any time. They are rather wild and the leaves are still pretty thick. The shooting will be better in a couple of weeks, J. H. FISHER.

### A Tragedy of the Bowstring.

RARELY has the wilderness outing of a party of sportsmen ended in a more deplorable tragedy, than that in which Maj. C. W. Wells, of Saginaw, Mich., lost his life in the Bowstring country of Minnesota. The party consisted of Maj. Wells and Mr. C. H. Davis, of Saginaw, Mr. R. H. Bennett, of Minneapolis and Mr. Michael Kelly, of Duluth. The story of Maj. Wells's death is contained in a letter we have received from his friend Mr. W. B. Mershon, of Saginaw, who writes: Mr. Wells was with an old and experienced canoe man, who had been with him on these trips a number of years. They were returning to their camp on the Big Bowstring Lake, and either the guide was not looking or something was wrong, for Mr. Wells fired at a passing duck and the boat capsized and remained bottom side up. The guide told Mr. Wells to keep perfectly quiet and rest lightly on the bottom of the canoe, and he could work them to the shore, about 300ft. distant. After going about three boat lengths, Mr. Wells threw up his hands and died, as the newspaper clipping states. At that time they were just able to touch bottom with their feet. I learned from one of the party whom I have seen to-day, that McIntosh placed a paddle under each of the arms of his dead companion. He then worked the boat to shore in the icy cold water, emptied it and went back in the dark and succeeded in getting the body, unaided and alone, into a Peterboro canoe. How he did it, without capsizing and in his exhausted condition, only he can tell. He then paddled to camp and fell exhausted on the shore. Kelly, another member of the party was the only one in camp and was horrified at discovering his companions in this condition. McIntosh could not speak above a whisper.

The death of Mr. Wells has cast a gloom over us all, as he was an old friend of ours, one of the nicest men in the world, a thorough sportsman and one of the original owners of our car, "City of Saginaw." In the old days, the Wells-Birney deer hunting party was well known when Michigan was full of deer, and hunters came from the neighboring States. They, all of them, have heard of the exploits and perfect camps of the Wells party. There is no doubt that he died of heart failure, for at no time was he under water, but became thoroughly chilled and this caused his death.

### Gunning Experience.

HARTFORD, Conn.—*Editor Forest and Stream:* This is the month that all lovers of dog and gun are out after the wily grouse, quail and woodcock, and much experimenting is being done with the different kinds of powder now in the market. I have tried three kinds of the nitro powders, and while they are very pleasant to shoot, somehow I do not get the birds with them that I do with the old black powder, and wonder why this is so. Am using the E.C. this fall. This powder makes more noise than the American wood or Schultze, but after all it does not seem to get there like my old Hazard powder. I presume I do not load it right; but I try hard to follow the manufacturers' directions. I notice one writer says of American wood powder, that the wadding should be driven down with two smart blows of a two-pound hammer to get good results, although the manufacturers give no such instructions. I wish the brethren would send in to *FOREST AND STREAM* their experiences with these powders, as many of us like to load our own shells rather than buy those already loaded, and in fact those I bought loaded in New York last fall were not satisfactory.

I was out one afternoon last week after partridge (I notice that Charles Hallock calls them timber grouse) and did not succeed in stopping a couple of grouse I fired at and thought should stop, and both dog and myself were disappointed, as my old pointer feels fully as badly as I do if the bird don't come down when I fire with a reasonable chance of getting him. Just then I saw a chestnut plank lying on the ground, which I set up against a fence post and paced off forty paces, and fired a charge of No. 7 shot from shell loaded with 24drs. E. C. powder, one No. 12 white felt wad and one No. 12 pink-edge wad on powder, and the shot barely stuck into the plank. I then turned the plank around and fired a charge (3drs.) black powder, same size shot, and they were all buried deeply into the wood.

The only partridge I brought home that afternoon was brought down at long range with a load of black powder. I prefer to use the nitro powder but I want to stop the birds I hit, as I am never overladen when I come home, even with the best make of black powder. Am using shells with strong primers.

TATERS.

### The Proposed National Association.

THE subjoined call was sent out last week for the organization of a National Game and Bird Protective Association:

"To all shooting clubs, game wardens, sportsmen and other persons interested in the protection of game, birds and fish of the U. S.:  
"You are hereby notified that at a meeting held under the auspices of the Illinois State Sporting Association at Assembly Hall, Columbian Exposition Grounds, Chicago, Ill., on Sept. 21, 1893, a temporary organization was formed for the purpose of calling together at Chicago at the close of the Fair officers and members of shooting clubs, game wardens and other persons interested in game, birds and fish protection, to organize a national game, bird and fish protection association throughout these United States.

"The rapid destruction of our game and song birds calls for immediate and united action by all lovers of the fur, feathered and finny tribes; there is a demand for a more uniform close season and better enforcement of present laws.

"Believing that a large attendance could be secured at the close of the Fair, the call has been made for all sporting clubs, game wardens, sportsmen, and other persons interested, of the United States, to meet at the Sherman House club room, Chicago, Ill., Nov. 2, 1893, at 8 o'clock P. M., to organize. Every person interested in the subject should be present and participate. Let us make this a national success.

WOLFRD N. LOW, Temporary Chairman.  
"F. S. BAIRD, Temporary Sec'y, 172 Washington street, rooms 1,007-9, Chicago, Ill.

## New Publications.

### AMERICAN BIG-GAME HUNTING.\*

"Is a sheet of newspaper which happens to be wrapped about the 'Book of the Boone and Crockett Club,' which has come to my desk, is a paragraph setting forth the hunting exploits of the Archduke Franz Ferdinand d'Estes in India. His score for two months of this year, it appears, comprised no less than 2,800 head of game, the list including one buffalo, five elephants, forty-three black bucks, thirty-nine wild boars, twenty tigers and seventeen jackals. The Archduke is a mighty hunter, and without doubt such a record won

\*AMERICAN BIG-GAME HUNTING. The Book of the Boone and Crockett Club. Editors: Theodore Roosevelt, George Bird Grinnell. New York. Forest and Stream Pub. Co. 1893. Pages 345. Illustrated. Price \$2.50.

for him great fame in the country where it was made. But India is not America. The conditions are different here. No one in the United States to-day may count on winning enviable renown by an unconscionable slaughter of wild animals. The prevailing and growing sentiment is for moderation in the taking of game. This sentiment is shared by most men who claim recognition as sportsmen. It is the sentiment which pervades the volume put forth by the Boone and Crockett Club.

"Another means by which the Club hopes to bring about a proper spirit for the preservation of our big game," write the editors, Messrs. Theodore Roosevelt and George Bird Grinnell, in their introduction, "is by frowning on and discouraging among sportsmen themselves all unsportsmanlike proceedings and needless slaughter. The Club has persistently discouraged anything tending to glorify the making of big bags of game."

That is fine for sentiment and well enough for profession. But how does the practice of the Club members in the field accord with the sentiment and bear out the profession? If for answer we shall turn to the pages of this "Book" where are recorded their hunting chronicles, we shall find that far from being the subject of insincere cant and simply profession of principle, this spirit of moderation has force in the wilderness and is a controlling factor in determining conduct. In this respect the "Book" is a credit to the members of the Boone and Crockett. In a larger sense—for a club numbering seventy odd members, from various sections of the country, may rightly claim to be representative—it does credit to the American sportsmanship of the day. And the which are may not read these chapters without learning as from them something new in the practice of hunting, and too he may not read them without learning the manliness of foregoing wanton killing. Moreover, the stories are well told; the first one is likely to lure the reader to a second, and that to a third.

Relations of big game hunting in the West must of necessity have a historical significance, for they deal with conditions of nature and stages of civilization which are rapidly changing, many of which, as were printed, are already of the past. Thus Capt. George S. Anderson, now in charge of the Yellowstone National Park, writes of the time when his command rode for day after day in sight of hundreds of thousands of buffalo, and the particular "Buffalo Story" he tells of an ancient bull which, fleeing before a snowstorm, early one morning, invaded the inclosure of old Fort Lyon, so that Capt. Anderson was obliged to be awakened by the noise of the animal, or rising from his bed, took aim through the opened window and "scored a record of buffalo killing rarely or never equalled." Col. Roger D. Williams in turn writes of "Old Times in the Black Hills," and relates how in 1875, when the presence of gold was as yet hardly known in that country, he engaged in a hunting and prospecting trip under the direction of "California Joe," long famous as a Custer scout. The old West, too, the West of yesterday, with its game herds and its Indians, figures largely in Mr. Grinnell's chapter, "In Buffalo Days," here reprinted from *Scribner's Magazine*. This paper, by the way, because of its comprehensive scope and the thoroughness and intelligence of treatment, is likely to hold a permanent place as altogether one of our most satisfactory popular accounts of the American buffalo.

There is in these stories abounding humor, some taste of which the readers of *FOREST AND STREAM* have already been given in Mr. Owen Wister's "White Goat and His Country." Not without relaxing the wrinkles which time is bringing to us all, may one read Col. Williams's description of his heroic park horse Coffee making a bee line for camp to be relieved of the giant deer carcass he had bravely carried almost 24 hours; or Mr. F. C. Crocker's story in the chapter "After Wapiti in Wyoming" of how the "Elgier" gave the mountain-man a lesson in trout fishing, and with it gave him the sulks for all day Sunday; or Mr. Bronson Rumsey's story of "Blacktails in the Bad Lands," and how he trapped the ranch foreman into a contract to pack in the game, and saddled him with five deer carcasses to be carried five miles. Going to Idaho in search of big game in 1890, Mr. Dean Sage found an odd character in one Lanahan, a plausible individual, who was engaged for guide and packer, and is here described, in a chapter overflowing with humor, as "A Mountain Fraud."

Mr. Theodore Roosevelt has a spirited account of "Coursing the Pronghorn," in which is illustrated anew the divergence of hunting ethics in America from those in foreign countries, where as sports are more highly developed the rules which govern them are more strictly defined. Mr. Roosevelt relates that when the dogs could not locate the fringe game and the practice of the hunters to shoot it with their rifles. This will likely be scoffed at by a certain breed of British readers; no doubt it is contrary to the canons of highly organized coursing. Let them say what they will, it is the sport of the open and is followed in the game's own country. Thank heaven, we have not yet come down to hallooing after carted stags. Last week, to be sure, some "hunt" in New Jersey did attempt to take a buck out of a pen to be run with bounds; but the creature went on a rampage and they were glad to kill him on the safe side of the fence. More power to the antlers of all deer in such extremity.

Other chapters are Col. W. D. Pickett's "Nights with the Grizzlies," reprinted from *FOREST AND STREAM*, and Mr. Archibald Rogers's "Big Game from the Rockies," originally printed in *Scribner's*. The allures, ballistics and triumphs of "Photographing Big Game" are set forth by Mr. B. Devereux; and there is an intelligent and instructive presentation of the value of "The Yellowstone Park as a Game Reservation," by Mr. Arnold Hague, supplemented with a summary by the Editors of what has thus far been accomplished with "Our Forest Reservations." Other editorial contributions review "The Literature of American Big-Game Hunting;" and describe the Club exhibit at the World's Fair. The Club's constitution and the list of members follow.

Doubtless the reception accorded the first volume issued by the Club will be such as to encourage other "Books." In the next one we shall look for something treating of big game in the East. Although in the introduction of the present volume the Editors single out Maine as the most notable example of a State's successful care for its game supply, the subject matter of the book itself relates wholly to the West. New England surely deserves representation in a Boone and Crockett Club book on "American Big-Game Hunting;" for the preservation of the stock of game in the East is due to the practical application of that very principle of moderation advocated by the Club. Without such moderation in the hunting of deer, moose and caribou—a moderation enforced for and enforced by intelligent law—these races would long since have been exterminated.

The volume is from the famous DeVine Press; its handsome typography, paper and illustrations are very attractive, and it is in every way a creditable piece of bookmaking.

## Natural History.

### HAWKS AND OWLS OF THE U. S.

In the view of the vast majority of people, the birds included in the great order *Raptores* are altogether injurious and should be destroyed at every opportunity. The farmer believes that hawks and owls destroy his poultry; the sportsman, jealous of man's prerogative, declares that these birds—big and little—make away with quail, partridges and woodcock, and is ever ready to shoot the hawk or owl which may unluckily fly near him while he himself is engaged in his destruction of game birds. The feeling against the birds of prey is an old one and almost as firmly fixed in the popular mind as the prejudice against the serpent. It may be as difficult to remove as that one. There can be little doubt, however, that this view of the relation of rapacious birds to man is erroneous. The average man derives many of his opinions from impressions gained from observations which are often hasty and ill-founded. If he sees a hawk descend into a poultry yard or make a dash at a game bird, he is likely, without reasoning it out very closely, to come to believe that all hawks spend all their time trying to catch poultry and to destroy feathered game. On the other hand, the naturalist who, when he kills birds, does it for the purpose of learning all that he can about them, when he dissects a hawk is likely to find in its stomach only the remains of mice, snakes, frogs and insects, and he may examine hundreds of specimens before detecting the remains of a game bird or of a domestic fowl.

It is a good many years since it was first suggested that most of our hawks and owls were beneficial rather than noxious, but it is only within a few years, that is to say since the establishment of the Bureau of Economic Ornithology and Mammalogy in the Department of Agriculture at Washington, that any systematic effort has been made to absolutely determine the proportion of good or

ill done by any species of rapacious bird. To arrive at conclusions which should be of any value required the examination of a great deal of material, and many stomachs of each species of hawk and owl had to be inspected and studied before the observer could satisfy himself as to the actual facts, and announce the results of his investigations. When Dr. C. H. Merriam, chief of the Division of Ornithology and Mammalogy, who was much interested in this subject, determined to investigate this subject, he made a fortunate choice in selecting Dr. A. K. Fisher, the assistant ornithologist of the Bureau, as the gentleman who should conduct the investigation. The results of his studies have recently made their appearance as Bulletin No. 3 of the Division of Ornithology and Mammalogy of the U. S. Department of Agriculture. Its full title is "The Hawks and Owls of the United States in their Relation to Agriculture."

It is often a difficult matter to say that a species of bird is entirely beneficial or entirely harmful. The line is seldom drawn so closely as this. Most birds perhaps do some little harm and much good, or perhaps a great deal of harm and only a little good. For example, the bobolink of the North, while with us here in summer is a useful and beautiful bird, doing little or no harm, and giving much pleasure, while, after its southern migration, when it has reached the rice fields of Georgia, it does damage to the growing crop, which is estimated to amount to a million dollars a year. In like manner the crow, most unpopular of our birds in spring, pulls up the sprouting corn and is cursed by the farmer, but as soon as the young plants have reached an age when they are no longer attractive to the crow, he ceases his depredations and becomes one of our most useful birds, destroying vast numbers of insects which would otherwise feed on the farmer's growing crops.

The conclusions announced in Dr. Fisher's report are based on the critical examination by competent experts of the contents of about 2,700 stomachs of hawks and owls, a number so great as to give us a fair showing of the average food of each species which came under observation. The result of these examinations will surprise those who have never paid any attention to this subject, and prove very clearly that a class of birds commonly regarded as enemies to the farmer and indiscriminately destroyed on all occasions are really his best friends, and should with very few exceptions be preserved and encouraged to live about his home. The conclusions reached by Dr. Fisher are given substantially as follows:

First—That owls are among the most beneficial of all birds, inflicting very little damage upon the poultryer and conferring vast benefits upon the farmer. The relations which owls bear to agriculture are peculiar and important. Their eyesight is by no means so defective in daylight as is popularly supposed, but is keenest in the early hours of evening and morning. Hunting thus in dim light their food consists largely of those animals which hawks do not trouble at all or destroy only in small numbers. The work of owls thus supplements that of hawks and materially assists in preventing an undue increase of many noxious rodents. Besides this, though owls are to some extent migratory, they are, as a class, less so than the hawks, and so in winter, when the hawks have left the Northern States, the owls remain here and continue their warfare against the injurious rodents.

Second—All hawks, with perhaps one or two exceptions, are to some extent beneficial to the farmer.

Dr. Fisher divides the 49 species and 24 sub-species of rapacious birds which he is considering into four classes: those wholly beneficial or wholly harmless, those which are in the main beneficial, those in which the beneficial and harmful qualities about balance each other, and those which are positively injurious. The first of these classes includes the rough-legged and squirrel hawks and the swallow-tailed, white-tailed, Mississippi and everglade kite. The second class includes a much larger number of species, among which are many of the commonest of our hawks. Such are the marsh, Harris's, red-tail, red-shouldered, short-tailed, white-tailed, Swainson's, short-winged, Mexican black hawk, Mexican goshawk, sparrow hawk and all the owls except the great horned owl. The third class includes the golden and bald eagles, the pigeon hawk, Richardson's hawk, the prairie falcon and the aplomado falcon. The last class, including those species which feed chiefly on animals useful to man, is small, and contains only the sharp-shinned hawk, Cooper's hawk, the goshawk, duck hawk, the gyrfalcons and the osprey. These last, with the exception of the fish hawk, whose only harmful quality is that it eats fish and so sometimes interferes with the labors of the fish farmer, are all hunters of game or poultry, and are really the only species that should under any circumstances be destroyed.

Of the 2,690 stomachs examined in the preparation of Dr. Fisher's report, 169 contained the remains of poultry and game birds, 463 the remains of other birds, 966 those of mice, 397 those of other mammals, and 623 those of insects.

Dr. Fisher's report of something over 200 pages is crammed with facts interesting to the ornithologist and to the farmer. It is for the latter that it has been especially prepared, and it is for him that it ought to have the greatest interest, because it gives him some entirely novel and extremely useful information as to how he may best carry on the unceasing war that he has to wage with the powers of nature. The sportsman, too, may with great advantage study the interesting pages of this most valuable little volume, and he will be wise if, abandoning the preconceived notions which he has with regard to the injury which most birds of prey do to the game, he shall hold his hand when he sees a hawk or an owl fly by, recognizing that in the vast majority of cases the services performed by these birds far outweigh the harm that they do. We are all of us far too eager to destroy life, and too glad of an excuse which may seem to justify such destruction. Dr. Fisher's volume gives an excuse for refraining from this killing, which ought to be acted on by many thoughtful people.

Dr. Fisher's report is beautifully illustrated by twenty-six full-page colored plates drawn by J. L. Ridgway and Robert Ridgway.

### Summer Homes.

A BEAUTIFULLY illustrated book; list of over 3,000 summer hotels and boarding houses in Catskill Mountains and central New York. Send six cents in stamps to H. B. Jague, Gen'l Eastern Passenger Agent, West Shore R. R., 263 Broadway, New York, or free upon application.—*Adv.*

## Sea and River Fishing.

### ANGLING NOTES.

#### Supervisors May Save the Black Bass.

NEARLY ten years ago I wrote an article in *FOREST AND STREAM*, urging that black bass should be protected in the State of New York during the month of June, because they spawn all through that month. The issue of the paper containing my letter had also an editorial supporting all that I said on this subject, and more, for it said that I had understated the case, and asked this question: "Shall the fish be compelled to change their habits to comply with the wisdom of our legislators, or shall we acknowledge that they knew best when they want to spawn and accommodate ourselves to them?" From that time to this I have pleaded for a close time for black bass that would protect them during the breeding season. No one has pretended to justify the opening of the black bass season on May 30, except from the selfish motive that Decoration Day is a holiday and there are men who wish to fish for black bass on that day. The fishermen of the lake, for which this law was ostensibly passed, were among the first to complain of the scarcity of black bass and to ask that the State take measures to restock it with adult fish. After the Codifying Commission had taken testimony from one end of the State to the other, Gen. Sherman, the president, wrote me that he fully agreed with me that black bass should be protected until July 1, but that it would be impossible to pass such a law, and as a compromise the Commission would report June 15 as the opening of the black bass season. We know how quickly this was amended and the old date, May 30, restored. The past legislation by the State is evidence that no aid is to be expected in the future from that source to preserve the black bass during the breeding season, but those who are in earnest about the matter and desire to prevent the depletion of black bass waters through the operation of the present unjust State law, have a remedy if they will but take action and put the remedy in force. Section 273 of the game laws (Chapter 488, Laws of 1892) reads in part: "Boards of supervisors may pass at their annual session such laws and ordinances as shall afford additional protection to and further restrictions for the protection of birds, fish, shellfish and wild animals, except wild deer, and to prohibit the taking and killing of the same, but no such ordinance shall be operative until a duly authenticated copy thereof shall have been filed in the office of the clerk of the county, and published in the papers in such county in which the session laws are published, and filed in the office of the secretary of State. \* \* \* (This and other laws relating to the powers of boards of supervisors may be found in full in the *Book of the Game Laws*.)"

Columbia county has already availed itself of the privilege granted by this section and has made a close season for black bass in the waters of the county from Jan. 1 to July 1, and Madison county has made a close season during the same time for black bass in a portion of its waters. Still another county passed a similar law and complied with all the requirements to make it effectual except to file the resolution with the Secretary of State. Boards of supervisors hold their annual meetings at the close of each year, usually in December, and now is the time for all who are interested in preserving the bass to act by presenting the matter to the supervisors in their respective counties. All the black bass that it may be possible for the State to plant in interior waters will not benefit them so much as a rigidly enforced close season that covers the breeding period, and if fishing is to be permitted during the breeding season, what good will it do the waters if the State does furnish a few hundred bass annually! The remedy is in protection, not in restocking.

#### "A Wrinkle."

A few weeks ago, under this head, I wrote of attaching split shot to leaders in a way that would not injure the leader. I see that in the last issue of the *London Fishing Gazette* a writer answers a correspondent who desired to know how to do this very thing, and describes his method of doing the trick. The editor of the *Gazette*, in commenting upon it in a foot note says: "We noticed in *FOREST AND STREAM* that Mr. A. Nelson Cheney recently for himself made the discovery of this useful little dodge."

I find, however, that the English device and my wrinkle are unlike, and the former may be an improvement upon my suggestion. My idea is to put the shot on a gut length looped at each end and to fasten the leader to one loop and the snelled hook to the other, making the shotted gut length the connection between snell hook and leader. The English idea is to attach the shot to a piece of horse-hair about 2in. long, with a loop at one end (gut would answer the same purpose), and then fasten the horse-hair by the loop to the leader above one of the knots. In this way the shotted horse hair or gut length is independent of leader and snell and may be attached or detached without disturbing either. The editor of the *Gazette* says of this device: "It is a very old dodge in Ireland in worm fishing for salmon, in which style of fishing the bait is thrown out and then worked gently over the bottom of the river, and the shot being on a separate fine bit of gut attached by a loop to the gut line proper, if they get 'hung up' on the bottom you pull and they break off, thus saving the rest of your tackle." This arrangement is upon the same principle as the independent sinker and sinker line used in deep trolling for lake trout. I prefer my own idea for the reason that the shotted gut length is part and parcel of the leader, being a continuation of it, but I have given both, and anglers who are interested may take their choice.

#### Living Pictures.

Every angler who has a particle of poetry in his soul and possesses a love of the beautiful—and is there an angler who has not—is able to recall living pictures that are framed in his memory simply because he is an angler. It is Charles Kingsley who said: "The angler only is brought close, face to face with the flower and bird and insect life of the rich river banks, the only part of the landscape where the hand of man has never interfered." But there are other pictures besides those of nature that the angler cherishes in memory. For years I have enjoyed a mental picture which I saw one morning on Parmacheene Lake, in Maine, of a young woman standing

alone in a boat and casting a fly for trout. When my guide and I rounded a point of land in the lake and came upon the scene, somewhat unexpected to be sure, we stopped and watched it with silent admiration, for the caster was the personification of grace in all her movements, and there was a businesslike air about it all that proclaimed the caster to be a master of the art. Last summer I was fishing in a New England lake and was one day invited by two young ladies to go out fly-fishing for black bass. One of them asked that I put an extra rod in the boat that she might try her skill. On the pegs in the rod room I had, mounted, a 4-oz. rod with drawn gut leader, and flies tied on about No. 14 hooks, which I had been using for brook trout, and this I put into the boat. We rowed to a bay filled with rocky shoals, and there I put the light rod into the hand of my fair young hostess and she began to cast, much to my astonishment, like an old hand at the business, for I had understood that she desired me to give her a first lesson in fly-casting. Questioned, she admitted that she had cast a little on previous occasions without taking a fish, and I was inclined to charge her proficiency in a degree to inheritance. After a few casts, in which the leader and flies were unrolled on the water as deftly as the most fastidious fly-fisher could wish, there was a rise from a black bass of about 2lbs. and the gamy fisherman hooked it. Then I regretted that I had given her the light rod, for I feared disaster, as the hook was not large enough to take a secure hold in the mouth of the fish. The young lady stood erect in the boat, her beautiful, honest brown eyes fairly flashing with pleasure, and her lips parted with expectancy as the fish jumped again and again. The fish was handled skillfully until in an evil moment the hook came back empty, for the reason I had feared. I then gave her an 8oz. bass rod, with larger flies, and soon the look of disappointment at the loss of the first fish gave way to one of satisfaction as she hooked another bass, which she played safely to the landing net, all the time balancing herself in the wave-rocked boat, making a picture of health, loveliness and skill combined that will not be forgotten for many years to come. When one has the pleasure of looking upon such a picture as this he wonders why more young women do not engage in the graceful, health-giving pastime of casting the artificial fly for trout or black bass. There are women who use the two-handed salmon rod, and use it successfully, though they are chiefly residents across the sea, but here we have a good field for women with the single-handed rod and lack only the performers. However, every year finds a few additions to the number of women who realize that fly-fishing is not a masculine monopoly, and they are so warmly welcomed that I expect in time the field will be more evenly divided. A. N. CHENEY.

### BASS IN THE CONESTOGA.

THIS large creek is one of many in Pennsylvania that have become more or less noted black bass streams. One of the peculiarities of the fish in the Conestoga is their distribution, occurring in marked abundance in certain portions of the streams, while between the more thickly populated parts of the creek are stretches of water that are almost without bass although the conditions are similar to the well stocked portions. Between the Wahbank Dam and Petersville Dam, a stretch of three miles, very few bass are now taken. This was one of the favorite parts of the creek for bass before the advent of the German carp. These fish are getting so large and plentiful that they are apparently driving the bass from the stream. A curious incident happened along this part of the creek last summer. A farmer was driving along the road, which touches the edge of the creek, when a lot of carp, close to the bank and apparently spawning, made such a commotion in the water that his horse took fright and ran away, breaking the vehicle to which it was hitched. The farmer luckily escaped serious injury.

Mr. H. C. Demuth tells us that from Pott's Landing to Eden, more bass have been taken this year than ever before. The carp in this part of the creek are scarce.

Anglers along the Conestoga are putting one and one together, carp plentiful, bass scarce, and the former is growing more and more into disfavor.

Bass weighing as much as 3lbs. have been caught in the Conestoga, and from the tales one hears of strong tackle broken in twain some monsters must inhabit the creek.

Speaking of the falling off of the bass fishing in the Susquehanna, Mr. Demuth gives it as his opinion that the apparent decrease in the numbers of bass in the river and its tributary during the past few years is owing to the prevalence of spring freshets, the muddy water greatly interfering with the natural reproduction of the fish. This is undoubtedly the case, for floods that will wash and carry coal of good size down stream for a hundred miles or more are sure to cause great destruction among the bass and other fishes. It takes no stretch of the imagination to conclude that by this cause millions of the eggs and young are annually destroyed.

This year has been exceptionally favorable to the spawning of the bass and good results are looked for. BART.

#### Lake Whatcom.

NEW WHATCOM, Wash., Oct. 23.—Eastern anglers desiring recreation and good fishing should come to Washington. Here is some of the finest fishing in the world. Nearly all the streams and lakes abound with trout. The fishing has been unusually good in Lake Whatcom this season, and especially during September and the present month. During one week not long ago, I am told that more than 1,000 pounds of mountain trout were taken there with hook and line. One man alone brought in nearly 30lbs. in one day. The trout average about 1½lbs. apiece. Trout may be taken lawfully in this State from May 1 to Nov. 1. H.

#### Are the Trout Returning to the Raquette?

ONE day in August of this year at a point about one mile from the Windfall House, I took from the Raquette River 6 trout weighing 4½lbs. The largest weighed 1½lbs., the next in size 1½lbs. Another morning I took from the same place 10 trout weighing 5½lbs. The largest weighed 1lb. lacking 1oz., the next in size 1lb. less 1½oz. The six largest weighed 4lbs. 5oz. I took them on a 9-oz. Bristol steel rod, and you may readily imagine what sport it was to kill them. J. M. GRAVES.

### POLLOCK WITH A TROUT ROD.

MANCHESTER, N. H., Oct. 27.—Did you ever fish for "pollock" with a trout rod? No! Then take advantage of the first opportunity that presents itself and do so.

Salvini and I created much merriment among the old fishermen in Portland, Thursday, as we left the wharf in a dory, with our trout rods, silk lines and long snelled hooks. "Them chaps air a-goin' to ketch cod with trout poles," remarked one old salt; but them chaps were not after the sluggish cod, they were going out to test a couple of new rods, and they succeeded in doing so to their utmost satisfaction.

Anchoring off Bug Light in about 15ft. of water, baiting an ordinary-sized Limerick with soft clam, weighting with a couple of BBs, we lowered our bait about 4ft. below the surface and waited. A sharp pull and the clicking of the little reel announced that Salvini had "struck," and after a brief struggle the blue and silver captive was brought within reach of the landing net and started the string.

Then came my turn; a big fellow, who fought like a striped bass, taking the bait with a rush, and running with it as gamely as a pickerel. In size they averaged about a quarter of a pound. They kept us busy long after twilight, until Jupiter outshone the after-glow.

I have heard that pollock take readily to the fly, and wish some one who knows would enlighten me on the subject. They are game enough, anyway, and as we pulled homeward through the yellow light of the rising moon, we counted forty-eight good-sized fish on the string. Not bad?

Try it some time with a light rod and tackle, and I'm sure you will agree with me when I say, "It is *great sport*." THE GENERAL.

#### Frozen Suckers Thawed Out.

NEW HAVEN, Ct.—*Editor Forest and Stream*: Having noticed several communications recently in your valuable paper in regard to the killing of fish by freezing I will give my experience of some forty-five years ago. On one very cold winter's day I witnessed the hauling of a seine under the ice in the Quinnipiac River in Wallingford, in which were caught about 100 suckers. It was a bitter cold day; the fish were immediately placed in the wagon, in which there was straw; and on our arrival home (some four miles distant) the fish were frozen solid. They were then placed in a tub of water, and in about half an hour's time the fish took on an icy coat. Soon the ice-coated fish seemed to have some life and began to move. Then the icy coating of the fish began to flake off, and they were soon swimming, and seemed as full of life as if they had not been frozen. My impression is, from the facts above related, that if fish are caught uninjured and immediately frozen in the open air, are kept for several days in a frozen state and then placed in cold water to thaw, they will be as full of life as before. C. B. B.

## "FOREST AND STREAM" AT THE FAIR.

### A STAFF STORY OF THE MIDWAY.

IT having become necessary, from a journalistic standpoint, for *FOREST AND STREAM* to have a thorough and authentic story on the sights and doings of that great international meeting ground, the Midway Plaisance of the World's Fair, an assignment was made which put both our Western representatives, Mr. Hough and Waters, on duty for that purpose. For reasons found best by the managing editor of the paper, during a recent visit to the Fair, it was thought advisable also to assign for the story a shorthand writer. The latter was instructed to follow the two young gentlemen above mentioned, and being unknown and unseen of them, to report faithfully what they said, it being believed that in this manner a story fully as authentic and perhaps more novel could be obtained. These three persons were all that were detailed for the work. The dog mentioned below as one of the party was included on the motion of the two young men themselves. Our shorthand writer transcribes the following from his notes:

#### They Get the News.

MR. HOUGH (*reading telegram*)—This yer shorely is tough, Chief. "You and Mr. Waters take Midway to-night. Rush two columns serious next week's paper." Whatever do these people take us for, slaves?

MR. WATERS (alias Chief-with-two-Stomachs)—What, work? Do they expect us to work? Not while the fishing is good. No, sir. They can blaze with their serried columns, I will not bend the knee.

MR. HOUGH—You can't, maybe, along of rheumatism. All the same, we got to get out two serried columns of stuff before the 10:30 train. I was just going—

MR. WATERS—So was I. Say, Colonel, we can't do it. It's too much like labor, and labor is beneath two free-men who are also gentlemen and scholars. Let's decline their MS. with thanks.

MR. HOUGH—Might fire us.

MR. WATERS—Well, even so. I have got a good spot picked out in the South Sea Islands, where we can go and sit in the shade and think great thoughts and reach up and knock off a hunk of bread fruit when we get hungry.

MR. HOUGH—That an immortal snap. But I tell you what, let's just do this for them this time and tell them not to let it occur again. We can take in the Midway, you know, and then do 3,000 words on the kaleidoscopic quality and all that.

MR. WATERS—All right, Colonel. But we got to have a dog.

THE COLONEL—What for?

THE CHIEF (*scornfully*)—The dog is man's best friend and the noblest animal what there is. Besides, there's lots of things on the Midway that you want to try on a dog first.

THE COLONEL—That's so. Well, what do you say to borrowing Smedgin's great Dane Achates? Smedgin is away from home.

THE CHIEF—He'll do, I reckon. We'll get him. We can call him Katie for short.

THE COLONEL—Yes, we can whistle and wait—

THE CHIEF—Say, did you hear about the failure on the Midway?

THE COLONEL—Nope,

THE CHIEF—Yes. Fellow tried to jump over the Ferris wheel and he failed.

THE COLONEL—Aw, go 'way?

THE CHIEF—Ain't you going to settle?

THE COLONEL—Yes, I'll buy the coffee. What kind you want?

THE CHIEF—Well, I want about five kinds, but I'll begin at Guatemala. I don't think that Brazil coffee is good for my stomach.

THE COLONEL—Which one?

THE CHIEF—What which?

THE COLONEL—Why, which stomach?

THE CHIEF—Say, I've heard about enough of that. These things stick to a fellow a long time.

THE COLONEL—Sure. I knew a man once whose stomach stuck to him all his life.

THE CHIEF—Monsieur is getting gay!

THE COLONEL—Goin' to settle?

THE CHIEF—What'll you have?

THE COLONEL—Java cocoa. Come on. I s'pose we'll have to get to work, and a few cups of coffee and cocoa will go well to start on. We've got to sample everything on the Midway. This here noble perfession of journalism has its joys and its sorrows.

#### They Felt Better.

THE COLONEL (*an hour later, in front of Hagenback's circus*)—Well, I feel better. This is a great world.

THE CHIEF—Yes, this is indeed a bright and beautiful world. It is entirely spherical, of a uniform lovely green color, with pretty red stripes on it, all equi-distant from each other. The world is all right.

THE COLONEL—You want to keep Katie out of sight of these lions. They'll take a leg off of him.

THE CHIEF—Naw. These here are tame lions. They won't eat spring lamb with mint sauce. Say, they wash 'em with cashmere bouquet soap and manicure their teeth.

THE COLONEL—This old fellow looks as if they fed him on Wiener wursts. He's despondent looking.

THE CHIEF—Yep. After a lion has lost his grip he's no good. A tired lion gathers no moss.

THE COLONEL—Well, I guess we can cover the circus all right now. How about the Samoan village.

THE CHIEF—Wait till I buy Katie a redhot. He's hungry yet, I thought those last three cups of coffee would calm him down, but he's dead game.

#### South Sea Islanders.

THE COLONEL—This is the only thing on the Midway that isn't a fake. These fellows are sincere. See 'em whack that drum.

THE CHIEF—They're a prime brand of yellow niggers, and if they had heart they ought to make fighters.

THE COLONEL—They need clothes. I can now understand where my boyish Sabbath school pennies went to. I'll bet that fellow changes his costume before October is over. But see him whack the drum!

THE CHIEF—Yes. They are a simple and direct people. History recounts that when they wanted missionary to eat, they went right out and ate missionary, and were glad of it. In short, we may write them down as those who loved their fellow man. Come here Katie, sir! I'll have to put a spike color on you.

#### The Alpine Panorama.

THE COLONEL—I believe this here is a sort of thing like the battle of Gettysburg. That long thing his dukelets is playing is an Alpine horn. They call it a Matterhorn. That is what is the matter with him. He takes a horn every now and then. Say, that horn is so long he has to blow twice to get through it. That's what they call double tonguing.

THE CHIEF—I used to blow a cornet myself once.

THE COLONEL—I am ready to believe it of you. What do you say to going in and hearing the merry Swiss jodelers do their jodeling, and seeing the Ranz des Vaches come home in the evening gloaming?

THE CHIEF—Naw. I was through there once. It's all a spiral. You keep on going up, around a screw, and a fellow pokes you along, the way they do cattle in a chute. "Keep on the right!" he says, "keep to the right."

THE COLONEL—Yes, I've been there too. By and by you get up stairs, and just as you got your eye fixed on a job lot of glaciers, the same fellow says, "Keep to the right and pass on down stairs." He's a relative of David Crockett, that fellow—Be sure you're right, and then go down stairs: The Mont Cenis tunnel is no railroad at all compared to the way they railroad you through there. Come on. Here, Katie! Let go of that Ottoman.

#### At the Hindoo Jugglers.

THE COLONEL—I allow this is a plenty good place to go in and sit down. They make trees grow in five minutes in here, and draw baskets of flowers out of the air.

THE CHIEF—That's all right. I was in there once, and the most wonderful thing they do is the way they draw twenty-five cents out of your clothes. Come on.

#### At the Beauty Show.

THE COLONEL—Owing to certain reports I have heard in regard to this joint, I think two gentlemen of our character oughtn't to go in there, not for a thousand dollars.

THE CHIEF—I ain't scared. I'll go in for five hundred.

THE COLONEL—Well, you know about Ulysses and the sirens. They had to put cotton in their ears to deaden the report.

THE CHIEF—Who's Ulysses?

THE COLONEL—Prominent dogman before the war. Come on.

#### At the Turkish Cafe.

THE COLONEL—Here, Katie, have some of the Oriental Ormus and Ind, hot, hot, hot. It'll do you good.

THE CHIEF (*in alarm*)—Don't let the dog eat that. Do you want to kill him?

THE COLONEL—Mr. Waters, as I understand it, we brought this dog along for clinical purposes.

THE CHIEF—That's all right, but give the dog a chance. Come and have some coffee.

THE COLONEL—All right. They've got coffee in here so strong you have to wear smoked glasses while you drink it. You can get some coffee for Katie if you want to. He's only had four kinds so far. Get on to the Turkish bagpipes.

THE CHIEF—Ain't they darlin's? As John Davidson would say, a man would face a regiment of devils to the music of the pipes—that is, to get away from the pipes.

#### At the Algerian Bazaar.

THE COLONEL—Ah, here are the merchants of Bokharis, who are selling rugs at a bargain because they are going to New York to-morrow morning. Been going all summer.

THE CHIEF—Colonel, where do you get your Oriental pronunciation?

THE COLONEL—Always pronounce a foreign word the hardest way. I was taught this method in college, and have used no other since. Come along, we don't want any two-by-four rugs, nor any semi-silverized souvenirs. I'd buy a sandwich all around, if it didn't cost a king's ransom on the Midway. Say, I saw a six-foot roller chair pusher just now, and he said—

THE CHIEF—He must have been a high roller, wasn't he?

THE COLONEL—Oh, quit! You ain't funny. Do you know what he said?

THE CHIEF—Nope.

THE COLONEL—Well, a lady from Indiana had just asked him which building the lagoon was in, and he said he didn't know.

THE CHIEF—I heard a fellow ask a guard what part of the Government Building he ought to visit to see 'em hatching fish out of artificial eggs.

THE COLONEL—Now, about that tall slim chair roller. You know, I expect he has to eat in the Polish restaurant.

THE CHIEF—Poland is a great country.

THE COLONEL—You say the truth. We owe to it freedom on her mountain heights, Kosciusko county, Indiana, and the small but active Pole cat.

THE CHIEF—Come here, Katie! Let go the Algerian. Let him go to New York, if he wants to. Say, Colonel, did you ever go to the Swedish restaurant?

THE COLONEL—Not if I knew it.

THE CHIEF—I did, and it was a corker. You know I speak Swede and French just about alike, and so I went in and sat down and said kind of careless like, "Sjorkss-keedjwed jorgswatzgen, ride away!" Guess what he brought me?

THE COLONEL—Gave it up.

THE CHIEF—Scrambled eggs. Then guess what he brought me?

THE COLONEL—Check for \$2?

THE CHIEF—Thought you said you hadn't been there?

THE COLONEL—I've been all over. You know these restaurant men forget all about the hereafter. A fellow ought to go in with a sign card hanging around his neck which says, "Please do not touch."

THE CHIEF—They'd touch him, anyhow. But where are we now in the evening work?

THE COLONEL—That's so. This story is getting tangled. Say, let's go see the volcano of Hawaii. That ought to be good stuff. There ought to be a lavatory there, and we can go in and wash up.

#### At the Panorama of Kilauea.

THE CHIEF (*as they enter*)—Colonel, do you see anything wrong about that sign?

THE COLONEL—Why, rather. It says, "No Smoking in this Building." Now, no self-respecting volcano ought to have its rights infringed on that way. If I was a volcano I'd smoke if I felt like it.

THE CHIEF—So would I, if I was of age, and I allow this volcano shorley is.

THE COLONEL—We ought to have this volcano down in the FOREST AND STREAM office. We could give a hard-boiled egg with every subscription to the paper.

THE CHIEF (*looking at the crater*)—This volcano has had a drop too much of the craythur.

THE COLONEL—Hush! There's a guard. Get on to that moon, won't you. Most over-worked moon I ever saw.

THE CHIEF—Yes, that moon ought to join the eight-hour movement.

THE COLONEL—I don't think they ought to have little fire-extinguishers sitting around here the way they have. To put a volcano out with a hand extinguisher is sort of lowering it in public estimation, ain't it? Say, let's rip this volcano up the back, it's no good.

THE CHIEF—She's already ripped up the back, I'm thinking. Who's the artist?

THE COLONEL—Don't know. He wasn't bad on mountains.

THE CHIEF—These careless ways of running things ought to be discouraged. The name of the artist ought to be blown in every mountain.

THE GUARD—Hear, hear, now! None ov that! Move an, now, will ye!

THE COLONEL—I beg your pardon, Captain, but is this where they have the Honolulu?

THE GUARD—Naw! Yere t'inkin' ov de Persian theayter, see? Move an wid ye!

THE COLONEL—Well, when we get the cold shake at a volcano I'm due to roast the Exposition. Let's go.

THE CHIEF—That fellow evidently don't know he's entertaining two sporting mahatmas unawares. Let's go across the street. Say, over in the Fisheries Building they've got an exhibit of fish glue. They make cement out of it, and they show a cracked plate stuck together with this cement, holding up a big block of granite. At night they put a piece of wood under the granite.

THE COLONEL—What for?

THE CHIEF—Why, to give the cement a rest. Wouldn't you get tired if you had to hold up 500lbs. all day long? Say, you goin' to settle?

THE COLONEL—What'll it be this time; tea, coffee or cocoa?

THE CHIEF—Suppose we hit another cup of Javanese cocoa. Katie didn't drink any cocoa and he's got to have some. Cocoa is good for mange—at least, I expect it's as good as a good many things sold for that. It also is good for canker of the ear, and rabies. Come here Katie. Let go the nigger!

#### At the Javanese Village.

THE COLONEL—This is the only decent place on the Midway, and I'm surprised it isn't better patronized.

THE CHIEF—That's why it isn't.

THE COLONEL—My dear sir! My dear sir! Pish, tush and tut, tut, tut! Also, fie!

THE CHIEF—Here, Katie! Come here and drink your cocoa. We'll make a newspaper man out of you yet. There are three kinds of cocoa. One you get where the girls wear yellow bodices and white caps, and one you get where they wear Dutch costumes, and this is the kind that comes right out of the cocconut. Katie, drop the wild man from Borneo and drink your cocoa!

THE COLONEL—Let the dog alone, if he's enjoying himself. He's the only dog that ever went down the Midway, and he ought to have privileges. Come on, we ought to see the Moorish theater.

#### At the Moorish Theater.

THE CHIEF—I've been in there. Nothing to it but Rosa, the famous dancing girl. She's a whirler, sort of goes round and round. Makes you think you've got a wheel in your head.

THE COLONEL—It wouldn't be good for you to go in there, then, my boy. We'll pass it, and write it up as a dreamy, languorous scene of Oriental vice.

THE CHIEF—All right. Let's cross over. But say, you know why I like Rosa?

THE COLONEL—Well, no—that is—I didn't know you did.

THE CHIEF—Well, I do, because she's the only foreign girl on the Pলাসance that isn't named Fatima or Maud. I don't think there ought to be too much Volapuk in proper names.

#### At the Persian Theater.

THE COLONEL (*gazing at the muscular dancing*)—The stories of the abandonment of this horrible spectacle have not been exaggerated.

THE CHIEF—Yes, they dance as if they had the freedom of the city.

THE COLONEL—Let us flee this wicked spot! We can come again when we aren't in such a hurry.

#### The American Indian Village.

THE COLONEL—We can surely do this sudden. I can go an Indian with a tomahawk, but when the same Indian carries a fan I lose confidence in the tomahawk. Let's go.

#### At the Dahomey Village.

THE CHIEF—These here may be genuine Dahomans, fresh from the realm of King Benzine, but to me they look a mighty lot like just plain Mississippi niggers. I kick on paying a quarter to see thirty-eight niggers. I've seen 700 for nothing.

THE COLONEL—Well, well, now don't let's have any race war here. We got to get this story, and this is part of it. Come in and see the fiery untamed Amazons that don't know nothin' but fight, see?

AN AMAZON (*to the Chief*)—How do? Chicago? Chicago? Poppie? Poppie? Me—Chicago beer! Me—Chicago beer.

THE CHIEF—The insulting creature! Is there then no nationality on earth, or even on the Pলাসance, that doesn't hanker after Chicago beer! Let go of the Amazon, Katie! Come on, let's go.

#### At Old Vienna.

THE COLONEL—Now, here we at last have it. Isn't this the Old Vienna we have read about in the pages of our esteemed contemporary?

THE CHIEF—Yes, it is. You can write a good deal about old Vienna, or about new Vienna, or any Vienna, but the plain truth about this Vienna is that it is a big carousing ground, where at 11 o'clock you can kiss all your neighbors, and in the meantime can put in the evening at assiduously buying beer at 10 cents a glass.

THE COLONEL—Yes, and incidentally you can hear two kinds of music of the bung-starting sort, and can also smile at the waiter girls—it won't hurt 'em any. The Old Vienna of the special correspondents and the Old Vienna of harsh fact constitute two entirely distinct and separate entities, Sick 'em, Katie!

#### At the German Village.

THE COLONEL—As near as I can see this is pretty much the same thing—some music and some beer, and then some more beer.

THE CHIEF—It hath much moreness.

THE COLONEL—Yes. I don't know why it is, but all German band music is ulterior—it has beer in its intentions every time. Don't let Katie get in there. Suppose we do Cairo now.

#### In Cairo Street.

THE CAMEL GONG—Whang! Bang! Tumpy, tumpy, tum; whang, bang!

THE EGYPTIAN PIPES—Whee-ee-eek, ee-eek, whee-ee-ee!

THE COLONEL—I see they have doubled the price on this concord of sweet sounds. Costs twenty cents now to get in.

THE CHIEF—Costs you \$4 to get out; but here goes.

THE DONKEY BOYS—Ride-a the donk! Best-a good donk! in the street!

THE CHIEF—Try it on the dog.

THE CAMEL DRIVERS—Ride-a the cam! Tirty cent backsheesh!

THE CHIEF—Try it on the dog. Say, Colonel, get on to his trousers. They're cut tandem.

THE CANDY MAN—Bum-bum, bum-bum, very good-a bum-bum!

THE CHIEF—Try it on the dog. Here, Katie, come and have some bum-bum. Let go the camel driver, and come and get some candy. Good fellow, good Katie. There now.

THE CAIRENE FLOWER GIRL—Buy flowah, nice mistah!

THE COLONEL—Hello, Mary, haven't they suppressed you yet? What makes you wear that mask? Have you taken to the veil?

MARY, the FLOWER GIRL—Buy flowah, nice mistah.

THE CHIEF—Bet your life we're nice, all right.

THE COLONEL—Mary, raise your veil and I'll give you a dime. (*Mary raises veil, disclosing a nightmare physiognomy.*)

THE COLONEL (*after intent scrutiny*)—I thought there was something wrong with your face. You may put the veil down again. (*Mary drops veil and hastens away, swearing in Cairene dialect.*)

THE CHIEF (*to attendant of bazaar*)—Parlez vous Français?

THE ATTENDANT—Oh, oui, assurance, monsieur.

THE CHIEF—Well, I don't. How much for this bangled girle? I think I'd look well in that.

THE ATTENDANT (*suddenly weary*)—Six-fifty.

THE CHIEF—I wanted a good one.

THE COLONEL—Let's go see the Nubians. They got two kinds of Abyssinian fuzzy-wuzzies in there.

THE CHIEF—We have to sweeten it again for ten cents apiece before we get in there; but let it go at that. (*They enter, and witness the barbaric dances.*)

THE CHIEF—I announce as the result of profound study

that the skin on all these here foreign niggers is plenty loose.

THE COLONEL—I have discovered that the wild man of the desert and also the wild woman, chews Yucatan gum.

THE CHIEF—I observe that the wild Bedouin of the sandy Sahara always builds his fire out of cracker boxes. Now where in Sahara does he get 'em?

THE COLONEL—Yes, and where do these Nubian darlings get their tallow candle hair oil? Thank heaven, they're done dancing.

THE CHIEF—After the ball is over they take up a collection. The dancing comes extra. See the Oriental houri coming for us with the derby hat?

THE COLONEL—Another sweetening? This reminds me of one of Marshall Wilder's stories. You know, a nigger got run over by a wagon. The front wheels passed over him and when he saw the hind wheels coming, he says, sort of surprised-like, says he, "What! again?"

#### In the Temple of Luksor.

THE CHIEF (looking up at the inscription)—They don't spell this thing the way my geography does, and I'll bet a hundred it's not genuine. They hang out a card announcing genuine Egyptian mummies, religious ceremonies of olden times and all that. Shall we go in?

THE COLONEL—Sure. That's good stuff, and the paper ought to have it.

THE CHIEF (to the lady ticket seller)—Are you a mummy?

THE TICKET SELLER—No, I came from Indiana. Tickets twenty-five cents. If you don't like our show we will hand you back your money.

THE CHIEF (pointing to sign on temple of Yuksor)—I see you announce Val. Blatz's Hofbrau.

THE COLONEL—Is that Col. Val. Blatz that lived in the third dynasty? Have you got a mummy of Col. Val. Blatz?

THE TICKET SELLER—You might go in and see. You can't expect me to remember all the mummies. I'm from Indiana. I'm saving my money to go on the stage.

THE COLONEL—That's right. Be a good gyrl and save your money. That's the way we got our start, and now look at us. Give us two tickets. This is on the house.

THE CHIEF (making notes as they inspect the mummies)—I observe, item, one Egyptian monarch, Rameses I., received in bad order.

THE COLONEL—Yes, but you want to call it Ram'-ses, not Ram-e'-ses.

THE CHIEF—What do you know about it?

THE COLONEL—I used to go with a girl that was a school teacher, and she told me this man's name was Ram'-ses. That goes. This other fellow is Tot'-mes, not Thought-mes. He's Thot-mes II. Hello, Tottie! Little disfigured, ain't he?

THE CHIEF—Yep. Love's young dream must have gone wrong with him. He looks all broke up.

THE COLONEL—Alas! Alas! Is this then the end of a greatness like his—to be put away in a linen surcingle, and exposed in a badly sunburned condition to the American public, at twenty-five cents a clatter? Chief, there's no use in our being great, after all.

THE CHIEF—We'd bring more'n twenty-five cents. Live'er matter, you know. The trouble with these fellows is, they're kind of lost news interest. They ain't in it now.

THE COLONEL—They ain't no real, original, mummies, you can bet on that. They're only electrolytes. Hullo, what's the fellow talking about?

THE LECTURER—Ladies and gentlemen: The high priestesses of the ancient temples of Om and Ra will now give their sacred mystic dances, including the wedding dance, the funeral dance and the mythological mystery dance of ancient days, after which all those so desiring can pass on to the right and visit the ancient tombs of the pyramids. I can recommend these tombs as faithful in every respect. Remember you can see the tombs for the sum of ten cents additional, only ten cents, or one dime.

THE CHIEF—Let's skip the Egyptian priestesses. One of 'em used to be cashier in a State street candy store, and all the dances are alike. Let's tackle the tomb.

THE COLONEL—We sweeten it for ten cents noch einmal. Can't get into the tomb without a ten cent obolus. Come, give up your obolus.

THE CHIEF—I don't know what that is, but if you mean my watch, I'll have to go you. I'm going to see the end of this Cairo game, if it breaks me. First you pay at the gate, then you buy some bum-bum candy, and some things for the loved ones at home, and ride a camel whose legs are impartial in their joints and whose teeth betray a lack of zoöodont positively shocking.

THE COLONEL—Well, if you had to carry three country school ma'ams and a blame fool all at once, you wouldn't care whether your legs worked forward or backward, yourself.

THE CHIEF—Mebbe so, yes. Then you sweeten it to see the Sudan niggers, and in there they spring a collection on you. Then you pay to get into the mummy temple, and pay again to get into the tomb.

THE COLONEL—Anyhow, here goes.

THE CHIEF (at the sarcophagus of Apis)—So this is the tomb of the sacred ox. I'd make a nice watering trough. Say, I bet you Phil Armour could give those people pointers on preserving beef.

THE COLONEL—Chief, remember we're on duty. You can get funny, but not gay. Come on, this ox coffin is like a good many other things; there's nothing in it. Let's go.

FORTUNE TELLER (at exit from tomb)—Have your fortune told, gentlemen. Only twenty-five cents. Have your future portrayed by the only genuine Egyptian fortune teller from the desert. Only twenty-five cents.

THE CHIEF—Well, by the great everlasting enchanted horn spoon!

THE COLONEL—We'd better go and write up our stuff now, I reckon. But where's Katie? We might get his fortune told.

THE CHIEF—Yes, where is he? I haven't seen the dog for half an hour. We'll look for him down by the bum-bum stand.

(Achates is found curled up, dead, near the candy stand. Expressions of horror from both young men.)

THE CHIEF—What! So? He's gone! Sweet sir, speak but again! Wist not that great Danes will rise in price when we come to settle! Speak! Alas! Alas! He's gone. He was a dog which, take him as he ran, he would not see a night like this again.

THE COLONEL—It was too swift for him.

THE CHIEF—Yes. He couldn't stand the gait.

THE COLONEL—And still there are some who say that journalism, with a big J, is a dog's life. We can now refute this error also. But come, weh must away! (Exit both, bearing Katie by hindlegs.)

[At this point the notes of the short-hand writer cease. The forms have been held over an hour, but as we go to press no copy whatever has yet been submitted by the two frivolous and highly irreverent young men who had the assignment.]

Later, by wire.—Can't get any story on Midway. Nothing to it.

E. HOUGH.

B. WATERS.

Mr. Clark Sintz, president and superintendent of the Sintz Gas Engine Co., had many kind words to say of FOREST AND STREAM, of its wholesome literature and clean teachings, of the welcome it received at his home by his family, all of whom read it. He is an old subscriber.

Mr. A. Solmans and wife of South Norwalk, Conn., gave the exhibit high praise. Mr. Solmans is an enthusiastic trout fisherman, and gave some most interesting narrations of trout fishing in Maine and the East.

Mr. J. W. Ten Eyck Burr, Cazenovia, N. Y., has never let his subscription expire since FOREST AND STREAM first started. From his expressions of esteem, I think that he will always be a subscriber.

This is but a mention of a few of the readers who daily stop and pay their respects to FOREST AND STREAM. Some shake hands as they pass by in the dense crowd, with a mention that they are old subscribers, and that limited time in which to see all that wonderland, the World's Fair, prevents them from tarrying.

Mr. W. F. Gray, of Fort Worth, Texas, formerly of Houston, Texas, one of the best known sportsmen of that section, visited FOREST AND STREAM at the World's Fair several times. He at one time owned some of the best setters and pointers in Texas, and, for that matter, in the country. Big game hunting now engages his consideration, and he thinks that before many moons he will have killed a moose or two. Better sportsmen than Mr. Gray do not exist.

Mr. Frank L. Epps, Topeka, Kan, set himself on record as one who admires FOREST AND STREAM.

Miss Fannie Pearson Hardy, of Brewer, Me., after her autograph wrote as follows: "Bringing regards to FOREST AND STREAM friends from Chas. H. Ames ('Ebumi')."

Mr. W. P. Grounough ("G. de Montauban"), of Canada, called and numbered himself among the enthusiastic advocates of the merits of FOREST AND STREAM.

Mr. John W. Titcomb, of the Vermont Fish and Game Commission, put his name on the list, as did also W. P. Andrus, Minneapolis, Minn., Game and Fish Commissioner.

Mr. Royal Robinson, of Indianapolis, Ind., whose fame in the land as a fancier of bird dogs and field trial judge are well known, stopped during a few brief moments and uttered some words of praise for FOREST AND STREAM.

Mr. Gus Haywood, Hampton, Ill., said that he would not attempt to get along without FOREST AND STREAM. He narrated some most interesting personal incidents of big-game hunting in the far West in the early 50's and 60's. The head of the mountain sheep which watches with sleepless gaze from the wall of FOREST AND STREAM's exhibit recalled to his mind a mountain sheep which fell to his rifle, on Pike's Peak, in the early 60's. Long canoe voyages are still a favorite means of recreation in his outings. The years have not lessened his vivacity nor energy, though they have added to his love for the best sportsman's journal, FOREST AND STREAM.

Mr. Claude King, wife and sister, called and graced FOREST AND STREAM's cosy corner for a short time. On the register Mr. King inscribed "Kate and Claude King, Denver, Col." The winsome little lady apparently enjoyed the sightseeing heartily. To Mr. King the public is indebted for that bright and clean periodical, *Sports Afield*, whose broadness and kindness are but a reflex of himself and the section in which he lives.

A bright, eager little fellow, eight years old, trim of figure and natty in dress, stepped into the exhibit and politely asked what FOREST AND STREAM wrote about. He was earnestly attentive to the explanation and left his name, "Gustav Nadler, Chicago, Ill.," in the register in a clear even hand which would outrank by far the average penmanship of his elders. He went away rejoicing with a sample copy of FOREST AND STREAM.

As Mr. G. R. Greene, Jr., of New York city, wrote his autograph in the register, he remarked that he subscribed for FOREST AND STREAM for three years in advance, and his tone of voice and kind words implied that he would do it again.

Mr. and Mrs. Frank B. Davidson admired FOREST AND STREAM pictures. Mr. Davidson, as the readers know, is secretary of the Chicago Fly-Casting Club, but they do not all know that he is one of the true kind of sportsmen, all too rare, who love sport for its own sake. With a sunny, frank disposition and an amiability which never weakens, it is not to be wondered at that his confrères all love him.

On the register I note the name of C. M. Hampson ("L'Eclair"), Denver, Col., who wrote his name down in black and white and vanished.

Mr. H. C. Hammond and son, of Chicago, tarried at the cosy corner a few moments. Mr. Hammond was at one time superintendent of the Deaf and Dumb Asylum, at Little Rock, Ark., and is an ardent admirer of a good field dog.

Messrs. Walter M. Smith and A. S. Pitt, of Stamford, Conn., had been enjoying some most successful duck shooting on Horicon Marsh, in Wisconsin, and were making the Fair a visit in the stop-over period of their homeward journey. They seemed satisfied that Horicon Marsh is a great duck ground. They reported large bags.

Gen. W. B. Shattuc, of Cincinnati, General Passenger Agent of the O. & M. R. R., made a pleasant visit to FOREST AND STREAM's nook, while Mrs. Shattuc viewed the live fish and other exhibits in the Anglers' Pavilion. To his fondness for sport with dog and gun, General Shattuc has added that of rod and reel, and is now a member of the guild of anglers. Hereafter, he will take more time to devote to his favorite diversions than heretofore. Of the class known as pure sportsmen he is.

Dr. J. S. Niven, of London, Ont., wrote his name in the register and chatted on bench show judging past and present. The readers will remember him as an active and popular judge in the earlier days of bench shows.

B. WATERS.

## The Kennel.

### FIXTURES.

#### DOG SHOWS.

Nov. 28 to Dec. 1.—New Jersey K. L., at Newark. Dr. W. F. Seidler, Sec.  
Dec. 12 to 15.—R. I. Poultry and Pet Stock Ass'n, at Providence.  
Dec. 20 to 23.—Northern Ohio Pet Stock Association, at Akron, O. H. F. Peck, Sec'y.

#### FIELD TRIALS.

Nov. 6.—United States Field Trials Club's Fall Trials, Bicknell, Ind. P. T. Madison, Sec'y, Indianapolis.  
Nov. 7.—New England Beagle Club trials. W. S. Clark, Linden, Mass. Secretary.  
Nov. 7.—International Field Trial Club's Fourth Trials, Chatham, Ont. W. B. Wells, Sec'y, Chatham.  
Nov. 15.—Ohio Field Trial Club's Second Trials, Canton, O. C. V. Lelling, Sec'y.  
Nov. 20.—Eastern Field Trial Club's Trials, at Newton, N. C. Members' Stake Nov. 16. W. A. Coster, Sec'y.  
Nov. 27.—Irish Setter Club's Field Trials, at Thomasville, N. C. All-Age entries close Nov. 1. G. G. Davis, Sec'y.

1894.

Jan. 1.—Southern California Field Trials, at Ontario, Cal. H. C. Hinman, Los Angeles, Cal., Sec'y.  
Jan. 28.—Southern Field Trial Club's Trials, New Albany, Miss. T. M. Brumby, Sec'y, Marietta, Ga.  
Feb. 19.—United States Field Trials Club's Spring Trials, Grand Junction, Tenn. Second payment in Derby due Nov. 1. P. T. Madison, Sec'y, Indianapolis, Ind.

### POINTS AND FLUSHES.

[By a Staff Correspondent.]

UNDER date of Oct. 13, Mr. Thos. Johnson, of Winnipeg, mentions that he has sent two dogs to Mr. Lansdole, and also that Sefton Hallam will handle four of his dogs in the competition at Chatham, Ont.

Mr. C. W. Tway, of Irwin, O., stopped over a day to visit the World's Fair. He left his name on the list. Bloomfield, Ia., is his destination, and his purpose is to teach the young idea of his dogs how to shoot. He was looking in good health and was as full of bonhomie and amiability as a mandarin. The United States field trials will receive his personal attention in a competitive way this fall.

I learn that the severe winter made the quail crop in Ohio very short this season.

Many are the earnest regrets I hear from the dog fanciers over the failure of the World's Fair dog show, the show which was run both as a public institution and a private interest. The loss is more apparent now that the real worth and scope of the World's Fair are known. With the attendance numbering hundreds of thousands each day, the World's Fair dog show would have been seen by more people than the whole dog shows of the country in one season attract. It is the more regrettable since it is a loss which can never be mended. And it is also regrettable in that the loss was from the personal selfishness of those who protested to be the best friends and advocates of the World's Fair. But it has brought its lesson, and such a mistake cannot ever occur again.

Mr. C. M. Smith, of Akron, O., a subscriber to FOREST AND STREAM of ten years' standing, made a call at FOREST AND STREAM's corner in the Anglers' Pavilion. He informed me that Mr. R. B. Morgan, the well known handler, of Akron, had gone to Mississippi, with a string of twenty dogs. He will spend the winter there training.

B. WATERS.

### Eastern Field Trials All-Age Entries.

#### ENGLISH SETTERS.

DASHAWAY—Ed. Watson's black and white dog (Leo—Julia), 2yrs.

CECIL H.—T. L. Adams's black, white and tan dog (Dr. Maclin—Cosette), January, 1891.

DIRECT—T. L. Adams's black, white and tan dog (Gun—Victoria Laverack), August, 1891.

BUENOS AYRES—L. D. Hargrave's black, white and tan dog (Antonio—Buena Vista), August, 1892.

MECCA—T. E. Shreve's black, white and tan dog (Paul Gladstone—Latonia), 3yrs.

HOPE'S QUEEN—Greensboro Field Trials Kennels' black and white ticked bitch (Gath's Hope—Queen Noble), 21mos.

LINWOOD—W. B. Meares, Jr.'s liver and white dog (Antonio—Buena Vista), 17mos.

MISS RUBY—P. Lorillard's lemon and white bitch (Gladstone's Boy—Ruby D.), April, 1890.

ANTEVOLO—P. Lorillard's liver and white bitch (Count Noble—Trinket II.), October, 1889.

DOT RODGERS—P. Lorillard's black, white and tan bitch (Rodrigo—Gladstone's Girl), April, 1891.

EUGENE T.—P. Lorillard's black, white and tan dog (Count Noble—Ruby's Girl), October, 1889.

ROI D'OR—F. R. Hitchcock's black, white and tan dog (Rodrigo—Bo Peep), January, 1887.

BESS—F. R. Hitchcock's black, white and tan bitch (Chance—Bessie Aven), May, 1891.

WINNIEP—Charlottesville Field Trial Kennels' black dog (Manitoba Toss—Pitts Sing), 2½yrs.

BOB COOPER—Hempstead Farm Kennels' black dog (Roi d'Or—Miss Nellie Y.), 3½yrs.

COUNT GLADSTONE—Avent & Hitchcock's black, white and tan dog (Count Noble—Ruby's Girl), 3yrs. 10mos.

CHEVALIER—Avent & Thayer's black, white and tan dog (Jean Val Jean—Lucy Aven), January, 1891.

LOCHINVAR—Avent & Thayer's black, white and tan dog (Chance—Bessie Aven), May, 1891.

KINGSTON—Avent & Thayer's black, white and tan dog (Chance—Bessie Aven), May, 1891.

BETTIE S.—Avent & Thayer's black, white and tan bitch (Rodrigo—Bo Peep), June, 1887.

DION C.—W. C. Barnes's black and white ticked dog (Roi d'Or—Mildred), February, 1890.

#### POINTERS.

GAMESTER—F. R. Hitchcock's liver and white dog (Duke of Hessen—Woolton Game), May, 1891.

WILD DAMON—Charlottesville F. T. Kennels' liver and white dog (Damon—Flora), April, 1890.

KENT ELGIN—T. T. Ashford's black and white dog (King of Kent—).

SANFORD DRUID—Hempstead Farm Kennels' black and white dog (Exon Don—Sanford Quince), April, 1891.

HEMPSTEAD DUKE—Hempstead Farm Kennels' black and white dog (Duke of Hessen—Lass of Bow), October, 1890.

FLOCK FINDER III.—Maj. J. R. Purcell's lemon and white dog (Old Staunch—Flake of Flockfinder), 3yrs.

LADY MARGARET—Maj. J. R. Purcell's black and white bitch (Dick Swiveller—Countess Bang), 2yrs.

LUCKY DEAL—E. R. Bellman's black bitch (Luck of the Goat—Midge), March, 1890.

LADY KUSE—T. H. Gibbs's liver and white dog (Lad of Rush—Devonshire Belle of the Ball), 15mos.

GIBBS'S MAUP—E. H. Gibbs's liver and white bitch (Rash of Lad—Topsy), 2½yrs.

DUKE OF KENT III.—Glen Rock Kennels' liver and white ticked dog (Tempest—Nady of Naso), June, 1890.

RENO B.—B. M. Barksley's liver and white bitch (Volney Hall—Leta), 3yrs.

GROUSE—C. M. Hunt's lemon and white dog (Mainprin g—Swain's Fly), 4yrs.

## AMERICAN KENNEL CLUB.

The adjourned meeting of the executive committee of the American Kennel Club, was held at its offices, 44 Broadway, Friday, Oct. 27, President Belmont presiding. There were present: Associate Members, Dr. H. T. Foote; English Setter Club, Wilson Fiske; Gordon Setter Club, James B. Blossom; Great Dane Club of America, A. H. Heppner; Mastiff Club, C. F. R. Drake; National Beagle Club, H. F. Schellhass; National Greyhound Club, L. C. Whiton; New England Kennel Club, Edward Brooks; New Jersey Kennel League, E. H. Morris; Pacific Kennel Club, James Mortimer; Rochester Kennel Club, W. Whitney; Westminster Kennel Club, H. B. Cromwell; City of Straits Kennel Club, W. H. Muir; Pointer Club, W. Jarvis; South Carolina Poultry and Pet Stock Association, Mr. H. C. Glover. The following credentials were presented and accepted: Rhode Island State Fair Association, Frederick E. Perkins; Saratoga Poultry and Kennel Club, Washington A. Coster; Pointer Club of America, W. Jarvis; City of Straits Kennel Club, W. H. Muir; Duquesne Kennel Club, John Morehead.

## MEMBERS NEW AND OLD.

The Minneapolis Kennel Club, Northwestern Beagle Club of America and New Orleans Fanciers' Club were admitted. The application of the Kansas City Exposition Driving Park Association, was laid on the table, because the list of officers had not been filed. The South Carolina Kennel Club and the American Fox-Terrier Club were reinstated.

In regard to applications by the Portland Kennel Club and the Oregon Kennel Club, the secretary stated that from affidavits from these clubs as to the dates of their organization he had ascertained that the Portland Kennel Club was organized April 10, 1893, with six members; and that the Oregon Kennel Club was organized on April 13, 1893, three days later, with twenty-two members.

The application of the Portland Kennel Club was accepted, and the Oregon Kennel Club was notified of the acceptance of the application of the Portland Kennel Club on account of its priority.

## THE WESTERN MEETING.

The secretary reported: "As is generally known, the reported demand for a meeting of this club to be held in the West was acceded to and faithfully tried, the president going out of his way by mailing to each delegate an official appeal to either attend in person or to arrange to have his club send a representative. The attempt to hold such a meeting was a dismal failure. For the first time since June, 1886, the club failed to obtain a quorum. Your secretary talked with four delegates from Western clubs, who were unanimous in informing him that they did not demand, request, nor expect a meeting to be held other than at the permanent headquarters of the club. He would therefore respectfully recommend that the resolution providing for the meeting each year to be held in Chicago, be adopted at the meeting held May 18 last, be rescinded at this meeting." It was rescinded.

## WORLD'S FAIR CERTIFICATES.

The secretary reported: "I would call your attention the abandonment of the World's Fair dog show by the directors of the Exposition, an action that the A. K. C. had nothing whatever to do with. The club, however, was put to quite some expense in having a book of certificates prepared to conform with the requirements of the Department of Live Stock. A number of these certificates were issued upon application of intending exhibitors, and in case application is made for the club to refund the fees received for such certificates your secretary desires definite instruction." The secretary was instructed to refund the money.

## THE NEW RULES.

The secretary read a letter sent him by President Belmont, July 24: "I beg to acknowledge receipt of your favor of June 28 advising me of the result of the vote upon the amended rules passed at the meeting of May 18, 1893, under Article XIV. of the constitution. The total number of clubs entitled to vote you state to be fifty-five, but this is after striking out all the clubs which have been in arrears for the annual dues of 1893; also the clubs elected at the meeting of May 18, 1893, and in addition the name of Mr. Jas. L. Anthony, who resigned as an associate delegate at that meeting. It would appear, therefore, that the thirty-seven votes you report as cast constitute the necessary two-thirds ratifying the adoption of the rules. However, as the matter is of serious import and the provisions of the constitution are not clear as to the right of new clubs to be received to declare the rules, and was not carried pending the final decision of the American Kennel Club on the subject at its September meeting, when you will please bring the matter to the attention of the club."

Commenting on this the president said: "The change in the rules has been the matter of considerable newspaper comment. There has been a great deal of criticism about the shortcomings of the American Kennel Club and the rules have been revised to declare the rules, and was not carried pending the final decision of the American Kennel Club on the subject at its September meeting, when you will please bring the matter to the attention of the club."

Mr. Vazquez reported: "The rules were adopted unanimously at a special meeting of the American Kennel Club. That meeting adjourned. Afterward the meeting of the executive committee convened. At that executive committee meeting there were some 10 or 12 clubs dropped from the roll, and therefore I considered they had no vote. Then there were three clubs admitted. Exclusive of the clubs that were dropped and the three clubs subsequently admitted, the necessary number of votes to ratify and carry into effect these new rules was obtained, 37, which is a two-thirds vote. We required 37 votes and received that number. There was no vote against it. The question now before us is whether these rules are ratified or not."

After some considerable discussion it was voted "that we consider these rules adopted to take effect Jan. 1, 1894, instead of July 1, 1894." It was voted that the new rules be copyrighted.

## A. K. C. AND G. K. C.

The following resolutions, forwarded by the Canadian Kennel Club, were read: Extract from the minutes of the Canadian Kennel Club executive committee meeting held at Toronto, Canada, July 15, 1893. It was unanimously resolved:

"1. The abolition of the compact that has existed between the A. K. C. and the C. K. C. would tend to increase the income of each club, but would put an additional tax on exhibitors both in the United States and Canada for the registration of dogs with each club for the purpose of making them eligible for shows in both countries.

"2. The qualifications for registration in the C. K. C. B. are more stringent than those in the A. K. C. B., as on dogs with pedigrees complete for three generations, or that have won not fewer than two first prizes at recognized shows are eligible for registration in the C. K. C. B.

"3. Non recognition by one club of the wins at the shows held under the rules of the other would complicate records and prove confusing to exhibitors, and be apt to lead to mistakes in making entries.

"4. Non recognition of one club of the black list of the other would put a premium on wrong-doing, and would throw a great responsibility on the clubs which are supposed to use all the reasonable means in their power to prevent dishonorable conduct in connection with dogs, and dog shows and field trials.

"We are decidedly of the opinion that the reinstating of disqualified persons of either club, and the subsequent consideration of charges against them, is apt to have a tendency, so far as the public is concerned, to destroy faith in the management of the said clubs.

"The executive committee of the C. K. C. believe that the action of the A. K. C. at its May meeting was taken without due consideration of all the facts and interests involved, especially as regards wins and black lists.

"Moved by Dr. Niven, seconded by Mr. Bedington and resolved that the secretary be directed to acknowledge the communication of the secretary of the A. K. C. of May 29, to forward a copy of the representations recommended at this meeting and to state that in the meantime the C. K. C. will govern itself according to the action of the A. K. C. in regard to the previously existing compact at their meeting of May 18. Carried."

## THE COMMITTEE ON DATES

consisting of Messrs. H. B. Cromwell and Jas. Mortimer, reported: "After one year's experience we have come to the conclusion that the objects for which this committee was appointed are impracticable. In many cases A. K. C. shows are held in connection with State and county fairs, which are annual fixtures and must be held at certain times in spite of any conflict with other shows. Further, it is impossible for the committee to properly learn the reasons why certain clubs can hold profitable shows on certain dates and at no other time (on account of advantageous renting of proper buildings, etc.). Further, the committee has already received claims for dates from a number of clubs in all parts of the country and has thus far failed to hear from a number of other important clubs which will, without doubt, hold shows during the coming season. We therefore believe it to be impossible for your committee to arrange a satisfactory circuit, and for these reasons we beg to ask for our discharge.

H. B. CROMWELL, Chairman.

The following preamble and resolutions were adopted: "Whereas, bench shows are increasing to an extent that renders the control of dates by the American Kennel Club impracticable and inadvisable. Resolved, that the sense of the American Kennel Club is to no longer legislate in the matter of dates, leaving the same wholly in the hands of the clubs and associations holding bench shows."

## ADVISORY COMMITTEE AND DOG TRADES.

The secretary read this resolution offered by Dr. J. Frank Perry at

the last meeting of the advisory committee, to be submitted to this meeting: "Whereas, after some three years experience in the trial of cases of alleged misconduct, this committee has come to the conclusion and belief that the American Kennel Club should not consider and render judgment in cases of complaint based on monetary transactions, unless fraud, deceit, trickery or the like is obvious, and that in complaints where legal redress is possible and these elements do not appear, this club should not act. Be it therefore resolved that a resolution be presented at the next executive committee meeting for action by the A. K. C. as a body defining its jurisdiction more specifically in accordance with the above opinion."

It was voted "That the American Kennel Club shall not consider and render judgment in cases of complaint based on monetary transactions unless fraud, deceit, trickery or the like is obvious, and that in complaints where legal redress is possible, and if these elements do not appear, this club should not act."

## TREASURER'S REPORT.

The treasurer reported, under date of Sept. 18:

Balance on hand Jan. 1, 1893.....	\$5,004.20
Receipts from all sources to date.....	4,920.95
	9,925.15
Disbursements for same period.....	7,554.99
Balance on hand.....	\$2,370.16

## DELEGATE LESLIE'S CREDENTIALS.

Dr. M. H. Cryer, chairman of the committee appointed to investigate and report on the credentials of Mr. Robert Leslie to represent the Massachusetts Kennel Club as a delegate to the American Kennel Club, reported: "The papers referred to your committee embrace two totally distinct subjects, Mr. Leslie's appointment as a delegate, and secondly, a club dispute. We find that his letter of authority to act as delegate of the Massachusetts Kennel Club is in proper form, we have nothing before us other than the letter, but we are aware that its being referred to a previously appointed committee was on account of an objection raised by Mr. Anthony, because of something Mr. Leslie was alleged to have done in the way of giving Mr. Peshall information when the latter's case was being considered in executive session. The Peshall business is to be dead an issue in our opinion to resubmit at this late date. We are of the opinion that disputes between club members must be settled by themselves, and the aid of the American Kennel Club cannot be involved. If the 'petitioners' of the Massachusetts Kennel Club are a majority of the club members, they surely have the remedy in their own hands; if they are a minority, they must bow to the majority."

Dr. Perry, of the committee, wrote: "My finding in the case of Mr. Robert Leslie is practically the same as that of Dr. Cryer. In my opinion his credentials are in proper form and he is clearly entitled to all the rights and privileges of a delegate. In re the conflict between the members of the Massachusetts Kennel Club, the minority have no case." The report was adopted and Mr. Leslie was accepted as a delegate.

## PUG DOG SHOWN AS SPRAKE.

The secretary said he had entered a protest in the name of the club against the payment of prize money to a pug dog shown under the name of Sprake, for the reason that the dog was registered as L. C. P. and has always been shown under the name of Sprake. He had written to Mr. Goodman, the then owner of the dog, early in 1892, and informed him that this violation of the rules should cease. The dog was, however, again shown under the name of Sprake, and has been disqualified. The dog has changed hands and is now owned by Mrs. Davis, who showed him under the name of Sprake at Lexington in violation of the rules.

Mr. Mortimer stated that this dog had been shown and won repeatedly as Sprake, and that it might be somewhat of a hardship on an innocent owner of the dog to have him disqualified, and he moved that the secretary be instructed to write to Mrs. Davis, the present owner of the dog, informing her that she can appeal from the disqualification. Voted.

## TRUNK LINE DOG TRANSPORTATION.

On motion of Mr. Morris the secretary was instructed to investigate and ascertain the nature of the compact between trunk line railroad and express companies concerning the transportation of dogs to dog shows when accompanied by their owners.

## OTHER BUSINESS.

An application of Mr. H. C. Trevor, of Southampton, L. I., for the prefix "Meadowmore" was granted, also that of Mr. J. P. Daveport, of Omaha, Neb., for the use of the prefix and affix "Braska."

An application of the Northern Ohio Poultry and Pet Stock Association for a change of its title to that of the "Akron Kennel Club" was granted.

Mr. Lyman W. Clute, of the Saratoga Poultry and Kennel Club, requested a ruling in the matter of registering the height of a beagle upon entering a show and having such measurement held good at the time of judging. The communication was laid on the table.

In the matter of violation of rules by the Danbury Kennel Club, in failing to publish the A. K. C. rules in its premium list, and the recognized shows, the secretary was instructed to caution said club against any further violation of the rules.

The secretary reported that the credentials for the delegate to represent the Duquesne Kennel Club, having been referred back to that club, the secretary names Mr. John Morehead as the regularly appointed delegate.

The charges preferred by Mr. J. B. Martin against Mr. George Bell, for violation of rules, were referred to the advisory committee.

It was voted that the awards of the show given by the City of the Straits Kennel Club should be recognized.

An application of Mr. G. W. Patterson, for removal of the penalty of disqualification imposed by the American Kennel Club, was granted.

Charges filed by Mr. H. W. Huntington against the New York & New England Poultry and Kennel Club, for non-payment of a first prize won by a dog at the show held Jan. 3, 1892, was referred to the advisory committee.

The secretary reported that the Illinois Kennel Club had sent a large number of listings but that the check did not accompany it. The fees had not yet arrived, and they held their show last August. The club was suspended pending full compliance with the rules.

## THE STUD BOOK COMMITTEE'S REPORT.

As to false pedigree of Stipend Regent, No. 39,351: "Mr. C. Clark, the owner of Stipend Regent, purchased the dog from T. Potter, who claimed to be the breeder. Mr. M. Wilson, owner of the alleged sire, asserts that no such bitch as Potter's Daisy visited his dog. No reply can be obtained from T. Potter, and it is recommended that he be disqualified and the pedigree canceled."

In the matter of false pedigree of black and tan terrier Betsey: "This bitch won second prize at Denver show this year, and Mr. A. W. Smith, owner of her alleged sire and dam, Buffalo General and Buffalo Lass, asserts that the latter had no bitch puppies in the litter of August, 1890. No answer can be obtained to letters sent to her then owner, and it is recommended that he be disqualified and the record of Betsey's win at Denver be canceled."

Pedigree of Gordon pedigree of black and tan terrier Betsey: "The sire of this dog, Bp H., was in charge of D. B. Holtz, of Philadelphia, and he bred him to W. C. Redfield's bitch, receiving in return a puppy, the dog Edgewood. Dr. Roussel, owner of Bob H., says that if any such service took place it was a stolen one. The committee are of the opinion that it is not their business to enter into the question of the service being stolen, Dr. Roussel having another remedy for that. It is well, however, to note that Mr. Holtz evidently had no fear of making public the Bob H. pedigree, as he exhibited Edgewood at the Keystone Kennel Club and Dr. Roussel resides within a few minutes' walk of the building. The committee declines to take any action in the case."

In the matter of the pedigree of the St. Bernards Old Honesty, 25,363, and Blarlock Gypsy, 34,665: "The false pedigree of that of Reginald, their dam. This bitch is a mongrel but managed to get a pedigree either from Howarth Bros. of Columbus, O., or A. M. Stukey of Mount Sterling, O. Several letters are herewith sent, the tenor of which tend to prove that Mr. T. A. Howard is not responsible for what was given through or by authority of A. M. Stukey. No explanation has been received from Mr. Stukey in response to a request for information as to him and Sept. 15, '92, and it is the opinion of the committee that the onus of proof rests with A. M. Stukey, and pending his giving satisfactory explanation he should be suspended from all privileges of the American Kennel Club."

On motion the report was accepted and the recommendations therein contained adopted.

## Badger.

Editor Forest and Stream:

In your last issue I find "Badger" presses his invitation for Paddy Doolan to make him a visit, and as Paddy is dying "for that same," if we attend the Newark show, shall certainly run down to Philadelphia. I don't say Paddy will do the badger, but he will give a good account of himself. Have also a light weight bull-terrier no heavier than his badger that can also make himself known.

GEO. S. THOMAS.

SALEM, Mass., Oct. 23.

## DOG CHAT.

## Field Trial Entries.

The entry in the All-Age Stake of the Eastern Field Club shows another falling off. How this is to be accounted for would be difficult to explain, unless it is on account of the abandonment of the Central Trials, though we can scarcely believe this when we were told that had it been known earlier that the Central would not hold trials this year, the entry in the Eastern Derby would have been larger. We believe that one reason may be found in great part owing to, as in dog show circles, the trials becoming simply the stamping ground for large kennels, controlled by the best or most fashionable trainers, and the one dog man thinking rightly or otherwise that he stands no show of winning. In the All-Age entry, received too late for last week's issue, we find out of 34 entries, 17 are entered from five kennels, including the one dog entered by Messrs. Avent and Hitchcock. This year we notice the Blue Ridge Kennels are conspicuous by their absence. The reason for the abandonment of the Ohio Field Trials shows deplorable lack of interest in what may be termed the amateur ranks. In this connection it would be interesting to know what becomes of the dogs that one hears so much about in the early spring as candidates for the fall field trials, but which somehow do not materialize when the entry forms are scanned. Perhaps they join the great army of plug dogs, who knows! The interest in the trials in the East seems to have been almost entirely shifted to the U. S. Trials, whose entry is the bright particular star in the field trial firmament this year. Perhaps that deliberate body the Senate has something to do with the collapse of the promised boom in field trials, we trust that this may be the only cause and that when the financial clouds roll by the entry in 1894 may make up for the deficiency in 1893.

## Providence Dog Show.

The premium lists of the Rhode Island Poultry Association are now ready. The show will be held Dec. 12 to 15, in the Music Hall, Providence. Mr. J. Otis Fellows will judge. Premium lists will be mailed on application to Mr. H. S. Babcock, Butler Exchange, Providence, R. I.

While out exercising the other day Mr. Ed Brooke's otter hound dog struck a fox trail and has not been heard from since. Mr. Brooke thinks he will turn up eventually, but if he does not he still has the bitch, and she is in whelp.

Mr. Mortimer using the brush on a Yorkshire is rather a novel sight, one generally associates him with pointers or collies or wire-haired terriers. Before the meeting of the A. K. C. he showed a very dainty little silver Yorkshire that he had just secured for Mr. This. Terry, through F. Senn. It was imported recently and has a more than ordinarily long coat.

Mrs. Cleveland has an uncle running a celery farm in Michigan, and to him she ships all the dogs and other beasts sent to her as presents. The Michigan uncle stood it for a while, and then became quite generous himself in the matter of making his friends presents of dogs. He says he prefers to continue in the business of raising celery rather than to be keeper of the Administration hounds and board them himself.—*New York Commercial Advertiser.*

## Mastiffs for Holland.

It is not often we hear of American bred dogs being sent abroad and especially to the land of schnapps and of canals. Dr. Lougest, the well known mastiff breeder, has, however, recently shipped two promising pups by Ingleside, Maximilian out of Gerda II., to a purchaser in Rotterdam, Holland. The doctor's kennel is evidently acquiring a world wide reputation.

Mr. W. C. Ehrman, Spratts Co.'s energetic biscuit pusher, has been making a most thorough visit to all the leading kennels in the East during the past month, and he reports the dogs doing well on "Spratts." In fact, there is scarcely a kennel in this section of the country that does not use Spratts biscuit to more or less extent, being assured of generally finding the same food at the shows which, as those who know how biscuit often affect dogs at shows, will readily admit is an advantage.

If breeding tells, Mr. N. Wallace, of Farmington, Ct., has a litter of English setter pups that should prove valuable in the field. They are by Antonio out of Maud Noble, whose parents were Roderigo and Bo-Peep and Rowdy and Pear Noble respectively. Antonio and Rowdy Rod are four-hour race winners.

We stated recently that it was probable that A. M. Hughes would take charge of Mr. Reick's kennel, and now we are pleased to state that such is the case, and from what we know of Mr. Hughes the move is a good one, and the dogs will soon be looking as their owner would like to see them. We are also more than gratified to know that it is far from Mr. Reick's intention to leave the St. Bernard fancy. Although Sir Bedivere has been sold, the New York St. Bernard Kennels still have a very strong hand, and, judging from a letter from Mr. Hughes, it will not be his fault if he does not, as he tenderly puts it, "steer this beautiful 'barque' safely to the land of promise."

It is reported that Professor Batchelder, the well-known trick dog circus man at our shows, is dead. We have an inquiry from a show secretary, and would like to know if the rumor is true; and if not, his present address.

## Newark Show.

One of our oldest mastiff breeders, Mr. Herbert Mead, will be the judge of this breed at the N. J. K. L. show this month. Mr. Mead has judged before, having, we believe, officiated at New York once. He is the secretary of the American Mastiff Club, and his kennels are at Lake Waccabuc, N. Y. The A. M. Club will offer two of their cups in honor of the occasion. Mr. Mead used to exhibit five or six years ago, but of late years we have seen nothing from his kennels, so can form no opinion of the style of mastiff he favors.

We understand that Spratts Co. is making a thorough investigation into the circumstances attending the death of Mr. Nim's pug dog. According to "Tale Teller" in *British Fancier* the dog was playing about the ship, and put into his box apparently in perfect health the night before he was found dead on the following morning. In calling to mind the case of a St. Bernard shipped to Canada recently, and in whose stead a mongrel was delivered, the idea occurs to one: Did Dong really die?

Col. John E. Thayer's coaching party of Oct. 25, came near resulting fatally. Col. Thayer and a party of friends, including his brother, Bayard Thayer, were returning to Lancaster Mass., from a game dinner at Rutland, and at Brooks Station the coach was drawn up in front of the track to allow a train to pass. The leaders became frightened and plunged on to the track directly in front of the engine, which fortunately was running slowly. A footman ran to the horses' heads and was picked up by the cowcatcher of the engine, but one of the horses was caught in the engine and hurt so badly,

it had to be shot. The footman escaped with a few bruises. Mr. John E. Thayer was driving. We don't want to lose such good and true fanciers and sportsmen as John E. and Bayard Thayer, and though they say a miss is as good as a mile, in a case like this we would rather take the mile.

English Kennel Club Show.

The entries for the show of the year in England, the Kennel Club show at the Crystal Palace, London, which took place last week, numbered 2,297, which marks the record so far in kennel annals. As this is such an unusual entry we may be pardoned for giving the list by breeds. In point of quality it is expected to outstrip any previous effort of the K. C. Barn Elms show in 1887 is said to be the next largest show held by them. The large entry of fox-terriers is accounted for from the fact that it is also the show of the London Fox-Terrier Club, their classes being confined to members. That only four Italian greyhounds should be entered is most peculiar, and mastiffs do not seem to be well represented. The list is as follows: Bloodhounds 53, mastiffs 29, St. Bernards 145, Newfoundlands 50, great Danes 46, Irish wolfhounds 11, deerhounds 56, borzois 24, Chou Chous 11, foreign dogs 23, greyhounds 20, pointers 49, setters 83, retrievers 80, spaniels 125, collies 134, old English sheep dogs 26, beagles 27, basset hounds 35, Dalmatians 10, poodles 23, bulldogs 65, bull-terriers 35, whippets 18, Airedales 35, fox-terriers (smooth) 226, fox-terriers (wire) 125, Welsh terriers 52, old English terriers 12, dachshunds 90, Bedlington terriers 13, Irish terriers 121, black and tan terriers 26, white English terriers 13, Skye terriers 46, Scottish terriers 61, Dandie Dinmont terriers 56, Pomeranians 31, schipperkes 35, rugs 55, toy spaniels 66, Japanese spaniels 15, Italian greyhounds 4, toy terriers (smooth) 19, toy terriers (rough) 28. Total, 2,297.

Sale of Fox-Terriers.

Some good bargains in fox-terriers have been picked up at the Rutherford sales, which are generally held during the New York dog show. To make room for young stock there will be another sale at auction held Nov. 17 at the American Horse Exchange, Broadway, New York. We need scarcely say that the fox-terrier blood in this old established kennel represents the very best strains.

The Duchess Kennels have sold the well-known St. Bernard Ellen Terry to Messrs. Woodin & Hoyt, Berwick, Pa.

Ohio Field Trials Off.

*Editor Forest and Stream:*  
A meeting of the Ohio Field Trial committee was held at the office of the secretary in Canton, O., on Saturday last, to discuss the prospects of their trials, entries, etc. In referring to the entries, it was found that the amount received for the Derby entry was far short of the advertised stake—\$500. A vote was taken as to whether the members should make good the difference.

The present hard times and stringency in money matters compelled a majority to vote against the proposition. This left no alternative but to declare the trials off until next year. A vote of thanks was tendered to all patrons of the club, whose fees will be returned at once. JOHN BOLUS.

Grade Entry Fees.

*Editor Forest and Stream:*  
Have just received the premium list of Newark show, and I think it about time that shows which charge the same entry for small dogs as large dogs should give an equal premium. One dog costs as much as another to bench, and no more, usually \$1.25 to \$1.50 per dog for benching and feeding. Why they should discriminate is beyond us. I can give a good entry but shall not, only picking out two or three. I am not taking challenge dogs for \$5 and put up a \$3 fee, as \$2, provided the dog wins, will not pay traveling expenses; and \$7 as against \$12 in various other breeds that have no more and not so many entries in other classes, is absurd. CHAS. N. SYMONDS.

SALEM, MASS., Oct. 23.

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.

J. K., Tuscarora Park, N. Y.—Has a greyhound ever been known to follow a hare after losing sight of it? Ans. Greyhounds have been known, when put on the fresh scent of a hare to put nose to ground and hunt out the trail in all its turnings after the manner of the beagle. The greyhound has the power of scent only in a modified form, owing to the contracted formation of head and jaws and owing to the sense having been kept in abeyance by disuse. Once unsighted the average greyhound stops or makes short jumps to one side or the other in his endeavor to sight the game again. A greyhound that would use its nose is not desirable—he would be too wise and soon run cunning.

C. H. D.—You kindly tell me what to do for my Scotch terrier's eyes? My coachman rubbed some diluted carbolic acid on the dog's head (to cure mange), and the acid has probably got into his eye. The glassy portion has a blue scum, or perhaps dimness would better express it, on it, and the eye is weak. Ans. Use the following drops:  
R Cocaine hydchlor.....gr. vi  
Atroph. sulph.....gr. ½  
Aq. distil.....3 ss  
Mix. Gutt.  
One drop to be placed in the eye four or five times a day.

J. M., Marlboro, Mass.—The beagle bitch Beauty was entered at Toronto and Providence under the ownership of John Mullane, Peabody, Mass., and as the rules of the shows state that all dogs must be the bona fide property of the exhibitor we suppose the bitch is owned by said John Mullane. It was claimed, however, at the Providence show that Beauty was really Baby Deane, who was lost by Mr. W. S. Clarke in 1890. Whether this is the case or not we of course do not know, and the burden of proof lies with Mr. Clarke. Mr. Clarke's address is Linden, Mass. We do not see the drift of your query.

SUBSCRIBER, Lansingburgh, N. Y.—I have a setter, eleven weeks old who fell one day, and now his right paw turns directly to the right, he does not limp, and his leg is not out of joint; is a finely bred dog, and I would not like to have him grow up deformed. Is there any thing I can do for him? Ans. It is difficult to advise in a case of this sort. Why not consult a veterinarian? There may be a fracture or dislocation.

H. W., Monticello, N. Y.—I have a pointer pup, 11 mos. old, apparently in the best of health; skin does not itch or seem unhealthy, but his hair comes out very badly. Ans. Treat for worms. Wash twice a week in a solution of creoline (oz. to a pail of warm water).

C. H. R., Tuscola, Mich.—No. 31,001 will be published in the A. K. C. Stud Book for 1893, and of course is not issued yet. If you write to the secretary of the American Kennel Club, 44 Broadway, New York, he will be able to give you the particulars.

W. C., Barnegat, N. J.—Our kennel advertising columns contain notices of foxhounds for sale that will run both foxes and hares.

A NEW-SUBSCRIBER OFFER.

A bona fide new subscriber sending us \$5 will receive for that sum the FOREST AND STREAM one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals. For \$3 a bona fide new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Fleet's handsome work, "Bird Portraits for the Young" (the price of which is \$3).

Hunting and Coursing.

FIXTURES.

Oct. 31.—The Cowley County Coursing Association, Winfield, Kan. J. R. Ballard, Sec'y.  
Nov. 1.—Western Kansas Coursing Club's meeting, at Leoti, Kan. W. D. Allphin, Sec'y.  
Nov. 7.—New England Beagle Club's Trials. W. S. Clark, Linden, Mass., Sec'y.

National Beagle Club Trials.

NANUET, N. Y., Oct. 30.—The fourth annual beagle trials of this club commenced to-day. The headquarters of the club are at the house of Mr. H. L. Kreuder, the president. All the dogs were on hand this morning with the exception of four out of the thirty-eight entries. The morning was devoted to measuring the dogs and drawing for class A. A number of sportsmen were present, among them being J. W. Appleton, H. F. Schellhass, John Bateman, H. L. Kreuder, Geo. Laick, Geo. W. Rogers, F. W. Chapman, H. V. Jamieson, Pottinger Dorsey, C. Staley Doub, A. D. Fiske, Geo. F. Reed, Mark Lewis, C. W. Qumby, H. W. Lacy and judges Bradford S. Turpin and Jos. Lewis.

The draw for class A resulted in:  
H. L. Kreuder's Fanny Racer with Glenrose Beagle Kennels' Gypsey A.  
Pottinger Dorsey's Rambler with E. J. & J. W. Becker's Halcyon.

George Laick's Trifle II. with Middleton Kennels' Model.  
Pottinger Dorsey's Venus II. with Forest Beagle Kennels' Vick R.  
Waldingfield Kennels' Oracle with H. L. Kreuder's Jack Bannerman.

Guy D. Welton's Joe with Pottinger Dorsey's Wanderer.  
Middleton Kennels' Snow with H. L. Kreuder's Grayburn Daisy.

Pottinger Dorsey's Buck with Waldingfield Kennels' Lufra.

Thus 16 out of 19 filled, the absentees being Glenrose Kennels' Marguerite and Mr. T. Terry's Millard and Glory. In the Champion Stake Lee II. is absent.

After lunch a start was made near the house, and first brace,

FANNY RACER—GYPSEY A. were cast off at 1:50 in a thick swamp, Fanny handled by Mark Lewis and Gypsey by her owner. Both worked merrily in search of a trail, but were taken up after 20m. hunting without a find. Cast off again in small swamp, where Fanny jumped a hare, but they did not run long before they were at fault. Some back trailing was then indulged in, in which neither had much advantage. Judge Lewis put up a hare which, however, was soon lost in a wall. Dogs called off, and going through thick swamp Fanny started another hare, but dogs could not follow. Up at 3:10; Fanny having the best of the heat.

RAMBLER—HALCYON.—Cast off at 3:18 in swamp. Rambler handled by owner, Halcyon by Wm. H. Hyland. Working to higher land a hare was started by Mr. Hyland. Halcyon saw it and was quickly on, but soon yielded the lead to Rambler, who likes a hot trail, which he followed at a great speed. Working hare to cornfield, the dogs were tried for gunshyness and both hesitating a little; game was soon after lost. Another rabbit was started, and Rambler carried it across a field at good pace, but lost in stone wall. Nothing more found and dogs up at 4:40 P. M. Rambler had the advantage in pace and range.

TRIPLE II.—MODEL.—Cast off 4:47, and after hunting forty-five minutes without a find they were called up and will be the first brace down in the morning.

The hares seem scarce where they were rather plentiful last year, and it is to be hoped that game will be more frequently started, or the trials will not be very satisfactory, as the short runs of a hundred yards at long intervals scarcely give the judges time to form an idea of the dog's capabilities. The weather was typical of a late October day, dull, gray, cold and without a breath of air. H. W. LACY.

The Winners at Goodland, Kan.

THE competition at the meeting of the new Kenmore Coursing Club at Goodland, Kan., was stronger than at Huron, S. D., for the reason that the dogs had been given more time for preparation, the grounds were more even and the hares stronger. Some of the dogs, perhaps, were a bit out of condition from neglect on the part of their trainers to give them the work they actually needed. It is not wisdom to require one man to handle too many dogs at a meeting or in preparation. It is very hard work to thoroughly fit up a greyhound for a coming meeting and keep him in the pink of condition through two or three meetings. Three, or at the outside four dogs is all one man can handle.

It was quite noticeable that the Landseer Kennels' dogs, practically handled by J. R. Cochran under Dr. Van Hummel's watchful eye, were in fine fettle, also kept so through the meet. The Doctor has very practical notions about training, and this has undoubtedly carried him through to victory in so many instances.

Mr. H. C. Lowe has shown an improvement in his methods of training, and this season has brought his dogs to the slips harder and with less flesh than formerly, and as a consequence has gone to the front. In his White Lips stock he has some of the best greyhounds in America, and if they can be bred on good killing and staying stock they can beat the world. They have the speed, close working qualities and the right kind of a spirit.

The Maybrook Kennels have the blood of the best, but they need a longer sojourn in the Western country and more work on the long hares. They need more killings. Miss Dollar ran a grand course, but lost her head, as the result of too little experience. Conditions are everything for a greyhound. He cannot be pampered for ten months of the year and then be made fit to win in a bare two months in a new climate. They must in a measure be acclimated and inured to a measure of hardships. A dog lying around a kennel covered with a blanket constantly, in a climate like our Western country in the autumn, cannot be kept fit. Take some of this fast stock, let them lie about the farmers' hay stacks, go about with the farmer and be given their liberty, and they can kill off and defeat honestly nine out of ten of their pampered brothers.

The St. Patrick Kennels, of Denver, Col., are what you can call hard trainers, but their dogs stand grief all the same. They are judiciously mixing in new blood and if kept on the same line will be hard nuts to crack the next few years.

We were pleased to see a new acquisition to the ranks in the Scout's Rest Kennels from Nebraska. The practical men that brought the dogs to the front are Mr. E. H. Shaw, the Melton Bros. and Messrs. Sweet, Drummond and Cochran, all of Wallace, Neb. They have the blood of Dingwall, Miss Kitten, Babazon, Lady Iliffe, Glendyne and Daisy Dublin, in their kennel, and no better mingling of speed, stay and beauty can be found in this country, and although they did not get a piece of glory this year, look out for them in '94. They promise a rousing meet in Nebraska another season, probably will have a spring meet. Good blood is getting plentiful and if all prejudice and jealousy could be laid aside and proper selection and mating be practiced we can jump to a level of the Waterloo winners in a very short time.

Sending across the water is proper enough, but it takes a couple of years to breed up and adapt the imported dogs to our climate and methods.

Coursing is going on gloriously and we hope to see many valuable additions the coming year. Eastern men can scarcely measure the value of a few weeks' outing in the West in attendance on these coursing meetings, and as they find out its merits, coursing will absorb other less interesting and much less honest recreation.

The Goodland people take a practical interest in the sport, and before the night of the drawing organized a kennel club, purchased four greyhounds of the Waterloo Kennel and will be "strictly in it" another year. They show the right kind of metal and their little town will get honors for her pains. It is a very suitable place to hold a meet. Rhea, by Major Glendyne—Daisy Dublin, one of their purchases, won third money, notwithstanding she broke her leg in April of this year.

The winners of the two stakes at Goodland, Kan., went to their places on merit, although we disliked much to see a dog like Light Foot take the place he did.

Nancy, the winner in the Goodland Stake, is a very plain bitch, dark brindle in color, and will weigh about 50lbs. She has a rather neat head, but a sheep neck, straight in back, with a coarse tail, badly carried. She is, however, put up strong, good bone and good legs and feet. She goes away with a sprint, keeps close on her hare and shows more stay than the average of Mr. Lowe's stock. She is by Lord Never-settle out of Partera and is a bit over two years old. She showed condition which reflects credit on Dr. Van Hummel and Mr. Cochran, who did the hard work on her.

Light Foot, the runner-up, is a plain, light red dog, weighing 60lbs., strong made and resolute. He goes out of the slips slow, but "gets going" after a time, and if on a long hare works down his opponents. He was bred from a brother and sister, son and daughter of Trales, out of Arthur Massey's Gipsy, a native-bred bitch. His hardness, strength and staying powers wholly disprove the theory that inbreeding is injurious. It is a necessity, and a little more of it would give something sure and not so many experiments.

St. Lawrence and Mellita, the dividers in the Kenmore Derby, are brother and sister, same litter, by Lord Never-settle and that queen of greyhounds, White Lips. St. Lawrence is a black and white, nicely and showily splashed, strong, neat and symmetrical. He goes away in the same style as all of the White Lips stock, a sort of gallant rush that takes him to his hare in beautiful style. He holds close to his hare, and promises to make a killer if Mr. Lowe will give him a few more hares. With dogs of his spirit there is very little danger of giving them too many hares. They must have the kills to give them experience.

Mellita is a black bitch with white toes and small splash on her breast. She is good size, probably 55lbs. in weight, rather more rangy than most of the White Lips stock, but this seems to give her a longer stride. She has the same whirlwind go to the hare, steadies herself for the kill and comes again quickly, scarcely letting her opponent in. She is probably the best bitch from the cross of Lord Never-settle—White Lips yet bred by Mr. Lowe. She and St. Lawrence only lacked a few days of being 18 months old, which probably gave them a decided advantage, as three months on a young dog tells when heavy work is before him.

The Dingwall pups were only 15 months old, but they are clippers and no mistake. Another year look well to their work. Who can predict what position coursing will take in the world of sports in the next five years?

GEORGE IRWIN ROYCE.

National Beagle Club Meeting.

THE annual meeting of this club was held at the "Kreuder Homestead," Nanuet, N. Y., Oct. 30, at 8:15 P. M. Present, President Kreuder, H. F. Schellhass, J. W. Appleton, Geo. Laick, H. W. Lacy, G. W. Rogers, F. W. Chapman, H. V. Jamieson. Treasurer's report showed a balance on hand of \$31.29. Mr. Schellhass was asked to communicate with Mr. W. H. Child regarding his resignation. Mr. Kreuder reported he had forwarded the Lee II. special to Mr. Dorsey, who was well pleased with it. Mr. Henry Hanson's resignation was accepted. Application by the New Jersey Kennel League for special at Newark show was not granted owing to expenses incurred by field trials now being held. Mr. A. Wright Post was proposed for membership by Mr. Laick and accepted. Election of officers then took place and resulted as follows: President, H. L. Kreuder; First Vice-President, J. W. Appleton; Second Vice-President, H. F. Schellhass; Third Vice-President, Geo. W. Rogers; Secretary-Treasurer, Geo. Laick; Executive Committee to serve with above officers: John Bateman, George D. Post, Jr., and Edwin M. Field, M.D. H. F. Schellhass delegate to the A. K. C. for 1894.

A motion was made that the secretary should not be allowed to furnish reports of meetings to the press. This was lost, and Mr. Kreuder moved that the secretary use his own discretion in this matter, but that he be instructed to ignore the first and second requests for reports from papers that can otherwise secure reports. Carried. Meeting adjourned 10:20 P. M.

Field committee then held a meeting. It was voted that a dog or bitch must have won a first in the open class before it can run in the champion class.

Voted that judges should be instructed to award "Reserve" to the next best dog to the money winners in each class. Adjourned 10:50 P. M.

Western Massachusetts Fox Club Hunt.

THE sixth annual hunt of the Western Massachusetts Fox Club will take place at Westfield, Mass., Wednesday and Thursday, Nov. 15 and 16. The huntsman's horn will sound at 5 o'clock Wednesday morning for breakfast. At 6 o'clock carriages will be ready at Park Square Hotel, to carry the hunters to the grounds. Supper will probably be served in the Town Hall at 6:30 P. M. or after the hunt. It is expected that a much larger number of the members of the club with friends will be present than last season. Some twenty-five or more members of the Brunswick Fur Club have informed President Roraback of their intention of being present and participating in the hunt. It is to be hoped that the clerk of the weather will provide the club with unclouded skies, which was not the case last season, and proved quite a serious drawback to the success of that hunt. There need be no question as to the result of this season's hunt, as the woods are full of foxes awaiting the invasion of the hounds and hunters. WORONOCO.

WESTFIELD, MASS., Oct. 27.

Fox Hunting at Worcester.

THE Worcester Fur Company will hunt the North Grounds on Thursday, Nov. 2. The club headquarters will be established at the Lincoln House on Wednesday evening. The horn will sound the assembly of huntsmen at 5 A. M. on Thursday and breakfast will be served at headquarters. Guests and members will be transported to the hunting grounds in barges, leaving the hotel at 6 A. M. sharp. The meet will be at the historic Heywood Farm, on Burncoat, and the hounds will be cast off at 7 A. M. on Bond's Hill, Sewell's Hill and East Ridge. The annual club dinner will be served at the Lincoln House, at 7:15, Thursday evening. Visitors are asked to inform the secretary, Mr. Guy C. Whidden, Worcester, Mass., if they intend joining in the sports. The M. F. H. is Mr. Addison C. White.

Mr. T. J. Webster, secretary of the Kenmore Coursing Club, we regret to say, was taken ill the first day of the Goodland meeting, and compelled to return home. He is now better, but will not be able to do the Winfield meeting, as intended.

## COURSING AT GOODLAND.

**The Kenmore Coursing Club's First Meeting.**  
GOODLAND, Kan., Oct. 17.—The initial meeting of the Kenmore Coursing Club has clearly demonstrated the fact that there are hundreds of places on the Western prairies where a coursing meeting can be brought off, and it really seems that every new place chosen proves to be a better one than the place where the previous meetings were held. The onward march that coursing is making in this country has received an impetus through this meeting that perhaps will carry it forward more rapidly than any influence it has had, not excepting the big international held at Huron.

Goodland, Kan., where the meet was held, is in Sherman county, near the western border of the State, on the grandest of all railroads, the Rock Island. It is a neat little city of 2,500 people and is the headquarters for this division of the Rock Island. Its road house and shops are quite a feature of the place, and it has waterworks and other advanced improvements. It is made up of a select element of the active young people from the eastern part of the State and many are from Illinois, Indiana, Ohio, etc., which give it a refined and civilized look.

The people are active, generous to the fault and have thoroughly captured the hearts of the coursing men, and unless, as at Great Bend, they eventually think that they are indispensable to the club, the meetings may be held here indefinitely.

The city was agog on the arrival of the coursing men and the citizens had arranged a reception and banquet in honor of their guests. The drawing was done at the banquet in the Opera House, preceded by an address of welcome by the Mayor. Toasts were responded to by "Our Visitors," J. H. Stewart; "Kenmore Coursing Club," Dr. Q. Van Hummel; "Coursing as a Sport," Dr. Royce; "The Sporting Press," Basil Hayman; "Goodland and her Jack Rabbits," M. A. Rush. The banquet was followed by dancing till a late hour.

The grounds where the coursing is done are the vast level prairies which extend from the suburbs, and you can course for miles without the least interruption or annoyance in the form of wire fences or other obstruction. The soil is a sort of loam which crumbles under the dogs' feet, and that with the soft buffalo grass makes a model footing for them. Fortunately the dogs incurred no injury further than that two of the dogs had a couple of nails torn off, which perhaps injured the chance of Light Foot in the last course.

The first two days the weather was delightful and cool with a pleasant breeze, but the third day it was quite hot, but not enough to distress the dogs, and barring the death of Touchwood III., the first day, none of the dogs were in the least injured. After his course with Battle Royal, Touchwood seemed to be much distressed and died in a few hours. He was owned by Nelson P. Whiting, of Minneapolis, Minn., and was imported by him. He would have been a valuable dog in the stud for this country and it was a great pity that his death had to be recorded.

Mr. Bradbury, of the Maybrook Kennels, was unfortunate in losing a very fine puppy, purchased of E. H. Mulcaster, at Huron, S. D.

While out in the yard, she jumped against a pitchfork that had been carelessly thrown into some loose hay in the yard, one of the tines penetrated the heart and she died suddenly. She was a promising youngster by Glenkirck ex Gilda.

The judging was done by Mr. E. H. Mulcaster of Wisconsin, and gave almost universal satisfaction. The courses were many of them long grueling ones, but were nearly all ended by kills or by the hares going in holes, which is quite a common thing for them to do on these open buffalo-grass prairies, while in the eastern part of the State it is a very rare occurrence. They were about equally divided—white tails and black tails—although the white tails are rather in the majority. There was no scarcity of hares, sometimes three jumping away at a time, but in no instance did they separate the dogs. They are big, strong fellows, and start away as independent as you please but soon strike their stride and are away.

Although there were at least a thousand people on the grounds each day, perfect order was preserved throughout, and great credit is given the people of this locality for their courtesy and great interest taken in this greatest of all sports, coursing.

The slippage was done by Ralph Taylor, of Colorado Springs, a son of Col. Taylor, of Emporia, Kan. He gave good satisfaction, some expressing themselves so strongly as to say he was about as good a slipper as they had ever seen. He is a great walker and fairly kept the horses on a trot the day through. He is just from office work, and how he could stand the three days' work was a mystery.

The club is looking forward to a spring meeting, and if so it will likely be held about April 15.

At the regular meeting of the club the officers elected for the ensuing year were: President, Dr. Q. Van Hummel, Indianapolis, Ind.; Vice-President, M. B. Tomblin, Goodland, Kan.; Secretary, C. F. Weber, Goodland, Kan.; Treasurer, H. C. Lowe, Lawrence, Kan.; Executive Committee, J. Herbert Watson, Brooklyn, N. Y.; H. C. Lowe, Lawrence, Kan.; T. W. Bartels, Denver, Col.

Action was taken whereby the constitution and by-laws of the American Coursing Club should be adopted, substituting the name Kenmore for American where it appeared, and that the executive committee be empowered to make such alterations as it deemed necessary and to report the same at the next regular meeting.

A very important step was taken in the adoption of the following:

Moved that the Kenmore Coursing Club adopt the rules of the National Greyhound Club, with the following modifications, that wherever the name of the National Greyhound Club appears in said rules there shall be substituted therefore the name of the National Coursing Board.

Some of the prominent coursing men from abroad were: E. H. Mulcaster, Fox Lake, Wis.; Dr. Q. Van Hummel, Indianapolis, Ind.; Mr. Bradbury, of the Maybrook Kennels, Dover Plains, N. Y.; T. W. & S. F. Bartels, Denver, Col.; H. C. Lowe, Lawrence, Kan.; D. C. Luse, Great Bend, Kan.; Sam. W. Vidler, Colorado Springs; Ralph Taylor, Colorado Springs; J. R. Cochran and Dr. Miller, Winfield, Kan.; E. H. Shaw, W. N. Sweet, F. Drummond, S. Melton, A. Melton, G. Cochran, of Wallace, Neb.; M. Barrow, of Denver, and Dr. Geo. Irwin Royce, Topeka, Kan.

The meeting has proved a grand success, there never having been a meeting held with less friction. All leave for their homes to enjoy in memory the happy scenes on the prairies surrounding the pretty little city of Goodland, the home of the rain makers.

The club having done away with the per cent. plan, taken from the winnings, happily came through with \$78 in the treasury, and \$30 still owing them, with all expenses paid to date. There is no good reason why a club cannot be managed so that everything can be done on business principles. The future of the club is very bright.

The charter members of the club are: Dr. Q. Van Hummel, Dr. A. C. Cattanchi, Denver, Col.; H. C. Lowe, Lawrence, Kan.; D. C. Luse, Great Bend, Kan.; Dr. N. Rowe, Chicago, Ill.; J. Herbert Watson, Brooklyn, N. Y.; J. R. Cochran, Winfield, Kan.; Roger Williams, Lexington, Ky.; Nelson P. Whiting, Minneapolis, Minn.; M. B. Tomblin, C. F. Weber, Goodland, Kan. St. Patrick Kennels, Denver, Col.; Maybrook Kennels, Dover Plains, N. Y.; Scout's Rest Kennels (Buffalo Bill's), Wallace, Neb.; E. H. Shaw, Wallace, Neb.; Michael Allen, Chicago, Ill.; Geo. Irwin Royce, Topeka, Kan.

D. C. Luse, C. M. Bradbury, of the Maybrook Kennels; J. R. Cochran and F. H. Mulcaster, went to Leoti Saturday morning to attend the open meeting held there Oct. 24. Mr. Mulcaster will judge and Mr. Cochran will slip.

## Goodland Stakes.

**LAUGHED AT—ROOK.**—The first brace was placed in the slips at 10:30, about four miles from the city. Laughed At led from the slips three lengths to the hare, worked up several points, turned the hare, served himself, and went on working a number of points, when another dog joined in and killed, but it in no way altered the course, as the victory was a decisive one for Laughed At.

**LIGHT FOOT—VIOLA.**—Viola led up to the hare just as it had stopped to look around, but puss soon got away at a terrific pace, the bitch scoring several wrenches and a turn, from which Light Foot took advantage, carrying the hare away for some hot work, bringing it back toward the spectators he let Viola in for a go-by on the inner for a meritorious kill, but the dog had won handsly.

**REAR ADMIRAL—DRYTIME.**—From a good slip Rear Admiral drew away to the hare three lengths to the good, wrenched rapidly, turned to Drytime, and she looked well to her advantage and scored like a witch, but getting pumped out let Rear Admiral in for a go-by, the bitch stopped in the course, but the hare had clearly outfooted his pursuers and escaped. Rear Admiral won.

**TOUCHWOOD—BATTLE ROYAL.**—Battle Royal acted badly in the slips, and several hares getting up kept Taylor busy to get them sighted, Touchwood pulling into the slips until he was quite choked, but a hare coming close Battle Royal caught sight and they went away with Touchwood well in the lead, reaching his hare four lengths before Royal. He wrenched several times and turned to Battle Royal for a good sequence of points. Touchwood, showing distress, stopped. When taken up he was in bad condition and died in about five hours, evidently from congestion of the brain—possibly from rupture of a blood vessel.

**PRINCESS MAY—LADY IN BLACK.**—May showed herself a whirlwind from the slips, working like a demon on a strong hare, entirely shutting out Lady in Black.

**BENNAIRITA—BOOMERANG.**—To a short slip the brindle had a shoulder the best of it to the hare, turned to Boomerang

MR. H. C. LOWE WITH PRINCE CHARLIE AND PRINCESS MAY.  
International Meet, Huron, South Dakota.

and he, making a game effort for a kill, flected the hare lightly, but coming strong made a grand kill. We would have been pleased to see the hat come off. The slip was short and the margin was very small if any.

**ROYAL CREST—JEFF.**—Two hares got up just as they were slipped and Jeff pulled away slightly from the one Crest was pursuing, which gave Royal Crest a good lead up and some nice work before Jeff began to score, but this country dog, hard as nails, having killed over forty hares since September, had got too wise, and after scoring strongly quit dead, but seeing his master again went up and being placed by Crest scored several wrenches and a turn, but quit again, being too cunning for public coursing. As usual in these cases Jeff's owner made a pretty strong kick, being wholly ignorant of the rules, but an explanation was taken in a good spirit and settled for all time, a good precedent. The hare went to a hole. Royal Crest won.

**WHITE LADY—WILLY NILLY.**—White Lady went a merry clip to the hare, having three lengths in his favor, Willy Nilly running a very erratic course. White Lady let up her speed after scoring strongly, and let Willy Nilly in for a turn, but the hare outpaced them for safety and took to a hole. White Lady won.

**WOODFORD BOY—MISS DOLLAR III.**—Miss Dollar fairly smothered Woodford Boy, doing some very pretty work, only letting Roy in for a turn. Again getting possession, Dollar carried the hare back through the crowd for a beautiful kill.

**RHEA—LIVING YET.**—To a neat slip they went away like a double team, Living Yet showing a shoulder to the front, turning his hare to Rhea. She took up the work with a vim, never again letting Living Yet in for a point and killing in capital style, won.

**NANCY—BELLE OF ELTHAM.**—Mr. Luse showed a confident face as he took Belle to the slips, but she was scarcely in it with the little brindle, who in a short course scored a decisive victory, killing in pretty style.

**VAN'S PETER—VOLTAIRE.**—Peter led to the hare in a long run-up, wrenched repeatedly, turned the hare to Voltaire for a driving course down a hard road to an old sod shanty, round they went three times, the hare looking for a safe retreat among the sods lying loosely about, but they were too speedy for bunny, and again they went away for a lot of hard work, and Peter killed and won. Peter showed an inclination to lay up his speed a bit, having a bad toe, but ran gamely on to the finish.

**GREENSHINE** ran a bye with Mr. LeMoynes's Lord Neversettle—Partera dog that was sent from Denver too late to enter the stake, and it was well he did for the sake of the other entries, for he simply snuffed out Greenshine. He is a *fac simile* of Master Peter, but a trifle smaller. Had he been in good hands and well fitted he would have done some grand work.

This finished the first round, and the first round of the Kenmore Derby was run off.

## Kenmore Derby.

## First Round.

**MISS CODY—BEAU BRUMMELL.**—Considerable interest attached to this stake when the first brace were placed in the slips, one of them being from Dingwall and Miss Kitten, the pair imported by "Buffalo Bill." Beau Brummell showed to the front in an instant, got over his hare and it was hard to displace him; he worked up a good string of points, when Miss worked for a go-by on the shorter circle, made a phenomenal dash to kill but missed her mark and getting back, repeatedly made most supreme efforts, but the big white-tailed hare kept them busy guessing. The dog in the meantime made some masterly exchanges, the hare carrying them away for a two mile course; in an effort to kill, the bitch fell, forfeiting her chances, the dog going up for a half dozen points, drove the hare to a hole and won. Up to the time Miss Cody felt she had a bit to the good. A wonderful game pair of pups and hard to beat.

**FANNY—ST. LAWRENCE.**—St. Lawrence never gave the country girl a look in, the hare going to the brush on an old tree claim, and the dogs lost sight. St. Lawrence beat her pointlessly. Lack of education made the country bitch act badly and they were obliged to single slip them.

**BIRD'S EYE—WILLIS H.**—The little red bitch went out of the slips in pretty form, made a dash for the kill and tripped, but the cute white tail fairly slipped from her jaws and led them a merry dance, Bird's Eye having the best of it in some pretty exchanges, the hare gradually drawing away from them after a pumping course of two miles.

**BORDER RUFFIAN—BILLY TAYLOR.**—This was decidedly the prettiest course of the meet thus far. The dogs were a very showy black and white splashed, by Dingwall out of Miss Kitten, and litter brothers. They went out of the slips like meteors, and racing up to their hare whirled him about as fast as the eye could follow them. Billy Taylor had rather the best of the run-up, but the big brother would not be denied, and taking the work from Billy's turn steadied himself and held close to his hare for a dozen wrenches; at the turn Billy nicked in, and some beautiful and rapid exchanges took place, but the big white-tail had all confidence in himself and fairly played with the whirlwinds, and after nearly worrying them down worked for a hole. Border Ruffian laid up a bit, but soon came out again, but too late, as little Billy had the best of it and won. They were a good pair of representatives of a worthy sire.

After this course lunch was served in picnic style on the open prairie, without a tree or shrub to shelter us, but nature afforded a soft velvet carpet in the short, close curly buffalo grass. It was a most enjoyable feast, the keen air and long ride giving one a capital appetite.

**BEACONSFIELD—BOAL'S HOPE.**—Beaconsfield led to the hare, placed Boal's Hope, she turning to Beaconsfield, and the big red fellow made a masterly drive and overran his hare. Hope getting in wrenched strongly, taking the hare to a hole near the spectators. Beaconsfield stopped with the hare in full view. Boal's Hope won.

**MELITTA—BONNY BELL.**—Melitta went out of the slips like a rocket, carrying the hare along like a cloud. Bonny Bell trailing on gamely, and getting an opening went in for a grand kill of merit, but the black had a long string to her credit and won. A grand bitch and no mistake.

**BON BON.**—She ran a bye with Buearitta as helper, and a right able help she proved, for dashing in she killed in 300yds.

## Goodland Stakes—Second Round.

**GREENSHINE—LAUGHED AT.**—To a slip of 150yds. the dogs became unsighted, but Laughed At getting on the line of his hare raced up, and in the subsequent work held possession and made a grand kill and won.

**REAR ADMIRAL—LIGHT FOOT.**—Rear Admiral drew away on the outer circle, scoring four lengths to his advantage in the run up, held close to the line of his hare and wrenched several times, placing Light Foot in the turn, the red fellow holding the gift and adding to it. Good training showed its value, and the red won with much to spare. The hare went to a hole. Light Foot won.

**BATTLE ROYAL—VAN'S PETER.**—The annual squabble over an accident took place during this course. It seems that Mr. Lowe had requested Mr. Vidler, of Colorado Springs, to ride the course and assist in securing the dogs. He had a rather smart little pony, and the tricky hare coming back through the riders he was making an effort to hold up his horse when Van's Peter came round on the turn and brushed his hindquarters against the horse's leg, but was scarcely checked in his speed and did not receive any injury. It came near being a repetition of the Pearl of Pekin case. Summary measures should be taken to keep down careless riding. As a rule the owners of the greyhounds running keep too close up, leaving a grand opening for an accident. Lock the door before the horse is stolen.

**BATTLE ROYAL—VAN'S PETER.**—Battle Royal was unsighted from the slips, giving Van's Peter a strong run-up, several wrenches and a turn; coming again, he made a game dash for a kill, but only flected his game lightly, and going out wide let Battle Royal in for a lot of hot work, Peter's sore toe throwing him out wide in the turn, and although he drew off among the carriages could not wipe off the black and white's score. Battle Royal won.

**BOOMERANG—PRINCESS MAY.**—Boomerang had gotten away in the morning with the blanket on as the hare came down by the wagon where he was being held by his owner and made a strong course. In the meles he injured his ankle and as they went from the slips his crippled condition showed against him and his smart sister put it all over him in a pretty course, the hare being lost in a cornfield.

**WHITE LADY—ROYAL CREST.**—Royal Crest went out of the slips in his best form, beating White Lady very handsly to the hare and fairly smothering her. It was a long stern chase, the hare outfooting them. The black won with considerable to his credit. He has any amount of speed and at times works pretty close, but again will go out wide and let a very ordinary dog score on him. However, he is a valuable dog for coursing men, and if properly nicked will yet be heard from through his offspring.

**RHEA—MISS DOLLAR III.**—This was the neatest pair yet placed in the slips and acted in model style, both are good ones and go a clipping gait, so much was expected of them. To a model slip they went away together with Miss Dollar showing gradually to the front and reached her hare two lengths ahead of Rhea, but the little one would not be denied and taking up the work, some pretty exchanges to place, Rhea carrying the hare selfishly to herself down through a ravine, and as they raised the opposite bank, Miss Dollar took a cropper and stopped; Rhea carrying the jack away single-handed for two miles to a hole.

**NANCY** a bye.—Nancy was placed in slips with her big brother from Colorado for a bye, and the contests were over for the day.

It was nearly sundown and we were ten miles away from the town. It is wholly unnecessary to go so far, as hares are very plentiful near by. To-morrow the management promise to course much nearer home.

## THURSDAY.

## Kenmore Derby—Second Round.

**BEAU BRUMMELL—ST. LAWRENCE.**—There was considerable interest centering in this course as the black and white son of Dingwall was thought very fast and St. Lawrence had shown a fast clip. The big fellow showed his heels to Beau Brummell and landed his hare in masterly style, bringing

him around and placing Beau, but he was unable to keep possession, and St. Lawrence taking up the work was rapidly running up the points when Boal's Hope broke away from her trainer and raced after the hare with a long piece of rope attached to the collar. The victory was most decidedly in favor of St. Lawrence, otherwise there might have been complications. The owner of Boal's Hope was promptly fined \$5 for allowing the dog to escape. The rules are very strict in this respect and the management should be congratulated for taking prompt action.

**BIRD'S EYE—BILLY TAYLOR.**—Out of the slips they went away even, but the bitch had rather the best of it up, turned the hare to Billy, and then followed a bit of give and take, Bird's Eye making the kill and winning.

Through the courtesy of Mr. H. C. Lowe the bye was run out of the order of the running on account of Boal's Hope having gotten loose in the previous courses, and Melitta ran her bye with Lady of Fashion.

**BON BON—BOAL'S HOPE.**—Boal's Hope showed the effects of the extra course she had had but a few moments before, and went out of slips a bit stiff, Bon Bon leading up for a good run of points, but the little brindle warmed up and went in for a couple of wrenches and killed too soon. Bon Bon won.

Melitta ran a bye.

#### Goodland Stake—Third Round.

**LAUGHED AT—NANCY.**—In some unaccountable way Laughed At had received an injury during the night previous, the injury in the foreleg gave evidence of there having been some dispute in the barn. It was quite swollen, and he went to the slips on three legs, but when slipped he forgot that his leg was sore and went out like a rocket; but Rhea was sound and fast, and led him several lengths to the hare, and switched it about fearfully, the dog making a game effort to get in, but his leg led him out wild at the turns, and Nancy, sticking to her game like a leach, wrenched repeatedly and finally killed, beating the dog pointless.

**LIGHT FOOT—BATTLE ROYAL.**—Battle Royal had sprung a nail and was sore, letting the big fawn go up to the hare, but he soon came to himself and went away for some driving work, but failed to kill, and Light Foot getting in, scored repeatedly on a long-winded fellow of a hare and finally killed and won.

**PRINCESS MAY—ROYAL CREST.**—Princess May led up three lengths, made a game effort to kill, but missed her game and fell, sliding along on her side, but she was up and at him again before Royal Crest had scored very much, and getting in stayed in the line of her hare, bringing off a beautiful kill and won.

**RHEA A BYE** with Buenaritta, and receiving a good deal of help was saved from a grueling course.

#### Kenmore Derby—Third Round.

**BIRD'S EYE—ST. LAWRENCE.**—St. Lawrence went like a whirlwind from the slips, led up, wrenched several times and placed Bird's Eye, but she could not hold possession from the big fellow, who pell-mell forced bunny to a hole.

Another Dingwall pup against the stout son of Lord Neversettle and White Lips, and one by one they have gone down before him. Bird's Eye made a game effort, but it was of no avail. St. Lawrence winning a decisive victory.

**MELITTA—BON BON.**—There seemed to be but two strains left in the Dingwall—Miss Kitten and Lord Neversettle—White Lips, but the White Lips blood showed its superiority unquestionably, although three months in age would naturally give an advantage, Melitta being nearly eighteen months old. She took the matter into her own hands at once, and keeping possession ran up a good sequence and won in a decided manner.

#### Goodland Stake—Fourth Round.

**PRINCESS MAY—LIGHT FOOT.**—Princess May led four lengths in the run-up, turned the hare to Light Foot, but racing by, kept possession for a lot of work, but the demon of a hare was able to stay before them, and Light Foot that Princess May had worked down to his speed took up the work, and after a hard, long weary jaunt worked the hare down, but having sprung three or four nails became very sore and quite dead, allowing the bitch to go on and finish with a kill of merit, but the dog had scored too many for her and won the course.

**RHEA—NANCY.**—Nancy went with her usual fire, but Rhea showed the effects of the long course she had run the day previous, and the hare coming back toward the crowd spun around in a circle looking for his hole, but Nancy gave him little rest and he was kept guessing pretty lively. His cuteness, however, brought him near enough so that by a bit of strategy he made an opening, his heels twinkling in the sunlight, and, presto! the dogs were quite astonished as the rest of us at the sudden disappearance. Nancy won.

#### Deciding Course.

**LIGHT FOOT—NANCY.**—The dog having injured himself in the course before this, there was very little speculation as to the result, the more because Nancy was quite fresh.

Out of the slips she simply flew to the hare, ten lengths ahead of Light Foot, turned and came again, scoring like very mischief, but the hare being strong carried her away for thirty points, till the dog began to come to himself, when he took a hand, scoring a go-by, two wrenches and the kill. But the vast score Nancy had rolled up was a most emphatic victory. Heretofore some unlooked for mishap has generally marred the finishing course, but happily in this case not the least unpleasantness marred the pleasure of the day.

#### Kenmore Derby.

In the deciding course of the Kenmore Derby only St. Lawrence and Melitta were in, and both belonging to Mr. H. C. Lowe, they very properly divided the honors.

#### Goodland Stakes.

##### SUMMARY.

GOODLAND, Kan., Oct. 17.—Goodland Stakes, for sixteen or more all-age greyhounds; \$100 of citizens cash and 50 per cent. of entrance money to winner, \$50 cash and 50 per cent. of entrance money to runner-up, balance of entrance money to be equally divided between dogs equal at the finish; entrance \$10.

##### I.

American Coursing Kennels' light fawn dog Laughed At (Norwegian Bueneretro) beat Goodland Kennels' black dog Rook.

American Coursing Kennels' red dog Light Foot (Major—Chipper) beat Landseer Kennels' brindle bitch Viola (Babazoun—Verdure Glad).

Goodland Kennels' black and white dog Rear Admiral (Major Glendyne—Lady Alice) beat J. Herbert Watson's fawn bitch Drytime (British Still—Haytime).

H. C. Lowe's black and white dog Battle Royal (Lord Neversettle—White Lips) beat Nelson P. Whiting's fawn dog Touchwood III. (Thornwood—Burning Sham).

H. C. Lowe's black and white bitch Princess May (Lord Neversettle—White Lips) beat American Coursing Kennels' black bitch Lady in Black (Trales—Dick's Darling).

St. Patrick Kennels' black and white dog Boomerang (Lord Neversettle—White Lips) beat Sam'l W. Vidler's brindle bitch Bennaritta (Norwegian—Bueneretro).

J. Herbert Watson's black dog Royal Crest (Green Tick—Royal Rate), beat Goodland Kennels' black and white dog Jeff (Don—Nell).

Maybrook Kennels' brindle bitch Miss Dollar III., beat Allen & Rew's brindle and white dog Woodford Boy (Lord McPherson—Jessamine).

Goodland Kennels' white and brindle bitch Rhea (Major Glendyne—Daisy Dublin), beat American Coursing Kennels' white dog Living Yet (Trales—Dick's Darling).

J. Herseer Kennels' red dog Van's Peter (Babazoun—Carmine) beat H. C. Lowe's black and white dog Voltaire (Lord Neversettle—White Lips).

Maybrook Kennels' brown dog Greenshine (Mullingar—Green Finch III.) a bye.

##### II.

Laughed At beat Greenshine.

Light Foot beat Rear Admiral.  
Battle Royal beat Van's Peter.  
Princess May beat Boomerang.  
Royal Crest beat White Lady.  
Rhea beat Miss Dollar III.  
Nancy a bye.

##### III.

Nancy beat Laughed At.  
Light Foot beat Battle Royal.  
Princess May beat Royal Crest.  
Rhea a bye.

##### IV.

Light Foot beat Princess May.  
Nancy beat Rhea.

##### Final.

Nancy beat Light Foot and won.

#### Kenmore Derby.

For puppies under 18mos., \$50 cash and 50 per cent. of entrance money to winner, 50 per cent. of remainder of entrance money to runner-up, balance of entrance money to dogs equal at finish.

##### I.

St. Patrick's Kennels' brown and white dog Beau Brummel (Dingwall—Miss Kitten) beat Scout's Rest Kennels' brindle bitch Miss Cody (Babazoun—Daisy B.).

H. C. Lowe's white and brown dog St. Lawrence beat Goodland Kennels' brindle and white bitch Fanny (Jeff—Jessie).

St. Patrick's Kennels' red bitch Bird's Eye (Babazoun—Blue Belle) beat Nelson P. Whiting's brown dog Willis H. (Lights o' London—Little Nell).

Scout's Rest Kennels' brown and white dog Billy Taylor (Dingwall—Miss Kitten) beat St. Patrick Kennels' black and white dog Border Ruffian (Dingwall—Miss Kitten).

Scout's Rest Kennels' brindle bitch Boal's Hope (Babazoun—Daisy B.) beat E. H. Shaw's red dog Beaconsfield (Babazoun—Daisy B.).

H. C. Lowe's brown bitch Melitta (Lord Neversettle—White Lips) beat St. Patrick Kennels' brown and white bitch Bonny Bell (Dingwall—Miss Kitten).

St. Patrick Kennels' brindle and white bitch Bon Bon, a bye.

##### II.

St. Lawrence beat Beau Brummel.  
Bird's Eye beat Billy Taylor.

TAKING THE HARE FROM VAN'S PETER AND ROYAL CREST.

International Meet, Huron, South Dakota.

Bon Bon beat Boal's Hope.  
Melitta a bye.

##### III.

St. Lawrence beat Bird's Eye.  
Melitta beat Bon Bon.

##### Final.

H. C. Lowe's St. Lawrence and Melitta (Lord Neversettle—White Lips) divided.

G. IRVIN ROYCE.

## BRUNSWICK FUR CLUB FIELD TRIALS

[Special Report.]

THE fifth annual field trials of the Brunswick Fur Club were held at North Acton, Mass., Oct. 23-27. Each year has seen an increased interest in these trials, and a rapid improvement in the quality of the hounds. The meet held last week was no exception to this rule, and never before in the history of the club were there so many spectators or as large an entry of high class hounds. The striking difference in the type of quality of the hounds entered in the first trials, and of those seen at North Acton last week, show the rapid progress which has been made in the improvement of the New England hound, and the club surely has a right to congratulate itself on its success in this direction.

The hunting grounds chosen for the trials this year were in every way superior to those selected in the past. The country about North Acton consists of hill and dale, mostly open meadows and farming lands with here and there a small piece of woodland or swampy cover. A better place to see the chase could not be found in New England, and on many occasions during the week the hounds ran for a mile constantly in view. Foxes were found in abundance.

This year for the first time the spotting system was used in judging, and it was generally conceded to be a great improvement over the method followed under the old rules. It simplified the work of the judges and enabled them after the first day to devote all their time and attention to the best hounds of the pack.

The judges worked hard and conscientiously and their decisions were well received by all. Their task was no easy one, for a grander pack of hounds was never seen at a field trial, and where there were so many good ones it was most difficult to pick the winners. Nevertheless, as far as the writer knows, there was not even a little "kick" or any unpleasantness. Those who lost were disappointed, but they proved themselves true sportsmen by being good losers.

A list of those present during the week would include the great majority of prominent New England fox hunters. Among those noticed were: Dr. A. C. Heffenger, L. O. Denison, H. C. Nevell, R. D. Perry, W. B. Stone, E. M. Snow, L. E. Conant, H. S. Curtis, W. R. Dean, Stephen Decatur, F. W. Eddy, E. W. Gill, E. B. Hayden, E. J. Hill, O. F. Joslin, A. B. F. Kinney, J. M. White, C. L. Wellington, Bradford S. Turpin, F. G. Stewart, Richard Seely, N. P. Pope, C. P. and M. G. Plimpton, W. S. Clark, F. T. Liveret, A. B. McGregor, J. H. Murphy, G. W. Roraback, Herbert R. Morton, F. W. Whipple, J. U. Goss, and a host of others whose names I cannot recall at the moment.

A few hunters with their hounds arrived in North Acton on Sunday, but it was not till Monday that the rush fairly began. On the evening of that day the little village was fairly alive with the unwonted excitement, and not only was the Nagog House filled to repletion with sportsmen, but each house in the neighborhood held its quota of enthusiastic lovers of the hound.

The entries for the trials were made at the business meeting of the club, held on Monday evening, and both the Derby and All-Age classes showed an increase in number over any previous year. The entries were as follows:

#### The Derby.

TRouPE—Dr. A. C. Heffenger's black and tan dog (Walker), 15mos.  
TEMPEST—Dr. A. C. Heffenger's black and tan dog (Walker), 15mos.  
JULIETTE—O. F. Joslin's white and lemon bitch (July—Walker), 9mos.

PEDDLER—R. D. Perry's black, white and tan dog (Robinson—Maupin), 15mos.

BILLY—C. L. Wellington's black and tan dog (Native), 17mos.

PETER—C. L. Wellington's black and tan dog (Native), 17mos.

TREAD—L. O. Denison's black and tan dog (Native), 15mos.

STEVE—Dennison & Eddy's black, white and tan dog (Walker), 15mos.

POLAND PETWORTH—White Oak Hill Kennels' black, white and tan bitch (Robinson—Maupin), 15mos.

POLAND PARAGON—White Oak Hill Kennels' black, white and tan bitch (Robinson—Maupin), 15mos.

POLAND PARAGOUT—White Oak Hill Kennels' black, white and tan dog (Robinson—Maupin), 15mos.

POLAND PLUNGER—White Oak Hill Kennels' black, white and tan dog (Robinson—Maupin), 15mos.

POLAND PLUNDER—White Oak Hill Kennels' black, white and tan dog (Robinson—Maupin), 15mos.

#### The All-Age.

In the All-Age Stake there are five classes, hunting, trailing, speed, endurance and tonguing, and a hound can be entered in any or all of these classes.

DIAMOND—W. R. Dean's black, white and tan dog, (Native), 2yrs. 8mos.

ROCK—O. F. Joslin's black, white and tan dog (Robinson—Maupin), 2yrs. 8mos.

JOE J.—O. F. Joslin's black and tan dog (Native and Wild Goose), 2yrs. 8mos.

HENDRICKS—Portsmouth Hunt Club's gray, tan and white dog (July), 5yrs. 5mos.

BARNEY—Sandy Spring Hunt Club's gray, tan and white dog (July), 3yrs. 6mos.

DUKE—H. A. P. Smith's black, white and tan dog (Robinson—Maupin), 3yrs.

SAMP—H. A. P. Smith's black, white and fawn bitch (July), 1yr. 10mos.

CLINKER—R. D. Perry's black and tan dog (Avent), 4yrs.

QUILITE—R. D. Perry's black, white and tan bitch (Wild Goose—Native), 2yrs. 6mos.

POPPLE—R. D. Perry's black, white and tan dog (Wild Goose—Native), 2yrs.

MAJOR—Kinney & White's black, white and tan bitch (Pooler), 5yrs.

LOGAN—Kinney & White's black, white and tan dog (Pooler), 3yrs.

JIM BLAINE—Richard Seely's black, white and tan dog (Byron—Buckfield), 3yrs. 6mos.

GARRETT—S. Decatur's tawny dog (July), 1yr. 10mos.

NEP—F. M. Whipple's black and tan dog (Taylor), 2yrs.

SPOT—F. M. Whipple's black and white dog (Taylor), 2yrs.

JIP—C. L. Wellington's blue ticked bitch (English Blue), 5yrs.

CLAY—White Oak Hill Kennels' black, white and tan dog (Robinson—Maupin), 5yrs.

FLIRT—White Oak Hill Kennels' black, white and tan bitch (Robinson—Maupin), 4yrs. 8mos.

STEVE—White Oak Hill Kennels' black, white and tan dog (Robinson—Maupin), 2yrs. 4mos.

ZACK—White Oak Hill Kennels' black, white and tan dog (Robinson—Maupin), 2yrs. 4mos.

LEGGINS—White Oak Hill Kennels' black and tan bitch (Avent), 3yrs.

FEALER—White Oak Hill Kennels' black and tan dog (July), 3yrs.

SUNMAID—White Oak Hill Kennels' white, black and tan bitch (July), 1yr. 6mos.

\*DAISY FORESTER—E. J. Kennedy's black and tan bitch (Native), 3yrs.

\*SPOT—N. Willard's white, black and tan bitch (Native), 3yrs.

\*Entered only in speed class.

The entries having been completed and the usual number of fox hunting yarns spun, the party went to bed hoping that the rain which had been falling all day would cease before morning and give a fine day's sport for the Derby.

#### TUESDAY.

The rain fell hard all night and when the horn sounded at 6 o'clock it was still coming down in a steady drizzle. However, it was the first day of the hunt, every hound and every hunter was eager for the fray, and so despite the unfavorable prospect for sport, hunting togs were donned and 6:30 found everybody eating a hearty breakfast. By 7 o'clock the rain had ceased, and though the clouds were still thick and lowering, the Derby entries were ordered out at once.

The judges selected for this class were Messrs. F. M. Whipple, W. S. Clark, W. E. Gill, J. N. Goss and Bradford S. Turpin. The hounds were lined up for their inspection and after they had familiarized themselves with the markings and name of each entry, the long line of spectators and handlers left headquarters for the hunting grounds.

After a walk of a mile or more along the west shore of

Magog Lake the hounds were cast off on the crest of a hill in a large pasture at 8 o'clock. They went off well bunched and somewhat riotously, as puppies are wont to do. But they soon began to trail, and just as we were all congratulating ourselves on finding a track so easily it was discovered that they were working rapidly toward a bunch of young cattle. With considerable difficulty the pack was called off and worked into a strip of woods where they soon became widely scattered.

Then began a long and tedious hunt. Now we were in the dripping woods; then in the open fields; now climbing a hill and again picking our way through a swamp; but no matter where we went or how hard the hounds worked—and work they did—not a track could be found. To add to our discomfort the rain began to fall, and it was not long before everybody was drenched. Still we kept on, when good fortune brought us into an apple orchard, where there was plenty of fine fruit, and at the same time the hounds found a more promising trail than they had previously happened upon, matters began to assume a rosy hue. The track, however, came to nothing, but the rain stopped falling, and soon the sun came out bright and warm, quickly putting everybody in better humor. Finally when a good-natured farmer invited us all into his cider mill, life did not seem the dull and dreary waste which it had. But it is unnecessary to give further details of this unsatisfactory day's work. For seven hours the hounds worked industriously without making a strike, and at 3 o'clock we were all back at the Nagog House, waiting rather impatiently for dinner.

The club were unfortunate in having to start the Derby on so unfavorable a day. The hard rain had washed out all the tracks made in the night, and the difficulties of jumping a fox were too great for the youngsters to master. All worked well—some remarkably well—but without the success which their efforts deserved. The judges gave no decision, as a start had not been made.

The perfect evening, without a breath of wind and lighted by a full moon in a cloudless sky, tempted us out for a moonlight run. The pups, notwithstanding their hard day's work, were eager to go, and within ten minutes of the time they were laid on a fox was running to an accompaniment of string music, which kept many of the party in the open air till a late hour. Then to bed, with every prospect of a splendid day for the running of the All-Age Stake.

#### WEDNESDAY.

Dame Nature did her best to make a perfect day and succeeded admirably. The sky was cloudless, there was a light breeze and a heavy dew covered the ground. But though the conditions seemed favorable for a good day's sport, the scent failed to lie, and there was comparatively little driving during the day.

It was necessary to secure two more judges for the All-Age class to take the place of Messrs. Whipple and Goss, as the former owned and the latter handled hounds entered in this stake. Messrs. F. A. and C. M. Griffin were chosen, and they with Messrs. Gill, Clark and Turpin were the judges for the day.

The hunting party left headquarters at 7 o'clock and thirty-five minutes later the pack was cast off at the place where the Derby was started on Tuesday. A handsome lot of hounds was never seen in New England than those that covered the pasture in a wild rush, when they were released at the command of the M. F. H., Mr. R. D. Perry. Away they went at full speed along the shore of Foot Pond. Some of the hounds were bewildered by the unaccustomed confusion and fell back to the judges who were struggling along in the rear; but the great majority kept on and covered the fields and woods well. There were but few stragglers, the pack held together, and it was not long before a fox was jumped, which carried the hounds along through the valley at a great clip.

With nineteen hounds pressing him hard, reynard took to a swamp where he made a turn or two. He then ran directly up a hill which bounded the valley on the east, and as he crossed the road, was seen by Mr. F. G. Stewart and other spectators. There was a bad check in the swamp, and by the time the pack had gained dry land, the fickle scent had failed and the hounds cast in vain for the line.

The majority of the pack then trailed west, and after a time succeeded in jumping a fox. They drove him almost out of hearing, but the continuous tonguing gave such promise of sport that Judges Gill, Clark and Turpin hurried after them, and a merry chase the hounds led them before they reached home late in the afternoon. The pack always seemed to be on the next hill, and when finally the hard-working judges came up with the hounds, the fox had been lost or run to earth. He had led straight away without a turn or a circle, and the judges' attempt to get into the hunt was only a dreary failure.

Meanwhile Barney had been at work by himself, and as fortune would have it found the track of the fox which had been seen by the party on the hill. He worked it along carefully and soon jumped the quarry in a meadow, but lost when the fox entered a strip of pine woods. While he was driving, Hendricks, Logan, Major and Gyp harked to him, and all cast well for the line. Hendricks hit it first, the others packed to him, and with Barney in the lead, drove the fox up the valley for two-thirds of a mile in plain view of the party on the hill. Then the chase entered cover and came rapidly toward Judge C. M. Griffin. As he stood in the road two foxes burst from the woods directly in front of him and ran one on each side of him. One passed so near Mr. F. G. Stewart that he threw his hunting horn at him and turned him sharply back. The pack were at fault when they reached the road and did not immediately hit the trail of either fox. In casting Logan caught the scent near the point of loss, and Barney making a long swing struck it further away. On they all went, but soon were at fault again. Barney once more worked the loss and this time followed the track at a great pace without tonguing, and soon lost the fox or holed him.

The driving all through the day was jerky and unsatisfactory, and it seemed quite impossible for any of the hounds to follow smoothly. Yet a number of them managed to have considerable sport regardless of the miserable scent. Clinker had great fun driving a fox by sight for a quarter of a mile or more; Ned and Spot hustled another along the shore of Magog Lake, and Garrett and Jim Blaine drove a third so near a man who was hunting ruffed grouse that he killed him with small shot.

The sport was disappointing. Many returned early to headquarters and by 4 o'clock all the hunters were in. The judges held a consultation and ordered out for Thursday's hunt the following hounds: Diamond, Rock, Joe J., Hendricks, Barney, Duke, Comp, Clinker, Popple, Aggie, Major, Logan, Jim Blaine, Garrett, Ned, Whipple's Spot, Jip, Clay, Flirt, Leggin and Pealer.

At a business meeting held in the afternoon the following gentlemen were elected to membership: Mr. Frank Hartwell, Berlin, Mass.; Mr. A. H. Cutting, Worcester, Mass., and Mr. Geo. E. Hawes, North Beltingham, Mass.

#### THURSDAY.

Thursday morning was clear and cool; the ground was covered with a white frost, and there was not breeze enough to ruffle the calm surface of Lake Magog, everything pointed to a good day's sport, and it proved to be the best of the week thus far.

The party were off for the hunting grounds a little earlier than usual. The pack was considerably smaller than yesterday, as seven hounds had been "spotted out" and two, Popple and Pealer, had not yet returned from their first hunt. As the long line of men and hounds followed the

familiar road beside the lake, the puppies that had been taken out for a moonlight run on Wednesday were heard driving in the distance and rapidly coming nearer. Suddenly their fox jumped upon a stone wall but a short distance from the road and stood staring at the crowd for some moments. Then he turned back and trotted away. The judges hurried to the wall to await the Derby pack. Only three remained in the chase after their twelve hours' run, Tread, Tempest and Troupe. Tread was leading and tonguing, the others followed mute. The endurance and trailing displayed by these three pups in this long chase is worthy of note.

When the youngsters reached the fence they were caught and the All-Age class, that was already crazy with excitement, was loosed on the hot track. Then came a chorus that was worth going miles to hear. At tremendous speed the splendid pack drove the fox through the woods and into the open fields. There he made a short circle and then discovering that he no longer had a pack of tired pups behind him he ran to the westward, carrying the pack almost out of hearing. Soon he turned toward his burrow and now it was a race for life. As the fox came over the open fields hard pressed by the pack, which was now somewhat strung out, he ran close by judges Gill and Clark. The pack was then led by Logan, who was followed close by Hendricks, Jip, Clay, Clinker and other flyers, all striving for the lead. It was a grand picture and one long to be remembered. None too soon the fox gained his den close by the spot where the pack had been put on his track. The first judge to reach the burrow found Hendricks, Major, Logan and Rock digging madly at the entrance. The other hounds had scattered and a number of them were already hustling a fox toward Nashoba Hill, where he was lost or went to earth.

The hounds were now well separated. Soon a burst of music in the pines on the shore of Long Pond told that another fox was afoot, and in a moment he was seen running in the open fields. Not far from the woods he lay down in the grass and watched so intently for his pursuers, that Mr. Kinney walked almost to him before he was seen. Then his foxship lost no time in disappearing, and his departure was accelerated by the cry of the hounds, who were now hot upon his track. He ran the open pastures closely followed by the pack, headed by the fleet Logan, with Rock and Spot good seconds, then Ned, Joe J. and Major. The pack was soon at fault in a plowed field, where all the hounds cast well for the track, but Rock, making a wide swing, caught the scent near the shore of Long Pond, and led away, carrying the fox around the pond to the hills on the opposite shore. The rest of the pack followed some time later, and for a half hour or more the driving was fast and then all was still.

During the next hour and a half but little was done and many thought the fun over for the day. But soon after 12 o'clock a pack composed of Aggie, Logan, Rock, Major, Clay, Clinker, Diamond, Hendricks and Barney did some good work. For a time the pace was fast, then sent began to fail, and finally the fox was lost in a long and narrow strip of woods. This ended the hunting for the day.

The judges announced that the following hounds would be ordered out on Friday morning: Diamond, Rock, Hendricks, Barney, Duke, Clinker, Popple, Aggie, Logan, Garrett, Spot, Jip, Clay and Pealer.

#### FRIDAY.

The uneasy fox hunter who peered from his window at dawn found a southerly wind and a cloudy sky which, as everybody knows, proclaims a hunting morning, and as this was to be the last day of the trials he congratulated himself on so auspicious an outlook. Only twelve hounds appeared at the starting point, for Popple and Pealer were still missing from the kennels. This small pack contained the best of the hounds that had been entered, and though the names of all of them are not found among the winners, yet it is no small honor to have been chosen to run on the final day.

At 7:20 o'clock the pack was cast off at the point where the hounds had been put on the hot fox track the previous day. They worked rapidly through the little strip of woodland, but before they had found a trail for themselves they all harked to a local hound that was driving but a short distance away. This hound quit and ran ignominiously when he heard the fierce music of the pack behind him, and then the flyers drove the fox through the open field into the birches beside the road; then to a peach orchard, with Hendricks in the lead, and there in some unaccountable manner the track was lost. A few moments later the whole pack swung back, streamed over the pastures to the only large piece of cover in the region, jumped a fox, and drove him at a terrible pace out of hearing and into Texas. This is an immense tract of wild country, crossed by a labyrinth of blind roads and wood paths. Here the pack drove for hours, and in vain Judges F. A. Griffin and Turpin strove to see that running only one glimpse of the race did they get and that near its conclusion. It was most unfortunate that this great run should have taken place in cover, and in the only locality where it could not be seen.

While this chase was going on in Texas, Jip, Logan and Hendricks were having a little hunt by themselves. They drove a fox into the open close by Judges Clark and Gill. The trailing was difficult; Logan did not for the moment run in his usual fine style, Hendricks seemed indifferent and Jip distinguished herself by taking the fox away from both these flyers.

It was now 12 o'clock, and as the Derby entries were to be taken out for a final run in the afternoon, the horns sounded the retreat.

After a hasty lunch the youngsters were cast off not far from the Nagog House. The hunt proved to be a dull one. Some of the pups ran rabbits, others tongued here and there, and a few distinguished themselves by doing work worthy of old hounds. Prominent among these were Tread, Troupe, Tempest, Billy and Juliette. At sunset the pups were called in, and a long and weary walk to headquarters ended the field work of the meet, which can justly lay claim to being the most successful in the history of the club.

At a club meeting in the evening Mr. F. M. Whipple, Newtonville, Mass., was elected to membership, and the judges announced the awards as follows:

#### THE ALL-AGE.

Hunting—First to Sandy Spring Hunt Club's Barney; second to O. F. Joslin's Rock; third to Kinney & White's Logan.

Trailing—First to Kinney & White's Logan; second to O. F. Joslin's Rock; third to C. L. Wellington's Jip.

Speed—First to Kinney & White's Logan; second to O. F. Joslin's Rock; third to S. Decatur's Garrett.

Endurance—First to N. Q. Pope's Clay; second to Kinney & White's Logan; third to W. K. Dean's Diamond.

Tonguing—First to Kinney & White's Logan; second to N. Q. Pope's Clay; third to O. F. Joslin's Rock.

Style—First to Kinney & White's Logan; second to N. Q. Pope's Clay; third to Sandy Spring Hunt Club's Barney.

The American Field Cup and Mr. N. Q. Pope's Highest General Average Medal were awarded to Kinney & White's Logan.

Dr. A. C. Heffenger's Speed Medal to Kinney & White's Logan.

Mr. A. B. F. Kinney's Hunting Medal to Sandy Spring Hunt Club's Barney.

Mr. O. F. Joslin's Trailing Medal to Kinney & White's Logan.

Mr. Richard Seeley's Endurance Medal to N. Q. Pope's Clay.

Rod, Gun and Kennel's special for "best all-round hound owned outside New England and New York;" and "hound showing most speed and endurance owned outside New England and New York" to Sandy Spring (Md.) Hunt Club's Barney.

#### THE DERBY.

Best all-round puppy, L. O. Dennison's Tread; Mr. R. D. Perry's special for best all-round puppy, L. O. Dennison's Tread.

Rod, Gun and Kennel's special for "best Derby entry bred outside New York and New England," Dr. A. C. Heffenger's Troupe.

Hall & Snow's special for second best puppy, Dr. A. C. Heffenger's Troupe.

Hall & Snow's special for third best puppy, C. L. Wellington's Billy.

Logan, the winner of the highest honors in the trials, is owned by Messrs. A. B. F. Kinney and John M. White, of Worcester, Mass. He is a handsomely marked white, black and tan, three years old, and was bred by Mr. R. H. Pooler, Serena, Ill. In the trials he displayed in a marked degree the qualities that go to make the perfect hound.

Rock, whose record shows him to be the second best hound in the pack, is owned by Mr. O. F. Joslin, of Oxford, Mass. He is by Logan (a Kentucky hound) out of Muse, and was bred by Granville Smitha, Athens, Ky. The record he has made at these trials is a proud one, and he undoubtedly has a great future in store for him, as he is now but two years and eight months old. Rock was prepared for the trials and handled by Mr. F. G. Stewart, whose record with Clay last year and Rock this shows him to be a remarkably successful handler and trainer of foxhounds.

Tread, the Derby winner, is a small black and tan hound. He was bred by Mr. L. A. Dennison, Waltham, Mass., and is by Bonnie out of Maggie. He displayed wonderful endurance, fine trailing qualities and is as good a Derby entry as the club has ever seen.

In a driving rain on Saturday morning all but a half-dozen hunters left for home, and by evening North Acton had again fallen into that blissful repose which comes only to a town which has no store, no church and the nearest post office two miles away.

BRADLEY.

#### American Coursing Club Meeting.

THE officers elected at the American Coursing Club's business meeting at Goodland, Kan., are: President, Dr. N. Rowe; Vice-President, Dr. A. J. Cattanch; Secretary, Louis Zudervan; Treasurer, J. V. Brinkman; Executive Committee—Ira D. Brougher, J. H. Watson, Dr. Irwin Boyce; Ground Committee—H. C. Lowe, J. H. Rew, D. C. Luse. The club accepting the decision of the National Greyhound Club in the Pearl of Pekin case, it was decided that Mr. Edmonds should be requested to refund the difference between first and second moneys, that was wrongly paid to him in 1891 Pearl of Pekin fame. The American Field \$100 will now be paid to Mr. Bartels. The same rules as those adopted by the Kenmore Coursing Club were adopted and the same Coursing Board elected. Dr. Cattanch acted as secretary and Mr. Hayman presided, representing Dr. Rowe.

#### Western Coursing Club.

At the Leoti coursing meeting the principal stake was divided by S. W. Vidler's Buenerita and American Coursing Club's (F. B. Coyne's) Willis H. Miss Dollar II. and Royal Crest ran well up but Drytime was again beaten in first course. Home Stakes divided by R. S. Howard's Bolivar and W. O. Allpin's Jerry. Royal Crest, Maybrook Kennels' Greenshine, was sold to Mr. Allpin of Leoti, Kan.

#### New England Beagle Club.

THE following gentlemen have been nominated for office to serve the coming year, election takes place Nov. 6, at 7:30 P. M., at the Bacon House, Oxford, Mass.: For president, F. W. Chapman, H. S. Joslin; vice-president, H. S. Joslin, F. W. Cielfield, F. W. Chapman; sec'y-treasurer, B. S. Turpin, W. S. Clark; executive committee, Henry Hanson, F. W. Cielfield, A. D. Fisk, B. S. Turpin, H. V. Jamieson.

#### A Local Meeting at Great Bend.

MR. ZUTEVARN, of Great Bend, Kan., visited the FOREST AND STREAM World's Fair exhibit recently and discoursed pleasantly on coursing matters. Among other things he mentioned that the young men of Great Bend had arranged to hold a coursing meeting with such material for running as could be gathered in the immediate vicinity of Great Bend.

#### HUNTING AND COURSING NOTES.

The perils of coon hunting were illustrated in a startling way by a fatal accident to a hunter in Monroe county, N. Y., one night last week. Two hunters had discovered the coon crouching far out on a large limb. One climbed the tree and sawed the limb to tumble the coon to the ground. When the limb began to sag and crack the coon jumped to the ground. The man on the ground sprang forward to get at the coon just as the limb fell. It struck him on the head, smashing it, and killing him almost instantly.

There is some talk of cutting down the prizes in N. E. B. C. trials on account of the entries not numbering as many as anticipated. With an entry of 32 they should feel elated instead of the other way, and unless the fees are reduced in the same ratio the change would beget lack of confidence in the future.

The Royal Crest-Maybrook Kennels are now under the joint proprietorship of Messrs. J. Herbert Watson and Horatio Nelson. Mr. Bradbury, who did so well for both kennels out West will be the trainer. This combination is a strong one, and doubtless the stock already in the kennels will be materially increased.

### Dachting.

THE comments, questions and suggestions which are coming in from all quarters, American and English, are remarkable mainly for the ignorance displayed of the history of the Cup and of the rules and circumstances of the present races. One exception is the Field, which gives two independent accounts of the races, with some very sensible comments on the questions of centerboard, type, sail area and measurement, which might be read with profit by many who are wasting time and ink in thrashing over old straw.

THE New York Herald of Oct. 29 contains a very thorough review of the late international races, written by Mr. Irving Cox, of the Sea, vanhaka Corinthian Y. C. While Mr. Cox is evidently a strong believer in Vigilant, his critique is marked by an intelligent observation and fair judgment, which is refreshing after the many crude and prejudiced opinions which have appeared on both sides.

As a ram, the fast steam yacht Feisen can hardly be considered a success; but she will soon make her second debut as a commerce destroyer, having been sold to the Brazilian Government, which will convert her into a torpedo boat after rebuilding her.

THE Marine Journal describes Valkyrie as a "keel sloop," but fails to give any reason for thus classing her.

THE Boston Herald of Oct. 29 contains a very fair comparison of Colonia and Valkyrie, the conclusion being that Valkyrie would have beaten the Harreshoff keel. One important point is overlooked by the

*Herald*; Valkyrie represents Mr. Watson's ideal of what a keel boat should be, while Colonia does not represent Mr. Herreshoff's idea of keel boat, but merely the deepest yacht which could be conveniently launched at the Bristol shops; a very different thing. To test fairly the ability of the two designers, it will be necessary to deepen Colonia to the limits which her designers have themselves indicated as necessary—some 16 or 17 ft. at least. The *Herald* also makes an interesting and probably correct comparison of Vigilant and Jubilee.

ALREADY four yachtsmen are mentioned as anxious to challenge for the America's Cup, but there is hardly a possibility that any of them has the least intention of doing so. They are John Jameson, James Coats, T. B. C. West and the Emperor of Germany. There are good reasons why each of these yachtsmen is not likely to challenge, and the prospects of a race next year are very far from encouraging.

Vigilant and Valkyrie.

*Editor Forest and Stream:*  
Now that the contest is over once more for the much coveted America Cup it may, perhaps, interest your readers to hear what a Britisher has to say about it.  
To begin with, I will not refer to any of the races except the last, on Oct. 13, which, in my opinion, was the only really fair test they had. On that day there was plenty of both wind and sea to show what both were capable of doing, the only time to be regretted were the unfavorable accidents to Valkyrie's spinnaker and also to Vigilant's centerboard. Which of them was most affected by these accidents it is of course impossible to tell exactly, but the general opinion on this side is naturally that Valkyrie was the greater sufferer, and even on your side of the pond the opinion seems to tend rather in the same direction. Be this as it may, there can be no doubt about its having been a grand race, and even if the result was not so satisfactory to us on this side it is hardly to be admitted that the English boat may be able to teach us something different as to build, sails, etc., still as to the handling of a racing yacht our boys have not much to learn from yours.

Another unfortunate thing was the fact of Valkyrie having been altered from the trim she sailed all her twenty-four races in on this side; in every one of these she did all that could be expected of her, so why her owner, who would not lighten her so much as really to make quite a different vessel of her, is what no one here can understand, and in comparing the speed she made here, one cannot avoid the conclusion that if she had done as well on Oct. 13 she would have had a good chance of winning the Cup.

The fastest races she sailed here were from the Nore to Dover on June 10, and at Cowes on Aug. 3. In the first of these her times were: Nore to Tongue, 20 miles to windward, 2:15.00; Tongue to N. Sand, 10 miles to windward, 1:03.05; 34½ miles in 3:21.05 or an average of 10¼ miles an hour. On Aug. 3 at Cowes she did the 45 miles course, close haul and run about equal, in 3:49.03, or an average of 11¾ miles, while in the match of Oct. 13, her time for 15 miles to windward and 15 miles run was 3:26.52, or an average of 8¾ miles.

One cannot, of course, say exactly whether there was more or less wind here on these days than in your match, but the fact of her doing so well in the first two races, and sailing so fast to windward, it may seem as if there was even more wind there than in New York. The reports say it was blowing a gale, but if Valkyrie can carry her top-sail in a Yankee gale it is certainly more than she could do in a strong breeze on this side; in what we call a gale here she would require to close reef and house topmast, just as Navahoe and Britannia had to do in the match for the Brenton's Keel cup.

Another proof is that had Valkyrie is not quite the best heavy weather craft we have on this side, her best point of sailing being to windward in a light or moderate breeze. Every one who has seen her in such weather, must admit this, and if she had been in the same trim as she was here, I rather think she would have made a very different display of light windward work in the matches of Oct. 7 and 9; in fact, it may fairly be said that you never saw her in her proper trim in any of our matches here, and that the only time she only had carried two or three, one of, lead on Oct. 13, the opinion here is, that she would do even much better on that day than she did.

As it was, I see on working at the calculation, that if they had carried on to The Needles in the same breeze, Valkyrie would have been something like 45 miles ahead of Vigilant, as for instance she beat her 1m. 55s. in the 15 miles to windward, so on the 3,000 miles over to this side, at the same speed, in 40 hours, she would have beaten her by about 64 hours, equal to 45½ miles.

Another point we have to complain of here is, that the New York rules do not put our vessels on equal terms, this is clearly seen in the fact of Vigilant being allowed to carry about 1,300sq. ft. more canvas, without any penalty; this would never be allowed in Britain.

AN OLD YACHTSMAN.

It is quite possible that the changes of ballast immediately before the Cup races for Valkyrie, out of trim and out of tune, had they helped her; but so far as stability is concerned, she was stiff enough at all times, and would have carried her sail well on the last day without the extra ton of lead. Our correspondent is in error as to the New York Y. C. rule, as it does tax sail, as well as length; in fact it is in principle identical with the Y. R. A. rule, though easier on sail. It must be remembered that Valkyrie paid for 6ft. of excess of spinnaker boom, thus making her nominal sail area proportionately larger than Vigilant's.

Yacht Captains as Hosts.

CAPT. CRANFIELD and the crew of the English cutter Valkyrie were feted by the Yachtmasters' and Engineers' Association of Tebo's yacht basin last night. The yachtmasters and the engineers thought that to entertain the visitors would help to establish the feeling of good fellowship between the sailors of England and America, and at the same time they wanted to show how they appreciated the brilliant seamanship shown by the Englishmen in handling the Valkyrie in the Cup races.

The dinner was served in Prospect Hall, Brooklyn, and although the hall is a large one its seating capacity was taxed to the utmost. At about 330 sat down to the dinner, and the hall was tastefully decorated. The ensigns of England and America were draped together at each end of the room, the international code of signals was placed all around the room, and palms, cut flowers and greens helped to make the scene a very pretty one.

The Valkyrie men were on hand in time and attracted lots of attention as they went from the yacht at Tebo's to the hall. They wore their jerseys with the words "Valkyrie" and the number "1" on the front of each. Capt. "Willie" Cranfield led the men, and when they arrived at the hall they were received by Capt. Wicks, Capt. Betts, Engineer North and Theodore Krombach. Each man was decorated with a big yellow chrysanthemum. The hue of their jerseys and the yellow flowers helped to make Lord Dunsraven's colors more conspicuous.

About 8:30 o'clock dinner was announced, and Capt. Wicks, the chairman of the association, escorted Capt. Cranfield to the seat of honor at the head of the table. Mate Ponder, Navigator Harvey, and the thirty-five sailors of the Valkyrie followed, while the orchestra played "God Save the Queen," and the American sailors cheered. The Englishmen occupied a long table in the center of the room, with Capt. Wicks at the head and Capt. Cranfield on his right.

There were about 300 present at the dinner, and among them were old shipwrecks who have sailed yachts for years and have won many races. All were loud in their praises of the Englishmen, and of the ability shown by Capt. Cranfield. There was Capt. "Nick" Dand, of the steamer Stranger, a skipper who has handled yachts for a quarter of a century; Capt. Bowe, who has grown gray at the wheel, and who is now in charge of Manning's Basin, was there; so was Capt. Cooley, of the steamer Cadiz; and the famous schooner Miranda; Capt. Wicks of the steamer Electra; Capt. W. Press, of the schooner Vamoose; Capt. Roberts of the steamer Enna; Capt. Kellsey, of the schooner Triton; Capt. C. E. Bailey, of the steamer Corsair; Capt. Collamore, of the steamer Wadena; Capt. G. T. Webster, of the schooner Oryzhea; Capt. Charles E. Woods, of the sloop Rose Marie; Capt. Charles Belmont, of the sloop Sagitta; Capt. J. W. Staifford, of the schooner Siren; Capt. L. Rowland, of the schooner Elma; Capt. E. A. L. of the schooner Lady; Capt. J. C. of the schooner Vestal; Capt. T. Acker, of the schooner Cavalier; Capt. Matthews, of the schooner Brunhilde; Capt. Crosby, of the schooner Coronet; Capt. C. Percival, of the schooner Republic; Capt. Guiley, Chief Engineer Sand, of Tebos; Superintendent C. E. Brown, Chief Engineer Frank Broughton, of the steamer Spindrift; Superintendent Walford, of the Iron Steamboat Company; Superintendent Gregory, of the boats belonging to the Jersey Central Railroad; Capt. Porter, of the schooner Norrmahal; Chief Engineer North, of the steamer Electra; Assistant Engineer F. Hummel and Mate Johnson, of the Norrmahal; G. W. Lyons, Gus Basch, Alderman R. T. Blume, T. S. Sprung, Capt. Thomas Avery, Chief Engineer Baker, of the Stranger; Steward Petersen, of the steamer Oneida; David Clark and W. Bishop. All these men are well known in the yachting world, and the yarns they spun of past contests on the ocean would make good reading.

When all were seated Capt. Wicks welcomed all present and told how they had met to honor their visitors, the Englishmen. Capt. Wicks has evidently taken a good lesson from ex-Commodore Gerry, and that efficient officer is to be congratulated on having a skipper who can handle a yacht so expertly and so gracefully occupy the position at the head of a banqueting table.

When Capt. Wicks had finished, every one set to work to study the menu and enjoy the dinner. The cards were very tastefully arranged. Old Glory and the Valkyrie flag were placed at the top, and under them were the words, "Valkyrie Dinner. Our Tribute." The various dishes were facetiously named after prominent yacht skippers. One was "Brand" new salmon, Hansen sauce and Dunsraven potatoes. Capt. Nick Dand recommended this to every one. Then there was "Johnson" fillet of beef, Crosby sauce and Fish peas. There were four salads named "Porter," "Sherlock," "Wicks" and "Sam Slicks," and as no one wished to hurt the feelings of any of these skippers all

With the dessert came bonbons. Each one present had to snap his, and wear the paper cap it contained. Capt. Cranfield's face is tanned red and his beard is of the fiery hue. His cap was a green one, and a general laugh was caused when he put it on his head by one jolly sailor remarking, in a stage whisper, "The green above the red."

During the dinner the Menu Quartet, composed of Messrs. E. and C. Senne, J. E. Jackson, and G. K. Knobbs, sang the songs, the thanks and speeches. Capt. Betts gave the first one, "Our Guests," and Capt. Cranfield, in a few well-chosen words, replied. He thanked every one on behalf of the Valkyrie's crew for the entertainment, and invited all to visit them in England. He said he hoped to be back again and meet every one next year.

Then came the toasts, the President, the Queen, the New York Y. C. and American yachting fraternity, and the Prince of Wales, and the Royal Yacht Squadron. Several of the Englishmen spoke, and Sailor Roper sang some songs. It was early in the morning when the sailors left the hall, and every one declared he never had such a good time.—*New York Times*, Oct. 24.

Sailing in Home and Foreign Waters.

YACHTSMEN as a rule are inclined to underestimate a factor in international yachting which, in our opinion, is one of the most serious handicaps which a challenger must submit to—the fact that he sails amid new and strange surroundings. It is not the material difficulties of local pilotage and weather conditions, as these may be largely overcome by the proper use of the compass, the log, and the good local pilot, but it is in the moral effect of sailing among strange yachts, with unfamiliar surroundings and with the unavoidable conviction that the sympathies of the spectators are with the other boat. At the same time, the responsibility of sailing a challenger in a great international race is something very different from that in the regular home events, however important they may be. Both Navahoe and Valkyrie have felt the effects of this moral handicap this year, and no change of conditions can entirely remove it from future races. Valkyrie would unquestionably have profited by being here a month earlier and being sailed for a time in her new trim; but even then she would have been at a certain disadvantage beside the home boat. The *Field* makes the following pertinent comments on the subject:

"It is not surprising to find an impression prevailing that our yachts do not sail as well in American waters as they do at home; in fact, that directly they enter upon a contest for the America Cup they go all to pieces in their sailing. The mere effect wrought upon the imagination by the defeat of the yacht which had been successful at home is sufficient to account for this impression, but in reality there is good reason for its existence. In the first place, it must be remembered that, so far as the sailing master is concerned, he is placed in a novel situation; that is, the courses are fresh to him and so are the local surroundings—including the peculiarities of the wind and the tide, and the distracting greeting of the local yachtsmen. With regard to the yacht herself, she usually undergoes some alterations in hull, ballasting, trim, and sail plan at the last moment before starting to cross the Atlantic, and in the end has to enter upon the contests without proper trials to determine the value of such alterations. To what extent Valkyrie was altered we do not know; but she is now 15in. shorter on the waterline than she was in the contests at home; her topsails are about 10ft. longer, and her spinnaker is about 12ft. longer, and, of course, greater in diameter. We are not saying that any of these conditions could be avoided, but they at least are sufficient to cause a difference in the performance of a vessel either for better or for worse. We cannot say that it is altogether satisfactory from a sporting point of view, that a yacht should visit a foreign country, and sail herself out in a number of open trials, and then find herself handicapped by the alterations of local challenge cups; but it is at least more satisfactory for the challenger; and we cannot help thinking that any future British yacht which challenges for the America Cup should get over to the other side early in July, and take part in every available race."

A Cruising Sloop.

AT Drake's yard in South Boston, the cruising sloop that is being built for Mr. J. F. Small is timbered out. Her exact dimensions are: Length over all 37ft. 6in., length on waterline 28ft. 6in., beam 13ft. The overhangs are about 3ft. aft and 6ft. forward. Although she is a centerboard boat, there will be 6ft. of headroom in the cabin.

The cabin itself will be 17ft. 6in. long, and will be fitted with two doors, one with a wash room, clothes press and large china closet, while the space under the transoms will be utilized as a store room, being divided up into drawers and lockers. Forward will be the cook stove and a roomy forecabin with two folding berths in it. She will have a large water-tight cockpit with seats on the sides. There is 2ft. of deck between the sides of the house, or trunk, and the rail. Her mast is to be stepped 7ft. aft of the stem head. This will leave a place for the windlass and also give the line clew over her crew to work forward. With her centerboard hoisted she will only draw 3ft. of water.

The sail plan is very small. The main boom will be 36ft. and the mast will only measure 34ft. from the deck to truck. A boat will be carried on davits at the quarter. The keel is hewed out of a massive oak log, and will be protected by an iron shoe running its whole length. The timbers are heavy and only spaced 9in. apart on the centerline. The 24-footer Exile, the fastest and best centerboard boat in Eastern waters, is of his design. He has also made a wonderful record with his mosquito boats. The Enigma, now Banjo, was a sure prize-winner, while the Iantrum has been king pin of the fleet for several years, though Mr. Small's new "skeeter," Katydid, has defeated her the only two times they ever came together. An amateur designer, who sails his own boats, and even built the Katydid, yet he has a reputation in small boat racing as a professional who would be proud of his brother, Mr. S. N. Small, who will accompany him on his cruises, is also a crack amateur skipper and designer. The 22-footer Ustaue and the mosquito boat Transit are his productions, both fast and with good records, but it is his latest boat, the 23-footer Hildead, that has brought him the most fame. The Hildead has pushed the Beatrice very hard for her laurels this season, and is a splendid all-round boat.

If these two amateur boats leave the design of the Katydid, and it will be a long time before their places are filled, for they combine a thorough knowledge of both yacht designing and sailing with a spirit sportsmanlike fairness that makes them popular even with those they have beaten.—*Boston Herald*.

More About the Centerboard.

A CORRESPONDENT of the *Boston Transcript* writes as follows of the early history of the centerboard:

"Referring to the article in your issue of the 18th, taken from the *New York Sun*, I beg to say that in 1870 I wrote for the *New York Herald* a paper entitled 'The Origin and History of Centerboards,' the statements made in which have never, so far as I know, been controverted or even openly doubted. In the year mentioned I ran across a book in possession of a friend which gave descriptions and diagrams of two centerboards vessels, which I venture to believe were the first ever constructed. The book was unfortunately destroyed in the fire of 1872, and I am unable to recall the title. It was published in London in 1801, and is well known in England, as I have seen from time to time several allusions to it in the *Field* and other papers. The original centerboard, then called a sliding keel, was invented in 1774, by Capt. John Schank, a captain in the British Navy, and the boat to which it was applied was built in this city.

In 1789, after Capt. Sebark had returned to England he built a boat at Deptford with three sliding keels. In the following year the Trial cutter was constructed on the same principle at Plymouth, and afterward several others, three of which, Trial, Cynthia, sloop-of-war, and Lady Nelson, were at the beginning of the century still in the service of the British Government. The Lady Nelson went on a voyage of discovery to New South Wales, and proved to be an excellent sea boat. "Polkard's Sailing Boat" says the present form of board, then styled the revolving board, is the invention of a British Navy captain, while a prisoner of war at Verdun, about 1812. The original model was said to be in the museum at Portsmouth, and in 1851 was deposited in the Adelaide Gallery in London. I have no particular point to make or any theory to establish, but I suppose all yachting men want to learn the facts, and as these points appear to be clearly made out, I submit them for criticism or correction. H. B. J.

YACHT NEWS NOTES.

Arthur B. Claffin, son of John Claffin, the dry goods merchant, is trying to recover \$10,000 from Caldwell H. Colt, of Hartford, for alleged damages to the steam yacht Puzzle. The action was begun in the Supreme Court in 1891 by lawyer Robert H. Griffin, with Col. Robert G. Ingersoll as counsel, and yesterday Justice Barrett appointed a commission to take testimony in Florida. The Puzzle was built by Jacob Lorillard to be used as a house-boat in the shallow waters of Florida. The boat is 90ft. long, 13ft. wide, draws 4½ ft. of water and has a single screw. Mr. Claffin purchased it of Mr. Lorillard, and a contract made in November, 1889, he chartered it to Mr. Colt. The latter agreed to pay \$2,600 for the use of the boat, of which he was to take possession on Nov. 1, 1889. He agreed to pay all operating expenses and to return the Puzzle to Mr. Claffin on a certain date in the harbor of Brunswick, Ga. In his complaint Mr. Claffin alleges that Mr. Colt tried to sail the Puzzle in waters so rough that the machinery was injured and the hull was strained, and that he deserted the yacht at Punta Rassa instead of returning her to Brunswick. Mr. Colt rejoins that the plaintiff knowingly deceived him with regard to the qualities of the yacht; that the Puzzle is unseaworthy and that experienced seamen refused to take her to sea after March 15, 1890. Mr. Colt denies that he deserted the boat and says he left her at St. James City, Fla., in charge of a watchman, after notifying Mr. Claffin that he could find the Puzzle at that place. Mr. Colt adds that he was the one who suffered damages, because he had to hire another yacht for \$700 after he found the Puzzle to be unseaworthy.—*New York Sun*.

At a meeting of the New York Y. C. on Oct. 26, Vice-Com. W. Butler Duncan, Jr., presiding, Lord Dunsraven was proposed for the honorary membership by Com. Morgan, seconded by Vice-Com. Duncan, and unanimously elected, subject to ratification at the next meeting of the club, as required by the rules. The following new members were elected: Charles Carroll, Walter C. Tuckerman, John Corwin, Anthony J. Drexel, J. W. Phillips, J. Herbert Ledwith, Robert Hartshorne, J. V. Wright, Francis H. Davies, Howard Gould, Alexander M. Griswold, Clarkson Potter, Orme Wilson, the Hon. Cecil Baring, Frederick Rodgers, E. M. Shepard, Walter Lutzgen, John McArthur, John Joseph, H. H. Sanderson, Joseph H. Keroachan, E. Le Roy Stewart, Prescott Hall Butler, Wells L. Fields, F. Edwin Elwell, Edwin K. Johnson, Frederick A. Johnson, Alfred C. Harrison, John R. Drexel, C. McR. Winslow, John N. Masury, Lewis F. Chanler, Dr. George Trowbridge and J. C. Watson. The America's Cup committee and the regatta committee presented their reports in parts, and received permission to print them and present them at the next meeting of the committee on a new schedule of reports. The following nominating committee was elected: William P. Douglas, Ogden Goelet, C. Oliver Iselin, Henry C. Ward, George L. Rives, Gouverneur Kortright, John R. Platt, Edward E. Chase, John G. Beresford and Fordham Morris.

The following papers will be read at the first meeting of the Society of Naval Architects and Marine Engineers on Nov. 16, at No. 12 West 31st St., New York:

"Transatlantic Navigation." Charles H. Cramp, Esq., President Wm. Cramp & Sons' Ship and Engine Building Company, Philadelphia, Pa. "Steel Ships of the United States Navy." Theodore D. Wilson, ex-Chief Constructor, U.S.N. "The Development of Shipbuilding on the Great Lakes." Jno. H. Pankhurst, Esq., Vice-President and General Manager Globe Iron Works, Cleveland, Ohio. "Notes on the Machinery of the New Vessels of the United States Navy." George W. Melville, Engineer-in-Chief, U. S. N. "Comparative Performances of American and Foreign Freighting Ships—Our Superiority." Wm. W. Bates, Esq., late Commissioner of Navigation, Treasury Department. "United States Treasury Rules for the Inspection of Machinery and Boilers." James T. Boyd, Esq., General Manager of the Shipbuilding and Manufacturing Company. Papers are also expected from the following gentlemen, but the exact titles have not yet been decided upon: Col. Edwin A. Stevens, President Hoboken ferries; A. Cass Canfield, member America's Cup Committee, New York Y. C.; Joseph H. Linnard, Naval Constructor, U. S. N.

Norman L. Munro cannot dispose of the yacht Vamoose pending the litigation which is now in progress over the vessel brought by Frank T. Morrill, to compel Munro to give him a bill of sale of the yacht for \$10,000. Justice Bartlett decided yesterday to grant the injunction pending the suit in order to preserve the status quo of the matters until the hearing on the case on the merits, otherwise Mr. Morrill, even if successful on the trial, would wholly fail to secure the object of his motion. The Vamoose was formerly owned by William R. Hearst. Morrill wanted Munro to purchase the yacht for him and agreed to pay \$12,000 or less for it. Morrill offered him \$2,500 on account of the purchase, but he would not accept this. Afterward, when he learned the boat was more valuable than he thought it was, he offered the \$10,000, which Munro declined to accept.—*New York Herald*.

An interesting race of steam launches took place on the Ohio River at Pittsburgh on Oct. 14. Numerous entries were made, but there were only eight starters on account of the cyclone which was blowing on that day and which prevented the smaller launches from starting. The race was over a course of 10 miles, and the winner was the Gwendoline, belonging to Messrs. Geo. E. and Chas. A. Painter, of the Pittsburgh Iron Works. Notwithstanding the heavy sea and strong wind, the Gwendoline covered the course in 18m. and 35s. She has the reputation of being the fastest boat, regardless of size, on the Ohio River. Her success is due to the Roberts' boiler, which carries 250lbs. of steam and has been in use several years with the muddy Ohio River water, and has never needed repairs.

The finest yacht photos we have seen this year are those taken by Messrs. West & Son, Palmerston Road, Southsea, Eng. They are of large size, 15x13, and 11x13, and show Navahoe, Valkyrie, Britannia, and many other yachts of the year. The positions of the yachts are spirited in the extreme, and the work is excellent from an artistic standpoint. We understand that Messrs. West have sent a representative to this country who has secured photos of the Cup races.

At its election this month the Ohio Y. C. re-elected Com. Gunckel, the other new officers being: Vice-Com. Henry Tracy; Rear-Com. Henry Marshall; Sec. Gus Kelp; Treas. Rufus Long; Fleet Surgeon, Dr. J. T. Woods; Fleet Captain, George Craig; Measurer, Denison Steele; Directors—F. N. Quale, D. W. Stroud, J. W. Sanfield, J. H. Southard.

A yacht club has been recently organized at Pittsburgh, Pa., with the following officers: Com. C. E. Painter; Vice-Com. G. Boland; Fleet Captain, N. M. White; Regatta Committee—C. W. Hodgson, C. Rodgers, C. Clarke; Fleet Surgeon, H. Jones; Asst. Fleet Surgeon, Dr. J. B. Keazey; Treas. S. C. Lighthill; Trustees—G. E. Painter, W. C. Galbreath, J. Frazer. The name will be the Pittsburgh Y. C.

The Old Colony Y. C. has elected the following officers: Com., Wm. Fessenden; Vice-Com., W. V. Baker; Rear-Com., C. V. Greenlaw; Treas., E. K. Pratt; Sec'y, Geo. A. Hall; Meas., M. M. Torrence; Regatta Committee: Samuel Ware, M. M. Torrence, C. V. Greenlaw, Geo. A. Hall and Robert Gregg.

It is reported that the Stewart & Binney fin-keel Pilgrim will be altered to a passenger steamer, to run about Hull and Quincy, her flues being removed and engines with twin screws substituted, with cabins on deck. Messrs. Stewart & Binney have made the plans for the alterations.

The Atlantic Works at East Boston have the keel blocks laid for a steel steam yacht of 185ft. over all, designed by J. H. Dahl, designer of the steam yacht Seneca. The yacht is said to be for Mr. George F. Babyan, of New York, for whom the Seneca was built.

David Hall Rice, a successful Boston lawyer, died recently at his home in Brookline, aged 50 years. Mr. Rice was an ardent yachtsman, the owner of the yawls White Cap and Orgo, and a contributor to the *FOREST AND STREAM*.

On Oct. 25, Messrs. Watson and Ratsey sailed on the White Star steamer Teutonia. On the same vessel were Captain Cranfield, Navigator Harvey and Valkyrie's crew.

Jessie, schr., Mr. McDonough, of San Francisco, will be greatly altered in rig this winter, the excessive rake of her masts being reduced, and the single jib replaced by a double head rig.

Navahoe arrived at Madeira on Oct. 20 and sailed on Oct. 23 for Bermuda. Her racing spars were shipped to New York by the Berlin on Oct. 14 and her sails by the New York on Oct. 21.

White Layde, steam yacht, under charter for the summer to Mr. Ogden Goelet, sailed for England on Oct. 31, her charter having expired.

Pastime, schr., F. E. Whitney, is out at Frisbie's yard, Salem, for a new counter, and a lead keel in place of inline ballast.

Chrystal, cutter, has been hauled out at Lawley's and 2,000lbs. of lead have been added to her keel.

Wasp, 46-footer, has been sold by Archibald Rogers to F. J. Lippett.

A Record Breaker.

THE advertisement I placed with you three years ago has held good up to date, for I have not had to advertise in any paper since—a good, paying investment and a stayer. GEO. F. REED, BAY, VT.

than 1/4 in. of the outside is rotten. I have the 1889 edition of your book.

I do not think any of our native woods are of much use for boats, as a rule they are heavy and apt to split easily, and it is hard to season them. Again thanking you for your assistance to amateur boat builders.

C. S.

CANOE NEWS NOTES.

The St. Lawrence River Skiff, Canoe and Steam Launch Co., of Clayton, N. Y., have obtained the highest awards at the World's Columbian Exposition for 28 boats exhibited, namely, St. Lawrence River fishing skiff, St. Lawrence combination row and sailboat, bulb-fin sailing boat Scarecrow, Thames rowboat, Champlain rowboat, yacht tender, general purpose canoe and Canadian paddling canoes.

The annual meeting of the executive committee of the American Canoe Association will be held at Clark's, West Twenty-third street, New York, on Nov. 4, with a dinner in the evening at the same place.

The photo of the New York C. C. house, which was published last week, with another view was taken by Mr. Samuel Trimble, Bennett Building, New York.

Rifle Range and Gallery.

Hudson Rifle Club.

THE fifth annual prize shoot of the Hudson Rifle Club was held at their club house Oct. 23, 24 and 25. It was the most successful and best attended affair the club has ever held. The first and second evenings were devoted principally to the target of honor, which were for members only. At the close of the shooting on the second evening Captain Mahlenbrock offered a few excellent remarks and presented to the assemblage Mr. Thos. A. Reynolds, king of the festival for 1893. Receiving the king medal he responded that he was glad to have the honor of the festival, and furthermore he was delighted to

be able to say he had competed and won the honor from some of the most noted crack shooters in New Jersey.

Mr. J. J. Evans next responded by stating a brief outline of the club's work during the past five years of its existence and said that there was no reason why it should not be as well developed and strong as other like organizations. He hoped that in the next five years the club would reach such a point with the present elements that it would be second to none in the State, and that it would have a headquarters and ranges that would be equal, if not better, than any like organization in the country. After a rousing good cheer the captain and treasurer responded with brief speeches, after which members and guests partook of the refreshments awaiting them.

The following scores were made on the target of honor, possible 75:

TA Reynolds (King) 69	HE Boddey 57	Dr Jos Autenrieth 44
John Smith 68	H L Hansen 56	John Rebhan 44
Chas Hutch 65	Jos Buch 54	Thos Welsh 32
A Braun Sr 63	H Mahlenbrock 53	S Middleton 27
J J Evans 62	Bern Theil 51	C Schleimacher 16
E P Ingram 58	C Staderman 49	

The distribution of the prizes on this target was under the direction of Messrs. Middleton and Evans, and they were of the most elaborate ever received by the members of this club. The last evening was, indeed, well attended, and representatives of most of the well-known clubs were present. Among those noticed were Messrs. Ross, Dorrier and Flach, of the Zettler Rifle Club; Messrs. Rosenbaum, Zahn and Buss, of the Empire Rifle Club; Messrs. Hansen and Hughes, of the Excelsior Rifle Club; Messrs. Chas. Hutch, of the Harlem Rifle Club, and many others.

Shooting was indeed very lively and spirited, and much rivalry existed between the guests. This was the fifth anniversary of the organization. High scores were the order of the evening, and by referring to the list at the end it will be noticed that many tried for the golden apple at the head of the prize list.

At 11 o'clock Capt. Mahlenbrock announced that a supper was in waiting for the guests, and invited all present to accompany him to the adjoining dining hall and partake of an elaborate repast. Speeches and toasts were spoken. Meanwhile the secretaries were making up the prizes. All in attendance expressed themselves well satisfied,

having spent the most enjoyable evening the Hudson Rifle Club ever held under its roof.

The distribution of the ring target prizes next took place, and these were awarded to the following riflemen:

1. Chas Hutch, Harlem Rifle Club.....	75	74	73	—292
2. M Dorrier, Zettler.....	74	74	73	—291
3. F C Ross, Zettler.....	74	73	73	—290
4. W Rosenbaum, Empire.....	73	73	—146	
5. B Zahn, Empire.....	73	73	—146	
6. J Rebhan, Hudson.....	73	72	—145	
7. L Buss, Empire.....	73	72	—144	
8. T A Reynolds, Hudson.....	73	72	—144	
9. J Autenrieth, Hudson.....	72	71	—143	
10. L P Hansen, Excelsior.....	72	70	—142	
11. L Flach, Miller.....	71	71	—142	
12. H Mahlenbrock, Hudson.....	71	70	—141	
13. Jas Hughes, Excelsior.....	69	69	—138	
14. H L Hansen, Hudson.....	70	66	—136	

It was also stated at this prize shoot that the Hudson Rifle Club will always be pleased to receive programmes of such prize shoots and festivals and will endeavor to send representatives to return the compliments bestowed by their fellow friends at this, their fifth annual festival.

Greenville Rifle Club.

The active members of the Greenville (N. J.) Rifle Club are keeping hard at work at their practice both in the gallery and on the 300-yard range.

On Friday night, Oct. 27, the club opened its new half yearly handicap series in the gallery range. Fourteen members were present and participated in the shoot. C. Boag and Robidoux each got a handicap of 7 points from Dorrier and 3 points from Plaisted. Both Boag and Robidoux, with 7 points added to their scores of 245 and 244, have more than the possible 250. The scratch men are trying to figure out where they will come in. The scores in the gallery competition are appended, 10 shots, possible 250: C. Boag 245, W. H. Robidoux 244, M. Dorrier 240, G. W. Plaisted 239, Geo. Purkess 232, C. Scheeline 232, J. Boag 230, W. C. Collins 228, C. Agnew 222, J. Dodds 219, C. H. Chavant 218, John Spahn 216, John Hill 215, H. Mang 178.

At the Saturday outing of the club in Ambruster's Park seven members were present for practice, but only four entered the 50-shot handicap sweepstakes match. This handicap rule has got to be quite popular with the members who have been taking part in it and it will probably be kept up through the winter if the weather is not too severe for outdoor practice. Colin Boag entered the competition today with his new .38-55 Ballard. Inasmuch as this was Boag's first appearance in the handicap match, and that his gun was strange to him, the handicapper was disposed to be very liberal, granting him 75 points. Boag started off with the modest score of 184 points; he wound up his 50 shots with the following 10-shot score:

24	23	23	22	20	21	22	23	22	20	—230
----	----	----	----	----	----	----	----	----	----	------

The handicapper now thinks that Boag's handicap will have to be revised at the next meeting. The scores are appended, 50 shots, German ring target, distance 300yds.:

Colin Boag.....	184	185	205	198	220	—982	—73	—1067
Wm C Collins.....	190	188	215	203	199	—995	—60	—1055
Geo W Plaisted (scratch).....	214	206	214	208	210	—1032		
C H Chavant.....	157	200	203	200	185	—975	—40	—1015

New York City Schuetzen Corps.

THE New York Schuetzen Corps, Capt. C. D. Rehm, brought its summer season shoot at Washington Park to a close Oct. 27. The attendance during the season has been rather light, but what is true of the N. Y. City Corps applies also to nearly all of our shooting societies this season in and about New York. The past year has been a most unsatisfactory one to shooting interests. But let us hope that the advent of the year 1894 will bring with it a larger measure of prosperity to the business interest of the country. For, with good business assured our sports will prosper of themselves.

The scores of the members who filled out their scores for the season on the several targets will be found appended.

In the shooting Friday, R. Busse, was high on the ring target with a score of 213.

On the bullseye target, C. G. Zettler led with 6.

On the man target Messrs. Zettler and Facklam, tied with 58 out of a possible 60.

Ring target: R. Busse 213, C. G. Zettler 200, Otto Uihlein 197, H. Radloff 189, Christ D. Rehm 186, H. Munz 185, H. Kuhlmann 161, C. Gohmann 153.

Red flags: John Facklam 4, R. Busse 3, C. G. Zettler 2, O. Uenstein 1, A. Keller 1, Otto Uihlein 1, C. Rehm 1, H. Radloff 1.

Bullseye: C. G. Zettler 6, R. Busse 4, H. Munz 3, Otto Uihlein 2, A. Range 2, A. Keller 2, John Facklam 2, C. Rehm 2, W. H. Gerdes 1, John T. Gerdes 1, H. Kuhlmann 1.

Medal winners on the results of the season shoot are as follows: Ring target: R. Busse, C. Rehm, O. Uihlein, C. G. Zettler, H. Radloff, A. Keller, J. Facklam, G. Urnstein, H. Munz (2,000 rings), A. Holzenberger, H. Kuhlmann (1,800), John F. Gerdes, C. Gohmann, C. Rothweiler (1,600 rings), Wm. H. Gerdes, H. Gerdes (1,700 rings).

For the best bullseye: John F. Gerdes 13, H. Radloff 59 1/2, C. A. Range 59, John Facklam 74, Wm. H. Gerdes 76 1/2, A. Keller 78, H. A. Gerdes 83, Otto Uihlein 105, H. Munz 108.

For the most red flags: R. Busse 23, John Facklam 20, C. G. Zettler 13, A. Keller 13, H. Radloff 12, O. Uihlein 9, Christ D. Rehm 6, C. Rothweiler 3, H. Kuhlmann 2.

Turtle Bay Rifle Club.

THE Turtle Bay Rifle Club seem to have fallen into the practice of holding team shoots in their weekly gallery shoots. We are inclined to this idea as being a good one to draw out the members, provided, however, care is used to make up the teams in such a manner as to put each team upon an equal footing as to shooting ability. Any rule that will give the medium shooter an equal chance with the expert will conduce to the interest of shooting and the club interested. The active members of the Turtle Bay Club are all enthusiastic in the interest of rifle shooting, and we shall be pleased to note the results of their practice from week to week during the season. The scores are appended, three-men teams, 30 shots per man, German ring-target, distance 20yds.:

G E Jautzer.....	246	246	245	—737	
J Ochs, Jr.....	246	247	243	—736	
J Oberle.....	242	242	241	—725	—2198
H Walter.....	245	240	241	—726	
J Kramper.....	240	241	240	—721	
H W Tamm.....	240	240	241	—721	—2198
O G Fuchs.....	241	239	239	—719	
C H Plate.....	239	239	241	—719	
J Burns.....	238	236	240	—714	—2152

Zettler Rifle Club.

THE winter gallery shoot of the Zettler Rifle Club for the season 1893-4 was opened on Tuesday, Oct. 24, 13 members took part in the competition. The club has put up 15 prizes, amounting to \$300. This amount of cash should have the effect to draw out a large number of the experts of the club. On the opening shoot we were pleased to see that old rifleman John H. Brown present as one of the contestants. His score of 244 shows that Mr. Brown, while up in years, has a large surplus of shooting ability left in him yet.

The champion medal, a trophy which has been put up by the club, for a number of years for the best 10-shot score on each shooting night, will this season come up under new rules. A bullseye target will be open for the members on each practice night, upon which every member upon filling out his scores will be allowed to shoot one shot, and at the end of the season the member having the best center shot will become the possessor of the much-coveted trophy. In the meanwhile the trophy will be subject to the first best 10-shot score each week during the winter. On this occasion the first best score was a tie between Messrs. F. C. Ross and C. Percival, each having made 244 out of a possible 250. The honors for the best score for the evening were divided between Messrs. Holges and Plaisted with 247 each. The latter had a fine score of 9 centers (235) and one 22. The scores are appended, 10 shots, possible 250, distance 25yds.: H. Holges 247, G. W. Plaisted 247, F. C. Ross 246, C. Percival 244, B. Zettler 244, J. H. Brown 244, M. B. Engel 244, C. G. Zettler 242, L. Flach 242, H. Strate 242, Gus Nowak 240, R. Busse 239, H. D. Muller 237. Ross and Percival tie for medal on 244 each.

Cincinnati Prize Shoot.

INSTEAD of the regular practice shoot the Cincinnati Rifle Association had a little prize shoot; off-hand and rest shooting was indulged in for points and prizes. The following are the winners:

Point target, off-hand only: First, A. Drube; second, M. Gindele; third, W. Randall; fourth, C. Roberts; fifth, Wm. Hasenzahl; sixth, E. M. Brumbaugh.

Off-hand target: First, E. M. Brumbaugh; second, Wm. Randall; third, A. Drube; fourth, C. B. Copeland; fifth, B. Simon; sixth, Wm. Hasenzahl; seventh, Ottomar Topf; eighth, C. Nestler; ninth, E. D. Payne; tenth, R. Weinheimer.

Rest target: First, E. M. Brumbaugh; second, E. D. Payne; third, Wm. Hasenzahl; fourth, C. Nestler; fifth, R. Weinheimer; sixth, S. Stegner.

THE INTERSTATE AT LYNN.

Forbes.....0100101010-2

## Forest vs. Roxborough.

PHILADELPHIA, Oct. 28.—The Forest Gun Club had a double event on their grounds to-day. The first, which started at 3 o'clock, was not finished until 4, and it gave very little time before dark for the second event, which was a shoot for a double-barreled breechloading gun, 12-gauge. When this match was finished it was so dark that the shooters had to do lots of guessing. The first match was between a team from the Roxborough Gun Club and Forest Club. As the Forest boys only had ten members to shoot and the Roxboroughs had thirteen, Frank Corman, who is a member of both clubs, was allowed to shoot on both teams, and he did as well for one as the other, breaking 20 each time.

To make up the deficiency, at the suggestion of the FOREST and STREAM representative the names of the Forest Club were put in a hat and two drawn, these two being allowed to shoot double scores. The choice fell on Morrison and Riote. When they shot their second round is marked with an asterisk (\*) on the score.

There were quite a lot of spectators on the ground, as these clubs are supposed to be closely matched, but the Forest boys got away with their rivals in good shape with a score of 217 to 204.

The second event resulted in Landis and H. Thurman (shooting for Jackson) tying on 20 straight. The scores are:

Forest Team	
W. Morrison.....	11011100100111111111011-19

## Glenmore Rod and Gun Club.

THE monthly shoot of the Glenmore Rod and Gun Club at Dexter Park on Wednesday, Oct. 25, brought together only eight members. The regular club event calls for seven birds, five unknown traps, club handicap rules. J. Flynn was in good form and succeeded in killing his seven birds, using his second barrel only on his sixth bird. The birds, as a rule, were a fairly good lot and several of the contestants made some good long-range kills. J. J. Edgerton, with his old style 10-bore Greener, shot in good form, in a series of 20 birds losing only three, two of which fell dead out of bounds. Chas. Engelbrecht was another contestant who made a good showing, killing 18 out of his 20 birds. The scores are appended:

S. S. Edgerton.....	111112-6	Chas. Engelbrecht.....	1102122-6
J. B. Kay.....	102121-6	Wm. Lair.....	1122002-5

C. Engelbrecht.....112-3 J. B. Kay.....011-2

## Monthly Shoot of the Rosevilles.

THE Roseville Gun Club had a small turnout at its monthly shoot held on John Erb's Newark grounds on Oct. 26. The weather was fine for the sport and a big crowd was expected, but for some unexplained reason they failed to materialize. R. H. Brentnall and C. M. Hedden, of the South Side Gun Club, and B. C. Sutton, of Newark, were among the shooters. All the shooting was at bluecock targets, 10 in each event, the scores following:

No. 1.	No. 2.	No. 3.	No. 4.

## Herron Hill Gun Club.

PITTSBURGH, Pa., Oct. 23.—The Herron Hill Gun Club gave an all-day shoot on Oct. 17 on their grounds, Brunot's Island, at five events of bluecocks and the balance of the day at live birds. The scores were as follows:

No. 1, 15 bluecocks, entrance \$1, expert system: A. H. King first with 13, Kelsy and W. M. C. Jones second with 12, E. H. McWhorter and McCartney third with 10, Cochran fourth with 9.  
No. 2, 10 bluecocks, rapid-firing system, entrance \$1: McWhorter first with 10, Kelsy and McCartney second with 9, N. Johnson third with 8, Cochran and A. H. King fourth with 7.  
No. 3, 15 bluecocks, expert system, entrance \$1.50: Cochran first with 14, King and Kelsy second with 12, McWhorter and Jones third with 10, Huffman and McCartney fourth with 9.  
No. 4, 20 bluecocks, rapid-firing system, entrance \$2: N. Johnson first with 20, Jones and McCartney second with 19, Cochran third with 18, Kelsy, McWhorter and Born fourth with 17.  
No. 5, 15 bluecocks, expert system, entrance \$1.50: Johnson, McCarney and Jones first with 13, Cochran second with 12, McWhorter and J. O'H. Denny third with 11, Born and Kelsy fourth with 10.

LOUIS LAUTENSLAGER, Sec'y.

## Answers to Correspondents.

B. F. C., Brooklyn.—We cannot recommend you to good gray squirrel shooting within a few miles of New York or Jersey City.

A. BROWNER, Alexandria, Va.—1. Will small rust spots eaten on the inside of gun barrels affect its shooting qualities? 2. What shall I use, as it is for my gun? Ans. 1. No. 2. Try the Winchester Co.'s gun grease.

W. C. J., Duluth, Minn.—To deodorize skunk skins or articles of clothing scented with skunk odor, hold them over a fire of red cedar boughs and sprinkle with chloride of lime. Or, wrap them up with green hemlock boughs for twenty-four hours.

J. H. B., Jackson, Mich.—1. Can solid balls, the size of the barrel, be shot with any accuracy from shotguns? 2. Is any particular gun better than another for this purpose? 3. Is a choke as good as a cylinder bore for this purpose? 4. Which is the best for shooting large buckshot, choke or cylinder-bored guns? 5. Does Greener's book give information on the above-mentioned subjects? Ans. 1. Yes, with fair accuracy up to 50 yds. 2. There is little or no preference between standard makes of guns for this purpose. 3. Yes; care must be taken, however, that the ball is no larger than the smallest part of the barrel. 4. Cylinder. 5. Yes.

## A New Sundry.

## Illustrated Supplement.

THIS issue contains an illustrated supplement, a portrait of the Woodland Caribou, by Ernest E. Thompson. The first portrait of this series, the Moose, was published Oct. 14. Others to follow will be of the Coon, Dec. 2, and the White-tailed or Virginia Deer, Jan. 6.

### THE WOODLAND CARIBOU.

THE woodland caribou is one of the largest of the deer tribe of North America, being exceeded in size only by the moose and the elk. It is not a graceful creature, like the smaller deer and the elk, nor, on the other hand, is it ugly and grotesque, like the moose; in shape and general carriage—when not alarmed—it is not unlike a young Alderney cow. When in rapid motion, however, trotting swiftly through the forest or across the barrens, with head thrown well back and white flag conspicuous, it is a pleasing object; but when feeding or at ease, its deliberate movements and slouching attitudes remind one of a cow.

Wide differences are found in the accounts given by writers of the habits of this species. By some it is declared to be the shyest and most wary of all the deer tribe, while others speak of it as dull to stupidity, and as standing and staring about while its companions are shot dead around it. In a case which came under our own observation, something like this took place; the hunter having shot three out of four caribou, and then walking toward the remaining animal, which stood looking at him until he had come close to it, when it trotted off twenty or thirty yards, stopped and stood for a few moments, and then disappeared over the ridge. As the various shots were fired at the feeding animals, those untouched raised their heads and looked about as if curious to see whence the noise came, and then resumed their grazing. In this case the animals had not been hunted for eight or nine months. Those writers who have found caribou shy have probably sought for them in a region where they have been much hunted, and have learned that the sound of a gun or the scent of man or a moving object in the woods portends danger.

Measured from east to west the range of the woodland caribou is wide, but it is narrow from north to south. It is found in northern New Hampshire, in Maine and in Canada north to Labrador. Across southern Canada it is found as far west as the great plains. Its western limit in the eastern forest belt is northern Minnesota, for it is said to occur in the Roseau Swamp. Further west, in the Rocky Mountains, it is found again, on the further slope of the range, in western Montana, Idaho, Oregon and Washington. Capt. Chas. E. Bendire has told us of skulls that he has seen as far south as Boise City, Idaho, and Judge Greene has written of "queer elk" seen in the mountains not far from Portland, Ore., which were probably caribou. In many parts of the mountains of British Columbia woodland caribou are still abundant, though

much less so now than they were a few years ago, when the country was newer.

We do not know of any direct evidence that caribou have ever found in the Adirondack region. Dekay, it is true, mentions this species in his "Mammals of the State of New York," and as evidence of its former presence there refers to a pair of caribou antlers that he had seen, but Merriam has shown that these are elk, not caribou, antlers. Mr. R. L. McGonigle, long a trader on the upper Missouri River in the early days of the West, and an entirely trustworthy person, once described to us a curious elk-like animal which he shot from the deck of a steamboat near old Fort Peck during a trip up the river, and from the description the beast seems to have been a caribou—a long way from home.

North of the range of the woodland caribou, its place is taken by the much smaller barren-ground caribou, the range of which extends north to the Arctic Sea. It is this species which is spoken of as migrating in such great droves, and whose numbers have by some been compared to those of the old time buffalo. The woodland caribou, though they consort together in herds or bands, are never found in such great companies as their more northern cousins, though in Newfoundland their numbers during the migrations are said to be very great.

The caribou is singular among our deer in that the female usually possesses small horns, which are carried much longer than those of the male, though shed and renewed annually. It was formerly supposed that the cow caribou always had these horns, but Mr. Montague Chamberlain, the well-known ornithologist, has presented evidence going to show that in a limited district in the southeastern portion of its range, the cow caribou is sometimes hornless. This is a curious and interesting fact, and further observation of caribou in Maine and New Brunswick is needed to determine the percentage of hornless females.

The color of the caribou ranges from wood brown in early summer to nearly white in winter, when the darker tips of the hair have been worn off. The mane about the neck is nearly white at all seasons, and the legs are always much darker than the body color. The calf is mottled on the sides for the first months of its life, and we have killed full-grown animals which showed traces of this mottling, which presumably points back to a spotted ancestor.

Extended and interesting accounts of the woodland caribou are to be found in most works on natural history, and those given by Captain Hardy in his "Forest Life in Acadie," and by Judge Caton in his "Antelope and Deer of America," are especially worth reading.

### "PISECO" AT PORT ROYAL.

FEW older readers will fail to recall the stories of adventure in distant quarters of the globe, written by Capt. L. A. Beardslee, of the Navy, over the familiar pen-name, "Piseco." Of recent years Capt. Beardslee has been stationed in home waters. For a term, in near and friendly neighborhood of the FOREST AND STREAM, he was in command of the receiving ship Vermont, that giant house-boat moored at the docks of the Brooklyn Navy Yard; and thence he went to Port Royal, S. C., as commandant of the Naval Station at that point. From Port Royal "Piseco" has contributed occasional letters dwelling upon the charms of the old town of Beaufort, with its rose gardens and live oaks, its delicious climate, its shooting, its fishing, and other attractions, which pictured by his pen appeared to outsiders to lend an idyllic character to existence there.

But it is a truth old as story, and sung by the poets, that while others may journey round the world in quest of adventure and find it but tamely, there may come to you in your own home opportunity of worthy undertakings and noble deeds; and the seafarer in a home port may hear the call for the exercise of qualities as heroic as ever those which have carried him through hurricane and typhoon. Such an emergency confronted "Piseco" in that fateful August night when cyclone and tidal wave swept the Sea Islands of the Atlantic Coast. Paris Island, on which the Government buildings are situated, was submerged throughout its whole extent to a depth of from three to eight feet; more than one hundred houses were swept away, the crops were destroyed, the wells were polluted, and many of the dwellers on the island were drowned, while hundreds of the survivors were left without food or shelter. Amid this wreck and desolation Captain Beardslee, by virtue of his position in command of the Government

station, was the natural leader to whom these afflicted people turned for succor, relief and guidance. That he was equal to the emergency we may well know, that he met it with courage and resolution and readiness of resource we may be assured. There lies before us General Order No. 419 of the Navy Department, relating to the storm at Port Royal, and we print it here in the full text, not alone for its recognition of the services of Captain Beardslee himself, but as well for the record it makes of the men of the command of humble station, who by their daring and their doing—and as for Dr. Hazel, by his death—demonstrated once again another truth, which is as old a story and is sung by the poets, that when some supreme crisis calls for heroism the heroism will be found. Here, then, is the order:

GENERAL ORDER | NAVY DEPARTMENT.  
No. 419. | WASHINGTON, Sept. 23, 1893.

The cyclone which recently swept over the southern Atlantic seaboard, carrying devastation and ruin in its path, visited the U. S. naval station at Port Royal, South Carolina, on the 27th and 28th of August last, with unusual severity, destroying life and doing great damage to property, both within the precincts of the station and in the surrounding country, and leaving without food or shelter numbers of families of enlisted men of the Navy, and employees in the service of the Government and others.

In view of the fury and duration of the storm, with the attendant loss of life and property, and the courage and fortitude displayed by those who were unfortunately exposed to its violence, it is deemed proper that a public acknowledgment be made of the important service rendered by officers and enlisted men of the Navy, and employees of the naval station at Port Royal, on that occasion.

But for the prompt measures adopted by Captain L. A. Beardslee, U. S. Navy, commandant of that station, to meet the dangers of the emergency when the island, on which the naval station is situated, was inundated by the sea in the midst of the storm, and the invaluable assistance, so cheerfully rendered by the ladies of the families of the two officers residing on the island, in providing shelter, food and clothing, for the homeless and destitute, and in caring for and alleviating the sufferings of the sick and injured of this demoralized community, the misery following in the track of the hurricane would have been even more widespread than it was.

It appears from a report concerning this storm, made to the Department by Captain Beardslee, that a most deplorable consequence of its fury was the death by drowning of Dr. W. G. Hazel, apothecary an old and faithful servant of the Government, whose death in a gallant attempt to save others, exemplifies his character, as shown during his long and useful career.

Israel Elliot, commandant's steward, and John Broadanax, commandant's cook, during the height of the hurricane, waded up to their necks, in the fierce sea which swept the island, to a falling house, and with a lighter which they, with others, had secured, rescued from drowning about twenty women and children, and landed them in a place of safety. Middleton Grayson, coxswain; Jerry Green, landsman; Laurence Green, landsman, and Peter Brown, first-class fireman, stayed by the steam launches in which they were stationed, endeavoring to save them, until they narrowly escaped going down in them.

The conduct of the Marine Guard, in charge of First Sergeant Michael Gallagher, was most praiseworthy. When the island was inundated, the marines waded to and fro through the flood, which was driven by the wind into seas so dangerous that many people were overthrown and drowned by them, doing their utmost to preserve life and property.

The same report of the calamity shows that valuable assistance was rendered on this occasion by Civil Engineer George Mackay, Surgeon H. C. Babin, Messrs. G. B. Stratton, Juan Jimenez, J. Hardin Jones, Emil Diebitch, J. H. Disher, machinist, and L. L. Bennett, landsman, and that they, with the force of enlisted men at the station and the Government employees, without exception, behaved admirably, and were untiring in their efforts to render assistance to those in danger and to rescue property from destruction, in many cases at great personal risk.

Where devotion to duty is so general, and the response to the appeals of the unfortunate victims of disaster so prompt and efficient, it is difficult to select any individual for especial commendation; but to all those whose names are mentioned in this general order the thanks of the Department are hereby tendered.

H. A. HERBERT, Secretary of the Navy.

We make this record, knowing that his FOREST AND STREAM friends will be grateful for intelligence of "Piseco" and of his part in the rescues of the Sea Island flood. But our principal object is to second an appeal which Capt. Beardslee makes for aid in carrying on the work which has fallen to him. "I am looking out," he writes, "for the feeding and clothing of nearly 400 people. Miss Barton, of the Red Cross Society, having asked me to continue as her almoner, checks to my order will be used with discretion. I know all the people of the island and just what each family most needs. I got Gov. Tillman to give me an order to have fifty fishing boats built for distribution; and over one-half are afloat and earning money. Clothing is needed; thick underwear, old shooting and fishing garments, old everyday clothes, etc., are what are wanted. I am doing what I can to reduce the misery; and it has struck me that an appeal through your columns to the friends of 'Piseco' might result in help to us. Will not FOREST AND STREAM readers lend us a hand?"

Capt. Beardslee's address is Capt. L. A. Beardslee, Commandant Naval Station, Port Royal, S. C.

## The Sportsman Tourist.

DANVIS FOLKS.—XIV.

A Morning of Song.

THE low, dark, gray sky that had seemed to threaten a bodily smothering descent upon the earth, now began to scatter down a thickening shower of flakes, which the rising wind drove far aslant, dappling with flecks of down, then padding with white cushions the windward sides of trees, fences and buildings.

A great flock of snow buntings reveling in the storm, swept along in the driven slant, like an accession of bulkier flakes and settled in a long drift among the bent weeds, as heedless of the storm as its own wind-tossed flakes.

The further hills were quite hidden by the nearer woods, and isolated trees and dwellings were vaguely revealed through the drifting veil and the snow, beating with a soft patter against the shop window, blurred it to deeper dullness with clinging flakes and the slow trickle of their melting.

No one but a shoemaker could work, and the rest of the world could only go a-visiting. Uncle Lisha futilely wiped the inside of his dull pane and stared forth, but there was revealed to him only the distorted image of a woodpecker clinging to the leeward side of the nearest tree. Sam came in to smoke a second pipe, as did his father, in violation of his ordinary custom of sitting with women folks, whose unaggressiveness was a pleasing revelation after the experience of his later years.

But Uncle Lisha was not disappointed in his expectations, the stamping of feet on the doorstep announced visitors, and Solon, Joseph, Pelatiah, Antoine and his father drifted in, in a snow-laden file, as if they had come down with the storm and were a noisier adjunct of it; and each scattered from him his burden of snow in a circle of melting moisture.

"Dis was ma fader, Onc' Lasha Pegg," said Antoine, leading his desiccated parent to the shoe bench, "he'll gat great many hol', Onc' Lasha, he'll gat some hol'. Ah'll mek you intro-duce."

Uncle Lisha stared almost savagely at the old man, who bowed profusely and said: "Comme est ça va, M'sieu Pegg?"

"Hear the ol' critter callin' me a shoe peg," Uncle Lisha growled in an undertone, and roared in a voice so startling that the old Canadian recoiled before it:

"Commadgy vaw. Good airth an' seas. If it's talkin' French yer arter, I'm jest the man. Polly voo Francy. Sacree. Mushdaw. There. He's a sassy critter, a-callin' on me a shoe peg in my own shop."

"O, no-no-no, bien no, Onc' Lasha," Antoine protested. "He'll ant call you not'ing honly M'sieu Pegg; dat was Muster Pegg, dat was all."

"O, I wanten know," Uncle Lish ejaculated in some confusion. "Wal, that comes o' speakin' in unknown tongues. I c'n talk French consid'able but I can't onderstan' it no ways clear when other folks talks it. Seddaown by the stove, Ann Twine's father, an' make yourself tu hum."

The old Canadian stared at his host in bewilderment till Uncle Lisha repeated the invitation in what he considered more intelligible phrase, and with a roar that he was sure must make it understood:

"Sittay daown, smokey you peep," which being accompanied by a wave of the hand and a pantomimic sucking of the thumb, and interpreted by Antoine, induced the old man to take a seat behind the stove and fill his black pipe with rank, home-grown tobacco.

"An' now what's the news," Uncle Lisha demanded, as he laid a tap on the sole of a boot, fastened it with three pegs and trimmed the edge with his knife. "The' must be some, the hul caboodle on ye turnin' aout in sech a snowstorm."

"Wal," said Solon, not to be forestalled but with seemly hesitation, "the' is what you might call eenamost discred-ible news."

Uncle Lisha held his hammer suspended while he cast an inquiring glance at Solon.

"The's a feller," Solon continued, "hes come up to the village an' instigated hisself as a marchant in the Billins's saddler shop, an' he's jest cuttin' in on Clapham like all smutteration, an' is jest a gittin' his hul onmitigated trade."

"You don't say," said Uncle Lisha, driving home a peg and fumbling abstractedly for another, "An' who is the critter?"

"Feller f'm V'gennes, name o' Bascom, an' he's jest a givin' away goods."

"Humph. Won't git turrible rich at that, I don't cal-late. Just a baitin' folks. Wal, wal, ten stores tu the village, an' I remember when the' wa'n none."

"Ah'll tol' you, Onc' Lasha, it was be jes sem one man Canada, come to St. Ursule settlin' up store an' sol' so cheap, evree body crazy for bought it, an' dat man, he'll borry, borry fave, ten, feefy, honded dollar evreebody, den fust dey'll know, whoop, he'll bus' up an' gone where somebody ant known."

"I'd know, but mebbey he haint sellin' not tu say cheaper 'n Clapham, for they du say his paounds is almighty light an' his yards pleggid short, but I d' know," remarked Joseph.

"He's a sellin' boots a half dollar cheaper 'n what Clapham is," Pelatiah ventured to offer.

"Boots," Uncle Lisha growled in deep-toned contempt, "if he gin 'em away folks 'ould get cheated. Boots! 'Tannin' begretched an' makin' bewitched! Les' hear suthin' interestin'. Someb'y tell a story er sing a song. Ann Twine can't yer father give us a French song?"

"Dat was de honly kan he'll gat. He'll ant learn for sung Angleesh lak Ah'll was."

"It's hopesin he won't," said Sam.

"Tune him up, Ann Twine," cried Uncle Lisha, and Antoine with a few words in French, persuaded his father to sing in a nasally sonorous voice and with a feeling that was better understood than the words:

"A la claire fontaine  
M'en allant promener,  
J'ai trouvé l'eau si belle  
Que je m'y suis baigné.  
Il y a longtemps que je t'aime,  
Jamais je ne t'oublierai."\*

Then without much persuasion, the old man sang "Roulant ma Boule."

"Roull, roulant, ma boule roulant,  
En roulant ma boule roulant,  
En roulant ma boule."

"I like that aire about rollin' the bull almighty well," Uncle Lisha commented when the songs were ended, "but that aire Jimmy Jenny trouble you, I can't make much on."

"Dat ant what it said, Onc' Lasha. It was 'Jamais je ne t'oublierai,' sem he'll said, 'Ah'll ant never goin' fregit.' But Ah'll goin' sing you so you on'stan," and he struck up more tunelessly than intelligibly, "The girl I left behind me."

"De bee growl an' weesh for save hees store,  
De dove he shall turn over  
An' fall in the water, mek it roar,  
If Ah'll fregit for love her.  
If ev'ree chance Ah'll gat dat way,  
An' she ant gat for sign me,  
Ah'll reckon up mah min' for stay,  
To de gal Ah love behine me."

"Lord o' massy, yes, if a feller only knows the song he c'n onderstan' it jest as easy as rollin' off a lawg. Now then, Solon, give us 'Brave Wolf.'"

The swelling drone of Huldah's spinning wheel had ceased, and the shop door was softly set ajar that the occupants of the kitchen might share the musical treat.

"That aire French singin' is turrible satisfyin'," Aunt Jerusha whispered, as she sat with her ear bent to the crack of the door and a pinch of snuff half way to her nose, "considerin' you can't make aout a word on't."

Then Solon, after much preparatory clearing of his throat, struck up his doleful song in a high pitched voice.

"Cheer up your hearts, young men,  
Le-at nothin' fright yeou,  
Be o-of a galliant mind,  
Le-at that delight yeou."

When the hero of Quebec at last "died with pleasure" in the arms of his "Eddy Konk," Joseph Hill lifted up his voice in commemoration of another humbler and fairer victim of the great destroyer:

"It was all by the banks of a beauchiful river,  
As I walked aout in the sweet month of June,  
A pretty fair maid I chanced to diskiver,  
As carmly she strayed by the light of the moon.  
Nya—sing derry down derry,  
Nya—derry daown day."

"An' neww it's come your turn, Samwil." And Sam, after such persuasion as a bashful singer needs, sang of his beloved woods:

"When the airth is kivered white  
An' the trees is naked gray,  
O, then 'tis my delight  
Tu the woods tu take my way,  
Tu hear my haoun' a-hootin', an' a-tootin',  
An' hear my gun a-shootin'  
When the fox goes streakin' by."

When the greenin' spring has come  
Tu fetch the fun o' fishin',  
Though I du en'j'y it some,  
Fer fall I keep a wishin',  
Tu hear my haoun' a-hootin', etc.

But the yaller days o' summer  
Is the season wust tu bear,  
A lunsome spell o' waitin'  
Fer the jolly time o' year,  
That sets my haoun' a-hootin', etc.

O, it's bright in the mornin' airly,  
Of a gay October day,  
That I delight most dearly  
To the woods to take my way,  
Tu hear my haoun' a-hootin', etc.

Ev'ry tree's a painted picter,  
An' the grass is green as June,  
If the' haint no birds a-singin'  
I shall hear a sweeter tune,  
When I hear my haoun' a-hootin', an' a-tootin',  
An' hear my gun a-shootin'  
When the fox goes rustlin' by."

"Short an' sweet, like a spoo'f'l o' lasses, an' good 'nough tu hev more on't." Then Uncle Lisha burst forth in a stormy song of the sea of "Two lofty ships that from old England sailed," and went cruising round on the coast of "Barboree" in quest of pirates. The stove-pipe rang with a responsive vibration as he roared:

"Lay aloft," cried aour cap'n, 'lay aloft,' shouted he,  
'Look ahead, look astarn, look a-weather, look a-lee,  
Cruisin' raoun' on the coast of Barboree,"

and every one was glad when at length the "Jolly Pii-ruts" were sunk in the bottom of the sea.

"Lisher c'n sing jest as poety as ever he could," whispered Aunt Jerusha, admiringly.

"An' neow, Peltier, you come in like what the shoe-maker hove at his wife, but you've got tu be heard from, just the same. Tune up suthin' lively, neow."

Pelatiah lingered diffidently on the verge of song, feeling his way here and there with an unsatisfactory pitch till at last he launched forth with the recital of experiences somewhat similar to his own:

"Tis of a poor young map,  
Distraghted quite by love,  
His storee I'll relate,  
Your tears all for to move,  
Conven-iunt a damsel lived,  
No rose it could compare  
A-with the damask of her cheek,  
The color of her hair."

So Pelatiah continued his doleful strain till the heart-broken hero went to sea to drown himself and his sorrow. "That aire's a turrible lunsome kinder song, Peltier, an'

\*"Down to the crystal streamlet  
I strayed at close of day,  
Into its limpid waters  
I plunged without delay.  
I've loved thee long and dearly,  
I'll love thee, Sweet, for aye."

—From "Songs of Old Canada," translated by William McLennan.

I'm glad the' haint no more on't. Good airth an' seas, the' haint no sense in a feller given' up that way."

"No," said Sam, "he'd a tarnal sight better go aout an' kill a wolf, er a fox, er suthin'."

"I swan, Timmerthy has sneaked off wi'out singin'," said Uncle Lisha.

"Onc' Lasha, Ah'll wan' gat you medjy ma fader his foot of it for mek it some boot. He'll gat hees botte sauvage all waar hof so hees foots mek wet all de tam."

"All right, fetch him over here," Uncle Lisha shouted, picking up a splinter of pine and splitting it to the desired size. "Gittin' on him ready tu go tu Colchester P'nt? Wal, I'd keep him here a spell yet. Folks never come back f'm the P'nt no more 'n they du f'm any other hereafter. Why, they du say 'at you c'n hear th' bones an' skins a-rattlin' fore you get within a mile o' the P'nt, an' sech a pollyvooin'!"

"O, Onc' Lasha, what you talk so? Frenchmans dead when he gat ready, some tam fore, jes sem somebody. Den le Bon Dieu call it an' he flew up an' le Bon Dieu put it in veree high roos'."

"Shets it in a coop, more like, Ann Twine. But trot aout yer father over here. Pull off yer boot, Ann Twine's father. Pulley hof you butt." Uncle Lisha was not surprised that his meaning was comprehended by his customer, who cried, "Oui, oui," very rapidly, and at once grappled with his right boot and presently disclosed a very dirty stocking.

"Naow set your heel agin the side of the haouse. Settey up you heely. No fersten? He's so ol' he's forgot his own langwidge."

With Antoine's help, the old man was backed up to the wall with his heel against the mop-board and Uncle Lisha stooped over his foot with a sharp-pointed jack-knife poised threateningly above his toes which were instinctively curved.

"Quit a-wigglin', yer dumbd ol' toes. I haint a goin' tu jab 'em. No wiggly pav de toe. There, I thought I could make you onderstan'," Uncle Lisha was not surprised that his meaning was comprehended by his customer, who cried, "Oui, oui," very rapidly, and at once grappled with his right boot and presently disclosed a very dirty stocking.

The clatter of dinner-getting was a signal for the departure of the visitors, who went forth to find the storm spent and the landscape smothered to silence in universal whiteness, and to make their way homeward by unmarked highways and by-paths.

ROWLAND E. ROBINSON.

## THE SAGINAW CROWD.

Pilgrimage of 1892.—V.

(Concluded from page 389.)

THE morning was not promising for a fair day. The dark clouds indicated that the ride would by no means be a pleasant one. As the day progressed the storm did not increase, but the air was heavy with smoke from some distant prairie fire, that at times seemed to be quite near us. Breaking camp did not take long. About the meanest thing to pack are the kerosene lamps. We usually take one or two tin reflector lamps along to hang up on the tent pole. It makes camping more cheerful, and they are easily transported. At the same time the chimneys had to be packed and unpacked every night, and the oil emptied back into the can after we had done using them. Seib had seemed anxious to have some particular task allotted to him, and it was suggested that he be appointed cleaner and trimmer of lamps. This arrangement was made early on the start out, but he soon fell into his bad old ways of imagining he saw game on the neighboring hillsides about the time that lamps were due. He did take care of them one morning, and that was the end of it; so we excused him, and the not pleasant task fell into the hands of whoever happened to think of it.

We made an early start, and the morning passed uneventfully. A few antelope were seen, an occasional wolf, and a shot or two taken at a grouse that happened to be near the road. There are not many birds to be found away from the river and the ranch houses. We arrived at the H. A. ranch in good condition and early in the day. The horses were given a feed, and, with the kind assistance of the Texas-despising cook, Harrison set out his usual bill of fare. We left a quarter of one of the deer with the cowboys, took some more snap shots with the kodak, and were soon on our way again. Here we left the Kid, where he was to put in a long, cold winter line-riding. The more soberly inclined took him one side and gave him lots of advice. Boys of this kind are apt to sow wild oats with a very prodigal hand whenever they come to the settlements, and the Kid had boasted of several exploits that were not to his credit, but when his home in far-off Iowa was called to his mind, and a picture of his mother and the family fireside drawn in tender colors by the Doctor, we know there was a good deal of good in him yet, and that his heart was in the right place, for it brought the glistening drops into his eyes. It is not to be wondered at that these youngsters, away from all restrictions, and having only the rough amusement that they can get from occasional visits to the village bar-room, get to be, to draw it mildly, pretty tough.

We were all feeling well, the horses were in good condition, and we sped along the road toward civilization at a merry gait. Our destination that afternoon was Indian Springs, our first camping ground on the way out. It was a good long drive, but we had the entire afternoon to make it in, as we had gotten such an early start in the morning. The little wolf Briggs was contrary, not disagreeably so of course, but still it had cropped out at odd times for the past week. Whether it is a habit he has contracted from living an unmarried life of forty odd summers and one or two more winters I don't pretend to say; but the fact exists beyond controversy that that morning he had developed a full supply of disagreement. He objected to Jack's shaving before we broke camp—said there was no use in using up our limited supply of soap in useless and wasteful ways. Now, Jack's whiskers are no disfigurement to his little "prunes and prisms" mouth, but the boys did not resent this and thought there was slight ground for Briggs's objection, knowing that this was all that Jack had used of the soap to date. But when we lunched and all partook of the raw onions with

our bread and bologna he registered his disapproval in such marked language that there were smothered murmurs of revolt. Onions are to Briggs as the red rag is to the warlike bull.

The buckboard rattled along ahead, and our driver was busily engaged watching the movements of the roan's tail to see that no skip in the usual proceeding was made as said tail took its periodical flirt. Far down the valley to our right, a full grown wolf started from a clump of weeds, and trotted away over the plain. Briggs wears colored glasses when out in the sun. He is not far-sighted, and I know he had not seen the wolf; and was equally certain that it was so far away he could not see it if I pointed it out. Very naturally, I called attention to it about as follows: "Boys, look at that big wolf down there;" and instantly, "it's not a big wolf, it's a little wolf" came from Briggs. The Judge saw it in the distance, and turned and looked at the occupant of the rear seat for an instant in astonishment, and then opened on our cranky friend. "You ornery contrary cuss. You have done nothing but dispute the words of gentlemen all morning; and if you don't own up instantly that you haven't even been able to see the wolf, much less tell whether it's big or little, we'll stop right here, and wait for the provision wagon to come up, and put you in it with Harrison." It was so ridiculous that we both laughed till we ached. The poor victim saw he had slippery ground to stand on, but would not recede from the assertion that it was a little wolf. "How do you know it's a big wolf?" he argued. "It is a little wolf, I say." I think he saw himself "as in a looking-glass," and was quite decent for the rest of the time; but, whenever one of his spells seemed to be coming on, some one would say, "Well, it was a little wolf, anyhow," and Briggs would subside. At home the story was told to some of his near and appreciative friends, so that he goes by the name of Little Wolf, especially to the pedro players at the club.

We arrived at Indian Springs just before dusk, found the ranch house at the bottom of the hill still deserted, and made camp again in the old place. Some of the boys went down into the little marshy spot around the spring hole to shoot Wilson snipe. Two or three of the others wandered off over the hills after grouse, returning with two or three. No snow yet, but a very windy night, and occasional gusts of rain.

Wednesday, Oct. 12, we broke camp at seven in the morning and were off on the home stretch. We know that the train going east arrives at Dickinson about 2 o'clock and have plenty of time to make it unless something unforeseen happens. We, in the buckboard, take the lead, and arrive at the station about 12 o'clock, the others stringing in at intervals of half an hour later. We find that the train is two hours late, so we have time to shave and clean up generally. The Judge is much disappointed that he does not find half a dozen letters from his wife, and immediately keeps the wires hot telegraphing to find out whether his better half still thinks of him, and whether the children are well. Not getting an answer before leaving Dickinson, he determines to keep on the train and go home, for he is certain that all sorts of things have happened. He receives a good deal of sympathy from the old bachelors in the party. Is in excellent spirits again when, on arriving at Flint, Bob comes aboard and hands him half a dozen letters that tell him that everything is lovely at home.

Before leaving Dickinson, Paddock comes in the car, dressed in his Sunday clothes and cleanly shaved, so that we could hardly recognize him. He, as well as the rest of us, has had a good time; and he allows that we are not the tenderfeet he feared we were at the outset. He said that usually, when he took a party from the East on a trip of this kind, he had to put up the tents, attend to the horses, etc.; and that ours was the easiest crowd to get along with that he had ever piloted. He wanted us to promise we would come again. I sincerely hope we may. May his shadow never grow less; for in all my experience I never fell in with a man that improved more on acquaintance, or was "all wool and a yard wide" to any greater extent than our good friend Paddock.

We pulled into Flint at 8:52 Wednesday night, only twenty minutes late. As Bob's smiling face is seen at the door the musician that grinds the herophone puts in his best licks, Jack's mouth organ, with an empty tumbler for a sounding board, strikes up a lively gait, and the rest of the party go through an Indian war dance. Bob reported having missed us wonderfully; at the same time he had been driving around the country very thoroughly with Lee, and had had some shooting; but said it was no fun without the boys. He had killed about 100 ducks and geese and grouse since we had gone, and reported lots of ducks and grouse, but very few geese. We stayed up quite late that night and swapped stories and made plans for the morrow.

I shall not go into details of our hunting at Flint; it is a repetition almost of many of those of previous years, only that we did not find as many geese as usual, but plenty of ducks, snipe and grouse. Whether it was not cold enough to bring the geese southward we could not say, but my opinion is that there was so much water all through North Dakota that they did not congregate in the lakes around Flint as much as in previous years; and, there being lots of grain to be had in any direction, they were feeding undisturbed in the northern part of the State.

Thursday morning we were up fairly early, but did not leave the car till about 9 o'clock. We were getting lazy in our old age, and while before this we had attempted to take a morning shoot, and also one in the evening, we are now satisfied to take it easy, and only take in the evening flight. Bob, the Doctor and Ferd went north to Scott's, about eighteen miles, and thought they had picked out a good location. A heavy thunder shower came on, which interfered with their sport somewhat, but they came back with fourteen geese, seven grouse and four jack rabbits. Briggs, the Judge and myself started south for the sand hills after grouse, but it was so stormy that we gave it up as a bad job, and returned to Lake Isabel, meeting the rest of the party, bringing in that night sixty-three ducks.

Friday, all went north, looking for a good location for geese. Six stayed on John Goodman's place, but the birds came in high and shooting was poor. At the same time we got twenty-five geese, nine ducks, five cranes and two grouse. The other three located at some distance from the balance of the party; but the geese would not decoy, and they only got three or four.

! Saturday we put in hunting grouse and ducks. Two of the boys went off for geese, but had poor luck. The fol-

lowing four days were put in in about the same manner.

The Judge was not feeling well. He had gone on a long drive without taking his overcoat; and, becoming heated from tramping, got thoroughly chilled through on the drive homeward, and came near having an attack of pneumonia. The Doctor took good care of him; and I can yet see Judge's attempt to smile as he thanked the Doctor for saving his life.

One afternoon Bigelow and myself, after being skunked on a little trip we had taken to the north, and loafing around the car until 3 o'clock, concluded we would drive down to some little lakes three miles away, and see if we could not get some duck shooting. As we started out the wind was blowing quite strong from the west, and it in-

THE WAY JACK CARRIED DEER.

creased as the afternoon went on till it was a stiff gale. We selected a point on the little sand bar between two of the small lakes, one taking each side, and, lying down on our backs, we would rise to a sitting position as the ducks passed over and give it to them. The widgeon were passing in countless numbers. They would go down the wind like bullets, and it was as much as we could do to kill them. It was great fun, even though we missed so many, for when we did tumble one over he fell with a thud and a bound on the bare sand bar, and was easily retrieved. The little 16-gauge and the smokeless powder soon began to get in their deadly work. Bigelow, with his big gun, had been beating me for some time, but when we counted birds at dusk he had 23 and I had 21. He gave it up then as being too dark to shoot, but I am a regular night hawk, and had great fun knocking down four or five more that he could not even see as they passed over. I would shoot; a streak of fire, and a thump near by would be the result. Bigelow did the retrieving

THE BOLD BAD BANDIT.

in excellent shape. We felt quite jolly over our little impromptu shoot. Many times, when not much is expected, it turns out in this way, and is all the more enjoyable in consequence.

The cold nights had enabled us to keep our game in splendid condition and we had given away to those that wanted it. The conductors and trainmen on the passing trains had begun to regularly stop off for their daily supply of ducks and geese, and we were glad to give them whatever they wanted. The people at Flint did not esteem it much of a luxury, yet at the same time many of them were glad of a nice bunch of ducks. The appetite we brought with us from the Bad Lands also prevented needless waste. I developed about as good holding room as Bigelow. I remember well one night when we came in, Harrison had cooked two geese and roasted a duck for each one. After the second goose had been brought in, and I had carved every morsel from it, a duck was passed to each hungry hunter; and hungry they must have been, for it is an actual fact that three-quarters of the plates contained nothing but bare bones when we had finished. How good the cigars tasted! Bigelow had a box for state occasions, great big La Rosa de Santiagos, and on this night they were passed around. They were ordinarily strong enough to knock over an ox. The amount of tobacco one can use on a hunting trip is enormous; in fact, I believe we all smoked too much. No matter how many cigars you take with you you always run out before coming home, and then resort to the corn-cob pipe and the country tobacco, if you do not happen to have taken some with you. After two or three days' smoking a man who is not used to the pipe finds the inside of his mouth feeling like the rind of an orange.

The Saginaw Crowd are the best fellows in the world to be off on a carousal of this kind—they never kick. No matter what Harrison has to eat, it is always voted the best meal we have ever eaten. Briggs does object, as I stated before, to the onions, but he is not as bad as he used to be. May be the reason is that we have fewer onions. Another thing from the kitchen that never went begging was Harrison's good pancakes in the morning. How he could bake them as fast and get up the quantity of them he did on that little kitchen range was always a conundrum; but plateful after plateful of the golden brown cakes, steaming hot, came through the swinging door and disappeared morning after morning.

Finally the time comes for home. Some of us begin to think of wife and babies, friends at home, and not least, though it does come last, the duties of business. I suppose if we could hunt and shoot as much as we want to do it would not taste half as good. Thursday night the game is all packed, that is, what we want to use on the way home and take to our friends. We are in St. Paul the following noon, and in Chicago at 7:40 the next morning. Through some blunder our car does not get properly transferred from the Wisconsin Central to the C. & G. T. It happens to be opening day at the World's Fair, and we excuse the blunder on the ground that they have a great deal to do of an unusual nature. Some of us have tickets of admission to the opening, and the party divides up to see the sights. Bob and Seib leave us here, the latter to remain in Chicago a few days, Bob going directly home. Bigelow remains to come with the car on a later train; the rest of us take the regular train for home.

On Sunday morning, Oct. 22, the car arrives, Bigelow having come through all by himself, and living like a lord. Our truck is unpacked, and turned over to the man to be cleaned. The ammunition, what there is left of it, is carefully put away in the office for another year; and the trip of the Saginaw Crowd for 1892 is at an end.

W. B. MERSHON.

*Postscript.*—Jack was anxious to make a good impression as a thoroughly hardened Western hunter, and said it would be necessary for him to have something to show the family at home; for they might think he had not killed a deer or undergone the hardships and fatigue of camp life; so, rigged up in not only his own regalia, but what he could borrow from Paddock and Henry, he mounted his horse, and asked to have the deer thrown on the saddle with him. The head and skin of the small doe, the second he had shot, were handy by; so it was thrown across his lap (as the picture will show), in a very natural position, that is, it looked as if he had the deer with him on the horse; but it was also not a very natural position for a man with a lame knee to carry a deer. It did not occur to him that he probably could not pack the animal into camp, holding it on his lap. This fact, though, we did not point out to him, the kodak was taken; and Jack was proud of the picture.

Then came Bigelow's turn. He wanted to see what he looked like; and the contrast between this, and his usual appearance when going down Fifth avenue on a Sunday morning or stepping into Delmonico's after theater, is so startling that we immediately christen it "The bold, bad bandit." He had borrowed the Kid's shape, Henry's belt and .44 revolver; and, putting on his pleasant smile, added to our list of illustrations.

I had this picture enlarged and framed, and expressed to his wife; and, while she was very much pleased with it, I am inclined to think it is one of the reasons that prevent his going to the Bad Lands with us this year. He was afraid the example would be bad for his children.

W. B. M.

#### Hard Times and the Game.

CLEARFIELD, Pa., Oct. 30.—I take advantage of your invitation to send a few notes from the game fields of the Alleghanies. The squirrel crop with us was an utter failure. Indeed, I do not suppose there have been a dozen big squirrels killed by our hunters this fall. I can't account for this as the crop of nuts is here to sustain them, and our woods have always been the natural home of the black and the gray squirrel.

Grouse are fairly plenty notwithstanding the long, cold winter of 1892-3, and the birds are large and in good condition.

I spent two days in the Green Woods some days ago, looking for deer and deer signs with a view to pitching our tent next month. I saw but one deer and but few signs, though I walked over some of the best territory I know of. I found more hunters and hounds than I have ever seen so early in the season. All the old camps seem to be full of hunters and many new ones are being built. The hard times that have struck us have thrown many men out of employment, and many of these have taken to the woods with their guns and traps to hunt and trap for a living. Indeed, several men whom I met in the mountains told me they were there for the season and for the money there is in it. This is a sad comment on the statesmanship of the times, and will eventually prove hard on the game supply.

After looking the ground over carefully I concluded to give the Green Woods a wide berth this fall, and our party will again occupy Camp Blue Dell in the mountains of Huntington county, where our faithful guide, Harry Hoffee, writes me deer and bears are plenty. During the past week I have noticed two bears and one deer hanging in market, having been brought in by two market-hunters who prefer to hunt for a scanty living than to work at panic prices.

I'm glad to notice a new correspondent from our town, Capt. Thos. E. Clark. The Captain and Mrs. C. are very successful in catching big salmon, and I'm sure are a valuable acquisition to the great army of readers of the best sportsmen's paper in the world. FRANK G. HARRIS.

#### Thanksgiving for Rain.

*Editor Forest and Stream:*  
Burton Harris, of Pelan, Kittson county, Minn., writes me under date of Oct. 9: "Messrs. Miller and Oppold, of Sterling, Ill., and Cline, of Alexandria, Va., left here today, having killed over 700 chickens in two weeks. The rainy weather was against them. Had they not lost several days in this way they would have killed at least 1,200 birds.

All good Christians who read this will thank the good Lord who sent the rain on these sinners, and I for one regret that he did not give them several more days of it. G. O. SHIELDS.

## THE WEST OF LONG AGO.

My earliest memories carry me back to a beautiful grass country, rolling away in every direction in huge billows and hills of green. Flowers of a thousand hues bloomed all around, hundreds of varieties and countless numbers of specimens, making bright waves of color in the low draws and around the water holes.

Rattlesnakes sprung their warning, if you chanced too near, and coyotes howled, each with voice enough for ten. Occasionally too the weird, soulless howl of that gaunt spectre of the plains, the buffalo or loafer wolf, would float across the hills in a ghoulish way that made one's flesh creep. Buffalo still roamed by the thousands only a short distance to the west, and eccentric individuals clad in highly fringed and ornamental buckskins kept the settlement supplied with meat from these herds. Queer Arabs these men were, blackened by camp smoke and tanned to a leathery hue by the prairie sun and winds, free-lances who obeyed no dictates but their own will and handled a rifle by instinct.

The grass land was a pleasant place to dwell, and to me was never monotonous until the plow came, ripped the grass and flowers up by the roots and installed King Corn in their place. In the early days crystal springs gurgled and bubbled throughout the land, birds piped their glad notes from every bush, prairie chickens boomed and cooed from the dew-freshened hilltops in the early mornings, and the balmy southern breeze, charged with ozone, came across the millions of acres of wild meadow and made life worth the living.

Never was it so enjoyable as in the late summer when the thin blue haze hung over the land, softening the outline of distant hill and valley, and lending a dreamy air to everything. This was Indian summer, when the golden rod and sunflower bent their yellow heads to the sun, and the gold and black liveried humble-bee droned his buzzing songs among their petals. When the scarlet sumach plumes and milkweed blossoms touched the green with color, and the acres of bluestem grass waved, saddle high, for miles across the hilltops.

If you have watched the sun go down there and lingered through the long twilight, seen the crimson and gold slowly fade from the fleecy clouds, and watched the night-hawk's silhouette cross the aftermath of sundown which lingered in the deep blue dome above, traced the great horned owl's noiseless flight passing by on nocturnal hunting bent, and listened to the voices of evening come over the plain in that softly subdued way which only the grassland can conjure up, then, truly you have lived and not always existed.

There was a charm, too, as subtle but different about the mist-hung landscape of early morning when wild life awoke and began to move, the time between the first tinge of dawn and sunrise. Then there were sights and sounds which are unknown to the sluggard who waits for sunrise to wake him. Everything is bright and fresh, a crisp, new smell is in the air, and a soothing, restful feeling pervades everything. No man can be abroad at this time in any unsettled country without experiencing a sensation of delight, just from the surroundings and their influence on his animal nature, though there be nothing romantic, poetic or artistic in his composition. A feeling of quietude and self-content will steal over him, his camp smoke will have a pleasing odor unknown later in the day, his pipe will taste better and he takes a quiet, restful delight in all he sees. He watches the bath of the birds, the perch on a nearby limb, the pluming and oiling of the feathers, hears the song, of the singer's own composition, as he rises to salute the orb of day. The hum and buzz of insect life so noticeable at noon is wanting, for only the belated moths are about at early morning, and the rest are in discord in the quiet harmony of day birth. The sun tips the hilltops, long, level beams of light hunt out the dew-diamonds and lend an opalescent gleam to the glittering array in Nature's jewel box, the fresh smell drifts out of the air and the landscape takes on an even tone as the shadows lose themselves; then a period of comparative oppression settles down and leaves you listless, and day has come in earnest.

Prairie fires were a source of great danger to the early settlers of the plains. After the frost came in the fall and the grass was dry enough to burn, some stray Indian or emigrant camp-fire left smouldering would be fanned into a blaze by the wind and miles of country would be blackened before it would burn out.

Often times at night a lurid haze in the air and a red reflection in the sky would show where a long front of fire was licking up the bluestem tangle of grass. When the wind would spring up and blow wisps of burning material far in advance of a fire it would create a draft that sucked all the lighter sparks high in the air, only to drop them far in advance of the main fire and setting new points.

Then the only resource was to "back-fire" against the hordes that swept along like a cyclone of flame and licked up everything in its path. No horse could outrun the flames at such times, and nothing could live a minute once overtaken by the seething, roaring mass which went by like a whirlwind and left only death in its wake. Many wild animals were caught at such times, and their shriveled carcasses left to the buzzards, which always hung on the trail and circled through the smoke of a big fire. Sometimes the ironwork of a wagon and the blackened remnants of a team and driver were found, mute witnesses to the fury of the red blast gone by.

Let a smoky haze steal into the usually clear air and far up above the loathsome shape of the prairie scavenger, the carrion-eating buzzard, would be seen; at first a mere speck, which soon developed the outline of a bird poised on stiffened pinions, slowly sailing, with funeral solemnity, toward the path of the fire. Whence came they? Ah, Quien sabe? Well, they knew by some mysterious instinct that carrion awaited them there, and from their vantage point, thousands of feet above the surface, they dropped with unerring accuracy, down, down, down, until their hideous bulk rested beside the dead, and they commenced their loathsome work of destroying the decaying mass of flesh, nor stopped until it was done. Not alone or in pairs came the creatures, but by the score, and soon the ghastly feast was over and they mounted high again in ever widening circles, sailing, sailing, circling upward, never once flapping a pinion after leaving the surface, but floating and circling ever up, up, up, until the eye could no longer see the black blot against the sky. They are an uncanny bird, these black bits of the infernal regions, fit company for the

sneaking soft-footed coyotes that snarled and fought with them for a share of their awful feast.

These things we who dwelled in the great grassland of early days were perforce familiar with, and they are some of the memories that come to us through the winding haze of tobacco smoke, when the firelight flickers and ghostly shadows flit about, when the katydids and crickets chirp in quiet unison, and the phosphorescent glow of the firefly's lamp makes light among the cobwebbed corners of our memories, and we brush the dust from things belonging to by-gone times.

What charm is there about a quiet smoke with some congenial soul beside a flickering camp-fire that brings these old memories crowding back so vividly that you live over again, in mind, the scenes of long ago? Sunshine and storm, daylight and darkness, excitement and peace, flash through your mind and quicken your pulse, yet you sit immovably gazing into the fire, seeing naught but former scenes while you stolidly smoke, smoke, smoke!

The present does not exist and the past is not yet gone, you live again and cannot forget, but must think on and on until something dull, prosaic and commonplace calls you from a land of shadows, back to a world of hard reality! Yet some people say, "it is so lonesome away out in the woods!" Bah! They exist, while he who roughs it and lives a life of freedom in the open air really lives!

EL COMANCHE.

## THE OLD DAYS AT BARNEGAT.

THE wind is abroad to-night. The casements rattle and the pines toss their great tops angrily as they sway before the blast. The back log sputters, sending a shower of sparks out into the night to be swallowed by the blackness.

All objects in the room are outlined by the deep gold of the firelight, and the glass eyes in the elk's head over the mantle gleam and seem to move in a very lifelike manner.

Lolling back in my comfortable chair and following the blue wreaths of smoke as they float upward from my pipe and fade away in the shadow, my eyes rest upon an old breachloader of English make.

What fond memories it recalls! Over its brown barrels I watched my first wild duck come sailing into its fate. Its sharp voice sang the requiem of my first quail, and the English snipe has stopped short, just as he had finished his peculiar corkscrew twist and laid his course straightaway.

That was when Barnegat was undisturbed by railroads; when old Bill Chadwick reigned supreme over the sand dunes on Island Beach and the yellow meadows across the bay.

How many are there living to-day who can forget the hospitable ranch? Time can never rob me of the memory of it, and in the flickering gleam of the fire to-night memory paints the quaint old house, with its wide verandah from which hang great bunches of curlew, marlin, plover, "yelpers," doewick, robin snipe, and small yellowlegs.

I can see the little barroom with its smoke-stained walls, and the jolly crew of gunners busy cleaning guns, loading shells or indulging in "nap."

There are not many of the old time patrons left to listen to old Bill's yarns, but their places are filled by the descendants of those who frequented the place way back in the forties. The old register will show the names of such lovers of the sport as Rem Offley, Jim Lillie, Walter and Henry Fleming, Max Barretto, Jim Newton, Elias Drake, Lew Livingston, my father W. A. Day, better known as "The General," and a host of others whose names I cannot recall. Some of those I have named have crossed the silent river.

From the beach I hear the hoarse voice of the combers as they dash themselves to pieces on the treacherous coast, or perhaps some one holding up a finger, calls attention to the honking of a flock of geese flying over through the night; what a weird sound it is.

But it will be an early hour when we rise in the morning to go out to the blind, so we turn into one of Bill's cornhusk beds, and settling down between the nubbins sleep as soundly as though it were a bed of down.

To me there is always something uncanny about rising before daybreak, and those who do seem to have a sort of respect for the hour. Everyone converses in a hushed tone of voice, there is no laughter and the gunners move about noiselessly in their rubber waders. After a hurried cup of coffee we would all start for the blind that had fallen to our lot in drawing for position the night before.

Father and I occupied the "outer stand" one morning about half a mile from the house. The decoys are placed, everything is in readiness, then comes the morning pipe. Oh, that pipe! The best smoke of the day. The geni of the bowl, obedient to our call, added a zest to and mingled its flavor with that of our coffee, and kept the fierce Jersey mosquito at bay. No cigar from Havana's sleepy isle ever possessed such sweetness or gave more enjoyment to the smoker.

Gradually the cold light of morning would outline the meadows, and then the birds would commence flying. Father's keen eye never failed to "mark" them when the first bunch would appear like a minute cloud in the distant horizon. Here they come, in answer to his whistle, nearer and nearer, and we crouch, almost breathless, as they sweep in toward us and make a half circle, head up to the wind, and swoop down to the decoys. Now! And up we rise. Bang! Bang! Some drop and the call of the wounded bring the flock back again. We give them four more barrels, and few are left to resume their flight. But we are not the only ones, for over the russet and golden meadows the faint pop! pop! tells us the other blinds are doing good work, and now and then a shower of No. 10 settles down around our heads.

And so they keep coming until long after the sun has taken possession of the sky. Then we gather up our birds as the welcome sound of the horn summons us to breakfast.

Such a breakfast! Heaps of broiled birds, cooked to a turn; coffee, rich and brown; home-made biscuit, real butter, and oh, crowning glory, buckwheat cakes and New Orleans molasses. Lucullus never spread a feast that was more appreciated.

In the afternoon, with a good, stout bass rod, and a few menhaden for bait, one could seldom miss taking a few bluefish from off the pier built out over the surf on the ocean front, and I remember seeing the "General" and Jim Lillie, both weighing about 220 odd, chase through the heavy sand following a school of large blues

that came along within striking distance of the shore, and as the menhaden were driven in by their voracious foe, the two anglers would pick them up, hook them on as you would a minnow, make a long cast, and ere the singing of the reel had died out upon the air, strike a fish. They were not small ones, either, but eight and nine pounders.

But since the advent of the railroad Barnegat has changed so much that I have no desire to visit there again. The memory of those halcyon days still clings to me, and will, I trust, as long as I live, to dream of them beside my fire on winter evenings. Like the old chap in Charles Dickens's "Haunted Man," I say, "God keep my memory green."

THE GENERAL.

## CRAFT FOR THE WILDERNESS.

WHETHER the barge, the punt or the big canoe stands next in my affections I scarcely know. The latter we usually keep on a larger lake not far away, but the road to which is difficult. To carry a load over it is most decidedly difficult. *Experientia docuit*. From our landing place there we can make excursions in several directions. Our last one of last season was one of the pleasantest I have ever taken, albeit it was only for a single day. It is difficult to give a reader any idea of the pleasures of such excursions. It is easy enough to tell of incidents, but to bring before another person the thousands of momentary, fleeting, rapidly succeeding delights of an enjoyable day is not easy. Still, sometimes when I call such days to mind the *cacoëthes scribendi* gets hold of me.

This time, besides the two boatmen, we were just that *partie carrée* which I have said best suits the canoe, my invalid sister and myself with two others owning similar relationships. It was a morning in early September. The thinnest possible haze was in the atmosphere, there was no wind and the weather was neither cold nor hot. For an hour we were paddled up the lake under a granite precipice that towered 300ft. above our heads. The reflections were perfect, more brilliant appearing than if the sun had been bright. Every seam in the rock, every tree, twig and leaf was faithfully reproduced, exact in form and color. Once we stopped a few minutes to gum a leaky seam. The stop was not an annoyance, but only one more item of interest.

Soon we turned off to our right, passing through a narrow, weedy channel into another lake, but one hardly worthy the name. It is not a nice lake at all, for the lumbermen have made it overflow its banks, and old stumps and weird, spectral-looking dead trees line its shores. It is small and quickly passed. Then we go up its inlet, crooked and shallow, with frequent rapids. Our bowman, not fit for the place but hard to oust, lets us strike a rock, knocking a big hole in the canoe. We haul ashore, where all except the invalid disembark and scramble through thick bushes, treetops and fallen timber in search of an available place for repairing damages. We find one shortly at an old logging camp, but on the opposite side of the stream. Two of us make a "chair" and carry the lady across without dropping her, a feat I have seen attempted with a different result. And so we all came safe to land.

But, oh, my! the raspberries! I never saw them so large or so plenty. While our boat was being repaired we ate all we could hold, and my sister lined her hat with leaves and filled that also, thereby showing her enthusiasm, but not improving the hat in the least degree. "On the contrary, quite the reverse." Raspberry bushes spring up wherever the land is partially burned over or cleared; but why the berries should be so huge and in such profusion in this particular spot I cannot say. I usually find them rather small. I wonder the bears had not found these before us; but we saw no signs of them, and I have no doubt also but we were the first human beings to pick a single berry out of all this accumulated growth of thirty years. Nobody has occasion to pass that way in summer. Log drivers lodge in the old camp a night or two in the spring and then leave it to its solitude. Even I, when bound for the same point we were seeking this time, had gone by the winter portage road a hundred or two yards off. There is no summer road, and the nearest houses are miles away.

A bit of rag and a little gum soon put the canoe to rights, and having portaged it over a logger's dam close by we launched it on another lake that was a beauty. I will not undertake to say anything about it. Half an hour's paddling took us to its inlet, where we made our tea and took our luncheon in one of the loveliest spots imaginable. Rocks, trees, rapids, little cascades and everything combined to make it altogether delightful. I found the place two years ago and said then that I would some day bring a party to it. We had to cross the stream to get to our dining place. We men with our high boots didn't mind wading in the least, so we made a chair again and carried my sister over; but the other lady disdained that mode of conveyance, took off her boots and stockings, and waded like the rest of us. It was a part of her lark and she enjoyed it immensely.

Without disparaging any one else I will say—since she is not likely to read these lines—that this lady was the best "all round" member of a camping party that we ever had at the lake. Some may have been superior to her in particular points, but none in the entire combination. Never tired, always ready to go or willing to stay, able to climb over rocks or through thickets, with any of us, never out of humor, but always prompt to join in what the majority decided on, she was a model and a treasure in the woods. Women, even the best and most charming of them, have not invariably that balance of qualifications that makes the first-class camper-out.

After luncheon my sister embarked again and our men partly dragged and partly carried the canoe, often lifting it and its load bodily out of the water over some 400 or 500yds. of pretty rough navigation for a bark canoe. The watercourse was a mixture of sharp little rapids, boulders of all shapes and sizes and very deep pools. A number of the latter the men discovered quite unintentionally.

The rest of us crawled along the shore to the head of the rough water, where we all embarked. In a few minutes we came to a widening of the stream where the water was some 2 or 3ft. deep, looking black as ink and growing full of that jointed, reed-like rush, called here prelle (I do not know its English name), interspersed with thousands upon thousands of our common New England white pond lilies. The effect was wonderfully beautiful, the whole surface being starred with these lovely flowers, scattered on the black water among the green, spear-like

grass. We went on till we came to a space of some forty or fifty acres that was neither lake nor marsh, but partaking of the nature of both and called by the woodsmen Lac Rat Musqué or Muskrat Lake. It was all covered with these cane rushes and lilies, with from 1 to 3 ft. of water. When I first found it one season before the water was lower and it was with difficulty we could pass in the canoe. I had been to the head of this chain of lakes—there are nine of them—but in going up we had portaged from one lake to another and had avoided Lac Rat Musqué altogether.

Coming down we followed the outlets of the lakes, and so discovered this place. It was in going up that I found, all at once, great quantities of these lilies that I had never seen before in all this region. Nor outside this chain have I ever seen any about here with the exception of one little clump of a dozen or so of flowers at a spot on connecting waters, but some miles away. None of my companions, who at that time were all Canadians, had ever seen them before. At that time we left them as suddenly as we found them, for below the discharge of Lac Rat Musqué we did not discover one single specimen. On this trip, however, we found a few further down.

At this lake, after gathering all the lilies we wanted, we turned back, passing the same lakes and streams, but making better time, and reaching camp in time for a late supper, with our invalid none the worse for her long day's jaunt.

So on the whole, Mr. Editor, even if you should find a boat combining all the qualities mentioned, I think I will not part with my good old bark canoe just yet, but live in hopes to take some other party over the same route on an equally enjoyable occasion.

G. DE MONTAUBAN.  
QUEBEC, Canada.

ALLIGATORS ON THE ANCLOTE.

ON the 22d of March, 1893, a party of guests of the Eavey House, Orona, Florida, took the train for Tarpon Springs, a winter resort situated on the Anclote River, about four miles above its confluence with the Gulf of Mexico. We chartered the little steamer Belle, and commenced our voyage up the wildest and most beautiful stream that we have ever navigated.

The Anclote River, like all Florida rivers, is of a dark brown color, but the tiny caps of its mimic waves and the foam from the bows of our steamer were a bright yellow. In all of our experience we have never seen a river so crooked; indeed, from start to finish we could not see more than 200 ft. ahead from any given point. Twice we saw a stream on our right and asked our captain, "What river is that?" "That's the Anclote; we shall make a big horseshoe and soon be over there."

"Why not cut a channel across here, at the nearest point, and thus save a mile that it takes to go around this big horseshoe?"

"Ah! that would not only destroy the beauty of the river, but destroy our business too."

We steamed around horseshoes, and made curves and reverse curves through the tall water grasses, wild rice and palmetto chaparral, until we had gone three miles, and found that our starting point was only one half of a mile distant in a straight line. What a paradise this river must be for geese, ducks and other wild game birds, in the proper season.

We are eagerly watching and waiting for alligators. Very soon we hear a noise in the tall grass, and directly an 8 ft. "gator" toddles down the bank and tumbles into the water, making a great splash.

On we wind through the tall grass, and in making a short bend, come on to a large gator standing on the

thoughts came to us as we passed a cove in a bend of the river, completely covered with the overhanging trees and moss. The water shades of the trees were well defined in the depths below; indeed, every limb, bush and leaf were faithfully reproduced, even to the many shades and tints of green and brown, making up a scene of enchanting beauty that we shall long remember. How crude and incomplete are all landscape paintings when compared to nature's own work. We hunt for straight lines and find none, for we found all the lines were drawn on graceful and harmonious arcs and curves.

We now plow into a forest so dense that the sun is excluded. The moaning pines and the water oak trees close in on each side and interlock their branches over our heads, making us think that the great king of day was about to retire for the night.

The river became more narrow but still deep and sluggish. Water snakes could be seen here and there, and numerous small mud turtles and lizards tumbled into the water at our approach.

"There's one!" said the captain. "Where?" "Right

HEAD OF BLACKTAIL DEER.

dead ahead, I will run him down, for he is sleeping on the water." Sure enough, there was a 10 ft. "gator" fast asleep directly under our bow. We came near striking him with the cut-water of the steamer, but he makes the water boil in his frantic efforts to give us a wide berth.

We arrived at a point above the tide line, where the water is no longer salty. The captain takes a drink from the bilious river, and offers us a glass of the vile stuff. We decline and tell him in all gravity that water snakes and other amphibious animals lay their tiny eggs in such streams, when the heat of the sun would hatch them out, and that there were many well authenticated cases where men had drank such water, swallowing the tiny eggs, and that years afterward live snakes had been taken from their stomachs. What did the captain say? He said, "I'll take another drink, just for luck, you know," and with a broad grin he drank it. You might just as well try to drown a mallard duck by pouring water on his back, as to try to change the opinion of a Florida "skipper."

We finally reached the end of navigation, where we landed for a few moments for the the passengers to gather wild flowers and water lilies.

The scribe did not go into the jungle, for while it is very pleasant to hunt alligators and snakes from the deck of a steamer, it is quite another thing to hunt these animals on shore; besides, the scribe had lost no 'gators nor rattlers, and did not have to hunt them up.

We barely have room to turn our steamer in the narrow stream, and begin the return trip. We had "bagged" (in our minds) 10 alligators on our way up, and we saw 6 more on our way down, making 16 that we saw, ranging from 4 to 12 ft. in length.

About six miles from Tarpon Springs we pass an ice factory, and make some inquiries about ice making. Manufacturing ice involves a great expense. First, a good artesian well is a necessity, as common rain or well water will not answer the purpose, as even the artesian water has to be evaporated before congealing. All rain, well or spring water contains so much air that it cannot be used in manufacturing ice; for if made from the above water and exposed to the sun's rays, it will instantly crack into small pieces; while the condensed and congealed artesian water will remain very hard, keep a long time and is as clear and white as a piece of rock crystal. The capacity of this factory is twenty tons per day, and the ice is used largely in fishing vessels to keep their catch sweet until they reach a market.

"There's one!" "Where?" "Off the port bow." We look ahead our left and see a large 'gator standing in shallow water, exposing his head and back to view. Was there ever so homely and ugly an animal created as the alligator? He looks for all the world like an old rotten log. He sees us and makes for deep water.

Soon after we pass a mammoth pine tree, and way up in the tip top we saw an eagle's nest, with the old eagle feeding the young. The eagle builds its nest in the loftiest trees, using coarse sticks, which are interlaced and woven around the upper limbs, and when done it is shaped like a large bowl, about three feet in diameter; and this home is so well constructed that one nest will last during the lifetime of the pair that build it. They continue to use the same nest year after year, and the young birds pair off and set up housekeeping on their own account.

From Tarpon Springs to our turning point, as the bird flies is six miles, but by the meandering river it is fourteen miles, thus making the round trip twenty-eight miles.

In no other river in Florida are the alligators so numerous or large as in the Anclote River. For the past ten years they have been much hunted for their skins and teeth until they have become very scarce; but on the Anclote River the steamboat men will not let their passengers shoot from their boats, and the result is that the 'gators are not much afraid of the little puffing and wheezing steamboats; but once let them hear the rattle and splash of the hunters in their rowboats and they will

keep below the water and out of sight. The steamer is a friend to the 'gator and the 'gator is a bonanza to the steamer.

R. P. B.

Natural History.

PARRICO THE PARROQUET.

PARRICO would sit with his white beak buried in the down on his back, and give no sign of life before I would show that I was awake. He would chirp questioningly, when I parted the curtains of my bed to look at my watch, then would settle his nose among his feathers again if I turned over for another nap. He would not utter another peep, even if half the morning passed and he was half famished, before I put aside those lace draperies and got out of bed. But he would chirp sharply the instant my feet touched the jaguar skin that served as a rug, and he would give his plumage a shake that sent flying a little cloud of white scales that had been loosened from his feathers. Then, he would shriek "café, café," until silenced by a bit of cake or of fruit, or, better still, by a sup of the coffee he so dearly loved.

Usually I opened the shutters of the high window, as soon as I arose, and let a flood of sunlight pour in, to fall on my bed and the snow white wall beyond, and light up the shelves of books, the pictures on the walls and the warm, dark red of the tiled floor. As soon as the window was opened, Parrico would drop whatever he might have in his claws, and dance to and fro along the round stick which, its end driven into a crack in the ancient post of yellow pine, served as his perch. If I did not promptly transfer him to the window ledge, he would squall vociferously. If I did put him there he would shout "café, café, café," until the girl would come from the kitchen, sometimes to scold him for making so much noise so early in the morning, and often with the tray whereon were the little pitcher of black coffee, the rolls and the tin coffee-pot of scalding hot milk.

Parrico was scarcely larger than a sparrow, and—let us hope that he is—quite as courageous, energetic and belligerent as is that dirty brown intruder on the rights of native Americans. His pet passion was hatred of Juan, my mozo, who swept and dusted, arranged books and papers, made my bed and brought water each morning.

It was a great convenience for Parrico that his perch was an inch higher than the top of Juan's head was when he stood erect; for whenever the boy would pass beneath the perch the bird would seize upon the curls, and with his wings violently beat Juan's black plate, to the great enjoyment of all beholders. Great was the joy and pride of the bird when his enemy retired, vanquished and crestfallen, as he did every morning.

Whenever I sat down to write, Parrico instantly gave up whatever occupation he might have, and begged with imploring little squeaks, to be allowed to help me. He would even leave his coffee, to perch upon the tail of the bronze lion that was my paper-weight, and from that vantage oversee my work. And when, for reasons he never explained, my work did not suit him, he would scramble down from his roost and climb upon my wrist, then with his bill seize my penholder, and most earnestly struggle to move my pen so as to express the message he

bank, and our appearance was so sudden, that he stood stock still, seeming to be too dazed to move. There he stood as rigid and stiff as if he was carved from a block of marble, and although we hallowed and blew the steam whistle, he remained stationary, and as we steamed around a bend, the last we saw of him was his enormous head, standing out in bold relief. Our captain said he was 12 ft. long.

We now leave the prairie scenery and plunge into dense timber. The stately palmettoes, that grow from 50 to 80 ft. high without limb or bush until the top is reached, where long, green bows hang down, looking in the distance like great umbrellas, were numerous. The tall moaning pines towered above the palmettoes and the gnarled water oaks lined the banks of the river, with their long limbs intertwined above our heads, forming a mass of foliage covered with dark gray moss, which hung in pendants and festoons, and swung back and forth, sweeping the awning of our steamer as we passed through this enchanting scenery.

A great artist had told us that there are no straight lines in nature, that her lines are all drawn on graceful curves and all in harmony one with another. These

had for the world. It is a pity that he was not taught penmanship in his early youth. Perhaps my pen was too big and clumsy; at all events his writing never was quite legible, not even when I let the pen move as freely as possible, under his guidance. But Parrico seemed to be more than satisfied with the results of his attempt at writing, and when he had done enough he would clamber up to his place on the tail of the lion, and dress his smooth, brim suit of green, then settle down in quiet content.

He had one great trouble in an otherwise happy life. We would go out on the corridor to eat our breakfasts and our dinners; and I would leave him on the table or on a chair or other place from which he could climb down to the floor. He would first protest angrily against being left behind, then piteously plead to be taken along; finally would get down to the floor by whatever route seemed the safest. When the secure ground of the tiled floor was reached, he would run to the door that opened on the end of the veranda, in plain sight of the table, the abundant food, and—more tempting, more to be desired, tanall else—the plate of yellow butter. It was wildly exciting. It was worth every possible effort and all risks. That table, that butter must be reached. There was

nothing between him and the object of his ardent desire, except some 80ft. of tiled floor and a step of exactly 5in. downward. That was a mere trifle to a bird; had he not a pair of uncut wings which had often safely borne him from his perch to the window or to my table, and even from the window ledge to ground, six dizzy feet below, when he had missed the jasmine in his flight.

So Parrico would boldly trot to the very edge of the stone step, coolly peer down on the tiles, lift his wings for the daring flight, and—back out. It was too much. He could not face the danger of so great a fall; therefore he would run back a foot, perhaps, from that giddy height, glance over his back to calculate his distance, lift his tail to clear the floor, and, like the Irishman's squad, would advance backward to the very edge of that 5in. precipice, and stop. Then he would whirl around, take another long look at the tiles below, trot away a foot or more, and try again and again. Now and then he would stop to appeal earnestly to us, and we would cruelly laugh at him, and hold out toward him our coffee cups, or even tempt him beyond endurance by the sight of the uncovered butter. I am satisfied that, if he could have given free expression to the feelings of his soul he would have declared that "I wish I were a girl, so that I could cry."

He was a good little fellow, after all, and deserved better treatment than we gave, for all his sorrows were forgotten, and all his wrongs were forgiven as soon as one of the tender-hearted little girls of the family picked him up and set him on the floor of the veranda, as one or other of them was sure to do after listening to his plaints a minute. Then he would hasten to his dearest friend, dearest to him at meal times, and seizing with bill and claws the dress of la señora would climb to her arm and so to the top of the table. Once on the table he would straightway march to the butterdish and diligently strive to reach its golden contents. Finding that the glass cover kept him from the luxury he coveted, he would turn to the nearest cup of coffee, and, after carefully eyeing it to see that it was not too hot for his comfort, he would dip his bill in and sip in a most companionable and friendly way.

After breakfast he was content to perch on a stick driven into the adobe wall of the corridor that led to the kitchen, and from that secure throne give orders to the cook and to the waitress, scold the clarineros and the pigeons that would now and then alight in search of crumbs in the patio, and chirp cheerful accompaniment to the laughing chatter of the always happy trio of girls. But the instant he heard my footstep or my voice he would begin his intolerably rasping chirp, and would not stop before I would take him on my finger. He would dance along the length of the window ledge until I had washed and was ready to sit down to read or to write, and then he would insist on being taken. When perched on my shoulder he would nestle against my neck, reaching up now and then to softly nibble at my ear, in token of his affection and contentment.

EDWARD PERRY.

## SEA GULLS.

READING in a daily paper of the arrival of some sea gulls for the Central Park, brought from England, I have thought that the park authorities might not know how easily the birds may be obtained in this country, at the sea shores in winter. The eighteen gulls seen last summer at Starin's Glen Island resort, were caught by Mr. John DeNyse, at Gravesend Bay.

I was accustomed when a boy about ten years of age to catch gulls on the sea shore in England, and have shown others how to catch them. To make the float or bait, take a piece of cork 4in. long, 1in. wide and 1in. deep, taper the cork from middle to each end to about ½in., taper the depth to about ½in. Cut a groove in the bottom to receive a strip of lead. The lead acts as the ballast of a boat, and will keep the float right side up. Take two weakfish hooks, put shank of hooks together and wrap them with thread. Spread open the bowl and points of hooks. They will be like the new double Yankee hooks. Now bore in from one end of the cork, and insert the hooks as bound together, up to the bowl. This leaves the points of hooks partly down the float, also about ½in. above the float. In the other end of the float, insert a thin wire nail about 2in. long. Leave the head out enough to tie on a piece of fine strong twine; reel line as used for weakfish is best to use. Take a piece about 2ft. long. Tie one end firmly to the two hooks, pass under the bottom in the groove, draw the twine tight, and tie to the wire nail. The head of nail will keep the twine from drawing off, and if done right the hooks will not draw out, when the bird is fast. Tie on the lead in the groove by a course or two of thread round the cork. Make a loop on the end of twine. Bait this float with smelt a trifle longer than the float. With a sharp pocket knife cut down the back of the smelt, spread it open and take out the back bone. The smelt is then of equal weight each side. The smelt laid open will cover the top and part of the sides of the float. Begin at the head part and wind spool cotton around both float and smelt, thus making them one. Pass the cotton around about ½in. apart, from head to tail, and tie the tail to twine near the nail head. If done neatly the bait looks fit to eat.

To set this float we will want about 20ft. of weakfish line. Tie one end to loop of twine on float, the other end to a brick. We are going to try in the bay. We have a small rowboat and go out in the bay about 500ft. and put out several floats distances apart. If your float is made right it will just show the bait as barely swimming, or like a fish on the water. Go on shore and watch and we see some gulls flying away up in the air, but they are coming this way and looking for food, and now they have seen this smelt as it floats, and each one is eager to obtain the prize as his breakfast. One quicker than the rest takes the bait and attempts to fly away with it, but the brick gives the line a jerk and pulls the bait out of his mouth. It did not hook him, and now another grabs the fish and is going away with it, but again the brick snatches, and this time the gull has the hook through his bill, and now what a commotion. One gull fluttering but cannot get away, the other gulls screaming and sometimes attempting to get the bait which the caught gull is fastened to. Now take your boat and boat hook and go after the gull. As you near him, he will fly and dart many ways, but you catch the line with the boat hook and take him in the boat and loosen the hook, and now twist one wing over the other or he will get out of the

boat. And now you have a live bird, not disfigured, but clean and beautiful, as in his native element.

Another plan is of catching them from the shore. Take a bluefish trolling line, about 100ft. long, and a lead sinker of about 2lbs. weight. Tie one end to sinker and about 20ft. of the twine and float. Tie end of twine to sinker and throw into the ocean as far as you can. But you must endeavor to get it outside of the break of the waves. As you have one end of the large line on shore, tie to a stick and take it up the beach as far as it will reach. Now retire from the shore and watch. We see the gulls flying along the shore looking for food, they see the smelt and make for it, take it in their bills and attempt to fly away off shore. But the sinker gives a jerk, and the bird is fast with one of the hooks in his bill, and you pull him on shore. I have caught a dozen in this way some days. I have caught them at Rockaway Beach and on the south side of Staten Island.

If this is a gull story, it is a true one. Proof, the gulls seen at Glen Island last summer. I think it is very interesting to watch several of these water birds as they were at Glen Island. In the year 1868 I caught and had Mr. Akerst, a taxidermist of Brooklyn, set up thirty-three for me; and I presented pairs of birds to several of my customers, as I was then in business in New York. And I have some now that I caught thirty years ago.

JOHN BATEMAN.

## THAT ADIRONDACK RED DEER.

TUCKAHOE, N. Y.—*Editor Forest and Stream:* The letter of Mr. Burnham to clear the mystery of the Adirondacks "caribou" has a great many points which are untenable, when we consider the habits and signs of the European red deer. I will point out only a few. I have never in my life, except when it was perfectly at ease, that is, in safety, seen a stag, as reported by Mr. Robinson, trot and keep trotting. On the contrary, when it was not leisurely walking I always noted it on a lope; and when in the least alarmed in tremendous flights, bushes of 8 or 10ft. being absolutely no obstacle for any red deer to take in easy. And I should think when dogs were sent after it, as Mr. Robinson states, it never would keep trotting, unless badly wounded, when it certainly would take on the hounds, but not otherwise, if it was a European stag, which I doubt very much. His track is given of such a remarkable size that I can only remember once to have seen its equal, about the size of a yearling heifer, and this proved to be one of the strongest 10-enders, and all the foresters in the district proclaimed they had never seen the equal of his track in size. The photograph you published certainly shows the antlers of a not much over 4 to 5 year old stag, with one deformed end. But do you not find sometimes similar sized antlers of the Adirondack deer, say an old buck? As also the suggested peculiarity of some offspring of this animal near Elizabethtown in its reported habits is certainly entirely contrary to the habits of the European stag, as every hunter who has hunted the royal game will bear me out.

G. MUSS-ARNOLT.

Mr. Wm. Pickhardt in commenting on the above said that he did not agree with the strictures the writer has made upon the article with reference to the red deer killed in the Adirondacks.

"The gentleman misses the principal thing altogether," he said, "when he attempts to argue that the head as illustrated could probably be that of an Adirondack deer. The heads that of a perfectly normal red deer which has no defects of horn development, but only the natural characteristics."

Mr. Pickhardt went on to say that if the horns had not been enough to identify the deer, the short tail and light-colored patch of hair on the rump would have been sufficient. The feet, he said, may not have been as large as a yearling heifer, but that would depend upon the size of the heifer, and at any rate, a little exaggeration with regard to the size of the feet was natural and of no consequence as affecting the identity of the deer.

With regard to the gait of the animal Mr. Pickhardt said that his red deer "was a beautiful trotter;" he added, "and trotted better than many horses I have seen." What his gait would be when pursued by dogs he did not attempt to say.

With regard to weight he said he was satisfied his deer weighed 800lbs. or more when released, which was about the weight given by the hunters who killed the animal.

In conclusion Mr. Pickhardt said that if the habits of the strange animal which was seen in the neighborhood of Elizabethtown, and mentioned as a possible offspring of his red deer, were not entirely in accord with those of the red deer, no proprieties would be violated, as it would only be natural to expect a cross to share the habits of both parents.

## A Pinto Deer.

DOLORES, Col., Sept. 6.—*Editor Forest and Stream:* We mail you herewith two photographs of curiosities in our possession, which we believe, if you can reproduce them in FOREST AND STREAM, would be of interest to its many readers. One is the antlers of a black-tail deer with a symmetrical point on each side turned downward. The other is of the hide or skin of a "pinto" black-tail deer.

The animal that bore the odd antlers was killed by George H. Goodwin, of this place, on Beaver Creek, a tributary of the Dolores River.

The pinto skin we purchased of a young buck Ute Indian, who had killed the black-tail near this place during one of their regular hunts. Some of the older Indians told the writer that they had known of a similarly colored deer that roamed on Pine River, this State, and they said that it was "bad medicine" to kill a spotted deer. While the majority of the Utes are superstitious about such matters, there is now and then a young buck who will (like a white man killing cats) chance the "bad medicine" part of the business. This pinto's tail was the same in color as those indicating the natural species, but a careless New York fur dressing concern broke or wore it off in process of dressing, for which they received no extra thanks from us. This pinto, judging from size, must have been a two-year-old, and your readers will understand that the white spots were there to remain and are not fawn spots. We have bear and mountain lion skins, and other trophies of our own catch, but nothing we prize so highly as the articles mentioned herein.

JOHN J. HARRIS &amp; CO.

## "Bagging" a Rattler.

PINE RIDGE AGENCY, S. D.—For many years I have lived in the Dakota country, where the rattlesnake abounds. If I have destroyed one I have killed 500. I have never observed that any of them ever ejected their venom. Out here they are very sluggish in their movements; when approached by a person they assume the circular position, with head erect and tail slightly elevated, and rattling away so that it can be heard many yards. I usually kill them with my buggy whip, and what is strange, I never knew one to jump at all nor strike out more than a few inches. If they are teased with the whip cracker they pay no attention to it, but keep their eyes on the person. They make no attempt to bite the stick or whip, but seem to know where to strike. On one occasion I had in my buggy a valise, and encountered a rattler in the road; he was a fine specimen. I alighted, took out the valise, placed it on the ground six or seven feet from the snake, secured a stick about five feet long, placed the end under his body and lifted him into the valise. With the stick I then closed the valise and fastened it, replaced it in the vehicle and returned home, some fifteen miles. On my arrival I opened the valise and jumped quickly away. I then put him in a tin cracker box, perforated, and shipped him to the National Museum at Washington.

I killed a large rattler in July with my whip, and he made no attempt to jump or strike. Still, I always keep at a safe distance, which every one should do.

I sometimes capture them with a slip string on the end of a long stick, bring them to my office, and with pliers extract their fangs. In this condition they are harmless, and it is quite amusing to see dogs or cats fight and kill them.

Z. T. DANIEL, M.D., U. S. Indian Service.

## Strange Tracks.

FROM earliest recollection the sight of tracks of game or fur-bearing animals possessed for me a charm only surpassed by seeing these animals themselves; and now, after passing more than fifty years in the woods, the sight of a track, either well defined or obscure, impels me to scan and determine the species that made it. My experience extends over a large portion of northern Maine and Canada, and until within a few years I saw no tracks that were unfamiliar. Twice, once in Franklin county and again in Aroostook, have I been nonplussed over a track which at first sight looked like that of the domestic cat. In each instance the tracks were well defined in the fresh, damp snow of seven or eight inches. The size, shape, length of step and spread and depth, all catlike. But there was no breaking of the surface, not a particle of snow was disturbed, and the depressions were nearly perpendicular, as if a smooth round stick had made them. Evidently the animal had long, slim legs, yet stepping short, also that is rare. I am not familiar with works giving the natural history of animals, and so am puzzled and more curious than ever to know about this species. Perhaps you or some of your readers will kindly enlighten me.

PINE TREE.

## Albino Specimens.

BOSTON, Nov. 2.—Mr. E. W. Norcross, of Boston, while spending his vacation in Vermont recently, shot a beautiful albino robin. He seemed to have been deserted by the rest of the birds, and was flying around the field alone.

BREWSTER.

GREENSBURG, Pa., Nov. 2.—A few nights since the McCurdy brothers captured an albino raccoon and afterward shot it. The pelt is pure white with dim gray stripes and the eyes pinkish. The coon weighed 18½lbs.

DEACON.

## A Woodcock in the City.

NEW YORK, Oct. 31.—As I came across the platform of the Brooklyn Bridge to west side of Centre street, I noticed coming down Centre street a bird which I thought moved its wings too rapidly for a pigeon, and when it crossed the platform, which was crowded at the time, about 30ft. overhead, I recognized my old friend woodcock.

H. C. HAWES.

## Ruffed Grouse on the Nest.

FOR the interesting photograph of the nesting grouse we are indebted to Mr. W. H. Thompson, of Alexandria Bay, N. Y., the secretary of the Anglers' Association of the St. Lawrence River. The camera shows a bit of bird life which has been pictured before, but never with such success.

## Mule Deer and Grass.

ELDORADO, Kansas, Oct. 22.—*Editor Forest and Stream:* Rocky Mountain mule deer don't eat grass.

T. B. MURDOCK.

## A Massachusetts Man on the "Danvis Folks."

ONSET, Mass., Oct. 25.—*Editor Forest and Stream:* I have read nearly every number of FOREST AND STREAM since it was published, and have ordered it from newsdealers, as my business has kept me much on the move. The journal is much improved, although it was always good.

I wish here to express my appreciation of the writings of Mr. Rowland E. Robinson. In giving us "Uncle Lisha's Shop," "Sam Lovel's Camps," and "Danvis Folks," he has been a public benefactor. But to fully appreciate these books I think one needs to have been bred and born in the "country" of New England, like myself and thousands of others who have had the great pleasure of reading and re-reading them. And if the wishes (which are prayers) of the many thousands who have read his writings prevail he will live long and enjoy what he has so beautifully and graphically portrayed in his descriptions of the "woods" and "fields"—nature.

D. W. ELDRIDGE.

## Comforting in all Weathers.

AN Auburn, Cal., subscriber, who is none other than our well-known contributor "Arefar," writes: "During the whole course of the year there is no corresponding amount of expenditure that yields me one-tenth part of the pleasurable return that comes of my annual subscription to FOREST AND STREAM. The columns of your journal are to me as the toper's glass of whisky is to him, 'they warm me up on a cold day and cool me off on a hot one.'"

## As Viewed in Illinois.

EVANSTON, Ill.—I can drop any other reading, at any time, in a moment to read the FOREST AND STREAM, with its hunting and fishing; and I wish I were standing on a certain Michigan stream this very moment, far away from the "madding crowd," after the nimble deer and taking in great gulps of pine air, as well as "sowbelly" and "hardtack."

C. A. P. G.

## Game Bag and Gun.

### THE LONE CANVASBACK.

As the shadows crept from the western hill,  
And the wind from the lake came damp and chill,  
In his lonely blind, on an ancient log,  
An old hunter sat, with his gun and dog.

And the twilight stars and the plodding moon,  
And the plaintive cry of the phantom loon,  
Told the hunter old that the time had come  
To desist from sport and to pull for home.

But the shades grew dark and the wind grew cold,  
And the saucy loon had begun to scold,  
While the hunter still, and his faithful dog,  
Like two shadows sat on that old gray log.

In the long ago, at the same old stand,  
This man with his dog had sat there and planned  
How he might circumvent the proud canvas drake  
That persistently stayed far out in the lake.

'Twas thoughts such as these, such reveries dear,  
Made him blind to the stars and too deaf to hear  
The laugh of the loon, the wind's fitful moan,  
And tired nature's hints to leave her alone.

But why does he start from his dream profound?  
And why does the dog peer anxiously 'round?  
Did the rushes sigh or the night wind stir  
The low drooping boughs of the lonely fir?

'Twas the whistling wings of a canvas bold,  
That came for the night to rest in the fold.  
That long years before had been a resort  
For him and his friends and birds of his sort.

But to shoot his lake in the falling dew  
Was against the rule, as the hunter well knew;  
So he buttoned his coat and sat still to hear  
What the bird might say of trips far and near.

Quoth the canvas bold: "I am growing old,  
And I feel the chill of the night wind cold;  
So I'll crawl behind this withered old blind,  
And see what comfort an old drake can find.

'But it seems to me that here I can see  
A familiar look; but it may not be,  
For as I can say, 'twas a bright, still day,  
But long years ago, that I came this way.

'Happy days were those when our leader chose  
Pretty spots like this for our night's repose;  
But the hammerless gun has taught us to shun  
The best resting lakes that lie under the sun.

"My friends of the past have gone very fast  
From the face of earth, since I came here last.  
In fact, all alone I am left to atone  
For the harmless faults of a race now gone.

"But I wish myself dead. I wish that the lead  
Had gone to my heart and killed me instead.  
In my lonely days there are very few rays  
Of the hope that builds while the frame decays.

"In days long ago, when the Indian's bow,  
With its rawhide thong, was our only foe,  
We could look with contempt upon every attempt  
That the red man made, or even dreamt.

"But the white man came with his leaden flame,  
And destroyed our race, in all but the name.  
Our love for our kind lured us up to his blind,  
With its sirens in front and its death knell behind.

"And they tell me, too, that the old wapato  
Doesn't grow any more on Columbia slough;  
But I'll dive and see, for there's naught to me  
That can take its place this side of the sea.

"But list! Did I hear a strange sound, and near?  
Or was it my heart just beating with fear?  
I have wandered about like a vagabond lout,  
In fear and distress, till I'm all worn out.

"If I would not die I must turn and fly,  
Where the midnight sun tints the polar sky;  
I must steer my flight by the Northern light,  
And my sad way wing in the silent night."

PORTLAND, Ore., Oct. 27.

S. H. GREENE.

### MIXED SHOOT IN CONNECTICUT.

It was about the middle of October that I got word to catch the 7 o'clock train east the next morning for a day's shoot with a friend.

The old gun had scarcely been awakened from its close season's nap, and its owner had been so busy that the usual enthusiasm of a foredrafted shoot was almost entirely wanting. Yet with some misgivings and many conjectures as to the probabilities of finding birds, I wandered to the station next morning and met my friend on the train. After a ride of about twenty miles we were dumped, dogs and all, in to rocks, brush and ruralisms, and by the way, ruralisms are the hardest things we have to shoot against, except anglicisms and dude-like fads.

After wrangling about directions for some time we reached a mean, partially understood each other and struck out for glory, feathers and sweet cider. The first was scarce, but of the last two we got a genteel sufficiency. I don't know but I've started this big enough for a bear hunt in the Sierras, but it cannot be such, for we've neither Sierras, bears nor men big enough to hold a grizzly while another bats his brains out with a sandbag from the tomb of the mighty Caesar. Still we have a good many falsifiers, and in a future communication I will tell you of an athletic one, provided you don't discover one in this.

We followed the road nearly a mile, when we got over the fence and struck for brush. We had barely reached the edge of a maple run when I heard a partridge jump and saw it go in to the alders below; we split, Bill to left, I to right, and moved down on her for action. She wouldn't lie; jumped wild; I got a glimpse, pulled, and Dinks retrieved to my surprise. "We are not skunked anyway" says Bill, and on we go.

A little way brought my dog to a challenge and made me feel interested; he had just started on the trail to cross

the swamp, when Bill's gun twice answered to his touch; but smoked without avail. We took the range and after hunting full half an hour without a jump, turned to the right and were about to give her up as too smart, when lo, I heard a sharp whirr above me, and looking, saw her hugging the ground along the sidehill with a sharp left angle away. I happened to drop the gun just right, and she fell without a flutter. We then crossed the road, and reaching the top of the hill, Bill tried his luck once more on a bird that started above him and went past going down the hill, failing to stop her. We followed, but she jumped entirely out of sight and we gave her up.

A quarter of a mile brought us to a good woodcock ground, but they were *non est*. On the further side, however, the dog challenged, and after crossing and recrossing the swamp on a running flock of quail, we managed to overtake them in the thickest cover Christopher Columbus could discover in five counties. Flushing, they all held low, not rising above 5ft., and disappeared in the brush. I pulled twice, killing the first dead and wounding the second hard. Dinks soon found the wounded bird, and on flushing it came directly at me and within 6ft. I let it pass, intending to shoot when it got far enough away; but it settled back on to the ground and took to its legs to my disgust. The dog soon got the trail and after following about 75yds. pointed. I could not find the bird, and he would not stir. I finally pushed him, and he picked the quail up out of the leaves right under his nose. Bill came and we hustled the rest of them as well as we could. I got five more chances and five more quail. He did some more shooting, but failed to score. Yet game still, he was happy and hopeful. There were six or seven left, but so hard to find that we gave it up.

Dropping into a swale some distance below, we started a partridge. Following, she let us pass, and as I came back to the fence she ripped out of a maple about 35yds. away, and crossed me sharp to right and well up in the air. It broke me all up to see her come out of the tree, and I shot a little too high. A few feathers told me I had hit her, and that was all. Going back into the swamp, I followed her, and was just balanced on a wing fence when she started straight to the front, crossing to left. I was going to do the job right that time, and put the gun just in front of her (but I could not get it low enough) and let it go. That was the last I saw of her, until Bill, coming up from below, picked her up dead in the exact direction she had been flying when I fired.

We then drifted on about half a mile and started three partridge together. They were cunning, and for quite a while managed to outgeneral us. Driving to the end of the run we passed them, and coming back they again tricked us. We opened fire, however, but only to mow some brush and pepper a big white birch. Driving back they dropped in the edge of the swale and Dinks got a point. Running like a redhead around a knoll, I got in above them. They knew it, and two went to the big woods without giving a single chance. The third one I was too close to, and caught him before he could reach a low-hanging grape vine that he attempted to cover with.

We then had seven quail and four partridges, and we concluded to eat dinner by a little brook up on the hill. Going up there we discovered the spot sought for, a brook, a run of scattering maples, and a plentitude of moss-covered boulders. It was a spot fair enough for any one to eat in, and it seems a partridge thought so, too, for when we were within 50yds. of it up got a bird and hustled down a swale. We gave up dinner and went after her. On the right of the brook below was large timber, on the left now and then a scattering white oak.

After hunting through the big wood we failed to find her. I suspected she was hid close to the brook. Bill would not go back so I went alone, till I reached a cart path that crossed it. I concluded (it being rather warm) to test the water there. I laid down my gun, charged the dog and had just got stretched out on the ground when there was an earthquake; that partridge had jumped not 20yds. above me and was coming down past. I jumped on to my feet, grabbed my gun and tried to straighten out, but I rolled like a ship in a heavy sea. I put in the first barrel, but it was inches over her; I managed to get the muzzle down, pulled it ahead into position and stopped her with the second. Then I took a drink of water while the dog retrieved.

We traveled down the swale looking for another good place to lunch and had just found it when Bill picked a woodcock out from between two rocks on the edge of another maple swamp. He called loudly for it to stop, but it did not seem to know him and kept right along. I started it next and fired both barrels without scoring, Bill joining in the chorus. I was ready to bet I could not hit a balloon just then; and then, well, I missed it again; I got mad then. Again it got up, this time in thick scrub oaks (with the leaves on), at very long range. I put the gun on him that time and he answered the call.

We then dined; rather late, but our appetites were with us, and they are the finest things in the world to dine with. As a relish, they discount all other kinds, despite the fact they have never become an article of commerce.

Dinner over, we crossed a range of cleared hills until we struck a long swale, through which a road runs. We had just stepped into this path when Bill's dog put a partridge out of the brush just below; and she came up the hill on our right and near Bill's position. He straightened out for action in good style, and pulled both barrels. The first struck; the second never touched her; but for all that he firmly believed that it was the second barrel that killed her. The collective enthusiasm of the party now reached summer heat, and we tackled the big swale.

The lower end was nearly reached, when a partridge jumped in advance and came back at us. I saw her just disappearing in the same copse of alders in which I was standing, and tried to stop her; but was not quick enough. I fired behind her, but near enough for Bill's safety, who was not 30ft. from the line of fire, entirely hidden by the thick brush. She flew but a short distance, and Bill soon started and fired, but failed to score. She again flew north. Dinks got a point, when I started and killed.

We soon emerged into a cornfield, and had just remarked of its fitness for quail, when Bill's dog ran down across the field to the southwest, plump into a flock of about fifteen birds, and away they went into the brush and out of range without a shot. Going into the brush my dog soon got a point, but they were running and jumped wild. A couple of shots brought nothing but a few feathers. Being nearly out of shells I gave up the main flock and followed one I wounded to the left. I

I had gone but a short distance when Dinks challenged and began to rood. I followed just outside the brush slightly in advance of the dog and awaited developments. So closely did I watch his movements that I stepped directly over a large woodchuck skulking close to the ground. Not sighting until he rose I did not molest him, and he took one good look at me and then cantered toward his hole. I fear if I had stepped on him he would have waked me from my reflections with a jerk. Still the bird ran and I knew from my dog's actions that it was a partridge. Twice I tried to head it off but each time I was too short. It finally jumped out of sight and I followed on in the direction it flew. After hunting for half an hour I was obliged to give it up without a shot.

All this time Bill had been blasting at a terrific gait and fully expected to find him stuck fast in the mud from the weight of his catch. But, alas, for suppositions, whether liberal or conservative, they are seldom right; and, alas, for a man's reputation as a shooter when he gets nervous enough to think he must be careful and not miss.

In crossing over Dinks came to a point on a knoll with only here and there a scattering bird. "Now," I said to myself, "I've but three shells, and I must kill." As I stepped in front of the dog up got my wounded quail. I closed my left eye, squinted my sight to the proper notch and then missed that quail fair and square. I didn't try twice, but shouldered my gun and went down to pull Bill out of the mud. It was unnecessary. "How many?" I inquired. "One," was the melancholy answer. At the same time Dinks pointed and retrieved a dead quail. Bill thought that if one had flown on and dropped dead, the brush must be full of dead quail. But his hopes soon vanished in a fresh attempt. His mighty bone hunter, called Shad (in handling which I told him he should use a bone) pointed; Bill flushed and missed, and in disgust we left them to their own care, as it was fast gaining toward night. As we got over the fence in the big woods a quail started of its own accord, and I missed.

As the sun was just ducking its upper limb, we concluded to seek the depot by the nearest route. Bill was tired, and thought a team would be the speediest way. To find one we sought the first house, which lay at the head of this meadow. A narrow run of scrub oaks and alders lined its northern side, and we hunted this going up. We had nearly reached the end when up whistled a woodcock, being surprised it was some time before I pulled on him, but the dog retrieved him, and it was my last shell. Nothing more, until we were within 50ft. of the end, was seen, when both dogs pointed. Bill got wild with the outlook, and made me take his gun as his shells would not fit my own. So I stepped up to the dogs, and a woodcock jumped on my right, but kept low in the brush, which in the fast gathering darkness made it very difficult for me to see. I shot at him, but could not tell the effect. The dogs moved ahead a few feet and pointed again. Slipping in another shell, I stepped in, flushed, and it rose well, and I knocked it spinning, at the same instant another started on the other side of the run, flew but a few rods and dropped into the swamp again. I could not see it. But on Bill showing me the spot, went in, flushed and killed. I then sent Dinks in on the line of the bird I had shot at, but could not see, and he fetched it in dead, making four woodcock in about five minutes, on twenty rods of ground.

We had 7 partridge, 9 quail and 5 woodcock, 21 birds. Not a great big thing for two men, but all but one or two had been shot in very thick cover, on ground hunted by some one nearly every day in the week. We were a pair of happy gunners. It had been a grand day's sport to us. We had been in luck all day in finding. We had enough. We had both shot as well as we expected to, and had a bag beyond our wildest hopes. We now sought the farm house, but nothing would tempt its owner to try his steed's mettle for the next train, so we girded up our loins and settled down to conquer the necessary two miles or garnish the wayside with our noble bones. We wanted the 5:45 train; but we did not get it. We had covered about half-way, and had just reached the height of a grand hill, when away to the northeast about two miles, we saw the headlight of No. 27 swing into the sharp angle of the V formed by two high hills, and give us light on a subject of which we had sooner remained in the dark. We were left. We took it easy after that, and on reaching the station went over to the hotel and had a good supper and some coffee, which of all decoctions is best and mightiest. Then we boarded the next train at 7:10 perfectly happy.

C. D. E.

### Quail in Northern New York.

PORT HENRY, N. Y., Oct. 30.—You ask in last week's issue for reports on the success of transplanted quail. I give my mite. In the spring of 1892 I planted some ten dozen West Virginia birds in this neighborhood. They mated and thrived that summer and spread throughout the surrounding towns. Some begun traveling in October, leaving enough beves for seed. I had good sport with them during the season and left parts of beves for a test. Much to my surprise, I found some three or four of the beves I kept watch of were doing well. I found in February one bevy of twenty strong birds that I had not known of before. All during this last spring and summer we have heard their pleasant calls all around us; and I have heard of them for miles around, showing that more survived than I knew of.

I have been in North Dakota chicken shooting this fall and afterward to the Fair, so that I have not had much chance to locate the birds. My wife and I took the dogs out on Saturday, however, and found in the course of a two-hours' walk two beves, one with about forty birds in it (evidently two heves that had got together on the stubble) and the other with about fourteen birds. On our way home we met a man who told us of three other beves not far off, one of which he claimed had at least seventy-five birds in it. Wednesday we will be on deck bright and early. I am rather surprised at their living through last winter here and being winter-killed elsewhere, for we never lack snow and cold to test the hardiest.

W. C. WITHERBEE.

### North Carolina Quail Season.

MR. W. A. BRYAN, of the Renfro Inn, at Mount Airy, N. C., writes: Our quail and game law is off in this county from Nov. 1 to March 15. It may be of interest to your readers to know the long season here in Surry county.

## WIRE FENCING FOR PRESERVES.

BROOKLINE, Mass., Oct. 17.—*Editor Forest and Stream:* Will you kindly inform me, or let me know where I can get the information in regard to wire fencing of game preserves? I would like to find out about the fence around the Brooklyn Gun Club's grounds on Long Island and Austin Corbin's preserve. The size and style wire, number strands, etc., also if there are other preserves or grounds so fenced.

H. A. HORTON.

NEW YORK, Nov. 2.—*Editor Forest and Stream:* Your inquiry of Mr. H. A. Horton regarding fences for game preserves has been referred to us.

As to Mr. Corbin's park in Newport, N. H., we would beg to state that the posts are set 12ft. apart. On the smoothest portions of the line (about twelve miles) the fence is constructed with a 2in. mesh wire netting, 6ft. high, and with five strands of our Glidden barb fencing above the netting, making the fence 8ft. high. The netting is supported by seven strands of two-ply No. 12 galvanized twisted fencing, stapled to the posts over the netting, also in each panel by vertical "cross stays," made of  $\frac{3}{8}$ in. steel rivetted to the barb wire over the netting and also to the two-ply twisted wires, through the netting; the netting is thus held between the stays and the wires. On the balance and rougher part of the line (about twenty miles) no netting is used, as it was found that the netting would buckle over uneven ground, and it proved impracticable to use it in such places, unless the line is graded specially for it, which is expensive. On the line where the netting was not used, twenty-one strands of our Glidden barb wire was put on, spaced from about 3in. apart at the bottom, to about 7in. at the top, and the steel cross stays were rivetted to the wires, as above. These stays or binders keep the wires from spreading apart, cross-tying the fencing between the posts and thus in the union imparting more strength and stability.

We have furnished the material and built, by contract, most of the game preserve fences in this country, and among those in the neighborhood of New York we will name the following:

The New York State Deer Park, Big Indian, Ulster county, N. Y. Fence 10ft. high. Posts one rod apart, with 19 strands of two-ply No. 12, galvanized twisted fencing and steel cross stays.

Mr. Geo. Gould's game park at Furlough Lake, near Arkville, N. Y. Fence 8ft. high, posts one rod apart, with 21 strands of Glidden barb wire and steel cross stays.

Mr. C. C. Worthington's deer park, near Delaware Water Gap, Pa. Fence 8ft. high. Posts 12ft. apart, with 25 strands of Glidden barb wire and steel cross stays.

Mr. J. A. Havemeyer's deer park at Mahwah, N. J. Fence 8ft. high, posts one rod apart, with 23 strands of wire, 15 of two-ply No. 12 plain twisted fencing and 8 strands of thick-set Glidden barb wire and cross stays.

Tuxedo Park, Tuxedo, N. Y. Fence 8ft. high, posts one rod apart, with 14 strands of two point thick-set Glidden barb wire.

Mr. Magrane Cox's park at Southfield, N. Y. Fence 8ft. high, posts one rod apart, with 17 strands of two-point Glidden barb fencing and steel cross stays.

C. W. Chapin's game preserve at Lebanon Lake, Sullivan county, N. Y. Fence 8ft. high, posts 12ft. apart, with 30 strands of two-point thick-set Glidden barb fencing and steel cross stays.

WASHBURN & MOEN MFG. CO.,

## STOLEN TIME.

GAINESVILLE, Texas, Nov. 2.—Many weeks have passed since leaving the confines of your city, and having previously given myself no indulgence, an irresistible desire possessed me to try the quail on reaching this point.

Inquiry failed to elicit the information desired until I happily engaged in conversation with the genial proprietor of the Lindsay. Arrangements are quickly made for the afternoon and he kindly loans me a 12-bore, 6½lbs., an ideal quail gun.

Our conveyance is at the door by 1:30 P. M., and my companion is soon with me. A drive of three miles brings us to cultivated fields, where shooting privileges have been given us. Securing our "team" to a near-by fence, we hie away to the inviting stubbles, with Flossie (a pointer bitch of great beauty and endurance) quartering every inch of ground. We make inquiries of the "cullud" cotton pickers and are much encouraged. As we approach the copse that borders a lovely little stream in front, a welcome whistle greets us. We give a few answering calls and Flossie beats the old field beyond. With head high in air she makes game at the further edge.

Whirr!—a bird rises far in advance; we are now fully alive to the situation—whirr, whirr, whirr—they are off through the growth of alders. Two reports ring out, and but a solitary bird is secured. We raise a few of the scattered birds and two of their number are brought to bag. We "mark" the greater number away up the left bank of the stream. I knock over a couple of rabbits that dart across my path, and my companion secures a blue winged teal as we pass a small "tank" or pond.

With renewed hopes the spot is approached where birds were "marked." Flossie's instinct prompts a motionless attitude. A rise gives us two more of these rapid flyers and we bag a number of scattered birds in the copse.

Another bevy is found in a thick bed of weeds, where the heavily fruited pecan trees make welcome shade.

Almost at our feet we discover the game, but our better natures revolt against ruthless slaughter. An approach is made and the birds take wing; the cloud of feathers tells the tale of death. Flossie works to perfection and retrieves beautifully. Pursuing, we soon have birds enough to satisfy our appetites, and decide to drive leisurely along and try for ducks in the ponds along our route. We scarcely get under way before a jack rabbit apparently rises out of the prairie. Being a tenderfoot I am surprised. Never before had I beheld such a creature on his native heath. With long, sweeping strides, the ears in the ascendant, his speed would more than equal schedule railroad time in many parts of the South. I expressed a desire to pursue and endeavor to bag this creature while going at lightning speed. We drove rapidly on in the direction taken by this prairie racer, and were soon given a duplicate performance. Another attempt was made and the 10-bore Daly charged with 6s and passed to me. My companion held the reins, and we again began the pursuit. It was to me an exciting chase. We suddenly spy the jack, with head erect and all ready

for business. Whizz! bang!—at this moment a prairie chicken breaks cover and darts with cannon-ball speed to my right. Quickly changing position, the left barrel speaks. Imagine my surprise to find both shots successful. Far ahead another chicken rises and is marked in a ravine fully half a mile distant. Securing our game, we lay our course and approach the locality where lies in hiding one of the noblest of game birds. I leave the wagon and Flossie assists me in beating the grassy cover. Success is ours.

We drive homeward in the falling twilight; an occasional jacksnipe makes music for us with his tweak; we are too tired for further effort, and reach the hotel at 6 P. M. with a goodly bag of quail, a brace of prairie chickens and a variety of other game.

I enjoyed the trip immensely, and will look forward with much pleasure to future visits here.

Many of these lands are posted, but gentlemen will have no difficulty in securing privileges from the hospitable Southern planters. Good bags of quail and ducks can be made near the city. I cross the Indian Territory next week and will note any items of interest to sportsmen.

EDWARD HAVENS GOODNOUGH.

## A DAKOTA HUNTING WAGON.

The object of this communication is to introduce the Great Dakota Road Runner, which was operated some fifteen years ago in the southwestern corner of Minnesota and adjoining territory in Iowa and Dakota, by E. F. Warner, Esq., of St. Paul, who was at that time a member of the wealthy syndicate which operated the Rock County Farms. A sketch of this remarkable vehicle is here given that it may not pass into oblivion.

The Rock County Farm is notable as being the pioneer of its class, antedating the Dalrymple, Grandin, Kennedy, and Humboldt, Trail and Cass county farms by several years, and its chief promoters, Horace Thompson, Erasmus Deane, George L. Hamilton and Charles H. Bigelow, leading business men of St. Paul, deserve the credit which belongs to pioneers for many ideas which were afterward adopted and put in operation by those who went into expensive agriculture on the same lines.

One of the original products of the Rock County Farm was prairie chickens, and "Doc" Warner, as he was familiarly called, although he was in no respect a medicine man *per se*, devoted much energy and inventive genius to gathering them in. This road-runner was the most conspicuous of his appliances. With his business

COMFORT IN THE FIELD.

partner and a few chosen comrades outside of the connection he carefully "scoured" (if he did not absolutely clean) the adjacent country for birds and other small game which came in his way. The location was newly settled, and horns of elk and antelope and buffalo were found all over the prairie. Perhaps it was his habitual scrutiny of the plains which prompted him ten years later to gather up and utilize this ghastly legacy of the defunct occupants, whereby he realized an income of \$70,000 in a single year—the bone industry becoming the most lucrative of any in that treeless region.

The famous Pipestone Quarry was situated within three miles of Luzerne, the county seat of Rock county. It was a red cliff of jasper, aligned for half a mile with a vertical wall, which rose 70ft. above the surrounding level. For an indefinite period it had been a sort of Mecca for nomadic tribes of Indians, who resorted thither from far and near to make their "medicine" and collect material for pipes. Legends and superstitions in great variety were associated with it. Altogether it was an ideal hunting ground, and in respect to plentitude of game a "happy" one for both whites and Indians. Buzzards, crows and ravens enjoyed it too.

When the dry September south winds began to loosen the long tap-roots of the "tumble weeds" and blow them about the prairie like toy balloons, careering headlong, and the fields were bristling with the stubble of cut wheat and Indian corn, the "Do-Funny," as the wagon was styled, went forth on its autumnal rounds, sometimes into one State and anon into another. The hunters' dogs were provided with a spacious kennel which took the place of a rack in the rear of the vehicle. Guns, ammunition and provender found their place in ample lockers under the seats. There was a water butt in front with a faucet, and a pail swung under the rear axle for dipping water from the pockets of dry creeks, or any chance slough that offered. A capacious canvas canopy on two sticks made a grateful shade from the sun, which was often fervid at that season of the year. Ice could be carried in quantity sufficient to last a day, and was often the salvation of our heated dogs when the temperature was ninety-seven degrees. Altogether it was a commodious and comfortable outfit, and the like of it, I dare say, has never been seen to this day.

When "Doc" went into Montana on his bone business, the wagon passed out of commission, and eventually disappeared like a wet weather creek which sinks into the sand. Its present whereabouts is not officially known. Perhaps from the sketch herewith presented, some worthy imitation may be contrived in the interest of men who hunt the prairie stubbles and skirt the sloughs.

CHARLES HALLOCK.

## North Carolina Shooting Club Site.

MR. HARVEY TERRY, of Coswell, P. O., Washington county, N. C., advertises this week an unusually advantageous site for a shooting club. It consists of a plantation of 4,000 acres on Lake Phelps, adjoining 170,000 acres of wild lands, both of which offer great attractions for the sportsman.

## CHICAGO AND THE WEST.

[From a Staff Correspondent.]

CHICAGO, Ill., Oct. 27.—A gentleman asking to be known as "St. Albans," writing from Poughkeepsie, N. Y., asks:

"I should be glad to hear whether it is possible to increase the number of quail by giving them some care during the year? Can they be kept in the neighborhood where they are fed if moderate shooting is done, or do they wander as partridges do? What kind of protection in the winter against snow is it best to give them? What kind of a structure would you recommend to be made in the woods so as to protect against the snow and foxes? Is it practicable to plant some food for them in summer and fall? If so, what is best?"

I believe it to be unquestionably true that the quail sometimes migrate in large numbers, just as squirrels do. The shooters of Missouri will tell you this. The migrations usually take place just above and below the latitude line of severe winter. Bob White is not partial to snow and will move to escape it sometimes. This, however, is rare, especially in the upper North, and of all the game birds Bob White is perhaps the most purely local. The feeding and roosting grounds can be determined almost to a certainty for every bevy on a farm, and there is no bird so easily and directly helped by artificial aid in food and shelter. Buckwheat is as good food to sow as any, as it lies on the ground in such way as to be useful in the time of snow, and the birds are very fond of it. Hemp is good and so is wheat. You can always find the birds about a wheat stubble. They would riot in a field of broken down and uncut wheat. In time of heavy snow they will come up to a barnyard as regularly as chickens to be fed, if only they once learn they can get a meal of wheat, broken corn, and almost any small grain, not to say crumbs or scraps. Broomcorn seed is another thing they like a great deal, and a small tract put down to that would furnish a great deal of food. In the South a broomcorn patch is always good for a bevy or more. I should think buckwheat and broomcorn about as good as anything to plant for food, the latter to be broken or cut down.

As to shelter, it is hard to say. Lean-tos of brush and treetops might be useful, but would afford no protection against foxes, as would nothing else except houses with entrances too small for a fox. Into the latter the quail would hardly go to roost. Until the weather grows very severe they prefer to roost out in the open on a grassy knoll, sometimes in a cornfield, less often on stubble, it seeming to be their notion that they are less liable to surprise than they would be if hampered by more cover. They roost in a circle, and like to be able to spring out in every direction about the circle, when startled. As the winter deepens, they take to the hedges or to heavier cover, sometimes going to brush heaps, and in deep snow sometimes tucking themselves in under the edge of a straw stack. Sometimes again, they freeze to death, roosting in the open. Their worst time is when a sheet of ice shuts their food in on the ground from them, or when deep snow keeps them from the ground. At times like that the birds should be fed, and if feed be put along the edges of their accustomed feeding grounds, they will find it if the weather allows them to travel at all. Straw-covered lean-tos along the fences and hedges will be more apt to be patronized than earlier in the winter, and Bob White, usually hard to hive, will then be tractable. This is the time the trapper knows so well.

If others would join "St. Albans" in his effort to protect the quail, the quail crop of the country could be increased one-third. If trapping were then stopped entirely, the supply would double, and it would be found difficult to kill the birds down too close with a month or so of legitimate shooting in a region where they were native and fairly abundant.

## Sale of the Jones Buffalo Herd.

Buffalo Jones was in the city this week, and reports the recent sale of his entire herd of buffalo, numbering 52 head of full and cross bloods, to Charles Allard, of the Flathead Agency, Montana. This now gives Mr. Allard the practical, if not the actual, monopoly of the buffalo of the United States. Add these to his numerous herds of cattle and to the band of buffalo he already had, and Charlie Allard may be held a rich man. The consideration in the sale was \$36,000. The Jones herd was thought to be sold once before this summer, but the sale fell through and the Allard deal was effected later. This puts Buffalo Jones out of the industry to which he has clung so long and under such difficulties. He bears this philosophically, and wishes Mr. Allard all success with his great herd.

209 SECURITY BUILDING, Chicago.

## The Porcupine as Food.

It is repugnant to the feelings of many individuals to do the crawfish act, to take back any statements that they have made, squarely, fairly and confidently. I am one of that number. But when I find I am wrong, "what I says I don't stand to."

Two years ago I wrote slightlying, in fact, disparagingly, of the flesh of the porcupine as a food. I thought I had the papers to prove that it was "strong" and rank-tasting. And I had, so far as one specimen was concerned. This fall, while I was out hunting with two members of the Catawampus Club, the dog treed a porcupine. Our Uncle Adam Moore looked the animal over, said it would "do," and ordered the animal shot. He then proceeded very coolly to dress it. I said, "You're not going to eat that thing?" He said he was, if he lived. "Why," said I, "an Injun down our way tried to eat one a few years ago and he couldn't, it was so strong." "Would you like to eat an old buck sheep at this time of year?" I confessed that I would not. "But you wouldn't object to a piece of good, fat lamb?" "Nary an object," said I. "Well, neither would I eat an old he porcupine. I couldn't if I wanted to. But you will find a fat young fellow like this pretty good stuff when you are hungry." And I did, too. But it did not "taste just like lamb," as many say it does.

Not very long ago I wrote that there was no difference in excellence between English and American guns. I still think there is none as regards shooting qualities. But I find the woodwork of the guns manufactured in one of the above countries is more liable to have small pieces chipped from it where it joins the iron, and to shrink and swell, and "bind" the action. I had no preference two years ago. I have a very pronounced one now. We "live and learn," or think we do.

L. I. FLOWER.

**Cortland County, N. Y.**

CORTLAND, N. Y., Nov. 2.—The weather for the past month has been altogether too fine for the scoring of anything like satisfactory bags of ruffed grouse. Local gunners report finding the grouse in goodly numbers, but claim that the birds have thus far failed to lie well, flushing wild and indulging in light flights. Wm. Hartmanft, a well known field shot, tells me that a letter recently received by him from a party at Harford Mills, N. Y., discloses the pleasing intelligence that a tract of timber near that village, dozens of grouse of this year's breeding are to be found. I also hear that good grouse shooting may be had along the east shore of Cayuga Lake, some twenty miles north of Ithaca. Around Little York, seven miles from Cortland, a good many squirrels are being bagged. The grays are plenty in the vicinity of Dryden, also. With the aid of ferrets, a big rabbit crop will be harvested. M. C. H.

**Home-Made Explosive Bullets.**

TRENTON, N. J., Oct. 28.—I am not much of a deer hunter, but I have killed three deer with explosive bullets from a .44 Winchester, and can give your correspondent, "Sareault," Eddy, N. M., a pointer. Mould the bullet with a mine in the lower end, just the size of a blank pistol cartridge (.22cal.), pull out the wire and you have the bullet ready to insert the .22 blank. If you wish to expand, fill up the empty space with powder. If you want it to explode put it in just as you get it; the open space will explode it. Load the cartridge in the usual way, but I would not advise filling the magazine, although I have done it several times. I would keep an explosive in the barrel and solid ones in the magazine. V. P. W.

**More Snared Birds in Syracuse.**

SYRACUSE, N. Y., Oct. 29.—I found on Saturday, in one of our city markets, 12 snared partridge. About a year ago this same firm had about 70 snared birds in their possession and got out of their dilemma nicely. I have reported my find to our local game constable by messenger and am awaiting the result with great interest. Birds are very scarce in this county for the very reason that we have so few "men" in it. Every foreigner here owns a shotgun, and I often find them with pocketsful of song birds. In fact, they kill everything that moves about here, in or out of season. Shall keep you posted on the result of my find. FRANKLIN JNO. KAUFMAN.

**Snipe in Ohio and Kentucky.**

CINCINNATI, Oct. 29.—Snipe shooting is reported good at Jones's Station, O., and along the tributaries of the Big and Little Miami rivers, also in the lowlands below Fort Thomas, east of Newport, Ky. The prospects for a good season's sport at quail in and about here are poor. WICK.

**A Moose Trophy.**

THE head of the moose killed by our correspondent L. C. I., in the hunt so graphically described in last week's FOREST AND STREAM, is now being mounted by Fred Sauter, the taxidermist, at his shop on North William street.

**Another Museum Moose.**

MR. J. ROWLEY, JR., of the American Museum of Natural History, in this city, has just secured on a hunting trip in New Brunswick a bull moose, which was required to complete a group of seven, mounted for the museum.

**Summer Homes.**

A BEAUTIFULLY illustrated book; list of over 3,000 summer hotels and boarding houses in Catskill Mountains and central New York. Send six cents in stamps to H. B. Jagoe, Gen'l Eastern Passenger Agent, West Shore R. R., 363 Broadway, New York, or free upon application.—Adv.

**Sea and River Fishing.****OUANANICHE AS GAME FISH.**

WELLSVILLE, N. Y., Oct. 31.—*Editor Forest and Stream:* Some time ago I read in your columns an article from the pen of Robert C. Lowery, of New York, in which he touched on ouananiche fishing in the waters around Lake St. John, Quebec, with adverse criticism as to their fighting qualities, and their right to far-fame for gaminess and pluck.

During the last week of July and the first weeks of August of this year, the Rector and I, with four Indian guides and two canoes started from Pointe Bleue, on Lake St. John, on a ten days' outing up the Ashuapmouchan and through Lakes Pemoka, Broché, Plongér, Clair and Lac à Jeune to the Wassiemska, down which we proceeded to the Mistassini, turning up the latter river to the first cascade above the junction of the two streams, from which we journeyed down the Mistassini and across to Roberval Hotel, where we were staying.

Our first handling of ouananiche, a fish I had heard of in recent years, was at Chute à L'Ours, on the Ashuapmouchan, a mass of tumbling, roaring water, and extremely picturesque.

The guide paddled me to a point of rock between two falling bodies of water, where the mist from the falls rained down on one in a drenching shower, and the roar of the cataract was deafening.

I was provided with a 7oz. ash and lancewood rod, and two Jock-Scott flies on a 6ft. leader. Stepping out on a slippery rock constantly submerged by the dashing waves, I threw a 30ft. line across the white, foaming "brou," and as the swift current caught it, I let out 12 to 15ft. more, so as to reach solid water where the fish could see the fly. No sooner was the line taut down stream and I had raised my arm to make the flies skip, than a fish struck with such vigor that I almost fell off the rock in my surprise, so taken aback was I at the sudden challenge, when I had meant my first cast more as a preliminary wetting of the line than with serious intent. Up went a 5-pounder 2ft. in the air, 40ft. distant, with head and tail

together, and falling back into the water, with a rush he ran down stream until checked, then another wild leap and he came straight toward the rock on which I was standing. I pressed the spring of the automatic reel, taking up the slack as fast as he gave me the line. When he stopped, I held him to see what he would do next. He went down, drawing the point of the rod under, until I feared he was making for a crevice in the rock, where the line would be cut.

Putting a strain on him, the line slacked up so quickly I thought he had vanished. Instead, to my astonishment, he appeared in front of me 2ft. in the air, and at that moment I heard in the rear an emphatic "sacre" from the guide, who had been watching the mad capers of the ouananiche. The latter again took the hook and line and ran down stream, giving one more leap when I put the strain on him. Testing the strength of rod and tackle against his indomitable efforts to escape, I held him as he fought his way inch by inch, and stepped back to the main rock. The guide took the landing net, not large enough, I found, for ouananiche, and endeavored to push it under him, but his dashes hither and thither prevented his capture at once. At last he was in the net struggling for dear life. Jim, fearing he would escape, by a quick movement turned the net over on the fish, grabbing both with his two hands against the slippery rock. A fierce scramble, four distinct images—the guide, the net, a line with hooks dangling, a fish floundering off the rock into the water—and my first ouananiche was caught and lost. He gained his freedom with a brave pertinacity that won my admiration and tempered disappointment at his loss. I thought of Mr. Lowery's stricture on ouananiche and decided that at least one individual of the species had redeemed his tribe from the charge of being, as a fish worthy of one's skill, "flat, stale and unprofitable." We caught seven that forenoon, ranging from 5 to 8lbs. in weight, and the Rector, who is quite critical on the subject of gamy fish, concluded that he had seldom more enjoyed a tussle with the finny tribe, admitting frankly that the ouananiche had fully sustained his reputation as a fighter of the first order.

When we left the Chute à L'Ours next day, we had brought to land fifteen fish, and had lost about six more from "pure cussedness" on their part, and the possession of only one small net between us. We improvised a somewhat crude gaff from two large bait hooks fastened to the end of a straight bough, not having considered it necessary to bring with us a salmon gaff left at the hotel, but which next time we tackle the ouananiche we shall certainly add to our outfit.

Seeing a fin showing above a swirl of foam that was going round and round among the eddies, breaking up into small flakes and again uniting in one large sheet, circling in wide sweeps above the turbulent waters, we got into the canoe and paddled within casting distance of the swirling "brou." A fin rising, by a quick cast the line was thrown across the direction he was going in. The flies sank beneath the foam, the line straightened, and I had him. A vigorous leap, another and yet another, and Jim's stoicism gave way with a shout of approval. He don't fight, eh? How's that, Jim? Just look at him. Away he goes with the line, leaping into the air seven times by count. He keeps one busy at the reel and—but where is he? He is making straight for the bottom if there is any, and like a flash he is coming toward us, and under the canoe he goes, taking line and rod with him. Zip! Swish! Seated as I was with my back close to the prow, with the right hand the rod was thrust behind and caught with the left on the side he came out on, on the way skyward for the last time. He must have sneered a good-bye, "When shall we three meet again?" as I reeled in a slack line, and nary a ouananiche. This happened more than once. "To the victor belongs the spoil," and the ouananiche when you catch him.

Once two were hooked at one cast. It was "the parting of the ways," they with a hook each, and I minus two. One lying in the bottom of the canoe took French leave over the side as if shot from a spring-board. They fight like black bass to which alone I give the palm, weight for weight, and they accept defeat with a bad grace. Mr. Lowery must be a blasé fisherman, seeking unusual novelty in Waltonic pursuits, somewhat resembling a gentlemen we met at Roberval, whose present mission in the world seemed to be a continual search after new experiences.

In Lac à Jeune we trolled instead of using fly, and in that peaceful abode of plenty the ouananiche get too well fed and flabby, for want of the "struggle for existence," to which are fated his more muscular, finer fellows of the seething, troubled waters of the wilder cascade. They lack in vigor and obstinacy.

Our trip to the ouananiche country was one that will live in our memory as of the most enjoyable we could well have projected, and the Rector returned to Scotland fully resolved to "repeat the dose." The guides were excellent fellows, and Fred Philip one of the best and jolliest of the crew.

Shooting the rapids of the Wassiemska and "Mr. Sweeney" on our way down was highly exhilarating and fraught with constant danger of a capsizing, but in the hands of our experienced canoe men we missed the adventure and enjoyed the excitement. We shall count the days until we again renew our acquaintance with the St. John country and our worthy foes—the ouananiche.

WILLIAM BRUCE.

**Fishing at English Lake.**

ENGLISH LOOKOUT, La., Oct. 23.—Through the kind invitation of Mr. P. Mallard, member of the Marshall Fishing Club, situated here and on the L. & N. R. R., your correspondent accepted the pleasure of a day's sport last Saturday, which resulted in a very good catch, counting 46 green trout (black bass), 9 redbass, 11 sheepshead, 12 croakers and 5 speckled trout.

Mr. Mallard was not only entertaining during our trip, but proved himself quite an expert at rod and reel fishing; his casting was very pretty and done with great skill.

There are three clubs at this point, all within a throw of each other, situated 40 miles from New Orleans. Their members are of the best men found in the city, and all jolly good fellows.

Good catches were made by every one. Among those who are known to have made good strings were Messrs. B. F. Glover, E. Dupre, Muster and Capt. King.

ANODRAC.

**BARNEY'S POOL.**

WHY it was called Barney's Pool no one—not even the oldest inhabitant—could tell. Certainly any other name would have been as appropriate. Deadman's Pool, Dismal Pond or Dreary Swamp much more so, for a more desolate, weird, dreary place it would be hard to imagine.

But he who would fish successfully in B. Lake must occasionally visit the same Barney's Pool, for at certain spots in the pool—spots well known to the old fishermen—were gravel beds over which minnows fairly swarmed. Here the very choicest bait for muskallonge could be found in the greatest abundance. Often and often have I filled my minnow pails with the most tempting bait in an incredibly short time, but I think I can say it was always with a sense of relief that I closed the lids, pulled up my anchor and left the desolate spot.

Never shall I forget my first visit to Barney's Pool and the adventure which followed it. It was a hot day early in September, hot, close and sultry, not a breath of air stirred the leaves; B. Lake lay like a vast heated mirror, not a ripple disturbed its surface. The sun was fairly scorching and seemed to dry up the grass it touched. All the morning John and I had fished with very fair success and noon found our minnow pail almost empty. We had eaten dinner in the woods at the north end of the lake and were enjoying a quiet after-dinner smoke.

"John," said I, "what shall we do this afternoon? It's too hot to go on the lake before 6 o'clock and it's now only 3. We have three hours on our hands to dispose of."

"Well," answered John, "I think we had better go after bait or we'll not have enough for this evening's fishing. A little way from here there's a creek comes down through these woods. By rowing up it we can get to Barney's Pool, and there we can soon get bait enough to last us two or three days."

A half hour later we were afloat again on the lake and a short pull brought us to the mouth of the creek, into which John shot the boat.

It was a deep, sluggish stream, running, or rather lying dead, under the trees, for current it seemingly had none. The bushes and trees grew so thick on its banks that the little sunlight finding its way through the leaves fell in a pale, sickly light.

The water was black, dead, gloomy looking—decaying logs, fallen treetops, rushes and reeds obstructed the channel. The air was damp and filled with the odor of decaying wood and leaves. Numerous black-backed turtles slipped off the logs at our approach and glided out of sight, burying themselves in the murky darkness of the water.

After following all the curvings and windings of the stream for possibly a mile, we pushed our way through a thick growth of rushes and found ourselves on a small pool of water.

"This is Barney's Pool," said John.

It would be difficult to describe my sensations on first beholding this pool. There was a sense of loneliness, of dreaminess, that entered with the very air one breathed. A feeling of depression came over me that was impossible to shake off.

The pool lay dark even in the full daylight. Its waters black like the stream we had followed. Shores it had none, but the black water seemed to lose itself in long, rank weeds, out of which rose tall, lifeless, barkless tree trunks, like grim skeletons guarding the desolate spot.

The pool seemed surrounded by a vast swamp, save at one spot where a little knoll appeared a few feet above the water, and on this knoll stood the remains of an old log cabin. Old, deserted, neglected, it but added to the weirdness of the scene.

When we left the lake the sun was shining. When we reached the pool great clouds had covered the sky, flashes of lightning were seen in the west and low rumblings of distant thunder indicated the approach of the storm that had been gathering all day.

A few pulls of the oars and John proceeded to drop the anchor, announcing that we were over one of the gravel beds, and we got ready our minnow lines, and the work of fishing for minnows soon absorbed our attention. For some reason the minnows refused to bite, although John assured me "there were thousands of them in there," and later experience proved he knew whereof he spoke. At the end of a half hour we had caught but three; we moved to another spot with no better success. It began to look discouraging.

In the meantime the storm was approaching, the flashes of lightning were more frequent, the thunder louder; a sudden gust of wind recalled us to the fact that we had better seek shelter.

"John," I said, "get up your anchor and let us pull for that old hut," and it was time, for scarcely had we gotten inside the old ruins when the rain came down in torrents. Fortunately we found one corner of the cabin protected by a remaining portion of the roof, and here we had to remain for three mortal hours listening to the rain beating on the outside.

Finally it ceased, ceased almost as suddenly as it began; and we ventured out of our prison, only to find night fast approaching.

This was an unexpected turn to our adventure. We had not anticipated spending the night at Barney's Pool, but here night was almost upon us, and how dark it would be down that stream. It would be almost impossible to find our way in the darkness through all the windings of the little creek, and even if we did succeed in getting back to the lake a strong wind was blowing up it, so that it would be difficult, even dangerous, to attempt to cross it. There was nothing for us but to remain where we were.

"John," I said, "I guess we'll have to spend the night here."

"Yes, I guess so," he answered, "and I would a good deal rather not."

"Why, John?" I asked. "Of course, it's not the pleasantest place in the land, but we have spent nights in a great deal worse places. We can find enough dry boards in the corner to sleep on, and it'll not be the first night I have slept, and slept well, on boards."

"I am not bothered about the sleeping," he answered, "but I would rather be almost anywhere else. Don't you know, Mr. Sherman, they say this hut is haunted. They say there was a man killed here once, and that he haunts the place, and that strange lights are seen here at night, and—"

Just then a terrific clap of thunder interrupted John, and another splashing shower coming on we were driven

back to our corner. I tried later on to get John back to the story of the hut, but either he knew nothing more, or did not like to talk about it. I could get nothing out of him, and he seemed anxious to avoid the subject, so I soon gave up the attempt, and we lapsed into silence. The time passed slowly away, outside the wind blew fiercely, driving great clouds across the sky; at times the moon shone out bright, then heavy clouds obscured it. The wind whistling through the chinks and crannies of the old cabin gave forth weird and unearthly sounds.

The evening was slowly passing away. There had been a longer interval of silence between us. I was beginning to feel sleepy and thinking of turning in for the night, when there came a fierce blast of wind that shook every log in the old hut. Then followed a dead calm—perfect silence—not the motion of a leaf was heard.

Then clear and distinct on the night air came the tinkling of a bell. It startled us both, it seemed so near the old hut.

"It's a stray cow," John. "Some stray cow has wandered into the clearing and is making a meal off the long grass."

"It ain't no cow," John answered, "a cow never rings a bell that way."

"Well, if it isn't a cow, what is it?" I asked.

"I don't know what it is; but I know it ain't no cow."

"Well, I'll soon see what it is," I said, making my way to the door of the cabin as I spoke.

In front of the cabin was a cleared space possibly a hundred paces in width, and beyond the clearing was a dense woods. The sound seemed to come from a point in the woods almost directly in front of me.

I stood in the doorway some time listening to it. John was right. There was something peculiar in the way the bell rang, and yet I could scarcely tell wherein the peculiarity lay.

I was trying to determine this when I was surprised to see a pale blue light shine out distinctly at the very point I had settled on as the spot where the bell was ringing. I was certain the light wasn't there when I first came to the door.

I called John to my side and together we watched the light in silence.

The moon was shining brightly, lighting up the clearing distinctly, and we could see a well worn path leading from the door of the cabin in the direction of the point where the bell was ringing.

"Come with me," I whispered, "and we'll soon find out what's going on over there."

I noticed John seemed a little reluctant at first and hesitated about going, but finally he followed me. The path was broad and well beaten, and we had no trouble in following it. We had gotten within 20 paces of the woods when suddenly the light disappeared, and at the same instant the bell ceased ringing.

We hesitated a moment, then hurried along as fast as we could and entered the woods. To our surprise we found nothing unusual. The moonlight coming through the trees gave an abundant light, yet, although we searched carefully everywhere, we could find no trace either of animal or human being.

I was just thinking of giving it up and returning to the hut when I was surprised to hear again the tinkling of the bell, and looking up I saw the light burning apparently a short distance ahead of us in the woods. "Come quick, John," I said, "we'll not let it escape us this time."

As I spoke the bell stopped ringing but the light continued burning. We hurried forward as fast as we could and apparently were getting nearer to it. We were only a few paces from it when suddenly there was a rustling among the leaves back of us, and before I could turn around I felt myself grabbed by both arms and instantly a bandage was thrown over my eyes.

It was so sudden, so unexpected, that it took us both by surprise, and our hands were bound behind us almost before we had time to think. Then a low, gruff voice whispered in my ear, "Now, Cap, if you know what's good for you you'll keep quiet and come with us without any nonsense," and I felt the barrel of a pistol pressed against my temple. I heard John say, "Mr. Sherman," but a coarse voice interrupted him with, "Shut up, or I'll blow the whole head off you." I then felt my arms grabbed by a man on either side of me, and the same voice spoke again at my ear: "Now we'll lead you, and walk along right smart, Cap, for we have no time to spare."

We then started through the woods, my captors guiding my steps so that I experienced no trouble in walking. I could not tell the direction we went nor how far, but it seemed to me we walked for miles.

Suddenly I heard the crackling of wood burning, I noticed an increase of light through my bandage, and felt a sudden heat on my face as though I was near a fire. Then we stopped and one of my captors told me to sit down; at the same time I felt a log of wood pressed against my knees and I sat down on it.

I had been studying all the time we were tramping through the woods what the meaning of all this could be, and what object they had in seizing us in this way. I listened with the greatest attention now, hoping to hear something that might enlighten me. I could hear feet shuffling about and could hear voices talking low at a little distance from me, but could not make out what was said. After several minutes of this suspense the same voice whispered at my ear: "The Captain is coming this way."

I soon heard the approach of his footsteps, and then his voice addressed me, though in muffled tones, as though he were wearing a mask:

"Well, we've got you this time," he said; "you thought you would capture us, but the tables are turned, and instead we've captured you."

"I don't understand you, Captain," I said.

"No, I suppose not," he answered, laughing. "Of course you are very innocent. Of course you are not Government officers. Of course you weren't sent out to capture a gang of illicit distillers. Of course you weren't informed that we had a still near the old hut. Oh, no, my pretty boys, you couldn't take us in. We watched you ever since you came here. We saw you hiding in the hut this afternoon."

"But I protest, Captain."

"Oh, protest all you want," he said, interrupting; "you can't fool us. We saw you sneaking about the old hut. You thought we would go there this evening and you would capture us without any trouble. But we were a little too sharp for you. We judged you had plenty of assistance within call, so we decided to tempt you to

leave the hut, and we succeeded, as you are aware."

"But, Captain," I said, "we are not Government officers."

"No, I suppose not," he answered, sarcastically. "That's too old a dodge. You'll have to get something better. Why, we had a full description of you a week before you came here. We have been watching for you."

"But I will give you proofs, Captain."

"We have all the proofs we want and will not listen to any more. I have only come here to tell you the punishment the gang have decided on in your case. In the first place I will tell you that we are going to let you off very light. We are going to release you when you have taken an oath not to reveal anything you may have heard or seen either at the hut or with us."

"We'll very willingly take that oath," I answered.

"And in addition," continued the Captain, paying no attention to my remark, "the gang has a rule that any person caught spying in any way on the actions of the gang shall be branded with a red-hot iron on the right arm."

I jumped to my feet. "This is monstrous, this is inhuman!" I shouted, "you wouldn't dare!"

"Seize him!" said the Captain, "and if he don't keep quiet, gag him!"

Instantly two men caught me by the arms.

"Now take him to the fire and brand him. We'll show these fellows what we are made of."

I struggled all I could, but it was useless opposing the strong arms that held me. I was forced up close to the fire, then rough hands pulled my sleeves about my elbow. I was then forced to stoop over until my arm came so close to the fire that the heat against it was terrible. There I was made to stand several minutes, while I could hear men working about the fire, apparently heating the irons.

While all this was going on not a word was spoken, then a voice said "Ready."

"It was answered by several voices, "All ready, Captain."

"When I count three, strike both together."

There was a moment of silence that seemed an hour. Then came slowly the words "One—two—three."

There was a groan from John, and at the same instant I felt a sharp, stinging pain shoot up my arm and all through my body. It was but a second, but what a second. "Bind them up quick!" said the voice; and instantly a bandage was bound tightly around my arm.

"Now take them back to their seats," and we were led back to our logs.

"Let them rest awhile." And I heard the Captain's footsteps walking away, and soon afterward the men who had charge of us followed him.

For half an hour we sat there without hearing a sound. I began to wonder at it. Could it be possible they had gone? Finally I ventured to speak. "John." "Well, Mr. Sherman." Not a sound was heard even then. No one interrupted us. "John," I said, "I believe they have gone and left us. I don't hear anything of them."

Again we listened a few minutes. Still not a sound. My hands were free, so I determined to venture on removing the bandage from my eyes. After a little effort I got it off. As I imagined, there was not a soul in sight. The fire was still burning brightly, but no one was near it.

"Pull off your bandage, John," I said, "there's no one here."

In a moment John's eyes were free, and we stood looking at each other.

"Are they gone, Mr. Sherman?" said John, doubtfully. "Oh! the villains, to burn us that way."

For the moment I had forgotten the burning. This recalled it. The bandage had been wrapped so tight that my arm was numb and I could not feel the burn. I determined to take off the bandage, and so began to unwind it very carefully so as not to injure the arm. Fold after fold came off, and when the last round came off judge of my surprise to find the arm entirely uninjured. There was not a scar or mark upon it. John had removed his bandage and was standing gazing in surprise at his own uninjured arm.

"Why, I felt the iron burning."

"I thought I did too."

While removing the bandages I had unconsciously walked nearer the fire. My attention was attracted by two glittering spots on the grass. I stooped and picked one up. It was a small piece of ice fast melting in the heat from the fire. In an instant all was plain.

"Here," I said, "are the irons that burned us and that explains why they held our arms to the fire so long. Ice would hurt as bad as hot iron on arms heated as ours were. There's some mystery about this that we haven't found out yet, but we had better get away from here before they come back. We've had quite enough of them for one night. Do you know where we are?"

John looked around a while. "Why yes, I know where we are. We're on the hill just a little ways above Somer's Point."

"Somer's Point! Ah, is that so? And the Jolly Fishing Club are camping on Somer's Point."

"Yes, and it ain't but a little ways to their camp."

"Well, they are old friends of mine and we'll go down and spend the night with them, but not a word about this night's adventure."

I never yet found a party of campers so hard to waken, or who seemed so sleepy when we did get them out; but at last we got them far enough awake to understand that we wanted to spend the night with them. We made some paltry excuse for appearing at such an hour, which excuse was accepted without comment, and they soon stowed us away comfortably for the night.

I slept in the tent of my friend Captain Blank. Before going to bed I noticed the toe of a boot sticking out from under his cot. It had mud on it that looked too fresh and wet to have been there many hours.

I said nothing, but I thought a great deal.

F. I. SHERMAN.

#### A NEW-SUBSCRIBER OFFER.

A bona fide new subscriber sending us \$5 will receive for that sum the FOREST AND STREAM one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals. For \$3 a bona fide new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Fleet's handsome work, "Bird Portraits for the Young" (the price of which \$3).

#### BY STREAM AND LAKE IN MICHIGAN.

THE trout season for 1893 in Michigan has closed. The wind already sweeps cold and mournfully through the woods. The extremely hot days and remarkably cold nights have turned the leaves on the ancient oaks to varied hues of golden richness, and slowly dropping, one by one, they are claimed by Mother Earth as her own. The majestic, brilliant-colored, lofty-plumed golden rod nods gently to the passing breeze. The meadow queen is shedding its lovely flowers of dainty purple, and all nature tells us, in language unmistakable, that other days and of a vastly different character are soon to dawn upon us. The streams of northern Michigan are noted the world over as being the favorite home of the trout and of the grayling. The season just closed has been a particularly good one for the trout and grayling fishermen. Parties from all sections of the country have visited our world-renowned lakes and streams, and they have returned to their homes well pleased with their experience, satisfied with their catches, and fully determined to come again at the first opportunity.

The people of Michigan extend the hand of welcome to all comers who are honest, law-abiding, respectable sportsmen, and they will spare no pains to make the sojourn of the visiting brother sportsman enjoyable and pleasant. It is the little things, kindly extended, pleasantly received, that go to make up the sum total of our daily life. So it is with the trout fisher—the successful experience of others who are engaged in the same pastime, will ever be his guide, and the more carefully and thoroughly he studies the success or failure of others, the better and more successful trout fisher he will become.

This reminds me of the story of the last party to return from the trout streams to Lansing; and as their experience will be interesting and instructive to those who are to visit that section of northern Michigan on a like mission I will venture to tell you something of it. The little party, consisting of Frank E. Briggs, T. H. Sedina and A. J. Bradford, all armed and equipped as the most fastidious trout could require, left Lansing Aug. 7. Their destination was Baldwin, Lake county. Their headquarters at Baldwin was at the Townsend House, one of the best kept and most homelike country hotels in northern Michigan, owned and presided over by J. C. Townsend and his pleasant and obliging wife. To Mr. H. C. Rudd, one of the prominent business men of Baldwin, the entire party were deeply indebted. Mr. Rudd has the only large ice box in town, and among his many other good deeds he allowed the party to use his ice and ice box during their entire stay at Baldwin, and he refused to take a penny for his trouble. At Baldwin the party was increased by the addition of Uncle Abe Bush, Roscoe Bonney, John Updegraff and Charles Frost. These gentlemen are old residents of Baldwin, and as trout fishermen and guides they can't be beaten. They know every inch of the country for many miles around, and they are perfectly familiar with every trout stream in that section. They can each one handle a fly-rod and cast a fly equal to the best of men, and they can land a trout with an ease only to be acquired by a lifelong experience as trout fishermen. The party here engaged a livery, and Sam, the German driver, to take them about the country as they required. The livery was good for a backwoods village, and Sam did his part faithfully and well.

Baldwin is located on Baldwin Creek, one of the most lovely little streams of northern Michigan. This stream, like many others in this section, was once well filled with trout, and one could catch a fine string of nice big fellows within a few moments' walk of the village almost any day; but, alas! the stream has been literally blown to pieces, the banks have been torn up, big holes have been gouged out of the bottom of the stream, and successful trout fishing or even fairly good catches is a thing of the past. The law-breaking wretch with his explosive dynamite bombs has put in his dastardly work, and desolation, wreck and ruin follows in his wake on any stream which he visits. I am told that fish killed by explosives are always badly crushed, the ribs are torn from the backbone, and about every bone in the body is broken.

Five members of the little party fished all of one day a few miles below Baldwin, and they only took, as the total catch, fifteen small trout.

At Baldwin the party got together their campequage, and taking the guides and Sam and the team, drove thirteen miles to the Little Manistee. Here the entire party camped in an old, unused log house, located near the river, slept on the ground, did their own camp work and their own cooking, and enjoyed themselves as only an old-time camper can. The Little Manistee for many years has been one of the most famous trout streams in Michigan; but here, too, the explosive bomb has been at work, and very greatly injured the prospects for extra big catches for some time to come. This stream, like most northern Michigan streams, is very deep, the water is very cold, the current runs very swift, the banks on either side are studded thickly with a tangled, rank growth of alders, and one must get into the middle of the river and wade every foot of the stream in order to do any fishing at all. The casts must all be made in midstream, with the water hip deep, as the bushes and trees nearly meet over and above the water, and there is no chance to cast a fly with any kind of success except one is prepared to wade. To wade up the stream was utterly impossible, as the current ran so swift. The party waded and fished down the stream altogether, and they covered from five to eight miles each day.

When bait was used in fishing for grayling, it took three large bullets to sink the line and keep the bait near the bottom of the stream. The entire party in four days' fishing took 165 fine trout—not an awful big catch, but enough to supply the camp, and some extra fine ones for the friends at home. In camp, they all turned in and took turns at camp work. In the way of flies they found that the professor, as a leader, with a grizzly-king and a brown-hackle, or a grizzly-Palmer and a dull-Palmer, gave the best results. Each fished with a 9ft. leader, and about 100ft. of line. They caught a few rainbow trout, and a total catch of fifteen grayling. The trout took nothing but the fly, and the grayling took nothing but bait.

One morning early Mr. Briggs took a stroll down the stream for grayling; he had just dropped his bait near the bottom of the pool, when a monster trout caught sight of it, and, making a rush for it, turned and hit it a sharp blow with his tail, then turned again and tossed it about with his nose, then pushed it from one side of the pool to

the other, by pushing against it with his body, and after playing hide and seek with the bait for nearly half an hour, he gave a grand whirl and then retired to a quiet spot near the upper edge of the pool, and placing himself in position, in plain sight all of the time, he positively refused to budge an inch. Nothing seemed good enough to tempt him to make a strike that morning, so Mr. Briggs left him for some other, perhaps more lucky, fisherman to try his skill upon. As bait for grayling the grasshopper did the best as a rule. The small Scotch hook gave the best satisfaction of any hook used.

Mr. Updegraffe makes a very nice cast. He has no trouble when standing in midstream, water hip deep, in delivering 75ft. of line and landing his fly as softly as a feather upon the water. He uses a light, 7oz., split-bamboo rod.

Nine miles up the Baldwin, at Bradford's dam, the entire party spent one evening fly-fishing. They had extra good luck and took twenty fine trout, averaging about 1lb. each. They found it hard work to wade the stream in the dark and to make their casts to good advantage, but they were all greatly pleased with their night's work. They returned to Lansing delighted with the people whom they had met, pleased with their camping and fishing, and they would say to any really good fellow who wants a good time to go to Baldwin.

Uncle Abe Bush is one of the fixtures and old-time characters of Baldwin. He has passed the three score milestone by a number of summers, but he is hale and hearty and well preserved, and a most delightful companion in the camp and on the river. He is a competent, good guide in every sense of the word, and he knows the wants of the trout fisher and woodsman thoroughly. His home is a very modest little cabin in the edge of the village, where he lives alone. He was a soldier early in life, and his army training serves him well in his old age, for he is a pattern of neatness always, and his cosy cabin home is wholesome and exceedingly well kept. A large piece of canvas reaching nearly across the front of the cabin tells the wayfarer that he has reached the headquarters of the Baldwin Fishing Club, and that Abe Bush is the president of the club. Inside of the cabin, if Uncle Abe is at home, he will receive a very hearty and whole-souled welcome, and if he likes to look over fine fishing tackle, and hear how the fishing was done a score of years ago, and about the big trout and the big catches in the early days in Michigan, he will be pleasantly and well entertained. The boys from Detroit, Grand Rapids, and from many places outside of the State, when they visit this section make their home at The Townsend and their headquarters with Uncle Abe. The great abundance of fine fishing tackle which hangs suspended by wooden pegs on the walls of Uncle Abe's cabin home, and his comfortable, home-like surroundings, seem to indicate that Uncle Abe stands in well with the boys, and that they appreciate his friendship and reward him well for his hospitality.

Cans, Canning and Cannery.

Some little time ago I mentioned in FOREST AND STREAM that a party of jolly campers at our lake were having lots of fun and great sport fishing with tin can floats, and since the article was published I have been flooded with letters asking how the floats were made and how to use them. Simply tie one end of the line into the ring in the funnel end of the can, bait your hook and throw the entire arrangement overboard into the water and let it drift. When a fish takes the bait the buoyancy of the can, constantly pulling upward, soon tires him out, for it requires quite a pull to keep the can under water. As there is no line attached to the can except the short line that has the baited hook on, there is nothing to hold the can and it goes here and there, now on top of the water, and now under the water, as the fish moves along, or as the fish runs deep or shallow. You would be very much surprised to see how soon a big fish will tire out and give up to the steady pull of the can. With a dozen of these cans drifting about, it requires the constant attention of three or four fishermen in a boat to keep the cans in shipshape. It often gives the boatman a great race to catch the can and secure the fish. It makes heaps of fun for the outsiders. With one of the new style of snap hooks you get the fish every time—they very seldom get off the hook.

To make the float we take a 3-pound can, one that has had canned corn or some other kind of canned goods in it, take the can to the tinsmith and have him slice off about one-eighth of an inch from one end of the can; then have him make a long funnel-shaped cap and solder it on to the cut-off end of the cap; then take a piece of light wire and make an eye on one end of it, or take a small screw-eye, that you can get at any hardware store, and stick it into the funnel end of the can and solder it tight, and if the can is airtight you are all ready for business. As the baited line is short and the can revolves readily in the water, it does not require a swivel to keep the line from twisting up or kinking.

Jugging is one way of fishing, bottle-fishing is another, but nothing equals the tin can float if you wish to fish in that way. The can is light, durable, strong, easily handled and will last a lifetime if properly cared for, and if painted white the can may be seen on the water for a long distance. For a party, or a picnic at the lake, can-fishing will afford more amusement at less expense than anything that can be gotten up to entertain the party. The can costs you nothing and the tinsmith will only charge you a dime to fix the entire can in good shape for actual service. Attorney General Ellis, of Michigan, in his official report states that there is nothing in the fish laws of Michigan which prohibits fishing with floats.

The trout, the grayling, the pike, the bass, all find a congenial home in the waters of the streams and lakes of Michigan. I have in store for you the details of a most delightful and pleasant trip down the Au Sable after grayling, the acknowledged king of inland fish—and, to me, some equally as pleasant hours among the quail and ruffed grouse.

JULIAN.

Pennsylvania Fish Protective Association.

PHILADELPHIA, Nov. 1.—The celebration of the eleventh anniversary of the organization of the association will be held at the rooms of the association on Tuesday evening, Nov. 14, at 8 o'clock.

W. J. SELLERS, Sec'y.

"Money ain't eb'ryt'ing in dis country yit," says Uncle Mose. "People still t'inks a whole lot more ob da man dat ketches one fish dan ob da man dat buys a whole string ob em."—*Indianapolis Journal*.

FISH CAUGHT IN DEEP WATER.

DENVER, Col., Sept. 4.—*Editor Forest and Stream:* In your issue of Sept. 2, page 189, third column, there is an article entitled "On Tilefish Grounds," relating the experience of the schooner Grampus in a recent cruise in search of that fish. In the last paragraph but two a number of other fish are mentioned as having been taken along with the tilefish, two of which were taken from the stomach of one of the captives. Then the paragraph concludes with this sentence, "The fish as a rule come up with the stomachs turned inside out."

I desire to ask is this statement an error of the printer, is it a freak or is it a fact in natural history? If the latter it is news to me, no matter how well it may be known to others, and I would like to learn more about it. What fish are meant? The tilefish; all of the several species named; the swallows or the swallowed? Were the stomachs ejected or how were they reversed? What was the cause? Was it the coming from a great depth?

W. N. BYERS.

[It is a fact that many of the tilefish, when brought suddenly from great depths to the surface, are found with their stomachs everted and protruding from the gullet. The same is true of other fish under similar conditions, notably cod, hake, pollock, rose-fish, red snapper and grouper. The fish upon which the observation has been made all have wide gullets through which the stomach can readily be forced by pressure from within.

The cause of the turning inside out is the sudden removal of the pressure of water from without, allowing the expansive force of the air within the cavities of the body to exert itself without adequate resistance. The eyes are forced from their sockets, the scales are loosened, giving the surface a blistered appearance, and the stomach is frequently everted, as described in the account above referred to.]

FISHING CLUBS OF LANCASTER.

LANCASTER, Pa., can boast of three clubs, composed in large part of enthusiastic devotees of the rod. The Tuquan Club—Mr. Kevenksi, Pres.; Major Rineohl, Sec'y. The Algonquin Club—Harry Moore, Pres.; John Black, Sec'y. The East End Club—Harry Herr, Pres.; T. A. Deem, Sec'y; F. A. Everett, Treas.

The old Iroquois Club seems to have died away; some of its members are to be found in one or another of the clubs now in existence, others have passed over the river and are beyond the finding processes of man.

The clubs above mentioned are well organized and this is especially true of the East End Club, which is a stock company, the members being limited to twenty. The regular camping ground of the East Enders is located in a very pleasant grove on Sherman Creek, about one mile from Blaine, Perry county, Pa. This is a most delightful place and an annual reunion is held by the club each summer. During the present season most of the members went into camp the last week in July. Fishing for pike was very good, but turtling furnished the fun. Pike were unusually plentiful and about eighty were taken. The total catch of turtles was forty-two, the largest of which weighed 12lbs. They were caught on hooks, baited with fresh meat. Of course turtling isn't sport, but it's mighty good fun when they're biting and one has an empty larder to fill.

Not a trace of black bass was to be seen in Sherman Creek, from whence they have been driven by the voracious pike. Mr. Justin Roddy, of the Millersville Normal School, tells us that there are quite a number of bass in the smaller streams tributary to this creek, fish of excellent quality and exceptionally bright colors for the kind. These are a remnant that have escaped the "wolves" of the larger streams. Last year the East End Club camped at Wagner's dam, three miles northwest of Landisburg. The creek here flows through a narrow gorge, formed by high hills on either side. The breast of the dam is 35ft. high, the area of water above about forty acres. Twenty years ago this dam was damaged to such an extent that the water had to be drawn off to make the necessary repairs. The creek was known to be full of fish, so before the water was drawn off, the people for miles around were notified of what was to take place and invited to come and help themselves to the fish.

The quantity of fish taken from the stream was beyond all expectation. Thousands upon thousands of well-known American forms were gathered in.

On July 8 the Tuquan Club went into camp at York Furnace, on the Susquehanna, for a stay of ten days. July 12 Mr. Sec'y Demuth, of the Pennsylvania State Commission, went down, and with several of the other members took sixty bass. Somehow or other when Brother Demuth reaches camp the boys go to fishing, and it's a bad day if they don't catch them.

Early in July Messrs. F. A. Demuth and J. Porter went to Fite's Eddy for bass and succeeded in taking twenty-seven fish, largest 3lbs., total weight of catch 40lbs.

Mr. John Kevenksi, President of the Tuquan Club, caught three fine crappie while at York Furnace, about 500 of these fish were introduced into the Susquehanna at Columbia three years ago, and are now occasionally caught. It is to be hoped that they will thrive and multiply, and so make a desirable addition to the list of game fishes of this noble river.

To write of Lancaster's fishing clubs and overlook Major Howell would be quite as bad as to bind up an edition of the Bible omitting the Book of Genesis.

The Major is in his eightieth year, and may justly be called the father of anglers in Lancaster. The woods and banks of streams have been his rendezvous for years. He seeks and finds both health and pleasure in nature, and in his erect, sturdy carriage to-day is an example of the benefits of outdoor life. For the past 40 years Major Howell has made regular trips to the Susquehanna and other streams. Among his favorite resorts on the river are Safe Harbor and Shank's Ferry, both noted places for bass and "salmon."

The Major's tackle box is always full of light, suitable gear for the fishes he seeks, every piece in its proper place, so that there need be no time lost getting "a few more hooks, lures, leaders," etc. Rising at 4 A. M., he breakfasts, after which he is off, for there is a drive of ten miles before the fishing is reached. Man and boat ready, the Major has entered upon his fishing in good time, and if the river is in condition a fine lot of bass is his reward. The small-mouthed black bass, in the swift waters fished by Major Howell, are as game a fish as one comes across.

Messrs. Howell, Frey and Hubly, often seen together on

these excursions, are a trio hard to beat. The Major in his long experiences has met with many funny things, and has had good laughs at the expense of some companion. On one of their recent trips he and Frey were fishing from the same boat. The Major landed the first bass, and soon another, when Frey said, "Major, would you care if I should cast in near your line?" To which the Major replied, "No, certainly not." Frey cast into the promising water, and the Major in a spirit of fun immediately took Frey's end of the boat, and casting in soon hooked a bass, much to Frey's chagrin.

The Major and a friend were on the river at Safe Harbor in 1891 when a large "salmon" leaped out of the water and circled right over the tip of his rod. The fish soon again appeared above the surface, this time with the hook in its mouth. The Major not trusting his light tackle with such a large fish, directed the boatman to a sandbar, where he managed to strand the fish. It measured 23in. from mouth to tail.

Maj. Howell's old bass scores ran high, as many as sixty bass a day, but nowadays the scores do not run so large, a dozen fish being a good day's catch.

BART.

"FOREST AND STREAM" AT THE FAIR.

Coffee at the Fair.

The matter of eating and drinking at the Fair is for the most part to be considered in the light of a luxury. There is only one thing of that sort which you can have good at the Fair at a reasonable price, that is coffee. For this you pay the uniform price of ten cents a cup, and if you know where to get it, you can secure a beverage such as was never before known in Chicago. Rather let us differentiate the coffee question, and say beverages, for the knowing one in World's Fair coffee matters can show you half a dozen sorts of coffee there, all dissimilar and all good—as good some of them as that proverbial coffee which is made at the camp-fire. Perhaps lovers of this camp-fire cup may get a hint or a bit of knowledge out of a study of the different foreign coffees of the Fair. The Chief and myself sacrificed ourselves on one or two afternoons in the purpose of getting a comprehensive knowledge of the subject.

Between the Fisheries Building and the Lagoon, going north, is the big and ornate building of Brazil, and back of this building the Brazilian government dispenses free coffee, from 1 till 4 P. M., each day. It does this to induce newspaper men to migrate to Brazil, which isn't a very good place for the profession. Owing to the purchasing clause of this coffee being as it was, the Chief and I patronized the Brazil product a great deal. Let no one despise Rio coffee, if this be the coffee we had, albeit no Rio coffee of the corner grocery ever could produce a nectar like this. The Brazilian coffee was made by the "French drip" process, like the Creole coffee of the South, but on a larger scale. The berry, well browned, is ground fine, and boiling hot water is poured over a quantity of the ground coffee. The percolations are coffee, clear, bright and strong, aromatic, pungent, yet with no raw or unpleasant flavor. It certainly is coffee that "takes hold." There is a novel and seven poems in every pot of Brazilian coffee, and at first we came near voting it the medal of honor, until one of the coffee girls, a curly-headed, saucy thing, offended us by intimating that we could get a line on the Brazil coffee well enough without ordering more than two cups apiece. That made us mad, and we told her that we would not colonize Brazil under any circumstances.

Guatemala Coffee.

Back of the Brazil building is the Guatemala building, and out in the open air near this building they serve you coffee at 10 cents a cup, while you sit and listen to four natives play the *marimba*, an instrument which is a combination of the zylphone, the organ and the piano, and which gives forth music of just the sort that makes you want to buy more coffee. The *marimba* is admirably adapted to its purpose of outdoor music, its half barbaric melody being the natural complement to the bright native costumes of the pretty coffee girls, and to the mild sweetness of a coffee which is foreign and unknown—to that extent we could believe it a distillation born of another world. The Chief and I never could make up our minds which coffee we liked best, but we found on comparing notes that we came around to the Guatemala booths about four times as often as anywhere else, and so reasoned that this must be the best coffee. It is true, the music was good, and the coffee girls passing fair to look upon, but all adventitious surroundings aside, the Guatemala coffee was so sympathetic, so touching, so dreamy, yet so potent and so thrilling, that we could never resist its charm. Once we drank a pot of it, and then it seemed a liberal privilege to live upon a world so glorious as this. The next day, however, the Chief complained that the coffee had swelled his liver all up till it stuck outside of his ribs, "Why, I look like a poisoned pup, I'm all swole up so," he said, plaintively; and this being the first time I ever knew him to complain of anything once taken into his confidence, so to speak, I am inclined to ascribe great power to the Guatemala extract. This also is a drip coffee, and with it one is served a delicate, flaky waffle, a bit too greasy, and bearing an unpoetic native name which sounds like "guff" or "goff."

Costa Rica Coffee.

Near by the Guatemala building is that of Costa Rica, and upon the north side of this building you can get a waffle similar to that of Guatemala and a cup of coffee a great deal larger. The Brazil and Guatemala cups are just larger than after-dinner cups, but the Costa Rica cup is the kind the hired man wants to have alongside when he is eating ham and turnips. It is good coffee, better than you can buy in any big Chicago or New York restaurant, but the cup is so big it raises your suspicions. This is not a drip coffee, but is made by a peculiar steaming process. When the crowds grew so big, the last month of the Fair, this coffee grew weaker, and I suspect plain boiling, with no frills. A Costa Rica, Guatemala or Brazil man who came to Chicago to live would soon forget how to make good coffee.

The Coffee of the Palsance.

Away up on the Midway there are some Algerian booths where you can have coffee made for you while you

wait. The be-fezzed heathen who takes your ten cents puts a spoonful of finely powdered coffee (brand unknown) in the bottom of a big copper cup, and on this pours boiling water. You can add sugar and you can have milk if you like. You would better take milk, because this is much like plain American restaurant coffee, and is dangerous if not mitigated. No one should use milk with the Brazil or Guatemala coffee, or any pure drip coffee. The Algerian coffee looks foreign owing to the copper utensils and the red fez which you see with it, but it tastes mild and domestic. Too much of it would make you hate mankind.

#### Turkish Coffee.

Observation led the Chief and me to think the Turks the most ill-mannered and utterly abominable people on earth, or at least on the Midway. They are insolent, impolite, indeed "unspeakable." Accordingly, when we inquired at the Turkish bazaar how the Turkish coffee was made, we might have expected the unsatisfactory answers we got. Served in very small cups, the Turkish coffee was black, muddy, strong, but rude rather than suave in its strength. A cup of Turkish coffee has the sound of brass and cymbals in it, but not the melody of soft airs or babbling waters, and not the inspiration of the lofty song of birds. When one finishes his cup he finds a spoonful of fine, pasty sediment at the bottom of it. This was what made us wonder how the coffee was made. One evening we were sitting out in the open part of one of these bazaars, drinking coffee, when we noticed that famous Oriental, Far Away Moses, talking with an American gentleman. The latter I approached, after the fashion of the Midway, and asked him if he knew how the Turkish coffee was made. He told me that he did not, but added, "Far Away Moses has told me that he will show me, and when he does, I will write you and tell you what I learn." I gave the gentleman my card, explaining that the request was in the interest of science, and that was the last we heard of Turkish coffee for two or three weeks. Then I got a letter from 17 Temple place, Boston, Mass., dated Aug. 21, which read as follows:

"I promised one night to let you know how the Turkish coffee was made. I did not find out until the day before I left Chicago, and this is the first moment I have had to write you.

"The coffee is first ground very fine in a hand mill. Then a small teaspoonful of coffee is put into a cup and a teaspoonful of sugar is put in with it, and they are thoroughly stirred. Then boiling water is poured upon this. It is made very simply. W. L. CROSBY."

I did not even know Mr. Crosby's name until I received this letter, and I wish to thank him not only for the recipe for Turkish coffee, but also for his faithfulness in the small promise he made another stranger. I should be inclined to trust him in larger matters.

The Turkish coffee is Mocha, of course. It impressed us as being a harsher berry than any of those mentioned above. The amount is very small, but even one cup is exhilarating. The method of making it leaves it muddy, and not so pleasant as the clear drip coffees we had so much fancied earlier.

#### Java Coffee.

Lastly, we tried, and tried often, the heavenly fluid, soft, charming, enthralling, served by those delightfully polite and agreeable little villagers, the Javanese, in their clean and quiet little town upon the Midway. Here you have the hand of iron in the glove of velvet, a coffee powerful but seductive, dreamy but compelling, languorous but inspiring. To sit on the gallery of the big bungalow, and sip a cup of this divine essence of happy dreams, and to listen meanwhile to the slow, erratic, irregular clack! clack! clack-a, clack-clack! of the laziest little bamboo water mill on earth—I know of no situation on this earth more infinitely or innocently blessed. There is no viciousness in the Javanese coffee, not a bad thought in a barrelful of it, and the brimming measure served you by the grave but pleasant little brown man is naught but an amber draught of pure content. It bids you on not to wild deeds of visionary sort, but teaches you the beauty of a serene and tranquil hope which makes life seem another thing. If you drink one cup of coffee in the Javanese village, you think you are going to have your salary raised. If you drink two, you are certain of it. If you drink three, you don't care whether it is or not. [The Chief and I drank three.]

Java coffee is drip coffee. The cup is large and you can use milk if you like, though it spoils any good coffee. To suit the average popular taste, the coffee is weakened a shade after its first strength is developed. The berries are ground very fine, after careful roasting to a dark brown color.

#### A Glorious Dream.

Oct. 29.—To-morrow the White City dies. Its brief but glorious life has run its term, and, "like the baseless fabric of a vision," it must fade at the stern light of a harder day. It was a glorious dream, and that it must die is pitiful. Against uplifted hands so white and so pathetic, what can even Oblivion, the all-devouring, do? Even Oblivion, which has swallowed cities, races and centuries, says, "I will wait for a little time. This dream, so white, so pure, so good, shall not die by the stroke of measured time. It was too glorious a dream."

If it be a pleasure to look upon the dismantling of the great city, that pleasure may be indulged, for though the Exposition closes formally to-morrow, the gates will be held open for some time yet, and those who wish to see the remnants of the Fair may have that privilege.

#### The Spirit of the Dream.

But Oblivion relents for a time, and the spirit of this vision will remain, at least a suggestion of the perished thought. The great Art Building, the most beautiful of all the beautiful structures of the Fair, is to be retained, and it will be the home of many of the choicest treasures of the Fair. The Columbian Museum will take the place of the Columbian Exposition, and for years yet to come the great statue of Winged Victory will dominate over the defeat to which Oblivion consents. The spirit of the dream, holding still much of beauty, much of thought, much of high import, will live on, and will continue to do good to tired and grimed humanity, in manner alike, though in less measure than the majestic spectacle whose allotted hour has now arrived. Let us love the daughter for the mother's sake. For the latter, for this White City, for this inspired creation which was more than the work of man, for this lesson which came because in this time

it was needed by humanity, and needed at this place and hour, what shall we say, except this? It was not respect, nor awe, nor wonder, nor humility, nor curiosity, nor even pride which the people felt for it. It was love. Therefore we can not bury it as we would a man, with slow music to the grave, a salute as the coffin drops, and a gay and lilting march as we return to await the calls for the rest of us. We can not do that. Oblivion does not ask it. So we will love the daughter for the mother's sake.

#### Chicago.

Chicago did it. Chicago made possible the Fair, and now makes possible the perpetuation of the Fair's memory. Yesterday one Chicago man gave \$1,000,000 for this so-called museum. Another gave \$100,000. This ragged Monte Christo of a town has a heart and a soul. If you come to figure on progress and accomplishment, do not leave out of the calculation the "omnivorous West," nor that city which is the heart and center of the West.

Mr. W. G. Davies, of Whittle's Depot, Pennsylvania county, Va., stopped for a good long talk. Mr. Davies bitterly deplores the negro with the gun, who has killed off about all the small game in his section except on land closely protected. He says there are more deer not far from his part of Virginia than for a long time. South of him, in the Carolinas, he says one can have the finest sort of woodcock shooting; the Congaree River being especially good. A few turkeys are still left in Pennsylvania county, Mr. Davies says. What is left still, however, and what will always be left, though Mr. Davies doesn't mention it, is the unfailing hospitality of Ole Virginia, which ought to make a cold-blooded Northern man ashamed of himself. "Come down and see me," said Mr. Davies, "and stop a while. I'll put you behind an old-fashioned big pointer, and give you some bird shooting and may be a shot at a turkey. All I ask of you is to write up the little-minded men of our neighborhood, who don't believe in protecting and keeping the game as a few of us do." Mr. Davies wanted to have some duck shooting while in the North, and I was sorry I could not go out with him.

Mr. H. J. Welch, inventor and patentee of the Welch & Graves glass trolling bait ("one minnow a day"), and also of the changeable-center inanimate bait, which latter device is less known than the former, tarried awhile on his way from Mr. Graves's one-minnow-a-day booth in the Angling Pavilion and we discoursed pleasantly for a while.

Mr. C. A. Damon, of the Burgess Gun Company, now in charge of the gun exhibit of that firm, as I understand it, left his card and made a pleasant call while the writer was absent.

Mr. F. L. Glezen, of Providence, R. I., called several times during his stay here. Mr. Glezen was disappointed about his big-game hunt in British Columbia this fall, a trip on which he had counted much, but will try to console himself with a duck hunt out in Minnesota, whither he starts this week. Mr. Glezen has killed moose and caribou in Nova Scotia, but this year his old hunting grounds were burned over and he attempted to carry out his long-cherished idea of a trip to the Rockies, only to find, late in the season, that his hunting partner would be unable to go, and that so the trip was off. Sympathy for Mr. Glezen will be ready from those who know how that is themselves.

Rev. J. H. LaRoche, author of the little poem "O, Fair White City," lately published in FOREST AND STREAM and a very pleasant gentleman, called several times at the cosiest spot in the Fair, but unfortunately the writer missed him every time, more's the pity for the writer.

Mr. Wm. N. Byers, of Denver, Colo., stopped for a little while, and asked us all to come and see him if we were in Denver. "We have still some game and some fish in Colorado," said Mr. Byers, "in spite of all the efforts of man to the contrary."

Mr. F. C. Donald, of Chicago, and his 24-karat smile, dawned on the FOREST AND STREAM space the other day. Mr. Donald's smile is surpassed by none and equalled only by that of Col. R. S. Cox, of the firm of Haller & Cox, Seattle, Wash. It is a tie between them. "I have been trying all summer to find one of you FOREST AND STREAM men," said Mr. Donald, "but they are all always somewhere else. I don't believe any of you have been in town all summer." Mr. Donald is wrong. We have been right in the heart of the city.

Mr. Geo. L. Wilkinson, of Beloit, Wis., and an admirer of the g. p. o. e., paused and parleyed, and told us to come and see him. I wish I could accept all the invitations of this sort I have had this summer. It would be hard on national affairs, but I wouldn't have to work for ten years.

Mr. Gardiner M. Skinner, of Clayton, N. Y., the Skinner spoon man, and the author of the 42lbs. mascalonge lately mentioned, stepped in for a time and we had a pleasant talk. "I sent a copy of our local paper," said Mr. Skinner, "to the editor of FOREST AND STREAM, showing the account of my big lunge, and it happened that in the same column there was the account of the wedding of my daughter, who was married that same week. The editor man wrote back, 'Weight of mascalonge noted. Weight of son-in-law not stated. Congratulate you, anyhow.' I thought that wasn't bad."

Mr. A. R. Bechaud, of Jefferson, Wis., tarried and made converse at the white birch sign.

Mr. L. K. Liggett, of the Detroit Tigers Canoe Club, stopped for a few moments. He reports everything dull at Detroit. "Chicago is taking \$100,000 a week out of Detroit," said he, "and the Fair is killing everything else." Mr. Liggett thought the W. C. A. meet next summer would go to Mullet Lake, Mich.

Mr. A. Ames Howlett (the "Onondago" of FOREST AND STREAM), and vice-president of the Lefever Arms Co., Syracuse, N. Y., came into the FOREST AND STREAM corner accompanied by his son, a bright little fellow, who seemed to take a keen and intelligent interest in all things sportsmanlike, as shown in that precinct. Mr. Howlett père and Mr. Howlett fils both lean much to amateur photography, and the youngster is the hero of the picture "On the Watch," shown in the Game Laws in Brief. I can't imagine any pleasure greater than that of having a bright boy to bring up and educate in manly ways, and I don't know of a better way to do this last than that chosen by Mr. Howlett, who is putting the boy through a course of FOREST AND STREAM and the things thereunto pertaining. E. HOUGH.

#### Echoes from the "Forest and Stream" Corner.

FOREST AND STREAM EXHIBIT, Last Days of the Fair, 1893.—Mr. B. F. West, of Wichita, Kan., a State whose citizens are justly famous for their broad views—particularly those who reside on the prairies—dropped into FOREST AND STREAM's corner with Mr. Comstock, of Protean tent fame. Mr. J. E. Wings, of Richmond, Va., was already studying the pleasing effects of big-game heads, fish, feather and pictures hanging on the wall together. Mr. Essig, who is on the staff of Messrs. A. G. Spalding & Co., sauntered in after a while and joined the group. The conversation ran mostly on fish and fishing, with descriptions of the killing of mountain lions, Indians and bears sandwiched in betimes in the narratives just to give a quiet bit of color to the fish stories. I remember that Mr. Essig calmly described how, once on a time when trout fishing, he held the leader motionless about three feet clear of the surface of the water and the trout would spring up and promptly take each one of the three flies. That was rising to the fly and the occasion. Mr. West then gravely explained that there were times when the trout, when not moulting, would bite eagerly at anything. He himself had taken a spear of timothy grass, reached out and placed it on the surface of the water, where it was instantly accepted by a trout. The trout were landed just as fast as the timothy grass could be whipped back and forth from land to water, the fisherman resting on a point of vantage on the bank of the stream during the thrilling ordeal.

A foreign gentleman and his wife stepped into FOREST AND STREAM corner and mentioned that both he and his wife were both constant readers and admirers of the best sportsmen's paper, then he inserted on the register, "John Soderburg and wife, Stockholm, Sweden."

Mr. H. L. Leonard, of Central Valley, N. Y., a name of mighty portent when stamped on a split bamboo, twice visited FOREST AND STREAM at the Fair. Inclusive in his purpose was a desire to see Mr. Hough, whose writings he admires. Mr. Leonard was not in the best of health and remained but a short time.

Mr. Eddie Bingham, of Montgomery Ward & Co.'s mammoth house, walked in one day with his brother and brother-in-law, Mr. Ira Bingham and Mr. E. L. Tull, the latter from Boston, Mass. Whether the duck flight was or was not in session was duly considered. Mr. Bingham, besides breaking clay pigeons with the same ease, certainty and quickness with which a hen picks up corn, can make an epidemic among birds with his shotgun, be the birds of the water or air.

Mr. Alex. McDonald, of St. Johns, P. Q., Canada, was accompanied by Mr. Skinner of spoon hook fame, on a brief visit to FOREST AND STREAM's exhibit.

Mr. J. V. Kridt, Washington, D. C., told of tarpon being caught near Cumberland Island, near the Georgia coast, by one Captain Butts. He said that, so far as he knew, it was generally supposed the tarpon never wended his fight so far nor'ard.

Mr. E. Percy Maynard, of Chicago, placed his name on the register after a most pleasant conversation on dog and gun, pistol, rifle and boating, in the use of all of which he is interested and proficient.

Mr. Frank F. Frisbie ("F. F. F." and "Prairie Dog") honored the corner with a brief call.

Well known to the dog fancier is Mr. Chas. K. Farmer, of Indianapolis, Ind., who tarried but a few moments, since he had much to see in the short time allotted to the Fair. He contemplated returning to Michigan to reside again.

Danville, Ky., is the home of many ardent sportsmen. said Mr. Thomas P. Flaig, of that city. Bass fishing and Kentucky reels—Mr. Flaig is an expert reel maker himself—afforded an interesting theme of conversation. His father has files of FOREST AND STREAM from the first number.

Of "Nessmuk" columns of reminiscences could be written from no other data than that furnished by the many people who knew him, and who visited FOREST AND STREAM's corner. The dead woodsman must have had a strong individuality and an endearing character, for all speak of him in terms of praise and affection. A quiet gentleman and his wife walked into the exhibit one day and wrote on the register, "Buck" Delano, Chicago. He then opened a volume of "Woodcraft," and pointed out where he figured in it as one of the characters of the book. "I was his companion in his outings for twelve years," said Mr. Delano, "and a better companion or woodsman never lived than he. 'Nessmuk' could get up a meal out of anything. No matter how poor the prospect for a meal, with 'Nessmuk' in camp there was a certainty of something to eat. An old shoe or bark would serve if there was nothing better."

Mr. Tim Donoghue, of La Salle, Ill., dropped me a line in his cheery way and informed me that he would be in town before the Fair closed. I had about given him up, when on a cold, dreary day, the last Saturday of the Fair, he dawned on the cosy corner with the whole board of aldermen of LaSalle, or rather, as he himself is a member, the whole board visited FOREST AND STREAM at the World's Fair. Neither the cold nor fatigue had lessened his natural affability or warm-hearted vivacity. If Tim's friends were all in one line no day would be long enough for him to run down the line and shake hands as he ran, finishing it all on the same day.

Mr. J. M. Freeman, of Bicknell, Ind., chatted over field trial matters, while Mrs. Freeman viewed the fish. He said that the field trials to be held at Bicknell would probably be the best held there in many years. B. WATERS.

#### "Sairy Gamp."

WESTBORO, Wis., Oct. 23.—I have read what Mr. Waters, World's Fair correspondent of FOREST AND STREAM, says in regard to the famous 10-pound canoe in which "Nessmuk" made a tour of the lakes and streams of the Adirondack region about ten years since. If I remember rightly it was not from mere sentiment that this name was given, but because Sairy Gamp "never took water." I think a reference to "Nessmuk's" account of the trip referred to in the files of the FOREST AND STREAM will bear me out in this. J. W. G.

There has never been any book published on big game hunting which contained among its illustrations so large a proportion of photographs of live wild game as the Book of the Boone and Crockett Club. The volume is a marvel of typographical beauty.

## The Kennel.

### FIXTURES.

#### DOG SHOWS.

Nov. 28 to Dec. 1.—New Jersey K. L., at Newark. Dr. W. F. Seidler, Sec.  
Dec. 12 to 15.—R. I. Poultry and Pet Stock Ass'n, at Providence.  
Dec. 20 to 23.—Northern Ohio Pet Stock Association, at Akron, O. H. F. Peck, Sec'y.

#### FIELD TRIALS.

Nov. 7.—New England Beagle Club trials. W. S. Clark, Linden, Mass., Secretary.  
Nov. 7.—International Field Trial Club's Fourth Trials, Chatham, Ont. W. B. Wells, Sec'y, Chatham.  
Nov. 20.—Eastern Field Trial Club's Trials, at Newton, N. C. Members' Stake Nov. 16. W. A. Coster, Sec'y.  
Nov. 20.—Gordon Setter Field Trials Club, at Freetown, Mass. C. R. Taylor, Sec'y, Providence, R. I.  
Nov. 27.—Irish Setter Club Field Trials, at Thomasville, N. C. All-Age entries close Nov. 1. G. G. Davis, Sec'y.

1894.

Jan. 1.—Southern California Field Trials, at Ontario, Cal. H. C. Hinman, Los Angeles, Cal., Sec'y.  
Jan. 29.—Southern Field Trial Club's Trials, New Albany, Miss. T. M. Brumby, Sec'y, Marietta, Ga.  
Feb. 19.—United States Field Trials Club's Spring Trials, Grand Junction, Tenn. Second payment in Derby due Nov. 1. P. T. Madison, Sec'y, Indianapolis, Ind.

### POINTS AND FLUSHES.

[By a Staff Correspondent.]

In the few moments Mr. J. M. Freeman, of Bicknell, Ind., tarried in FOREST AND STREAM's corner at the World's Fair he informed me that already the handlers were gathered thickly about Bicknell, sharpening their dogs' noses and toughening their legs for the forthcoming trials of the United States Field Trials Club. Among those he mentioned were Capt. C. E. McMurdo and Messrs. Gillman, Barker, Bond, Tucker, Fisher, with Messrs. Johnson and Mayfield close by, and Mr. Arent soon to be in their midst. Birds he reported as being plentiful. There is every indication of a good trial, he said. The season of points and flushes will soon begin. The days will be musical with the rich voice of the handler as he excitedly stretches his arm preternaturally high in air and exclaims "Point, judges!" And the judge calmly says, "I see it." Then the handler walks forward with a bold air of apprehension to flush. If he flushes a bird to the point he says, "Betcher life I knew ther" was a bird there." If he finds nothing, he looks meek and says nothing. Still it looks much easier to handle a dog in a field trial than it really is. Few realize the mental and physical strain involved. And to accomplish the best results, a fairly good knowledge of the principles and rules of competition must have been acquired. Of course the mere fact that a man is a professional presupposes a knowledge of handling, but it is not necessarily so. A trainer may handle well in private shooting and in a field trial under the changed conditions incident to it, may handle very badly. In the near future I may give a few hints on handling dogs in a field trial.

B. WATERS.

#### Irish Terriers.

ANYTHING that Mr. Geo. R. Krehl may have to say on the Irish terrier is bound to be interesting, as we believe he is one of the best posted men on the peculiarities and origin of the "dare-devil" as we know him nowadays. An important point is touched upon when he says in *Stock-Keeper*:

"Dark face shadings in Irish terriers frequently form the subject of serious discussion among the breeders of this variety, and by those whose knowledge of the breed is superficial are suspiciously regarded as evidence of a taint in the pedigree. These wisecracks have as little foundation for their surmises as a certain all-round judge possesses for calling Irish terriers a made-up and fabricated breed, and who in the same breath would probably be capable of considering bull-terriers to have a better claim to purity of strain. The wheaten-red is, nowadays, the orthodox Irish terrier color, but people who know the breed in the rough are cognizant of the fact that the national terrier of Ireland is to be met with in different parts of the country of various shades of color, the gray blues used to be highly esteemed, brindles are to be met with, and even black and tans, but they were always rough and Irish."

In showing what "fancy" has done for the breed he "whispers": "Any skillful dog breeder could take a few specimens of the old rough parent stock, the big 30lb. terriers with shaggy coats and often linty heads, and by careful selection breed from them a modern bench Irish terrier. The different colors are undoubtedly in the blood of our modern specimens, and the dark colors will occasionally reassert themselves according to nature's laws of atavism. All Irish terrier breeders have remarked the gray patch on so many of their dogs' sterns, and the black eyelids and muzzle may be attributed to the same cause. But to pretend that they should be regarded as disqualifying defects is absurd; they are undesirable, and in competition with a dog equal in all other points, but even-colored all over they would weigh against their possessor. The best dogs before the public throw back to a dark union, for Killiney Boy, the very pillar of the breed, was out of a rough black and tan Irish bitch. A whole-colored yellow red dog is now orthodox, but even his ears should be of a darker shade than the rest of his coat, and they should be soft and velvety, without any linty, straggling hairs. The softer, light colored topknot, which even the best dogs will occasionally show symptoms of, is a throw-back to their early rough origin."

According to this writer a prevalent color among our dogs bred here is not desirable, but the "unfortunates" serve a purpose in the kennel though advised to "keep it dark."

"The most unpardonable color in the Irish terrier is the deep mahogany red which is so often associated with smooth-coats, greyhound heads, and a fatuous, untermier-like expression. These are to be tabooed by the judge, but breeders have found that, matched with rough-coated sires, they invariably throw hard coats. For this purpose they may serve, but they should be guarded in the privacy of the brood kennel. The theory respecting these undesirable mahogany smooths is that they are the teltails of an early Manchester terrier experiment, and we have little doubt that when an old-fashioned rough and topknotted bitch was bred to Manchester, the produce were likely to be clean-skulled and their coats harsher and less abundant."

#### Eastern Trials All-Age.

Editor Forest and Stream:

Please find the following entries for the All-Age Stake of E. F. T. C., which were delayed by accident and arrived after list for publication was sent you:

HOPE'S MINT—Orange and white English setter dog, 2½ years (Gath's Hope—Dashing Lady).

DICK FOX—Black, white and tan English setter dog, 2½ years (Chance—Countess Rush).

BLUE RIDGE MARK—Black, white and tan English setter dog, 2½ years (Gath's Mark—Ollie T.).

These three entries are all made by the Blue Ridge Kennels, Va. WASHINGTON A. COSTER, Sec'y-Treas. E. F. T. C.

## DOG CHAT.

### Canadian Fox-Terrier Club.

In publishing pictures of the principal officers of the Canadian Fox-Terrier Club, we may also give some particulars regarding the club. It was established in September, 1892, and although at present only a little over a year old, has flourished beyond the expectations of its most ardent supporters. This is mainly due to the energy displayed by its president, Mr. A. D. Stewart—whom, it might be mentioned, first entertained the idea of such an organization being formed—assisted by the vice-president, Mr. Richard Gibson, of Delaware, and the secretary-treasurer, Mr. H. P. Thompson, of Toronto.

The club was formed with the idea of promoting the breeding of pure breed fox-terriers, and to define and publish the true type of that breed in Canada. Well has it endeavored to carry out those objects, as might have been noticed at the Toronto Industrial dog show last month, where, although not numerically strong, the quality was far ahead of former years.

From the few terriers entered by the club at that show, one might come to the conclusion that the terriers belonging to members of the club were correspondingly few, but such is not the case. A great many of the members are old breeders who own good-sized kennels, but do not often exhibit, and a great many are novices and "don't know" when they have a good thing.

To give an idea of the number of terriers owned by some of the members, we might mention the president of the club, Mr. Stewart, who has in his kennel over a dozen wires and smooths. The vice-president, Mr. Gibson, of Delaware, who is well known all over the States and Canada for his particular strain of terriers, can generally place on the bench a string equal in both numbers and quality to anything in Canada and the majority of kennels in the United States. The secretary, Mr. H. P. Thompson, can count between thirty and forty terriers in his kennel, chiefly young ones. Mr. A. A. Macdonald, Toronto, has also a goodly number, among which are to be found the recent importation Dark Eyes and the well-known Blemton Trump, now a champion. Messrs. Smyth & Bell, Toronto, have a large kennel, now headed by the well-known Dusky Trap. Others we can mention are Messrs. F. S. Wetherall, of Compton, Quebec; J. J. Biggs and S. Munro, of London, Ont., and many others. The members are eager to take advantage of the services of "the best in the land," and are also to be found importing occasionally; so that a steady improvement may be looked for not only among the dogs the property of the members, but also among the whole fox-terrier interest in Canada. The secretary of the club is Mr. H. P. Thompson, 31 Mary street, Toronto, Can.

The cups which were competed for at the Toronto show were all donated by different firms and people throughout Canada, and are as handsome as anything of a similar nature we have yet seen. Each cup has to be won three times before becoming the property of any one member.

#### Judging at the World's Fair.

We rather think that some of the judges selected for the proposed World's Fair dog show should congratulate themselves upon the fact that the show did not take place. It is not at all likely that the judging would have been carried out in the ordinary and somewhat slipshod methods now in vogue. If we may take the experience of the poultry judges, who have been hard at work for the last ten days or more, the chosen ones are well out of it. Poultry men are divided on the merits of comparison judging and the more laborious work of judging by the score card, but the former is now the most popular mode at the largest shows, and its advocates are such well known men as Messrs. Drevenstedt, Diehl and Zimmer, all more or less known to the dog world. The comparison advocates got the ear of Mr. Buchanan and it was decided that judging by comparison should be the order. The comparison men thought they had, in classic language, a picnic, and made their plans to find out "what building the lagoon was in" and other Midway pleasures. But they found Mr. Buchanan and his committee on awards to be birds of another feather altogether. Mr. Buchanan thought that if comparison judging was best, comparison judging boiled down fine was better. Judging began at noon on Wednesday, Oct. 18, and by the evening the 19 judges had passed upon 107 birds, and it was nearly noon of the next day before some had their reports ready for the committee. Each judge was given a class and told to go over each bird thoroughly. He must then make his award on the form then in hand, must then go to the live stock department and copy this on another form and then into a book he would find there. He must then write a detailed description of each bird to which a prize had been awarded, telling wherein it was better than others and why others had fallen before it. Substitute dog for bird in the above and one can imagine the tribulations and growls that would have arisen in the dog show judiciary. The judging may be completed by this time, but as there were 5,000 birds in all, the judges may be finished up first. Mr. F. B. Zimmer, owner of the Debonair kennels of beagles, at Gloversville, N. Y., was one of the unlucky judges.

#### English Kennel Club Show.

The English Kennel Club brought the largest dog show ever held to a successful conclusion Oct. 26, at Crystal Palace, London. We have already published the list of entries, which numbered over 2,000. We find a full account of the show in the *Stock-Keeper*, which was the first English paper received this week, and comes a couple of days before the usual time. This journal will find the explanation of their not receiving the FOREST AND STREAM in the editorial notes in last week's issue.

To return to the big show, we find that a number of novelties were introduced, chief of which was the new benching provided by Spratts Patent. To the ordinary benching they have added a sloping wire covering which will prevent the dogs fighting, and also serves as a convenient receptacle for the prize cards, which are now out of harm's way, and cannot be torn down by the dogs, as is so often the case over here. It is to be hoped that our own Spratts Co. will adopt the same improvement. There was no startling debut unless we except the reappearance of Mr. Royle, of Manchester, in the ring, accompanied by a St. Bernard of more than usual merit for one only 19 months old. Lord Douglass is said to be a "phenomenon" and should still improve; good color, head a little long, but very deep; not enough stop yet, but excellent legs and feet, and active as a terrier, with a body of great size and substance. The critical say he might be a little taller. He won three firsts and the championship, winning in the "winners' class." He weighs nearly 200lb.

Among the interesting competitions was that between the bulldogs Dockleaf and Monkey Brand, the former winning. The show of fox-terriers, though large in number, was not better than ordinary. Champion Prompter won the challenge cup for his owner, Mr. Rotherham Cecil. It is remarked in the above journal that fox-terriers are gaining in size at every show, and that now an 18½lb. dog is considered by many as the proper weight. In this the breeders seem to be losing sight of the first principles regarding their practical utility.

The rough terriers, such as Dundees and Scotch, were well represented and in large numbers, Ainsty Grip and Champion Kildee played respectively prominent parts. The fair

contingent, with their toy dogs, were out in full array, even to holding afternoon teas in the alleyways, which, while enjoyable enough, no doubt, to those who are in it, must prove a nuisance to those who are not, and who wish to see the dogs. An extended notice of the different breeds must be postponed to another week.

#### Gordon Setter Field Trials.

The Gordon Setter field trials are to be run at Freetown, Mass., and Mr. J. W. Lawson, of Providence, will judge with Mr. Sharpe. The club has decided now to run the trials on Nov. 20, but the entries will close on Nov. 13 instead of 10. The stakes are open to all Gordon setters and prizes or money are solicited from all admirers of the Gordon. All money received in entrance fees will be given in prizes. A silver goblet has been donated for the All-Age Stake and a similar prize is expected for the Derby. While we are willing to do all that lies in our power to help these trials along, as such ventures are commendable, we believe that more interest would be taken in the venture by outsiders if those who are getting the affair up would publish the names of the officers of the club and give other information that would induce Gordon owners from New York, for instance, to enter their dogs. These men will scarcely feel like taking a very active interest in these trials without knowing who composes the Gordon Setter Field Trials Club or who is responsible for its proper management. The forfeit, we understand from another source, is \$5 and \$5 to fill.

#### \$100 for Eclipse.

At the Crystal Palace show, Mr. Krehl, the owner of the aged collie champion Eclipse, was offered by Mr. Megson, the Manchester collie breeder, \$500 for the dog. It was refused, for it is his owner's firm intention that this celebrated "pillar of the stud" shall eat his last crust at his board. This is true fancier spirit.

#### Another Mastiff Coming.

Mr. W. Norman Higgs purchased at the Crystal Palace show the mastiff bitches Brampton Beauty and Stella III. The former, according to *Stock-Keeper* (Eng.), was purchased for exportation to this country. Who the purchaser is we are not told.

The noted wire-haired fox-terrier champion Quantock Nettle has been repurchased by her former owner, Mr. H. Hopkins, so that she may end her days while in his possession. This bitch is said to have won in her day more prizes than any dog now living.

Mr. W. Patterson has sold to Colonel Knox; C.R.R.A., Military Secretary to the Governor of Bermuda, the Scottish terrier Moorfoot Bodach II., winner of second, Dalkeith, second, Glamis. The dog comes out in the Campana.

Some time since we spoke of a Mrs. Lawrence, of Wales, having paid large prices for some noted fox-terriers. Now she has gone one better and given \$1,500 for Mr. F. Redmond's Despoiler, who was formerly known as Belmont Terror, and is by Belmont Ranger out of Belmont Cheery. His pups are selling well, and the purchase, even at this long figure, meets with approbation.

The fox-terrier Result, probably the best known living fox-terrier, is said to have become stone blind through trouble with his teeth, eight of which were extracted at one time. In spite of his affliction the old champion enjoys good health.

The Blue Ridge Kennels have, after all, entered their dogs in the All-Age Stake at the Eastern field trials. Our readers will remember that we commented upon their absence at the time the other entries were published.

The Irish terrier bitch Mr. Geo. Jamieson recently sent to Canada is named Anna and is a litter sister to Breda Gripper, and the dog she was supposed to be in whelp to is Poor Dick, who is not, however, a brother to Poor Pat. The bitch missed. Mr. Jamieson has purchased another terrier, Shargar, for his Canadian friend. This dog has won seventeen first prizes and ten specials and *Stock-Keeper* remarks that his departure is a distinct loss to the home fancy, as the dog was getting some grand-headed stock.

Mr. Bousfield advises us rather tardily that the great Dane bitch Nuremberger, now and then in their charge, was not at the Lexington show, where she was credited with second prize. We asked some time since who or what the bitch was that was masquerading under Nuremberger's name at that show and in her stall.

The Eastern Field Trials will be held at Newton, N. C., and not High Point, N. C., as we have seen it stated.

Messrs. Wright & Tallman have decided to dissolve connection in the Netherwood Kennels. Mr. Wright has the dogs and Mr. Tallman the experience.

The Grove Kennels are offering in our business columns a number of fox-terriers for sale. Among them are Ruby Trigger, who when owned by Geo. Raper in England won thirteen first prizes and was shipped to this country by him for competition at New York show, where he was bought at a large figure by C. D. Bernheimer, since which he has won reserve, New York; second, Philadelphia; second, Baltimore; first, Wissahickon (last time shown, June, 1893). Another is Grove Lily, first, Pawtucket, 1892, beating the imported Blackrock Belle, several brood bitches and a lot of splendidly bred bitch pups.

Mr. Howes tells us he has bred his noted bull-terrier Grove Duchess to champion Streatham Monarch, and not without cause he is another of those who are "living in hopes."

Through a confusion in names we have done a sportsman an unintentional slight. In referring to the coming Gordon setter trials we spoke of Mr. Chas. R. Taylor as the writer who had done so much for sport in New England through the clever articles in the *Providence Journal*. It was Mr. S. H. Roberts whom we had in mind, and field trial men will remember him as representing his paper at the Assonet trials last year.

It is reported that there is some talk among the New England Field Trial Club members of running a sweepstake on the Assonet grounds. We should think that any such move would be preferable to allowing the prestige they have already won to suffer at all by inaction. New England sportsmen, for their own good and that of their dogs, must not let the commendable work already done go for naught. Such a sweepstake event would serve to bring the members together on the field even if there is not so much money in it.

Colonel Dean, the owner of the black and tan terrier bitch that was objected to at the Portsmouth show for alleged faking, admitted before the Kennel Club that the tail had been singed. The club took no notice of this admission, which is supposed to be contrary to dog show ethics, but listened to the affidavit of the Manchester B. and T. Club, which stated that they did not think the terrier had been unduly trimmed. *Stock-Keeper* comes out flat-footed on the subject and inquires why the judge who disqualified

the bitch was not called by the K. C. to give evidence, and deduces from this that there is something rotten in the way the Kennel Club conducts these inquiries, and it would seem so. While on the subject of black and tans, we might venture to ask who owns Rhodes Oban and Rhodes Una?

#### Dog Language.

Little Johnny—Dogs don't need to talk, 'cause anyone can understand their bark.

Visitor—Can you?  
Little Johnny—Easy as rollin' off a log. When my dog is at the door and barks, that means he wants to get in; if he's inside the door and barks, that means he wants to get out.

Visitor—Humph! Suppose he is half inside and half outside and barks, what does that mean?

Little Johnny—That means, that there's a bigger dog than him in our yard.—*Good News.*

#### Irish and Gordon Setter Field Trials.

##### Editor Forest and Stream:

Your comments upon the "absurdly few" entries in the Derby of the Irish Setter field trials, to come off at Thomasville, N. C., next month, are not just.

This has been a very hard year in all business and consequently sport has suffered. Vide the small entries for the Eastern field trials and one or two others, while the Central, New England and Ohio Field Trial clubs have dropped out entirely. If these clubs, with the large numbers of pointers and English setters to depend upon, are compelled to "declare off" it is greatly to the credit of the Irish setter, which does not number one-fifth as many, that it can continue its field trials at all.

And so with the Gordon setter, which don't number one-half the Irish. Yet Mr. Taylor has had the courage to announce Gordon setter field trials at Freetown, Mass., for Nov. 20. It will not be a test at all of the Gordon setter's ability. The time is too short and it will be impossible to find trainers at such short notice. No prizes are announced and I don't see how Gordon setter men generally can get ready. Some who run their own dogs and live near the place of trial can do so, but if the number of entries is few it will not follow that, with fair notice given early, the trials of next year may not be very creditable. I almost regret that Mr. Taylor has made the attempt at so late a date, but perhaps it will be a prelude to proper trials in coming years. There is many a good Gordon used in private shooting, and until frequent field trials have brought him up to the standard which fifteen or twenty years of public competition have attained in the pointer and English setter, it will not be fair to the Gordon, the most beautiful of all setters, to disparage him as a field trial dog.

A MEMBER OF GORDON AND IRISH SETTER CLUBS.

NEW YORK CITY, Oct. 30.

#### Irish Setter Trials.

PHILADELPHIA, Pa.—*Editor Forest and Stream:* The following are the entries in the All-Aged Stake of the coming Irish Setter Trials:

PATRICIUS—J. J. Mannion's dog (Duke Elcho—Red Rose), May 23, 1892.

CLAREMONT PATSY—Perry & Hamilton's dog (Frisco—Nellie IX.), August, 1885.

TEDDY O'BURKE—Perry & Hamilton's dog (Claremont Patsy—Nora of Claremont), April, 1891.

HAWKEYE QUEEN—Perry & Hamilton's bitch (Claremont Patsy—Nora of Claremont), April, 1891.

CURRER BELL IV.—G. G. Davis's bitch (Claremont Patsy—Nora of Claremont), July, 1890.

ROMAXNE—Dr. Wm. Jarvis's dog (Duke Elcho—Romaine), October, 1891.

HATTIE—C. B. Rutan's bitch (Erin's Lad—Lady Alice), May, 1892.

BELLE OF KILDARE—W. L. Washington's bitch (Kildare—Red Rose), November, 1889.

LADY ALICE—J. B. Blossom's bitch (Redstone—Lady No-reen), September, 1890.

NUGGET II.—J. B. Blossom's bitch (Finglas—Betsy Crafts), March, 1892.

ROCK—C. T. Thompson's dog (Blue Rock—Elcho's Maid), January, 1892.

Mr. Abner T. Hetfield, of North Judson, Ind., the owner of the well-known Irish setter Tearaway, offers a free service as a special prize to the owner of the winner of the Derby.  
G. G. DAVIS, Secretary.

#### Dogs as Draught Animals.

MR. N. SMITH, U. S. Consul to Liege, Belgium, who recently sent a report to the Secretary of State concerning the use of the dog as a draught animal by the Belgian people, and which Mr. Gresham published in a Government document, says that this utilization of canine power is comparatively recent, though it has become as much an institution in Liege as the mule in Louisville or Memphis. He thinks thirty years ago a dog in harness would have excited remark in Liege. We should think that they have been used a good deal longer than this in Brussels and parts of Germany. We remember seeing these dogs in harness when at school near Coblenz, on the Rhine, in 1871. They were used principally for conveying garden truck from the villages and farms along the Rhine to Coblenz.

One of these turnouts used to interest us greatly. A very tall fine looking German in a blue blouse made periodical journeys through the Rhine villages with a comparatively small black, rough-coated dog, weighing about 60 lbs., which decked out in neat harness drew a small cart or rather pair of wheels between which swung a brightly polished oaken barrel containing cognac. This the owner peddled along his route, and the whole turnout was surrounded by considerable romance in our minds, for rumor had it that the brandy was smuggled. But that is neither here nor there, the fact remains that the custom of using dogs as draught animals seemed to have been in vogue for years. The dogs we saw were generally coarse dogs of great Dane, or low-legged mastiff type, and therefore generally smooth-coated. In passing through Brussels on our way to Coblenz we noted numbers of these dogs in harness. Mr. Smith estimates the canine power of "unregistered" dogs in this country at 7,000,000, and the strength of each dog at 500 lbs., so that there is 3,500,000,000 lbs. of dog power idle in this nation alone, "which is running to waste at the very heels of the people."

#### How is This?

##### Editor Forest and Stream:

My attention has been called to Mr. Callihan's letter in your issue of Oct. 23, and if he is a resident of Danbury and his dog took the second prize then he is clearly entitled to the special which was given for best of the breed (Newfoundlands) owned in Danbury. This must be so whether Mr. Read's dog is eligible or not. As to Ben Lewis's collection of prize money, it would appear that unless he held the identification or an order from the owner the A. K. C. rules were violated.  
REPORTER.

NEW YORK, Nov. 2.

#### Business.

HUMBOLDT, Tenn.—*Editor Forest and Stream:* I shall send you an ad. next week. I wish to say this, I had excellent results from my set one in your paper.  
R. B. MORGAN.

#### KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

##### BRED.

##### Prepared Blanks sent free on application.

Belle of Surrey—Chatham Prince. J. G. Lipsett's (Roxbury, Mass.) bull-terrier bitch Belle of Surrey (Comet II.—Rose) to Chatham Kennels' Chatham Prince (Hinks—The Shrew), Oct. 17.

Rose—Chatham Prince. J. G. Lipsett's (Roxbury, Mass.) bull-terrier bitch Rose (Patch—Countess) to Chatham Kennels' Chatham Prince (Hinks—The Shrew), Oct. 23.

Grouse II.—Blemton Stickler. C. S. Hanks's fox-terrier bitch Grouse II. to Blemton Kennels' Blemton Stickler, Oct. 7.

Brokenhurst Queenie—Raby Pallisy. C. S. Hanks's fox-terrier bitch Brokenhurst Queenie to his Raby Pallisy, Sept. 27.

Raskeda—Leekhol. C. S. Hanks's Russian wolfhound bitch Raskeda (Krochat—Kharka) to his Leekhol (Riesvee—Labeled), Sept. 25.

Svodka—Leekhol. C. S. Hanks's Russian wolfhound bitch Svodka to his Leekhol, Oct. 2 and 8.

Obroaga—Sorvanets. C. S. Hanks's Russian wolfhound bitch Obroaga to his Sorvanets, Oct. 5.

Damson—Raby Pallisy. C. S. Hanks's fox-terrier bitch Damson to his Raby Pallisy (Raby Patter—Maise), Sept. 25.

Seacroft Myrtle—Warren Duke. C. S. Hanks's fox-terrier bitch Seacroft Myrtle (Raby Pallisy—Damson) to L. W. Rutherford's Warren Duke (First Flight—Warren Dawn), Sept. 20.

Seacroft Agatha—Raby Pallisy. C. S. Hanks's fox-terrier bitch Seacroft Agatha (D'Orsey—Damson) to his Raby Pallisy (Raby Patter—Maise), Oct. 1.

Seacroft Fuss—Starden's King. C. S. Hanks's fox-terrier bitch Seacroft Fuss (Venio—Grouse II.) to J. E. Thayer's Starden's King), Oct. 1.

Trizie H.—Woodale Driver. F. H. Hoyt's (Sharon, Pa.) fox-terrier bitch Trizie H. to W. F. Porter's Woodale Driver, June 19.

Belle of Sharon—Woodale Driver. W. F. Porter's (Sharon, Pa.) fox-terrier bitch Belle of Sharon to his Woodale Driver, Oct. 3.

##### WHEELPS.

##### Prepared Blanks sent free on application.

Chatham Queen. Chatham Kennels's (Boston, Mass.) bull-terrier bitch Chatham Queen (champion Jubilee—My Queen), Oct. 5, four (two dogs), by Toot & Symond's Prince Gully (True Blue—Polly).

Maud Noble. N. Wallace's (Farmington, Conn.) English setter bitch Maud Noble (Rowdy Rod—Pearl Noble), Oct. 11, nine (four dogs), by Blue Ridge Kennels' champion Antonia (Rodriggo—Bo Peep).

##### SALES.

##### Prepared Blanks sent free on application.

Jasper. Fox-terrier dog, whelped Jan. 20, 1893, by Blemton Rasper out of Grouse II., by C. S. Hanks, Manchester, Mass., to Mr. Mason, Newton Centre, Mass.

Seacroft Asert. Fox-terrier bitch, whelped August, 1891, by D'Orsey out of Damson, by C. S. Hanks, Manchester, Mass., to E. A. Cook, Germantown, Pa.

Seacroft Boaster. Fox-terrier bitch, whelped August, 1891, by Dominate out of Brokenhurst Queenie, by C. S. Hanks, Manchester, Mass., to W. H. Hendrich, Columbia, Pa.

Sorvanets—Flodeyka whelp. Russian wolfhound dog, whelped June 19, 1893, by C. S. Hanks, Manchester, Mass., to R. DeW. Sampson, Pittsfield, Mass.

Leekhol—Kinnal whelp. Russian wolfhound dog, whelped Dec. 31, 1892, by C. S. Hanks, Manchester, Mass., to C. H. Elsworth, Me.

Groubian—Flodeyka whelp. Russian wolfhound dog, whelped Nov. 16, 1893, by C. S. Hanks, Manchester, Mass., to T. D. Dolen, Philadelphia, Pa.

Leekhol—Vinga whelps. Two Russian wolfhound dogs, whelped Aug. 3, 1893, by C. S. Hanks, Manchester, Mass., to T. H. Kellogg, Willard, Seneca Lake, N. Y.

Leekhol—Obroaga whelps. Russian wolfhounds, whelped Dec. 29, 1893, by C. S. Hanks, Manchester, Mass., one to H. Winderle, Edge Hill Village, Pa., and two to W. Price, Chestnut Hill, Pa.

Leekhol—Raskeda whelps. Russian wolfhounds, whelped Oct. 16, 1892, by C. S. Hanks, Manchester, Mass., a white, lemon spots, dog to N. M. Wanner, York, Pa.; a white, red spots, dog to Eugene Hall, Burlington, Wis.; a dog to Dr. Stretcher, Chicago, Ill., and a bitch each to T. D. Dolen, Philadelphia, Pa., and A. E. Plais, Columbia, O.

Emblem. Pointer bitch, by Fred F. Harris, Woodfords, Me., to Ed. E. Kelley, same place.

Ellen Terry. St. Bernard bitch, whelped May 10, 1887, by Jacob Ruppert, Jr., New York city, to Wooding & Hoyt, The Heights, Berwick, Pa.

#### ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.

R. F. M., Omaha, Neb.—The Judge was Mr. C. H. Mason, and cocker, we believe, Mr. Dole's Othello.

B., Norwich, Ct.—Cherry Lad is by Cherry Boy (2,633), out of Flossy T., by Col. Stubbs (4,678) out of Pix, by Grip out of Flirt.

J. E. S.—Write to Mr. H. W. Huntington, 148 So. Eighth street, Brooklyn, N. Y., for a copy of the National Greyhound Club Rules.

N. C. S., Newtown, Conn.—I have just lost two valuable pointer puppies, five months old, and as I have noticed my English setter bitch by champion Paul Bo has begun to show symptoms of the same trouble, I hasten to describe it that you can tell me what to do for her. It comes on by a twitching in the hind legs, and I should think was a nervous trouble. It gradually gets worse, and their systems run down and twitching increases until they suffer terribly from it, and sometimes go into spasms. Ans. Probably the result of distemper. Write again describing all symptoms more fully. In the meantime give the following mixture:

Pot. brom.....	3 ii.
Chloral hydros.....	3 i.
Tr. bellad.....	3 iss.
Aq. ad.....	3 vi.

Mix. Give one teaspoonful three times a day.

## Hunting and Coursing.

#### FIXTURES.

Nov. 7.—New England Beagle Club's Trials. W. S. Clark, Linden, Mass., Sec'y.

#### Field Trial Committee Meeting of N. B. C.

A MEETING of the field trial committee was called at 8:20 P. M. Nov. 2. Present, H. L. Kreuder, Geo. Laick, F. W. Chapman, B. S. Turpin, H. W. Lacy.

The judges were asked to report on the classes they had judged so far, and then the objection by Mr. H. V. Jamieson to Mr. Dorsey's Pade was read, he protesting it on the ground that it was not a beagle according to the entry form of the N. B. C. Mr. Dorsey's evidence was taken informally. We would like to have given a picture of this dog, but Mr. Dorsey refused to have it taken, and would not state his reasons therefor, though asked by the club's president. On the entry form Mr. Dorsey states Pade's color to be yellow, brown and white, age not given; sire Ned, dam Flora. Ned is by Stonewall Jackson, by imported Chimer. Flora's pedigree is enveloped in shadow. In Mr. Dorsey's examination before the field trial committee he stated that he purchased Pade from a Mr. Jones, of Eliot City, Md. Flora is understood to have been stolen and to give her pedigree might be prejudicial to Pade's former owner. Ned's dam is unknown, but Stonewall Jackson is owned by a man near Eliot City. Mr. Jones bought Pade as a pup and he was hunted by his son. Mr. Dorsey paid \$15 for him. Acknowledged he would not enter Pade at a bench show and stated that he did not think Pade a typical English beagle for show purposes. Said Pade did not look like a thoroughbred beagle. Would not breed to him for show form, but would for field qualities. Had no idea where he gets his peculiar form. The committee then decided to pay the premiums won by Mr. Dorsey with the exception of Pade's, which was held over until the next meeting of the field trial committee, which will probably be held during Newark show or sooner. Meeting adjourned.

#### NATIONAL BEAGLE CLUB TRIALS.

ONCE more have the members of the National Beagle Club, one of the most energetic and progressive specialty clubs in the country, demonstrated that the merits of two beagles can be determined by a field trial just as well as those of a pointer or setter. It is hard work, but then the men who indulge in this sort of sport do not consider that. They may yawn and wonder what in the world they are there for when the minutes become hours and bunny is *non est*, but with the first whimper that proclaims a find all is eagerness and excitement, and when the whimper becomes a cry and is answered by the other dog, who quickly harks to his mate, and sure of the line out pours the glorious duet and away they go. Then does the beagle hunter think that life is worth living, and scratches, wet feet, tired limbs, everything is forgotten in the eager race to see the run, while the music encourages tired limbs to put their best foot first.

There was the usual grumble about the lack of rabbits, poor scent and rough grounds. But then what can be done! In the open ground and plain cover there seem to be few if any hares, so that in the end we have to go to the brier swamps to get through the trials before the week ends. For spectators it is one of the best places, for they can stand on the hillside, and in one part, where the sumacs grow, they can view all the twists and turns of bunny and amuse themselves with the frantic efforts of the judges to pick briers out of their eyes and keep track of how the dogs are working at the same time. Those who undertake to judge beagle trials must be stout of limb, have capacious lungs and plenty of patience and perseverance. These qualities the judges this year most certainly possessed in generous degree; both are well versed in field sports and were seemingly in good condition. Mr. B. S. Turpin was fresh from the Brunswick Fur Club trials of the previous week, where he acted as one of the judges, and a week after the foxhounds on the hills round North Acton, Mass., puts a man into prime condition. Joe Lewis, the other judge, is about as tough as they are made, and no run is too long or brier too thick but that he is somewhere about when the check comes and allows a minute's breathing time.

The quality of the work done in the Derby and large dog class was scarcely up to last year, but the judges think that the hunting by the winners in the 13in. class showed considerable improvement, and in this we coincide. Pade and Spot R. furnished the liveliest heat of the meeting, and kept us on the jump all the time. Snow and Wanderer did good work, too, but when they ran together it was in a poor place for scent—too dry. The Derby work was poor on the whole, though Mollie Dean gives promise of making a very useful bitch. The judges, as stated above, did their work well and conscientiously, and there was no kicking. The only unpleasant feature of the trials was the objection against Pade, and Mr. Jamieson would seem to be quite justified in the course he took. This affair, however, will be treated of elsewhere.

Although the New York papers, at least the principal ones published accounts of the running every day, there were fewer spectators than last year, and the last two days' hunting was left almost entirely to members of the club. We have already, in last week's issue, given the names of those present. The utmost good feeling prevailed and as usual the quip and joke passed around freely when the day's work was over.

Mr. H. L. Kreuder was field marshal, and it seemed that both he and his family and, in fact, everything that was his were at the service of the intruders. There are few men who would turn their homes into a semi-hotel, and subject themselves to the inconveniences that the Kreuder family must experience. A hunter's appetite is a simile commonly used, and nothing but solid viands will satisfy it. These we had in abundance, and whoever does the cooking at the "Kreuder Homestead" is a chef in her line. When all the hunting was over it was only appropriate that we sat down to a rabbit dinner, most excellently prepared.

There was little delay in getting the dogs up for each heat, and as far as trials go all was well arranged. The members of the Field Trials Committee are: J. W. Appleton, Wm. Tallman, Geo. Laick, E. Gerry Roberts, John Bateman, H. L. Kreuder, H. W. Lacy, H. F. Schellhass, Pottinger Dorsey, A. D. Lewis, F. W. Chapman, B. S. Turpin. We have already given the first day's work, and the continuation of the heats in the 15in. class is given below.

#### TUESDAY, OCT. 31.

##### Class A—13 to 15 in.—CONTINUED.

When we pulled up our blinds this morning it was to find the whole country covered with a white pall, and we knew that the heaviest frost of the season had been busy while we slept. Ice had formed in the ponds and ditches, but Old Sol was soon ready for business, and quickly melted the frost "crust" and then dried up the grass, so that scent lay badly all day, and as the day grew older it became quite warm. The grounds selected are about a mile from the village, and most of it is very rough, swampy and covered with briers and sumacs. Hares were plentiful, however, but naturally difficult to follow, and the scent was so poor at times, even a few yards from where a rabbit had been started, that the hounds were continually at fault. An early start was made and the first brace.

TRIFLE II.—MODEL—Cast off at 8:15. This was the unfinished heat of the previous evening. The dogs were bothered a good deal at the start; first a cat tracked led them astray, and then some dogs getting loose did not improve matters. At last the serious business of the day began when a hare was jumped by the crowd. The beagles drove poorly, being frequently at fault and harking back on the trails. Taken in all the work was indifferent, but Trifle had the best of it. This dog is over two years old but had never been hunted till three weeks since. Ordered up at 9:17.

VENUS II.—VICK R.—These were put down at 9:23, and both handled by their owners, P. Dorsey and H. V. Jamieson. Both started well, the ranging being in favor of Vick R. A long hunt in cover ensued before bunny was found by the spectators. Dogs were put on the hot trail and Venus hit off but Vick soon took the lead, set a good pace and showed herself much superior in driving and hunting and was at all times amenable to control. They ran for an hour and twenty minutes, being taken up at 10:43. Vick was clearly the best. ORACLE—JACK BANBERMAN—were cast off at 10:35. J. W. Appleton handled Oracle and Mark Lewis the other dog. By this time all signs of frost had disappeared and scent was very elusive. During the heat five rabbits were started in various places, and though the hounds were laid on hot trails they could not carry them. Oracle was slow and did too much pottering. This made Jack Banberman's vigorous style of hunting more conspicuous, and he always had the speed of the other. Neither, however, came up to winning form. Up at 11:25.

JOE—WANDERER.—Cast off at 11:28. Joe had the services of Mark Lewis and Wanderer was in charge of the veteran Pottinger Dorsey. The dogs hunted till lunch time without making a good strike, and in this work Joe seemed to have the best of it in ranging, making wide casts, but always well under control; but Wanderer's turn came after we had been regaled with most appetizing chowder and etceteras. That Miss Kreuder looks well after our material comforts was the general sentiment.

After lunch a grand race took place, the hare being a corker and up to every move known to his kind to throw his pursuers off the trail, and in following him Wanderer showed his worth, for he excelled in the way he made his casts and in picking up the trail at a "loss" and then generally leading when it came to a hard drive. Joe, in the earlier part, when

pure hunting was needed, showed that his bump of hunting sense was well developed. Wanderer is inclined to loaf a bit in this part of the game. The judges were fairly pumped out in this heat, as the going was terribly rough among the briers and sumacs. Dogs called up at 2:40.

**SNOW—BUCK.**—Cast off at 2:55 on a hot trail where hare had just jumped, and they carried it along at a great pace, following puss up close in all her feints and turns through the briers. First one led, then the other, Snow having generally the speed of the other in straightaway drives, but when it came to puzzling work at the turns Buck showed himself superior. In hunting for game Snow ranged wider, covered more ground and worked in a sensible manner. Up at 3:35, down 40m.

**GREYBURN DAISY—LUFRA.**—At 3:50 they were cast off in sumac bushes where so much of the work to-day has been done. Daisy in the little driving done had the speed of the other, and also in hunting made wider casts and hunted out intelligently more ground than the other. Lufra was inclined to potter at times. No hare was started and dogs were called up at 4:45, just as the sun was sinking. A pleasant walk home and the first series of the large class was finished. To-morrow the start will be made in the second series—Joe with Buck, Snow with Wanderer, Fanny Racer with Vick R.

WEDNESDAY.

Second Series.

**JOE—BUCK.**—These were put down in pasture behind the "Kreuder Homestead" at 8:10. Both were willing hunters and worked out several likely places without result, until Buck tongued, but failed to work out the trail. In thick swamp he started game and carried the trail alone, turned back and seemed to be driving for all he was worth, but no game was seen. Up at 9:55. Buck had the best of it, Joe being off nose to-day seemingly.

**SNOW—WANDERER.**—Mark Lewis handled Snow, and P. Dorsey his own dog. Cast off at 10:05 at the edge of open cover and at once Judge Lewis started a rabbit, and dogs were brought to the trail, but neither could lift it, though they cast well and intelligently, the leaves were too dry. Wanderer then drove for a hill to one side and lost casting for the trail; he soon hit it off and a keen run took place with Wanderer in the van. Then he let down, and from that time out Snow took the "reins" and drove hard and fast; in fact, she pressed her lost hare so close that as it sought shelter in the ditch and low wall, she nearly nabbed it. There is little between these two, but Snow has if anything a slight advantage. Up at 9:35. Wanderer is better in casting for and hitting off the trails, but when it came to fast driving Snow showed to greater advantage.

**FANNY RACER—VICK R.**—These two beagles are probably as well known as any in the trials; they have frequently won honors on the bench. They were put down where rabbit was lost in the last heat at 10:45. Fanny Racer handled by M. Lewis, Vick R. by owner. Vick soon tongued, but overran the trail, and a long hunt ensued without finding. In swampy ground Vick spoke again, then Fanny opened, but both potted a good deal. They carried this sort of thing on for a mile or more on an old fox trail. Then harking back, Judge Lewis jumped a hare in the open and some merry bursts ensued, short, but exciting while they tongued. They kept this up for twenty minutes, and then were called for lunch at 1:15. Vick seemed to have the best of rather poor work on the whole.

After a lunch, in which some hot baked beans, a tender compliment to our friends from Massachusetts, had played a conspicuous part, the running was resumed. In the

Third Series

**SNOW—WANDERER** were cast off to test their finding capabilities. Called up at 2 P. M. without starting anything, it was found that Snow beat out her ground better and was under better control.

**WANDERER—VICK R.**—These went down at 2:04 in woods for the same purpose. A long, weary tramp followed, in which every likely spot was hunted out, but nothing found, though Wanderer did a bit of driving by herself some distance from the other dog. At first he had to be coaxed to hunt, but finally got down to business. After an hour's walk we came up to Mr. Reed, who had marked a hare; and bounds being put on some good driving followed, in which both dogs did well. They were called up at 3:40, and after a short consultation the judges announced the results: Snow first, Wanderer second, Vick R. third and Buck reserve.

Class B—13in. and Under.

**LITTLE LEE—GYPEY FOREST.**—It was getting late when these two were slipped, and the hunt was in the direction of home. Little Lee seemed afraid of briers; he is very small—11in.—and lightly made. Having hunted always in the Maine swamps, he does not like this rough country. Gypsey went the strongest and showed most intelligent hunting. Nothing started by 4:45, when dogs were called up, and we found ourselves near the "Homestead" and dinner.

These two will be put down in the morning. Altogether the day has been rather a blank and the decisions given were generally on the work done on Tuesday.

THURSDAY.

Class B.

First Series—Continued.

The morning opened cloudy and damp with a light southerly wind, which raised hopes that scent would be good to-day and some fine hunting take place. We were not disappointed, as about the best work of the trials was seen. The start was with

**LITTLE LEE—GYPEY FOREST** in the sumacs and brier swamp down on Moe's Hillside. They were handled by owners. A hare was soon found, but they failed to take up the trail, and when another was started for them they did not do very brilliant work, though Gypsey Forest proved to be a much better hound.

**INA—ADAM.**—Ina was handled by owner and Adam by Mark Lewis. They were both active workers, but in experience Adam babbled so much that it was difficult to tell when he was driving and when he was just enjoying himself. In a rather poor race Ina had the best of it, both in hunting sense and the little trailing they did.

**LOU—PADE.**—These two were put down at 9:55 in thick, swampy cover. Lou had the help of Mr. Kreuder, and Pade was handled by Mr. Dorsey. The difference in type was very noticeable, Pade looking more like a modified basset while Lou—well, we all know that few can beat this pretty bitch in type and quality, and how she keeps up! She seemed to go stronger and looks far better in her hind legs this year than last, and she is nearly ten years old. Working up to higher ground a hare was started, but dogs had to be put on before they picked up the trail which carried them to the sumac grove where Pade drove fast, and left Lou whose heart was good, but the pace too warm. Pade ranged wide and fast and showed some of the best work of the trials. Up at 10:40.

**MOLLIE DEAN—SPOT R.**—These were down at 10:45 in sumacs, and Spot R. soon showed that she could run all round Mollie. Spot is a well made little bitch, an intensely busy hunter, and probably in her own country on the swamp hares in Vermont she would range wider, here the thick cover and briers made her very careful, but she never potted, it was all hunt, and when she struck a trail she meant business. Mollie was outpaced, but she hunted well. Up 11:07. This finished the first series.

Second Series.

**PADE—SPOT R.**—Down at 11:20 in open ground on hill.

Edge of cover, rabbit started by reporter and hounds put on, Pade struck first and they held to bunny's back trail, lost, and then Pade carried us out into the open where they were at fault again: the sun by this time being quite warm. Spot then caught the turn and took it up merrily to a loss. Another rabbit was started but trail soon lost, Spot then distinguished herself, and a short, though pretty run in open followed. After 30m. hunt Pade opened on a new trail down in cover again, lost, and then Spot led a merry burst and every one found it difficult to follow this speedy couple. Way off to the left Pade struck a trail which he followed to the swamp and lost. Up 12:35. Pade has the speed and is a wider ranger, but as beagles hunt there is little difference between them. Where Pade gets his speed is an enigma, he evidently has some of the old Southern hound in him. He drives more like a foxhound than a beagle.

**LOU—GYPEY FOREST.**—Cast off at 12:37 down toward the swamp. This heat afforded us a rest after the previous heat's hard work, running up and down this hill soon pumps

MR. POTTINGER DORSEY'S PADE.

every bit of breath out of an ordinary man. On a hare that was put up Gypsey led, but only carried it a few yards to a check, and Spot was put down with them. No more driving and dogs up at 1:05 for lunch. Judges consulted awhile, and decided that Pade wins first, but with the reservation that Mr. Dorsey explain his dog's breeding. Spot R. second, Gypsey Forest third, Lou reserve. In case Pade is disqualified Ina takes reserve and the others move up.

Derby.

First Series.

After lunch the first brace in this stake was called.

**LEE III.—CLIO.**—Dogs were handled by owners. Cast off at 1:52 in same cover where all the running has been done to-day. Nothing was found, however, and dogs were taken up to high ground over the railroad track. Cast off again at 2:40. Mr. Jamieson saw a rabbit squatting, and though dogs were brought up and saw it go away, they could not lift the trail. Lee III. did not show much interest, anyhow. Scent

PRESIDENT KREUDER WITH ZILLAH AND CHAMPION LOU.

was very poor on the leaves. Another rabbit was started by a reporter, and dogs drove well to a road, where they were at fault, and then worked the back trail to where game was started. Up 3:05. Neither hound showed up very well, but Clio had the best of it.

**QUEEN OF THE FOREST—MOLLIE DEAN.**—Down at 3:10. M. Lewis handled the first-named and Mr. Chapman the latter. Cast off where others were taken up. Shortly after Mollie started and drove till a gun was fired, and Queen blinked a little. Then Judge Turpin spied a hare, but neither could lift the trail on the dead leaves. Then Mollie had a short spin a few minutes after, and dogs were up at 3:32. Mollie was far the best, the little one showing little inclination or experience.

**BILL NYE II.—BLANCHE.**—Down at 3:37 in same place. W. H. Hyland handled Bill Nye and M. Lewis the other. We had more fun in this heat than any other. Working into open fields on high ground Mr. Hyland jumped a hare, and both dogs being laid on the trail Bill picked it up and drove a short distance, and then did some wide casting, but with little judgment. Afterward he found and carried it to open fields, but they were checked at a low wall; rabbit passed in front of them along the wall, but they did not see it and could not lift the trail. Going into the next field, where spectators marked the hare squatting on the short grass like a stone, the dogs were caught, and the sight of Hyland and Lewis holding their dogs over the hare waiting for the word go was most laughable. Hare started and both dogs went well from the slips in full view, and racing across the open field Bill led to the wall, when bunny fooled them. They made a pretty picture and conclusively proved that

they could follow the hare at great speed when they saw it. They evidently think seeing is believing. Up at 4:15.

**LITTLE LEE** (a bye) with Mollie Dean. Lee handled by Mr. Chapman. They hunted twenty-five minutes and then were ordered up; nothing found, Little Lee, as usual, not doing much hunting.

FRIDAY.

Second Series.

This was the last day, and opened cloudy and misty. Few came out to see the work as it was about a foregone conclusion that rain would fall, and it did, just as the stake was finished.

**MOLLIE DEAN—BILL NYE II.**—The same old sumac grove was tried. Cast off at 8:30. A hare was up at once and Bill had a chance to distinguish himself but failed, and Mollie did no better afterward. Soon after a reporter jumped another hare and Mollie hit off the line, but Bill babbled so much that it bothered Mollie at the checks. Up at 9 o'clock. Then

**BLANCHE—BILL NYE II.** ran together at 9:03 and down toward the swamp another hare was found by a reporter, and though dogs were brought to the form, neither could follow the trail, though Blanche followed the line for some distance mute. Afterward they had a short drive, and as there was little between them, the judges called them up and decided that Mollie Dean should have first and Blanche and Bill Nye II. divide second. Reserve withheld.

Champion Stake.

As Zillah had forfeited, Snow was the only aspirant for the championship title, as Pade was under a cloud, and Mr. Dorsey had gone home.

Snow was put down at 9:30 to run the time out with Spot R. Rain fell heavily and nothing was done.

Thus ended the trials of 1893 without the cheers, and as much good feeling as prevailed at the same time last year, when Lee II. was hailed as absolute winner.

SUMMARY.

CLASS A.

For dogs and bitches, all ages, 15in. and over 13in., that have not been placed first in any class at field trials held by N. B. C. First prize \$60, second \$40, third \$20.

First Series.

H. L. Kreuder's Fanny Racer (Racer, Jr.—Nellie) with Glenrose Beagle Kennels' Gypsey A. (Kennally's Lee—Tone).  
Pottinger Dorsey's Rambler with E. J. & J. W. Becker's Halcyon.  
George Laick's Trife II. (Leader—Jenny) with Middleton Kennels' Model (Stormy—June M.).  
Pottinger Dorsey's Venus II. (Lee—Venus) with Forest Beagle Kennels' Vick R. (Fitzhugh Lee—Nell).  
Waldingfield Kennels' Oracle (Orator—Lively) with H. L. Kreuder's Jack Bannerman (Billy—Kate).  
Guy D. Welton's Joe (Billy—Kate) with Pottinger Dorsey's Wanderer (Lee—Fairy).  
Middleton Kennels' Snow (Stormy—Lee) with H. L. Kreuder's Grayburn Daisy.  
Pottinger Dorsey's Buck (Tecumseh—Mary) with Waldingfield Kennels' Lufra (Orator—Lonesome).

Second Series.

Joe with Buck.  
Snow with Wanderer.  
Fanny Racer with Vick R.

Third Series.

Snow with Wanderer.  
Wanderer with Vick R.  
Middleton Kennels' Snow first, Pottinger Dorsey's Wanderer second, Forest Beagle Kennels' Vick R. third, Pottinger Dorsey's Buck reserve.

CLASS B.

For dogs and bitches, all ages, 13in. and under, that have not been placed first in any class at field trials held by N. B. C. First prize \$30, second \$20, third \$10.

First Series.

Glenrose Beagle Kennels' Little Lee (Fitzhugh Lee—Dill) with Forest Beagle Kennels' Gypsey Forest (Frank Forest—Sue Forest).  
H. Mann's Ina (Dan—Jolly) with Middleton Kennels' Adam (Sport—Trill).  
H. L. Kreuder's Ch. Lou (Keno—Fly) with Pottinger Dorsey's Pade (Ned—Flora).  
Glenrose Beagle Kennels' Mollie Dean (Sam—Baby Dean) with George F. Reed's Spot R. (Kennery's Lee—Skip).

Second Series.

Pade with Spot R.  
Gypsey Forest with Lou.  
Dorsey's Pade first; Geo. F. Reed's Spot R., second; Forest Beagle Kennels' Gypsey Forest, third; H. L. Kreuder's Ch. Lou, reserve.

The Derby.

For dogs and bitches, 15in. and under, whelped on or after January 1, 1892. First prize, \$20; second prize, \$10.

First Series.

H. L. Kreuder's Lee II. (Fitzhugh Lee—June Rose), April, with Forest Beagle Kennels' Clio (Bannerman—champion Twintwo), March 25.  
H. L. Kreuder's Queen of the Forest (Fitzhugh Lee—Una), September, with Glenrose Beagle Kennels' Mollie Dean (Sam—Baby Dean), Jan. 15.  
W. H. Hyland's Bill Nye II. (Rip Van Winkle—Queen Nellie), July 17, with H. L. Kreuder's Blanche (Fitzhugh Lee—Una), September.  
Glenrose Beagle Kennels' Little Lee (Fitzhugh Lee—Dill), June 24, a bye.

Second Series.

Mollie Dean with Bill Nye II.  
Blanche with Bill Nye II.  
Glenrose Beagle Kennels' Mollie Dean first, H. L. Kreuder's Blanche and W. H. Hyland's Bill Nye II. divide second. Reserve withheld.

H. W. L.

The Winners.

SNOW is a bitch well known on the bench, where she has won several prizes; she has markings on head but body is nearly all white. Wanderer is a heavily-marked bitch of fine build and not so large as Snow. Vick is a well-made, good-sized bitch, bit big in head and body, nicely marked. Buck is also a fairly well-made dog, heavily marked with black. Among the little ones Lou and Shot R. are easily first in regard to build and style, and both are about the same size. Shot R. had the straighter forelegs; would be a winner in almost any company. Gypsey Forest is a stoutly-made, prettily-marked bitch, longer in body than the others. Mollie Dean is a blue-mottled bitch of racy build, little long in body and not deep enough. Blanche and Bill Nye II. are prettily marked, well-grown beagles, and will come near the limit in height. Pade shows a mixture of basset, dachshund and beagle, is a low-set, heavy-chested, long-bodied dog, with arch of loin and quarters very much on the basset or dachshund form. A rough sketch shows the type of dog he is. His color is a sort of dirty fawn shot with dark hair, flat ears and longish head, and forelegs have almost a crook.

The Pade Protest.

THE National Beagle Club has been singularly free from even a suspicion of unpleasantness during the three trials they have brought off, and it is particularly regrettable that anything should have occurred to mar the good feeling with which we all took this year's trials. The objection to Mr. P. Dorsey's Pade, who was adjudged the winner of the under 13in. class, seems to have been made on good grounds, but unfortunately rather late in the day. If there was doubt about the dog's status as a beagle, action should have been taken by the field trial committee when the dogs were measured for the different stakes on the first day. This was not done, but two wrongs do not make a right, and of course we can pass no opinion here as to the merits of the case, as it is still *sub judice*.

### Western Kansas Coursing Meeting.

OUR report of this meeting held at Loti, Kansas, Oct. 24, did not arrive in time for last week's issue, and contains little more than the summary which follows. The meeting seems to have created considerable local interest, but the Eastern dogs failed to run into the finals. Miss Dollar III. and Royal Crest did fairly well and the owner of Drytime should not be disappointed in the poor showing she made. She should not have been slipped so soon after Goodland meeting. A number of well known coursers were present, including Dr. Van Hummel, whose partner, Mr. J. R. Cochran, was slipping; D. C. Luse, A. C. Bradbury, Goodland Kennels owners, the president, R. S. Howard and Mr. E. H. Mulcaster, who judged satisfactorily.

The attendance was quite good for a small meeting and everything passed off nicely. The club's secretary is Mr. W. O. Allphin, and he, with Mr. Howard, had the management of the whole affair, and did their work well. The summary follows:

#### Leoti Stakes.

Sixteen greyhounds of all ages at \$10 each, 50% to winner and 25% to runner up, 12½% each to next two dogs.

##### First Round.

Royal Crest Maybrook Kennels' b d Miss Dollar II. (Eden Castle—Miss Harkness)	beat	American Coursing Kennels' b d bitch Belle of Eltham (Jester—Bit of Fashion).
R. S. Howard's f b Elsie (Arkansas Traveler—Fanny)	beat	Royal Crest Maybrook Kennels' f b Drytime (Britain Still—Haytime).
St. Patrick Kennels' b w d Border Ruffian (Dingwall—Miss Kitten)	beat	A. Massey (ns. D. Grey's) f w b What Care I (Trales—Lightning).
S. W. Vidler's b d b Buenarita (Norwegian—Buenaritero)	beat	A. Massey (ns. S. Airhart's) b d Ketchum (Major—Clipper).
American Coursing Kennels' (ns. F. B. Coyne's) b w d Willis H. (Lights of London—Nell)	beat	A. Massey's b w d O'Rourke (Prince Patrick—Rose Macpherson).
Goodland Kennels' b e b Renella (Walnut—Humming Bird)	beat	Royal Crest Maybrook Kennels' b k d Greenshine (Mullingar—Greenfinch III.).
Goodland Kennels' w b d b Rhea (Major Glendyne—Daisy—Dublin)	beat	St. Patrick Kennels' b k w b Bonnie Belle (Dingwall—Dublin).
Royal Crest Maybrook Kennels' b k d Royal Crest (Greentick—Royal Rate)	beat	Goodland Kennels' w b k d Rear Admiral (Major Glendyne—Lady Alice).

##### Second Round.

Miss Dollar III. beat Elsie. Willis H. beat Renella. Buenarita beat Border Ruffian. Rhea beat Royal Crest.

##### Third Round.

Buenarita beat Miss Dollar III. Willis H. beat Rhea.

##### Deciding Course.

Mr. S. W. Vidler's b d b Buenarita and American Coursing Kennels (ns. Mr. F. B. Coyne's) b k w d Willis H. divided.

#### Home Stakes.

For local greyhounds, all ages, at \$5 each, 50% to winner, 25% to runner up, 12½% to each of the next two dogs.

R. S. Howard's f w d Bolivar beat W. O. Allphin's f b Queen. W. O. Allphin's f d Jerry beat I. G. Noble's f d King.

##### Deciding Course.

Mr. R. S. Howard's Bolivar and Mr. W. O. Allphin's Jerry divided.

### Cowly County Meet.

THE second annual meeting of the Cowly County Coursing Association was held at Winfield, Kansas, Oct. 31. A full report will be given in our next issue. The running resulted as follows:

#### The Winfield Cup.

Open stake for 16 or more greyhounds, entrance fee \$10, winner 50 per cent. of entrance and \$75 cash donated by the citizens of Winfield, the runner up 25 per cent., third dog to receive 15 per cent., and fourth dog 10 per cent. of entrance money:

D. C. Luse's (ns. S. W. Vidler's) brindle bitch Buenarita	beat	D. M. Sidle's white and fawn bitch Lady Maud (late Maudy Luse).
D. M. Sidle's fawn dog Laughed At	beat	D. C. Luse's white and brown bitch Lady Cleveland.
F. D. Coyne's black dog	beat	J. R. Ballard's (ns. D. C. Luse) Netfield.
D. C. Luse's Living Yet, a bye.		
Buenarita beat Laughed At.		Willis H. beat Living Yet.

##### Final Course.

S. W. Vidler's b d b Buenarita (Norwegian—Buenaritero) beat F. B. Coyne's b k and w d Willis H. (Lights of London—Nell) and won.

#### County Stake.

For dogs owned by resident members only, entrance \$2.50. Winner to receive 50% of the entrance money, runner up 25%, third to receive 15% and fourth 10% of entrance money.

S. S. Raper's black bitch Juliette	beat	Ricks & Smith's black bitch Little
John Weakly's black dog Lightfoot	beat	D. S. Hanna's brindle dog Jack.
C. C. Stevens's brindle bitch Skip	beat	D. S. Hanna's black bitch Dicky.
E. B. Condit's fawn bitch Zip	beat	E. A. Fisher's bitch Lady Grace.
James Ramsey's fawn and white bitch Goldie	beat	D. S. Hanna's black and white dog Jerry.
John Weakly's red dog Gold-dust	beat	A. E. Johnson's brindle dog Jo Jo.
Jas. Ramsey's brindle bitch Fanny	beat	E. P. Condit's fawn dog Pedro.
Ricks & Smith's black and white bitch Sailor Maud	beat	J. O. Miller's brindle bitch Minnie.
Frank Sidler's white and black bitch Witch Hazel	beat	D. C. Stevens's white and black dog Bob.
Jas. Ramsey's red bitch Meteor	beat	C. C. Stevens's white and black bitch Snowball.

##### Final Course.

John Weakly's red dog Gold-dust (Jack—Minnie), beat Frank Sidler's white and black bitch Witch Hazel (Bob—Unknown), and won.

### Quality of Courage.

#### Editor Forest and Stream:

I have read the articles in a Chicago contemporary upon the "Quality of Courage," and was much edified at the manner in which FOREST AND STREAM disposed of their sophistries with regard to the quality of courage in bird dogs. Let me add some data gathered from experience with foxhounds. It is not exactly clear what the writers of those articles was driving at, but I gather a lazy idea that courage is a very undesirable qualification in a dog. With pedantic pessimism he asserts "Courage is the genius of the sulks," and he attributes to high courage the inability of race horses to repeat.

"Courage is in the nature of a stimulus, and like artificial stimulants it fails when the contestant begins to feel the effect of exhaustion. Indeed, it asserts itself at all, when it might be useful it is only in resisting the wishes of the handler, and it matters not whether it be in dog, horse, or man."

The one qualification that distinguishes the Kentucky foxhound, that has given him the national reputation he now enjoys, that has been bred in him for generations and is as characteristic of him and as true a test of the thoroughbred

as gameness in a game chicken, is courage. No matter what his extremity, no matter how long and arduous the chase, how great his weariness, he will still strive, however feeble his endeavors be. His pace may be slow, it will be forgiven him; but let him show the white feather, quit in the chase, and his life will pay the forfeit. I know of no more serious misfortune that could befall a Kentucky fox hunter at a Kentucky meet than to have his dog fail in this crucial test and brand himself a quitter. The question that instantly arises is what is his breeding, where is the outcross, for a cold cross there must be somewhere. No thoroughbred if physically capable will ever lack the moral quality of courage. This is the distinguishing trait of the Kentucky foxhound. I know of no other that possesses it in such an eminent degree.

We have had the Birdsong, the July and the best of the Southern flyers, and it is a conceded fact that they cannot stand in competition with the Kentucky foxhound the test of enduring courage. They are sprinters. They are light of muscle and build, of the greyhound type, and are perhaps the best for their country, but where hard going and long running is the rule they are physically unable to stay the pace the Kentucky dogs set day after day.

So far from courage failing a dog at the moment of exhaustion, it is then that the quality of courage demonstrates itself. It does not take courage to keep a dog in the chase when fresh and full of redundant energy. It is when the muscles tire, when the feet are sore, when weariness and exhaustion come, it is then that high courage spurs him on to oblivion of his ills and animates him to those wonderful exhibitions of endurance that no other animal on earth can parallel.

Only to-day a fox hunter of the old school who has passed the biblical limit of life was recalling the exploits of the late John Shanklin's Tap. Day after day Shanklin called upon his dogs to make not one chase, but to close the run on three or four red foxes before he considered the day sufficiently rounded out. And many a morning, my mentor tells me, he has seen Shanklin take old Tap, who was physically incapable of moving, upon his horse and carry him on the saddle until some of the fresher and younger dogs opened, when he would throw old Tap down, and at the sound, fired by that high and indomitable courage which triumphs over physical ills, the old dog would crawl away, limbering his stiffened limbs, until when the fox was up he would get away in the front flight, never to flag again that day. He was the great grand sire of a worthy descendant in the Springknoll pack who bears his name. Last winter the younger Tap was caught in a steel trap and his right forefoot terribly mutilated, the flesh being torn to the bones and the toes simply hanging. The next morning after finding him his whole leg was inflamed and swollen, and no fear was entertained of his following, but he was chained for convenience in doctoring him. He slipped the collar, and overtaking us went into the chase on three legs and stayed to the finish. Next day, as may be imagined, the dog's sufferings were intense. He was fastened in the kennel, but deliberately dug out through a hard clay floor. If he only dug with one foot he must have sustained his weight on the mutilated member. There were several inches of snow on the ground and that dog ran in half a dozen chases with that foot, leaving a trail of blood behind him. It is the quality of courage in such dogs that endear them to us. It is the product of many generations of careful breeding, and it is indigenous to the strain. If it be an undesirable quality then we and our fathers before us have labored in vain. For it is our creed that gameness is the *sine qua non* of the red foxhound.

LOUISVILLE, Ky., Oct. 20.

### Coursing at Corsicana, Tex.

A FEW items of interest that Mr. C. L. Witherspoon, secretary of the Corsicana Coursing Club, sends us may be of use to some of our readers. Corsicana is a town of about 11,000 people, situated in Navarro county, and about fifty miles from Dallas, also about the same distance from Waco and Fort Worth. He says: "We have a fine country around and we have some good coursing grounds, although we are fenced up considerably with barb wire. Our main coursing ground is situated some three and a half miles from town. It is three miles square and level, with plenty of jacks. Our people seem to take more interest than we expected, and I think our prospect for success is fine. The stake is for all-age greyhounds raised in the State. We did this in order to get the Texas people to take interest in it before inviting others. We shall have a meeting in February, to which we invite all comers, and especially the Kansas coursers."

### Northwestern Beagle Club Trials.

THE report by Mr. Waters of the trials at Whitewater, Wis., has come to hand too late for publication this week. It will be given in our next issue. The trials were highly successful. The winners were in the Derby: First, Dillingham & Rammele's Mayfly; second, G. A. Buckstaff's Ilwaco; third, divided by Louis Siffin's Tony W. and E. Bender's Little Cooney Duke. All-age stake: First, Ilwaco; second, Dillingham & Rammele's Bose; third, G. A. Buckstaff's Royal Rover. Champion class: Mayfly.

### HUNTING AND COURSING NOTES.

THE following item from Mr. T. B. Bartels will be of interest to coursing men. He writes as follows: "As you probably know Boomerang hurt his fore leg while at Goodland before meeting Princess May. I thought two or three days' rest would fix it up, but such was not the case. I have nursed it ever since the meeting. This morning I was obliged to have Dr. Bore fire it. He put about 15 points in it and then a strong blister on top of that. I shall do nothing with him until the spring meetings, at which time I hope he will be as good as ever."

Mr. H. L. Kreuder leased about a half mile square of rough land about a mile from Nauvut during the Beagle Club trials last week. He takes it for five years, and as this piece includes the swamp below Mac's Hillside and is the very best rabbit country round there under protection, it is very likely that he will have rare sport by next year, and if the club elects to hold their trials on these grounds next year there should be lots of fun, as rabbits will be thick by that time. We should advise Mr. Kreuder to have runways cut through it; they would make it easier to follow the dogs and afford more opportunities to get "pop" shots at the game as it crossed.

County Nomenclature—"Well, Mr. Duffy?" "Mornin', Mr. Stoutberry; have yez an impty bar'l o' flour, sor, ter make a hin-coop fer me dorg?"—Smith, Gray & Co.'s Monthly.

"Do you own that dog?" asked Billy Bliven. "Ya-a-s," replied Gus de Jay. "Will he mind you?" "Oh, I nevah twy to boss him. I just own him."—Washington Star.

See advertisement on another page of "American Big Game Hunting," the Book of the Boone and Crockett Club, which has just been issued. Every big game hunter and rifleman in this or any other country should have a copy.

## Yachting.

### The Fife Cutter Sigrun.

THE conditions in Germany are hardly favorable to the development of yachting, the sea coast on the Baltic and the North Sea, the only available yachting water, is at a distance from the larger and wealthier cities to which yachting must naturally look for its chief support, and the rivers and inland waters afford a very limited sailing ground, even for centerboard sailing boats of the American type. In spite of natural disadvantages, however, yachting is firmly established throughout the Empire, and of late in particular it is benefited by the patronage of the Emperor himself, a keen and enthusiastic yachtsman. The formation of the new Imperial Yacht Club, at Kiel, with the purchase by the Emperor of the Thistle, now Meteor, and the building of the 40-rater Irene for Prince Henry, his brother, has given a stimulus to yachting and yacht racing that is likely to have a permanent effect.

The accompanying cuts, for which we are indebted to our enterprising German contemporary, *Wassersport*, show one of the later additions to the fleet, a racing cutter owned by Captain Rittmeyer. The design was originally published in the year book of the Imperial Y. C. but the cuts here shown were made for the *Wassersport*, which has very kindly furnished us with duplicates.

Sigrun is a racing cutter of modern type, designed by Mr. Wilf Fife, Jr., and in form is fully up to the most advanced ideas prevailing at the time the design was made, the winter of 1891-2, the yacht having been launched in the spring and raced with success during the seasons of 1892-3. The design is especially interesting as a step from the older type of cutter toward the fin-keel, and also from the remarkably light construction, no less than 64 per cent. of the displacement being carried in ballast. The details of cost, construction and dimensions are given fully in the *Wassersport* as follows:

#### DIMENSIONS AND ELEMENTS.

Length over all.....	86ft. 10in.
L.w.l.....	24ft. 8in.
Beam, extreme.....	6ft. 5in.
L.w.l.....	6ft. 3in.
Draft.....	5ft. 7in.
Displacement, long tons.....	8.04
Ballast, lead keel.....	2.55
Ratio of ballast to displacement.....	64%

Spars.		Square feet.	
Mast, deck to hounds.....	21	Boom, diam.....	4 3/8
hounds to truck.....	10 8	Gaff.....	17 3/8
diam. at deck.....	5 1/2	diam.....	3 3/8
hounds.....	5 1/2	Topsail yards.....	22 6
Bowsprit, beyond l.w.l.....	12 4	diam.....	13 6
diam.....	4 3/8	diam.....	3 1/4
Boom.....	38 4	diam.....	2 3/8

Sails.		Square feet.	
Mainsail.....	494		
Staysail.....	124		
Jib.....	140		

Lower sails.....	758
Topsail.....	151

Windward sails.....	909
Spinnaker.....	600

Cost.			
Design.....	\$95 00	Carving.....	\$9 50
Hull and spars.....	570 00	Sails.....	186 00
Lead keel and bolts.....	240 00	Blocks and rigging.....	90 50
Iron work.....	105 00	Equipment, flags, etc.....	48 50
Painting.....	38 00		
Coppering.....	23 00	Total cost.....	\$1,404 00

The cost is not very different from the 25ft. sailing length cutters, such as Nameless and Needle, built about New York.

The yacht is fitted up simply for racing, with a small cockpit aft and a companionway in the hull deck, the interior not being finished for cruising. The keel and keelsons are of oak, the former 4 3/8 in. thick and shaped to the lines of the hull; the latter 8 3/8 in. deep, 4 3/8 in. wide at the middle and tapering to 3 3/8 in. at the ends. The deadwoods are of oak, 8 3/8 in. thick. The frames are sawn and bent in alternation, the former sided 1 1/2, moulded 2 1/2 at heels and 1 1/2 at heads, spaced 14 in.; the latter 1 1/2 by 1 1/2, between each pair of sawn frames. There are five floor knees of angle steel, 2 1/2 x 3 1/2 in., with flanges 30 in. long. The plating is obtained by the English method of pitch pine, the top sides of European yellow pine, similar to American white pine, and the sheerstrake of mahogany. The beam clamp is 5 x 1 1/4 in. and the beams are spaced from 14 to 18 in., to fit in with the positions of the deck openings. The partners are specially reinforced. The deck is of 3/4 in. thickness. Near the mast are holes through which the balliards lead below, where they are made fast. The scale of the drawing is in meters.

### Vigilant and Valkyrie.

THE erroneous impression that a centerboard adds to the stability of a vessel has many times been dealt with in our columns; but it is not surprising to see it coming to the surface again amid the number of absurd ideas which have been published about English and American yachts during the contests for the America Cup. Of all these absurdities, the most mischievous of the delusions about the centerboard is one relating to the effect of a centerboard on stability, especially when we find it presented in this circumstantial form:

"Then she (Vigilant) has a larger sail area, which she is enabled to carry safely by means of the movable fin or centerboard, which gives her a large and light keel, and the English boat, on the other hand, has an immense weight of lead affixed to her keel. Finally, when she does not need stiffness, the fin is taken up and the frictional area is reduced, while with the fixed keel the area of opposing surface must remain, even when a large portion of it could be safely dispensed with." What a centerboard will do is to make the process of heeling slower; but if the wind force is sufficient to heel the boat to say 40°, it is down, so to speak, to the keel, and the boat is according to the weight of the plate and the distance it is lowered; but in the case of a plate like the Vigilant's, weighing about three tons, the effect would be very trifling, and when the contra effect of the fittings and gear used in working the plate is calculated, the addition to the stability would be about nil.

"Of course, a plate could be made heavy enough to produce a sensible addition to the stability when lowered, but the time when it would be most wanted for that purpose—on a close reach—would also be the time when it would be most desirable to have it up to reduce the surface friction, and, when up, it would have the effect of decreasing stability to the same extent that it would increase it when lowered. It is simply idle to attribute any of the Vigilant's success to her centerboard. She is an enormously powerful vessel, and these qualities are due to her beam, great draught of water, and the low position in which, by that reason, she is able to carry her eighty tons of lead ballast.

"In considering the power of Vigilant, it is interesting to note that her great beam was utilized for perching a numerous crew on the weather-covering board as live ballast. Of course, this is an English yachtsman's idea, and one that does not much commend itself to English yachtsmen; but if the crew has to be on board, the windward best place for them to be arranged is as far as possible to windward. Still, if they are carried as mere 'weight,' the weight had better be in the form of lead ballast and stowed in the keel ballast box. Some pull could, however, be obtained in the length of waterline by using live ballast. Vigilant is reported to have had seventy men on deck during her matches, and we suppose that not more than forty of these would be required to work the yacht. The other thirty would weigh about two tons, which would immerse the Vigilant about three-quarters of an inch and increase her loadline length perhaps three inches. This might be an advantage, but we should still prefer the weight (if had to be carried) in the form of lead ballast.

"There is another point of view from which to regard this matter. A deck load of men in a sea may greatly interfere with a vessel's good performance, and under such condition, the equivalent weight in lead ballast, instead of the men carried as live ballast, would be an enormous advantage. At any rate, the big crew of the Vigilant does not appear to have aided her much in her trial to windward in a reef sail breeze."—Field.

RACING CUTTER SIGRUN—DESIGNED BY WILL FIFE, JR., 1892.

YACHT NEWS NOTES.

Our New Orleans correspondent, "Anodrac," writes: I have learned that the great and fast catboat, Edna H. of Biloxi, Miss., was completely wrecked in the recent cyclone that visited the Gulf Coast.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

THE A. C. A. EXECUTIVE COMMITTEE.

Annual Meeting, Nov. 4, 1893.

The present year marks the close of the first full series of meets in the various divisions of the American Canoe Association. The scheme of divisions of the one existing body was first begun in 1886, but it was not until two years later that the fourth division, the Atlantic, was formed, and though the meets of 1888 and 1889 were nominally held under the new system in the Central and Northern Divisions respectively, as a matter of fact the real inauguration of the scheme of a meet in turn in each division dates from 1890, when for the first time the inland waters, the St. Lawrence, Lake George and Lake Champlain, were abandoned for the seacoast and salt water. While the division scheme has been followed ever since, a certain departure has been made in holding one meet outside of the territory of the division, and also of holding two successive meets in the same place, Willsborough Point, in the Central Division, though practically on the boundary line between it and the Eastern.

While opinions differ as to the success of the whole scheme of meets in the various divisions in rotation, it is safe to say that the expectations of the originators of the scheme have by no means been realized, and such serious objections have developed in the practical test, that there is now a strong and growing feeling in favor of the abandonment of an important part of the division scheme, and the selection of a central camp ground which shall be used for an indefinite time, until circumstances dictate a change of location.

The question has been discussed this year, but, as the rules stand, there are some obstacles in the way, even if such a course were generally desired; and there is also a very strong feeling on the part of a number of the members in favor of a meet near New York city.

The chief business of the executive committee at the annual meeting held last week was the selection of a site, but the circumstances were such that a final decision by the committee was impossible at that time and the location of the next camp is not yet known, though there is every probability that it will be at Croton Point, on the Hud-

son River, just above Sing Sing, New York. Like the previous meeting in the Atlantic Division in 1889, the meeting of 1893 was called at Clark's restaurant, in New York, for Saturday, Nov. 4. The members of the A. C. A. executive committee, including the general officers of the Association and the division executive committees, are as follows, those present being marked thus \*:

\* Commodore, Irving V. Dorland, Arlington.  
\* Sec'y-Treas., Geo. A. Douglass, Newark.  
\* Librarian, W. P. Stephens, Bayonne.  
Eastern Division: \* Vice-Com., E. H. Barney, Springfield; \* Rear-Com., C. F. Shuster, Jr., Holyoke; \* Purser, E. C. Knappe, Springfield; \* Ex. Com., G. L. Farnelle, Hartford; \* Paul Butler, Lowell; \* R. Apollonio, Winchester.  
Atlantic Division: \* Vice-Com., C. V. Schuyler, New York; \* Rear-Com., Barron Fredricks, Newark; \* Purser, F. L. Dunnell, Brooklyn; \* Ex. Com., J. R. Lake, New York; F. W. Noyes, Philadelphia; \* J. K. Hand, New York.  
Central Division: \* Vice-Com., W. C. Witherbee, Port Henry; \* Rear-Com., G. Belmont, Amsterdam; \* Purser, C. E. Cragg, Port Henry; \* Ex. Com., C. V. Winne, Albany; W. E. Huntington, Rome.  
Northern Division: \* Vice-Com., H. M. Molson, Montreal; \* Rear-Com., George Schofield, Peterboro; \* Purser, H. R. Tilly, Toronto; \* Ex. Com., W. H. Macnee, Kingston; W. L. Scott, Ottawa; C. E. Archbald, Montreal.

Mr. Noyes was not present, but was represented by Mr. R. H. Peebles. Saturday was one of the most unpleasant days of the fall, a very heavy rain falling steadily all through the day and evening. Those who once reached the friendly shelter of Clark's were glad to stay within it as much as possible, and one continuous session was held from about 10 o'clock until 6 P. M., a great deal of business being transacted in a very complete and satisfactory manner. Besides the executive committee there were present Messrs. Whitlock, Wilkin and other A. C. A. members, and, apart from the immediate business which appears on the minutes, the affairs and prospects of the Association were very thoroughly discussed.

Before the meeting was called to order Com. Dorland appointed a special committee, Messrs. Wilkin, Stephens, Douglas, Schofield and Butler, to arrange and formulate the various proposals for amendments to the racing rules, these proposals not being presented in such shape that they could be voted on.

The first business of the meeting when it was finally called to order was the report from the retiring Sec'y-treas., Mr. R. Easton Burns, and also the report of the regatta committee.

Contrary to the usual procedure, by which the amendments to the racing rules are taken up after all other business toward the end of the meeting, Com. Dorland called for the reports of the retiring regatta committee and of the special committee at once, and both were read.

The first amendment proposed was to the "one man, one canoe" rule, a question having arisen this year over the right of a man to use more than one canoe in the races, other than the paddling trophy. A reference to the Year Book disclosed the fact that the second clause of Rule II., prohibiting the use of more than one canoe except when specified in the regatta programme, was no longer in the book; though, so far as we have been able to learn, there is no record or recollection of the rule having been legally changed. After discussion, it was decided that, in view of the changes in racing since the original rule was framed in 1884, and of the fact that the conditions which called out the rule no longer existed, there was no necessity of amending the present

reading, which does not prohibit the use of more than one canoe; and that a member may in the future enter as many canoes as he may wish to in the various events.

The next amendment related to Rule V., the record races, two of the canoes entered this year having carried standing rigs, which were unshipped and shipped at each turn of the combined race. Both canoes were disqualified by the regatta committee at the time, the common understanding and the established custom being that a hoisting and lowering rig must be used in the combined race, and in order to prevent dispute in the future the committee recommended a positive statement to that effect in the rules. After discussion it was decided to insert after the third clause of Rule V. a clause to the following effect: "The same canoe and rig shall be used in each of the three record races, and the rig must be fitted to hoist and lower practically. The existing conditions are not altered by this addition, as the practice in the past has been in accordance with it. It refers, of course, only to the three record races."

The next proposed amendment related to Rule IX., the change proposed being to admit of an appeal to the executive committee from a unanimous vote of the regatta committee, such appeal being now permitted only in case the regatta committee is not unanimous in its decision on an appeal. A lengthy discussion followed, bearing less on the matter in hand than on the question of any appeal at all from the decision of the regatta committee to the executive committee, in the course of which the original proposition was entirely lost sight of. Finally Mr. Winne moved to amend the motion originally made, to adopt the amendment as proposed by the special committee, by adding the following words, "which shall consider and decide the same immediately." The result of this amendment to the original motion would be that an appeal might be made to the executive committee, whether the decision of the regatta committee were unanimous or otherwise, and that the executive committee must meet in camp and make an immediate decision. Mr. Apollonio then moved to amend Mr. Winne's motion, making it apply to the rule as it now stands, and also demanding the deposit of a dollar with the second appeal; and this motion was finally carried.

In this connection the committee recommended some minor changes of the rule to correct some obvious errors, and they were adopted, the rule as finally adopted reading as follows: Rule IX.—Should the owner of any canoe duly entered for a race, consider that he has fair ground of complaint against another, he must give notice of same to the Regatta Committee; and must present the same in writing to the Regatta Committee within one hour. The sum of one dollar shall be deposited with each protest, to be forfeited to the Association should the protest not be sustained. The Regatta Committee shall, after hearing such evidence as they may deem necessary, decide the appeal; and the decision, if unanimous, shall be final; but, if not unanimous, an appeal may be made to the Executive Committee, which shall consider and decide the question immediately; and whose decision shall be final. The sum of one dollar shall be deposited with the second appeal also." The final clause of the rule stands as before.

The next amendment proposed was to Rule XII., permitting back strokes of the paddle, but it was not adopted. Rule XIX. was amended by dropping the words, "with the wind free," correcting an obvious inconsistency in the existing wording.

The question of a positive decision as to the awarding of a record prize in the case of a tie, such as occurred this year, was brought up and discussed, but was laid on the table.

The report of the purser of the Northern Division was read and ap-

proved, subject to a proper audit, being ordered returned for that purpose. In considering this report the question of division representation came up, it being evident that the Northern Division had elected more members of the executive committee than it was entitled to—one for each 100 members, after the first 100. The membership of the division being but 178, it was entitled to but one member instead of three. It was moved to refer the matter to the division committee to decide which of the three should be retained.

The report of the purser of the Central Division was then read and referred back as incorrect and not audited. A majority of the division committee being present, they decided to retain Mr. Winne as the sole representative to which the division is legally entitled.

The report of the Purser of the Atlantic Division was then read. The question was raised that the Atlantic Division was not paying to the A. C. A. the legal proportion of its receipts; but on reference to the Constitution it was found that such was not the case, and the report was accepted. After a further discussion of the question of representation, in the course of which several proposals were offered but not adopted, it was decided to refer the matter to the division committee, and during the recess a little later a meeting of the committee was held at which Mr. Hand withdrew, leaving the legal number of representatives. The report of the purser of the Eastern Division was then read and accepted.

The following motion was adopted: It is the sense of this meeting that the financial membership reports of the pursers, as submitted to the executive committee at the November meeting, shall be the basis for the election of the Division executive committees for the following year. The amendment proposing a board of governors was taken up but laid on the table.

The matter of electing associate members was then taken up, Vice-Com. Schuyler offering the following motion: It is the sense of this meeting that no associate member shall be elected who has not attended one general and one Division meet. The motion was lost by a vote of 9 to 5, after which the following ladies were elected associate members: Miss E. Pauline Johnson, Miss Constance Braine, Mrs. A. Amois, Miss Lou Bond, Mrs. Howard Gray, Mrs. C. G. Belman. The next question discussed was that of the date for the meet of 1899, and Com. Dorland made the suggestion that July be selected in place of August. The suggestion was very favorably received, and on motion of Dr. Parme it was decided to begin the meet on July 13. The question of a two or three-weeks' camp was then discussed, the former time being decided on.

The question of location was then taken up, and after some preliminary discussion an informal vote was taken, the majority being in favor of a meet in the Atlantic Division, and most of them naming Croton Point. The only other site in the division which was seriously discussed was Chimmom Island, and a letter was read from the owner, Mr. Warren E. Smith, making a very liberal offer; but in the opinion of all who had visited the island it was not suitable for an A. C. A. meet.

After a full discussion of the question, in which it was stated that Croton Point possessed many advantages and was practically the only available site within the division. At the same time the officers had not been able thus far to obtain permission to hold the meet there, and pending such permission no final decision was possible. A motion was made that the selection be left to the division committee, and the executive committee of the Atlantic Division, but finally the matter was left to the executive committee of the Atlantic Division.

A motion by Mr. Lake, that a committee be appointed by the commodore to consider the question of a permanent site for the A. C. A., to report to the executive committee at the meeting in camp next year, was carried after a long discussion in which the two sides of the question of a permanent or semi-permanent camp vs. a camp in each division in turn was warmly debated. The motion was finally carried.

The amendment proposed by Mr. Wilkin, creating a board of governors, was then taken up and discussed at length, the opinions generally being in its favor. A number of questions were asked as to the exact details of the plan and its probable working, and it was finally carried unanimously as follows:

#### BOARD OF GOVERNORS.

**Board of Governors.**—ART. IV, Sec. 4. The executive committee of each division, as soon after the passage of this section as convenient, shall elect one member of that division to serve on the board of governors of the association, whose duty it shall be to have general control of the association.

The board of governors at their first meeting shall by lot determine their terms of office, one to retire on Nov. 1, 1894, one on Nov. 1, 1895, one on Nov. 1, 1896 and one on Nov. 1, 1897, and thereafter all members shall be elected in each division at its annual meeting in the same manner as its other officers, and their terms of office shall be four years or until their successors are elected. The commodore shall be a member *ex-officio*.

**Duties.**—Sec. 5. It shall be the duty of the board of governors to appropriate and apportion suitable sums to the officers and committees for necessary expenses for the running of the association and the camps, etc., from the financial report in the hands of the secretary-treasurer. They shall hear and determine all questions of dispute on appeal from the decisions of the regatta or executive committees when referred to them.

**Quorum.**—Sec. 6. At all meetings of the board of governors three shall constitute a quorum, but in the event of the absence of any member, the executive committee of the same division from which he comes may select any member of that division to serve in his disability only, and in the event of a vacancy occurring, the same shall be filled for the unexpired term by the active members of the division in the same manner as for a full term.

**Meetings.**—Sec. 7. The stated meetings of the board of governors shall be held during the annual meeting of the association in August, and at the annual meeting of the executive committee in November, but special meetings may be held at any other time, at the call of the president or at request of three members of the board.

**Officers.**—Sec. 8. The officers of the board shall be president and recorder, whose duties shall be as in other organizations and they shall be chosen annually at the stated meeting in camp.

**Art. IX, Sec. 1.** Amend by adding after the word "commodore" in sixth line, "but no money shall be paid out in excess of the appropriation made by the board of governors," and substitute in sixth and seventh lines "he shall" for "and to."

An amendment proposed by Mr. F. C. Webb, of Staunton, Va., to change the boundaries of the Atlantic Division so as to coincide more closely with the natural watershed, was carried without discussion. A letter was read from Mr. J. C. Massa, of the Orange C. C., suggesting that the yearly receipts for the A. C. A. dues be in the form of a ticket, similar to the L. A. W. receipt, but no action was taken. Mr. Winne offered a motion that the prize fund established in 1892, and temporarily devoted to other use be re-established, which was carried. A vote of thanks to Com. Cotton and Sec'y-Treas. Burns, was then passed unanimously, after which the meeting adjourned.

At 7 P. M., the members came together again and others arrived to the number of fifty, New York and the Passaic River. A long table was spread in the large dining room, and a very pleasant evening followed. No speeches were made, and the proceedings were very informal and thoroughly enjoyable. Compared with the meeting of 1899 at the same place, the number of old members, especially from the New York and Knickerbocker Clubs, was very small, and very many familiar faces were absent. On Sunday, the visiting canoeists were entertained by the various local clubs.

#### The Shy Boat.

WHY don't the Atlantic Division grow? Many reasons are given. Bicycles, fires, wrecks, etc., but really it is the "shy boat." Ask most any old canoeist how he became one and he will tell you, "A friend invited me to go with him in his canoe, and I liked it so well that I got a canoe, or 'Nessmuk,' Vaux, Thetis or Jabber wrote about it and I went cruising." But most of the Atlantic Division canoeists have racing canoes, and it would be ridiculous to invite a friend to go cruising with them, or to allow a novice to attempt to handle the canoe. The waters of this Division are so well adapted to fine sailing that we've all tried racing canoes and overdone it, and as not one man in ten makes a good racer, many have become afraid of their "shy boats" and large rigs, and either drop the sport altogether or go about it in half-hearted manner, not expecting any one to become a very smooth, sitting about the house or on the float, killing time, or making excuses. Some of the older sailors, who love the water too well to stay away from it, have gone into "Scarecrows" or canoe yavls. The Division gets almost no new members. The Northern Division grows, they had the meet this year, and that may have helped them some, but the reason is they use mostly open paddling canoes, or roomy, lightly-decked cruisers with small rigs, which can be handled by a novice without a surfeit of a ducking.

Boys! Look back at the cruising and sailing you used to do when you were afloat in all weathers, and sailed races with less than 50ft. of sail, when you didn't hesitate to ask any one to "come along." Can you remember any part of your canoe life that you enjoyed as much? Would you not like to see if you don't have some fun (grudge) to try your shy boat, and would you not like to see if you can't make a "canoe crank" after once trying it? If canoeing in this division is to wake up and not die of dry rot and rank and file have got to get back to cruisers, roomy, comfortable paddlers or sailers, and get new men to come in or old ones to come back. Let's have some races with old-fashioned "handkerchief rigs," say not over 50ft., shy boats, open boats and cruisers together, and see if it don't have some fun. We're in it for fun and if outsiders see we enjoy ourselves they will want to join us. Use a canoe that is beamy and has little deck, but lots of room, and your friend, or even your best girl, will want to go

with you, and your friend will be apt to want a canoe of his own. Let's get back to cruisers with very small rigs and see if canoeing in this division won't wake up. It's time. CANOE CRANK. NEW YORK, Nov. 3.

##### C. E. WARDWELL, Purser.

#### The Detroit Boat Club Fire.

The Detroit Boat Club house on Belle Isle, caught fire about 3:30 o'clock Sunday morning. The wind was blowing a hurricane at the time, and there being no protection against fire in the immediate vicinity the club house was entirely consumed, together with its contents, which included all the club's racing boats and shells, as well as pleasure boats.

There had been a dancing party at the club house on Sunday evening, but it broke up about 11:30 and before midnight every person had retired toward the island, but he succeeded in getting through one of the reception rooms and jumped into the flames had been seen by tower watchmen and an alarm turned in. A fire engine was sent across the bridge, but it, too, arrived too late to be of any service.

The building was erected in 1890 at a cost of \$10,000, and was regarded as one of the best boat club houses in the entire country. It was insured for \$8,500. The furniture costs \$4,000 and the boats, shells, etc., about \$4,000; but this, by no means covers the entire loss. There were private boats in the club house valued at not less than \$3,000, but the club will find its greatest loss in itself, which included photographs of all its officers since the club was organized on February 18, 1889, together with prize trophies of every description. The total loss will not be less than \$30,000.

A meeting of the club directors is being held this afternoon, at which it is the intention to take immediate steps toward rebuilding. President Jupp says the new building will be much larger and commodious than the burned building.—Exchange.

#### Hoboken C. C. Smoker.

At the last meeting of the Hoboken Canoe Club the members decided to hold their first "smucker" on Dec. 2 at their club house, foot of Tenth street, Hoboken. All canoeists welcome. J. FROST, Capt.

## Rifle Range and Gallery.

#### Zettler Rifle Club.

The season shoot of the Zettler Rifle Club for 1893 at the 200yds. range was brought to a close in Wissel's Cypress Hills Park on Oct. 22. The programme called for fifteen shots on practice days, but on account of the Zettler Club occupying the range on Sept. 10 for the annual fall shoot, the practice shoot was restricted to five days. The attendance was not what was expected, only thirteen members filling out their scores on the programme, which called for fifteen prizes, amounting to \$150, divided as follows: For the best 50-shot scores, first \$25, second \$18, third \$15, fourth \$14. For the best 35-shot scores, first \$12, second \$10, third \$8. For the best 25-shot scores, first \$7, second \$6, third \$5, fourth \$4, fifth \$3. The following appended scores were made by the members participating during the season:

Fred C. Ross, 50 scores.										Henry Holges, 50 scores.

## Trap-Shooting.

All ties divided unless otherwise reported.

### FIXTURES.

If you want your shoot to be announced here send in notice like the following:

Nov. 8-10.—Highland Gun Club tournament, Des Moines, Iowa.  
1894.

April 4-6.—Interstate Manufacturers' and Dealers' Association's Grand American Handicap at Dexter Park, Long Island.  
May 22-24.—Knoxville (Tenn.) Gun Club tournament, \$1,000 added money.

June 10-21.—Chamberlain Cartridge and Target Company's first annual tournament, at Cleveland, Ohio, \$1,000 added money.  
June (third week).—Atlantic City Rod and Gun Club, three days' tournament. Address E. C. Griscom, Sec'y, Atlantic City, N. J.

### DRIVERS AND TWISTERS.

Every sportsman in America knows personally or has heard of Rene T. Clayton, the handsome blonde who presides over the destinies of the United States Hotel, at Tamapa, Pa., that is to say, his name is on the signboard and he "presides" when he does not happen to be away at a trap shoot. He is a rattling good shot in the field or at the trap and usually manages to "pull out whole" in either live bird or target contests. He has a host of friends in trapshoot and adds to the number whenever he goes by his unfailing good nature and genial manners. He ranks as an amateur among target shooters, although at times his pace is pretty hot. Some months ago he conceived the idea that if an amateur could be provided with the means of "holding on" to quartering targets instead of shooting into space in order to break his scores would be materially improved, so he put his thinking cap on and finally evolved what he calls "Clayton's switch sight," got it patented and put a big lot on the market to catch the buyers. The success of the sight exceeded even the expectations of the inventor and to-day the demand is in excess of the supply, although he will soon catch up with his orders. The invention is a simple one, devoid of all complication and does not require the services of an expert mechanic in adjusting. The parts comprise a flat, thin plate of steel on the front end of which is a bead sight, and a small screw which passes through a hole in the rear end of the plate and is turned into the hole intended for the usual fixed bead sight. Along with each sight is a tap to thread this hole. When shooting at quartering targets the sight is moved either to the right or left, the bead held "dead on" and "a break is usually the result," says the inventor. It is useful, of course, only when shooting at known angles. It is really one of the most valuable inventions of recent date and deserving of the warm reception it has received from amateur shooters. It is sold at the extremely low price of \$1.50, which places it within the reach of all shooters.

Josh Billings' saying that, "It is better not to know so many things, than to know so many things which ain't so," could be applied with force to Walter B. Peet, author of an article entitled "Handling the Shot Gun," which appeared in a recent issue of the *Chicago Inter-Ocean*. The article contains many points which will be of benefit to the beginner, but on the other hand it contains some glaring inaccuracies. For instance, in instructions for aiming, Mr. Peet says, referring to the front sight, "If you see too much of the sight you will shoot over, if too little your charge will go under." The effect of seeing too much or too little of the front sight, as every shooter knows, is the reverse of what Mr. Peet asserts. He also states that, "In the Hurlingham rules for trap shooting, which is the code most used at present, the contestant is required to hold his gun below the arm pit until the call of 'pull,' " which statement proves conclusively that he does not study the trap columns of *FOREST AND STREAM*. Had he been accustomed to doing so, he would have seen an autograph letter from the secretary of the Hurlingham Club, stating that the rules had been the reverse of what Mr. Peet asserts. He also states that, "The gun could be held in any position. This letter was published in our columns over a year ago. Again he says, "A general rule, worth remembering, is that the stock should not be \* \* \* \* \* so short as to bend the right arm too much, and bring the right hand close to the nose of the shooter." This part is all right but in connection with the article is shown a picture (by Travis), over the caption, "Correct position for holding gun," which shows a shooter with his right shoulder, the gun stock being so short as to bring the thumb near the ear, and the hammers alongside the eye.

It is amusing at times to hear the remarks passed in reference to the relative skill of various shooters. At the first Elliott-Olsen match some of the spectators were heard to say that the two men could defeat any two men on earth in a live bird contest—because they killed 239 out of 250 birds on that particular day. No allowance was made for the weather conditions nor for the atmospheric effect upon the birds, the opinion being based solely upon the cold figures. The day has gone by when any man, pair, trio or quartette of men could sally forth and "shoot the deck." So far as individual skill is concerned we consider ourselves safe in asserting that there are in this country at least 100 men, the skill of any one of whom does not vary one per cent. from that of any other of the number. If all men were in proper form, all things being equal, a 100-bird contest between these 100 men would be so close that the slightest element of luck might determine the result in favor of any one. In New Jersey there are a dozen or perhaps fifteen men who shoot so wisely that they can be taken to scores that is not a "sure thing" to wager on any one. It is safe to say that were these men, along with J. Frank Class, to engage in a 100-bird contest, when conditions were equal and all were in form, it would be impossible to pick the winner. And yet not a Jerseyman except J. L. Brewer and John Riggott ever showed pluck enough to meet Class at the trap in an up-and-down contest.

New Jersey gun clubs should lose no time in affiliating with the State League in order that a new series of team contests may be inaugurated. The contests of this league have thus far been successful and pleasing affairs, and the only regret of the projectors is that such a small number of clubs took part in the sport. There are at least a dozen active clubs in the State, and it would seem as though one half of these should be able to muster teams for these contests. Clubs should consider the advantages of being able to make new and renew old acquaintances at the monthly contests of the league and promptly join. Mr. Wm. R. Hobart, 59 Halsey street, Newark, N. J., is secretary of the league and is ready to receive propositions for membership as well as to answer all queries.

In another column will be found an article under the caption of "Pigeon Shooting—Past and Present," which we commend to the careful attention of all interested in trap shooting. The author is the well-known "Gaucho" (Arthur W. Du Bray), whose facile pen has made his writings popular wherever sport is known. Mr. Du Bray is personally and favorably known throughout the country as a genial, whole-souled sportsman, and one who is sure of a welcome wherever he goes. His sentiments anent the brutal methods formerly used in live bird, trap and handle matches will commend themselves to all who have the interests of pigeon shooting at heart.

On Thanksgiving Day, Nov. 30, the Forest Gun Club will give an all-day shooting tournament on their grounds, Twenty-seventh street and Lehigh avenue, Philadelphia. The club intends making this one of the best tournaments ever given in Philadelphia. It is the best equipped ground and easiest of access of any in Philadelphia at the present time. Bluecock targets and expert bluecock traps will be used. Wm. Morrison, Sec'y, 3232 Ridge avenue, Philadelphia.

In answer to a popular demand from sportsmen for lower prices on the higher grades, that they may continue their use as against so-called smokeless powders, the Hazard Powder Co. has made a reduction in its "Electric" and "Duck Shooting" brands of from sixteen to twenty-five per cent.

The new model 12-bore single barrel shotgun made by the Remington-Union Co. of Ilion, N. Y., is rapidly coming into favor, and is used by a number of trap shots. It is a light-weight, and for this reason will soon attract the attention of the live shooters.

Another find, trap and handle match will take place at Martin's Hotel, Pine Brook, N. J., on Nov. 16, between Eugene Pierre of Boonton, and Samuel Castle of Newark. The conditions are 25 live birds per man, 25yds. rise for a stake of \$250 a side.

A private letter from Readville, N. C., reports quail in abundance all over that section. The Richmond & Danville Railroad runs direct to Readville, High Point, Greensboro, Charlotte and other prime game centers, and their service cannot be excelled.

Elmer E. Shaner, of Pittsburg, the popular and efficient manager of the Interstate Manufacturers' and Dealers' Association, has devised a new indicator which does away with all the elements of luck when targets are thrown under the Novelty rule.

Wm. and John Dukes, of East Orange, and Lewis Dentz, of Harrison N. J., spent three days last week in Hunterdon county, and bagged 34 rabbits, 13 quail and 5 grouse. This week they were to start for the West on a hunt for big game.

Programmes of the 1894 tournament of the Chamberlin Target and

Cartridge Company will be out about January 1. Bound with the programme will be the company's catalogue and a price list, and advertisements of all the leading sporting goods houses of the country. It will be embellished with a large number of half-tone hunting and fishing pictures and prominent trap shots. Fifteen thousand copies will be published of the first edition. Paul North has the work in hand.

T. W. Morfe, of Paterson, and Theodore Morford, of Newton, are to-day engaged in shooting a match on Martin's Pine Brook grounds, the conditions being 100 live birds each, for \$100 a side, Hurlingham rules to govern.

The entire lot of extra finished guns comprised in the Greener exhibit at the World's Fair have been purchased by Henry C. Squires, 178 Broadway, and are offered by him at regular list prices.

The heavy rain of last Saturday caused a postponement of the second match between Class and Elliott. The match was to have come off on Wednesday, too late for this issue.

Some lively work will be seen at Springfield, Mass., on Nov. 25, when the Yale and Harvard gun clubs will meet at the traps for their annual contest at artificial targets.

Wm. Lyman, he of "Lyman Sight" fame has been "doing" the trade in New York and vicinity, and met with good success. His sights are always in demand.

The shoot off of the tie between Bogardus and Hall will be shot at Springfield, Ill., on Thanksgiving Day, Nov. 30.

Nutley, N. J., has a gun club, newly organized, which will equip fine grounds in a convenient location.

Next Thursday will be Essex Gun Club day on Al Heritage's ground at Marion.

C. H. TOWNSEND.

### Pigeon Shooting—Past and Present.

Editor *Forest and Stream*:

Pigeon shooting as compared with many other outdoor sports is of comparatively modern origin. Prior to 1850, the shooting of birds released from traps had never been gone into to any great extent, so as to compare with football, cricket and indeed most of the leading games indulged in by men and boys alike, pigeon shooting is only a recent pastime.

Unfortunately, for the lovers of this sport the impression has arisen with many, principally ladies, that it is decidedly cruel to shoot at a bird sprung from a trap, while some men aver it to be unsportsmanlike even to go into a pigeon match, declaring in support of their objection that a bird should be at freedom and allowing no woman to take part by eluding its pursuer by stealth or else flying off before he is near enough to harm it, in other words that nothing but field shooting, pure and simple, should be recognized.

It is not to be denied that field shooting is on a much higher plane than pigeon shooting could ever reach. There is absolutely nothing sentimental in the mere killing of pigeons over trap; it is purely a test of skill, and was never intended to represent anything else. On the other hand, the many who stickles in the point of allowing a dog to bait the sportsman by hiding or in any way making itself scarce, ought not, logically, to shoot over a dog, for the *raison d'être* of the latter is simply to find the game, so that when it is flushed his master may shoot at it. Now, field shooting without a dog is worse than Hamlet minus the ghost, for after all the very best dog is the one that finds the most game, or in other words the dog that allows the least amount of time to elapse between the time the sportsman is told to make maulike to shoot a bird confined in a trap, it is necessarily so to shoot one that has already been located by a dog, for nine times out of ten, the gunner unaided would never have had the offer.

The greatest back set trap shooting has ever had, was when "find, trap and handle" matches came into vogue. The brutality of many of these contests was simply horrible; the most barbarous methods were used, and the most deplorable results, and no wonder that the heads calling themselves men sportsmen forsooth, disgraced humanity by torturing harmless birds in order to win a few paltry dollars or acquire a degree of fame (?), no wonder, I say, that the rest of mankind tabooed pigeon shooting as a whole, making all suffer alike as a penalty for the trickery of cruel black-legs bent on winning a stake or reputation regardless of the commonest laws of decency. These "find, trap and handle" matches were in a great measure merely gambling schemes, where the handle person always won, and greater part than those who actually did the shooting. In such affairs it was of upmost importance to have at one's back a person well up in the most devilish arts, in order that he might at least keep abreast of the man trapping against one for his opponent. Two men engaged in a "find, trap and handle" match being of equal skill, it was always dollars to cents on the man's winning who had on his side the most cunning and cunningly disguised person, who was often solely on the handier, when it was once known who should handle against him—clearly proving that the shooting was quasi of secondary consideration, so much stress being laid upon the effect produced on the defenceless pigeon, after it once left the merciless hands of its brutal captor. No one could from a demi-civilized standpoint, uphold such savage practices under the guise of sport, so that at once the shooting disgusted with the way in which it was being carried on, and declaring it a brutal degrading pastime and censuring in no measured terms its advocates.

Nowadays, fortunately, all such butchery of birds is removed. We now shoot at the best-flying pigeons we can procure; we shoot them from five ground traps, 5yds. apart, give them a good long start, and if they are wounded with the first barrel the second generally gives them a coup de grace, or else instantly kills them, and we waded bird, ending his suffering. So that as a matter of fact pigeons are much more humanely and carefully treated than poultry huddled up in coops, carried head down by the legs, bruised and banged about in a thousand ways, and eventually decapitated with a dull ax or saw-like knife at the hands of whoever has stomach enough to perform this delicate operation. Pigeons are now shipped in roomy coops, are well watched and fed, and at first the shooting grounds are given the best care, for non-fliers are a dead loss to the pursuer, and are purely a matter of economy everything is done to insure their being in good health and well able to take care of themselves when once released from the traps.

A great deal of discussion and condemnation has arisen from the shooter being allowed the use of both barrels when shooting at the trap. There is nothing to be said against this from any rational standpoint, for every one has the same privilege in the event of game birds, merely wounded the humane shot at once kills it, if possible, with his second barrel. Many birds that would fly off and out of bounds, though badly wounded, are at once killed outright by the dextrous use of the ever ready second. In field shooting one always uses the second edition when the first has not accomplished its purpose, and as it is well known that gunshot wounds are not painful until after a certain time after being received, it is quite reasonable to suppose that is at once killed by the trapper on being gathered cannot have suffered any more than had it been beheaded or killed in any other so-called legitimate method. Birds killed at the trap are invariably used as food, hence it is that they are well cared for, first to insure their being good rapid fliers, and secondly, so that when dead they can readily be sold for the table. The cruelty therefore of pigeon shooting is entirely a matter of management, and not for mankind to be compared with that inflicted by men who habitually fire into flocks of game birds, killing a few and wounding many others that wander off to die a lingering death or become a prey of carnivorous birds or beasts. It was, or has been a cruel sport, but when properly carried on there is absolutely nothing of that character about it. On some grounds, I admit, birds are allowed to suffer, wing-broken birds or birds shot so they cannot fly off are permitted to limo around the traps or lie stretched on the ground, bleeding and crippled, writhing in agony, but that is entirely due to the want of management and cannot in fairness be charged against the sport itself. Such birds being actually detrimental to it, as they serve as decoys and materially interfere with the flight of all birds subsequently released.

Let any one who considers pigeon shooting cruel go to John Watson's Park at Longwood, and watch the way in which most change his views. The same must be said of all the crack clubs in the country, where thousands and thousands of pigeons are shot every year, and never a one is allowed to suffer, unless indeed those that fly off wounded—against which wounded birds field act as an offset.

Another thing, men who habitually shoot pigeons are for the most part provided with the best guns and use the best and most expensive ammunition, and that for no other reason than that the gathering of wounded birds of yore an art by itself, and is now a thing almost obsolete. Now one uses a well choiced duck gun loaded with a powder that instead of producing a volume of smoke so dense as to be impenetrable, emits a thin vapor, transparent and fleeting, obscuring nothing from view, leaving the bird clearly visible, admitting thereby the instantaneous delivery of the second barrel. Aside from this, either because certain smokeless powders deliver the load more compactly and with greater force, fewer birds are wounded than formerly; it is now generally a clean, sudden kill, resembling the impact of an electric shock, or else a clean miss altogether, though of course some birds must be wounded and will so continue to be so long as shooting at them exists in any form.

It is to be regretted that men still continue to import pigeons long distances, generally by rail, when they come packed too solidly in crates, and where the feathers must be packed in such a way as to be stuck together to such an extent they cannot fly. Such shooting is entirely devoid of sport. It is at such pigeons that long runs of kills

are made, and it is in witnessing such insipid slaughter that men form erroneous ideas as to the possibilities of the sport. To charge the tameness of such shooting against the sport in general is parallel to comparing a game of baseball as played by some small village club, on a ground ankle deep in mud, swimming in ice water in winter, or chasing an antelope mounted on a worn-out city hack. And yet many men who have not the faintest idea of the pace and vim latent in a cooing pigeon, who have never seen one dart out from an end trap as though each wing was trying to overlap the bill in its anxiety to annihilate space, will complacently tell you that killing pigeons is easy, that you hold the gun where you please, that you are allowed two barrels, that it is always done in an open field, and to sum it up that the bird has no chance. All I can say to such is—let them try it—at Watson's in winter, with the wind at Lake Michigan, at Larchmont in a shifty breeze, or at any crack New York club—to say nothing of hundreds of places where good strong birds are trapped, and where the wind has a fair sweep at them. One single effort will dispel the illusion, for while it is easy enough to kill 70 or 80 per cent. of one's pigeons, yet every 1 per cent. after 85 is very hard to squeeze out, so hard indeed that but few men have the power of reaching beyond as a steady average.

Pigeon shooting should always be done over two or more traps, extending at least 20yds. apart at the extremes. The strings that operate the traps should always be concealed. The traps should invariably be placed in a totally bare spot, clear and smooth, the King trap being the best, though a scoop trap makes very fair birds of only mediocre ones and scorchers of really good pigeons. The rise should never be less than 30yds., while the boundary is about correct at 50.

In the matter of guns, assuming the 12-gauge to be standard, a 16-bore ought to go in at least 4yds. instead of 2; for no 16-gauge with an ounce of shot can equal a correspondingly good 12, even with the advantage of being in effect, with its second barrel. A thoroughly good 16-bore is absolutely certain, when properly loaded, to follow any bay 23yds. rise with the first barrel; but on thunderbolts that vanish through the air, leaving naught for the wistful eye to gaze on but a dim, fleeting meteor frantically endeavoring to overtake its own shadow, a 16-gauge can't be compared to a 12. It is not in the gun nor in the load, though skillful, steady handling will accomplish great things. On this subject I may be pardoned for speaking feelingly, as experience is availing the best teacher.

Over-loading should be avoided, especially in long matches. Great scores have been made by only 3drs. to, say, 46grs. of E. C. and 146oz. of shot. Per contra, J. L. Brewer, perhaps the greatest pigeon shot to-day, uses tremendous charges of powder, going up to 50grs. or more. Physically a very powerful man, constitutionally rugged, of a nervous organization that little feels, such a man can lead a pace on loads that would incapacitate any other man, and his ability to bring can counteract bad shooting, whereas the very best shot and holder may soon become totally disabled by over-charging his gun. It is erroneous to suppose that anything beyond the rational limit is advantageous. The speed of a charge of shot may be increased up to a certain point by adding to the powder; after that its pace is gained at the expense of the regularity of its delivery, but above all the jarring and bouncing of an overloaded gun will make flinching a certainty, will generally scatter the charge and may strain the hand and eye. The writer has seen men using but 23yds. of E. C. kill bird after bird stone dead. He himself has made good scores with a 16-gauge using only 24drs. of same kind of powder. The crack pigeon-gun maker of London, a man whose name is known the world over as having always advocated large charges of black powder, advises his customers to keep under the 47grs. limit. That, coming from such high authority, is convincing any one of the utility of moderate loading to obliterate time and space by using such tremendous charges that no gun can long withstand them. All nitro powders are greatly influenced by the kind and quantity of wadding used; 42grs. well wadded will actually shoot much harder than 48 with insufficient wads. So, also, does the crimp play a very important part. Velocity or penetration (synonymous terms) to the whole charge is lost in the wadding, and the regularity of shooting, by a rational load well wadded and crimped than by more powder not so well confined and held down.

Close observation of this very interesting sport teaches these things—isolated cases to the contrary proving nothing. A small percentage of men can withstand continued severe punishment without its interfering with their entire nervous system—the worst that happens to them is to be a little sore of the shoulder—but the great majority bruise themselves less because they continue to use the same old wadding progresses, dodge away from it in fact, and score less in consequence. A gun with a very crooked stock, when overloaded will kick back and hurt the shoulder; one with a straighter stock in addition to this reaches up for the jaw or cheek bones and gives these such a sudden jolt at every discharge that self-preservation soon asserts itself, and instead of facing the stock, the only way to properly align the bird is to lean the body away from the gun, and the legs being planted where the shooter is looking; result, pigeon moves off gracefully and serenely and a goose egg adorns the score. The mania for over-loading is very natural, especially among those who have for many years used coarse, slow-burning black powder. Of this kind four drams could be used in an 8lbs. 12-bore, and then but little recoil was felt. Indeed only a portion of the load was consumed, whereas now with nitro powder the whole charge is used, and out of all reason, if properly wadded and shell crimped as it should be. Unfortunately, we are becoming educated to the new powders, and in proportion to our knowledge generally, so do we decrease our charges.

It needs no vivid imagination to discover that in days when spring traps were in vogue and fated pigeons were tossed in the air to be instantly snapped out of existence by men using scattering guns—shot-birds to the last—the last word in the matter was not much sport in it, for then the bird never so good, the shooter given a very different idea of being included all possibility of his taking flight until he had overcome the impetus of the powerful flip. In the meantime, while dazed and completely bewildered, a whirlwind of small shot came pelting at him, so large in scope and dense in volume that there was no evading it. So his aspirations were cut short, and riddled, he falls to the ground without even a chance to spread his wings.

Now could the 23yds. rise trap be considered much better form, for here also, although to a lesser degree, the birds were pitched out of the trap and given an unnatural flight, being generally killed the moment the trap was sprung. Both styles were bad alike. They balked nature in the endeavor to accelerate motion, and neither style had a vestige of semblance to field shooting. The traps were always known ones, which is all wrong. The rise was short, though quite fair enough for the guns then used; but the wadding was always a suspicion in the minds of some, that they were getting a plentiful supply of harder birds than their opponents. And although this very frequently was a matter of luck, still it will always obtain where known traps govern.

Now, with good lively birds, traps further away and many yards apart, no one can be favored when shooting under standard rules; birds that are fast and that are not to be "extinguished" until after they have risen, it is wing shooting sure enough, and very different from popping at the Jack-in-the-box style contemporaneous with muzzle-loader guns, whose shooting qualities, albeit perfect inside of 25 or 30yds., have only the halo of loving reminiscence of our boyhood days to recommend them.

GAUCHO.

### Hell Gate Gun Club.

The monthly shoot of the Hell Gate Gun Club at Dexter Park on Tuesday, Oct. 24, brought together only ten members. Usually this club turns out twenty to twenty-five men at its monthly shoot, but the fact that Tuesday was bluecock day probably kept many of the members from coming out. To the ordinary pigeon shooter bluecocks are an abomination, for which he has no use. To face five targets in a twenty-target club event and break two, four or six, as the case may be, is likely to break the courage of the ordinary live bird shooter and cause him to pack up his kit and make a dash for home. The Hell Gate Club has, however, a number of members who are equally at home with bluecocks or pigeons, and when the conditions are right they can put up good scores shooting at either. On Tuesday all the members were off in their shooting. Dannefeller was in extreme hard luck, breaking only five out of his twenty. H. Shortemeyer, one of the prominent Emerald Gun Club members, put in an appearance during the afternoon and helped to make matters interesting for the other contestants. A series of sweeps at bluecocks and live birds were shot off following the club event, the results of which will be found appended:

Club shoot, 20 bluecocks:

RD. 50 cts. | FOR SALE AT THIS OFFICE.

# Standard Works for the Sportsman's Library.

ANY BOOK HERE NOTED WILL BE SENT POSTPAID ON RECEIPT OF PRICE BY THE FOREST AND STREAM PUBLISHING CO., 318 BROADWAY, NEW YORK.

## ANGLING.

### The American Angler's Book.

Combining the natural history of sporting fish, the art of taking them, with instructions in fly-fishing, fly-making and rod-making, and directions for fish breeding. Description of salmon runs, inland trout fishing, etc. By THAD. NORRIS. 80 illustrations. Cloth. Price, \$5.50.

### American Fishes.

A popular treatise upon the game and food fishes of North America, with especial reference to habits and methods of capture. By G. BROWN GOODE. With numerous illustrations. Cloth, 496 pages. Price, \$3.50. This is, by far, the most popular work which has ever been published on the fishes of America, and is the book that no angler who takes pleasure in knowing the fishes which afford him sport, can afford to miss.

### Book of the Black Bass.

Comprising its complete scientific and life history, together with a practical treatise on angling and fly-fishing, and a full description of tools, tackle and implements. By JAMES A. HENSHALL, M.D. Illustrated. Cloth, 470 pages. Price, \$3.00. Dr. Henshall's monograph is the standard work.

### More About the Black Bass.

Being a supplement to the "Book of the Black Bass." By JAMES A. HENSHALL, M.D. Fully illustrated. Cloth, 204 pages. Price, \$1.50. This is a supplement or sequel of Dr. Henshall's first volume, in which the author's aim is to bring the subject matter down to date.

### Fly-Fishing and Fly-Making for Trout, etc.

By J. HARRINGTON KEENE. With plates of the actual material for making flies of every variety. Illustrated. Cloth, 160 pages. Price, \$1.50. The matter of the book embraces everything which the fly-fisherman wants to know about the senses of fish, practical fly-fishing, casting and fly-making; with list of standard flies and their dressings; the feathers, silk and other material used in fly-making, there are samples of all, attached to blank sheets like pictures by way of illustration.

### Fishing Tackle.

Its Materials and Manufacture. A practical guide to the best modes and methods of making every kind of appliance necessary for taking fresh-water fish and for the equipment of the angler and fly-fisher. With 44 illustrations and explanatory diagrams. By J. HARRINGTON KEENE. Price, \$1.50.

### With Fly-Rod and Camera.

By EDWARD A. SAMUELS, President of the Massachusetts Fish and Game Protective Association, author of "The Ornithology and Oology of New England and Adjacent States and Provinces," "Among the Birds," Associate Editor of "The Living World," etc., etc. Cloth, 480 pages (7x9 1/2 in.), 147 illustrations. Price, \$5.00. The author is known as one of the most devoted and expert salmon fishermen of America. The volume is likewise noteworthy as an example of the rare possibilities of amateur photography.

### Fly-Rods and Fly-Tackle.

Suggestions as to their Manufacture and Use. By HENRY P. WELLS. Illustrated. Cloth, 364 pages. Price, \$2.50. The most exhaustive work on the subject in print.

## MANUALS.

### Game Laws in Brief.

Laws of the United States and Canada Relating to Game and Fish Seasons. For the guidance of sportsmen and anglers. Compiled by CHARLES B. REYNOLDS, Editor of *Forest and Stream*. Paper. Price, 25 cents. Gives all sections relative to game and fish seasons, limit of size or number, non-residents, transportation, etc. All in brief, but full enough for the practical guidance of sportsmen and anglers. Carefully compiled, and shorn of verbiage. Handsomely illustrated with numerous half-tone engravings from *Forest and Stream*.

### Woodcraft.

By NESSMUK. Cloth, 160 pages. Illustrated. Price \$1.00. A book written for the instruction and guidance of those who go for pleasure to the woods. Its author, having had a great deal of experience in camp life, has succeeded admirably in putting the wisdom so acquired into plain English.

### Tricks of Trapping.

Camp Life in the Woods, and the Tricks of Trapping and Trap Making. Containing hints on camp shelter, all the tricks and bait receipts of the trapper, the use of the traps with instructions for the capture of all fur-bearing animals. By W. HAMILTON GIBSON. Illustrated. Cloth, 300 pages. Price, \$1.00.

### Log Cabins.

How to Build and Furnish Them. By WILLIAM S. WICKS. New and enlarged edition. Price, \$1.50. Mr. Wicks might have called his book "Every Man His Own Log Cabin Builder," for he has set out to describe fully and particularly each detail in the process of construction. Plans are given for cabins, large and small, with details of exterior and interior.

### Hints and Points for Sportsmen.

Compiled by "SENECA." Cloth. Illustrated, 224 pages. Price, \$1.50. This compilation comprises six hundred and odd hints, helps, kinks, wrinkles, points and suggestions for the shooter, the fisherman, the dog owner, the yachtsman, the canoeist, the camper, the outer, in short for the field sportsman in all the varied phases of his activity.

## SHOOTING.

### Names and Portraits of Birds

Which Interest Gunners, with Descriptions in Language Understood of the People. By GURDON TRUMBULL. Cloth, 222 pages. Price, \$2.50. The average gunner with this work at hand would have little difficulty in identifying the contents of his bag from the text alone. Identification is further facilitated by portraits of the birds.

### Antelope and Deer of America.

A comprehensive scientific treatise upon the natural history, including the characteristics, habits, affinities and capacity for domestication, of the Antilocapra and Cervidae of North America. Second edition. By JOHN DEAN CATON, LL.D. Cloth, 426 pages, 50 illustrations; steel portrait. Price, \$2.50.

### The Gun and Its Development.

With Notes on Shooting. By W. W. GREENER. Breech-loading Rifles, Sporting Rifles, Shotguns, Gunmaking, Choice of Guns, Chokeboring, Gun Trials, Theories and Experiments. Fully illustrated. Cloth, 770 pages. New edition. Price, \$2.50.

### The Art of Shooting.

An Illustrated Treatise on the Art of Shooting. With Extracts from the Best Authorities. By CHARLES LANCASTER. Illustrated with numerous drawings from instantaneous photographs. Price, \$3.00. New edition.

### Field, Cover and Trap-Shooting.

By CAPTAIN ADAM H. BOGARDUS, Champion Wing Shot of the World. Embracing Hints for Skilled Marksmen; Instructions for Young Sportsmen; Haunts and Habits of Game Birds; Flight and Resorts of Waterfowl; Breeding and Breaking of Dogs. With an appendix. Cloth, 493 pages. Price, \$2.00. There is no other man in this country—or in any other, for that matter—better fitted to teach a novice the art.

### The Still-Hunter.

A Practical Treatise on Deer-Stalking. By T. S. VAN DYKE. The information contained in "The Still-Hunter" is as exhaustive as it is possible to make it. 390 pages. Price, \$2.

### The Breech-Loader and How to Use It.

288 pages. Price, \$1.00. A book for that numerous class of sportsmen who delight in a day's shooting, but have neither the time nor the means to make the sport a life's study.

## CAMP AND HOME.

### Uncle Lisha's Shop.

Life in a Corner of Yankeeeland. By ROWLAND E. ROBINSON. Cloth, 187 pages. Price, \$1.00. "Uncle Lisha's Shop" is brimful of quaint humor and sentiment, and there is an unmistakable touch of human nature in Uncle Lisha himself and his good old wife, Aunt Jerushy; in Sam Lovel, the hunter, and in fact in all the other characters introduced.

### Sam Lovel's Camps.

A sequel to "Uncle Lisha's Shop," by ROWLAND E. ROBINSON. Cloth. Price, \$1. When Uncle Lisha went West, Sam Lovel took Antoine as his partner, and the fortunes and misfortunes of the two as trappers are described with all the charm of our author's quaint style, while their friends and enemies, and all with whom they are brought into contact, in the course of the story, step on to the stage real living creatures.

### Pawnee Hero Stories and Folk-Tales.

With Notes on the Origin, Customs and Character of the Pawnee People. By GEORGE BIRD GRINNELL. Cloth, 417 pages. Illustrated. Price, \$1.75. New edition, revised. Like most Indian tribes, the Pawnees are story tellers. They have a vast fund of folk-tales and traditions, which have been handed down from father to son, and transmitted from generation to generation. Years ago, when the tribe lived in Nebraska, the author of the present volume camped and hunted with them, and joined in their village life. The nights were given up to story telling, and many of the tales told in the lodge and by the flickering camp-fire were carefully translated and written down. When published they excited great interest. They are tales of daring and adventure, weird accounts of magic, mystery and the supernatural; relations of the ways of life in the old, wild days; stories of war and the craft of war parties, the history of the tribe as treasured by the very old men. There is mother-wit in these stories, they are full of humor, sentiment, pathos and human nature.

### Blackfoot Lodge Tales.

The Story of a Prairie People. By GEORGE BIRD GRINNELL. Cr. 8vo., \$1.75. In this volume the story of the Blackfoot tribe is told by a friend, one who has hunted with them on the prairies, slept in their lodges, lived in their camps, and shared their daily life. The stories which constitute this history have been taken down by the author from the lips of the narrators, and are given without change as told to him. There is a singular and charming freshness about the stories, which give the history of renowned warriors of ancient and modern times, show how ancient customs arose, and explain natural phenomena. The account of the daily life, customs, and history of the Blackfeet presents a series of graphic pictures of savage life in peace and in war.

### Our New Alaska;

Or, The Seward Purchase Vindicated. By CHARLES HALLOCK. Cloth, 209 pages, illustrated. Price, \$1.50. Mr. Hallock's writings are always vivid and full of life.

## THE KENNEL.

### Dogs: Their Management and Treatment

IN DISEASE. A Study of the Theory and Practice of Canine Medicine. By ASHMONT. Cloth, 208 pages. Price, \$2.00. The *Forest and Stream* says that this is one of the most valuable treatises on canine management and therapeutics that has appeared on this side of the water.

### Kennel Record and Account Book.

Boards, \$3. An indexed volume of 180 pages, consisting of a series of carefully prepared blank entry forms suited to the registration of all kennel events and transactions.

### Dog Points and Standards.

First Lessons in Dog Training, with the Points and Standards of all Breeds of Dogs. Paper, new edition, 106 pages, revised to date. Price, 50 cents.

### Training vs. Breaking.

Practical Dog Training; or Training vs. Breaking. By S. T. HAMMOND, Kennel Editor of *Forest and Stream*. Revised and re-written. To which is added a chapter on training pet dogs, by an amateur. Cloth, 165 pages. Price, \$1. A book for dog owners, who, by the instructions here plainly given, can successfully train their hunting dogs.

### Modern Training;

Handling and Kennel Management. By B. WATERS. Illustrated. Cloth, 373 pages. Price, \$2. This treatise is after the modern professional system of training. It combines the excellence of both the suasive and force systems of education, and contains an exhaustive description of the uses and abuses of the spike collar.

### House and Pet Dogs;

Their Selection, Care and Training. Paper, price 50 cents.

### Lee's Modern Dogs.

History and Description of the Modern Dogs (Sporting Division) of Great Britain and Ireland. By RAWDON B. LEE, kennel editor *London Field*. Illustrated, 584 pages. Price, \$7. This is a standard work by an acknowledged authority, and is up to date. It treats all sporting breeds exhaustively. The illustrations are idealized portraits of typical specimens.

### Kennel Secrets.

How to breed, exhibit and manage dogs. By ASHMONT. The dog from the time he is conceived to the time he curls himself up for his last long sleep is treated from every standpoint that could possibly occur to a man of wide experience with dogs. Every important subject that has engaged attention has been fully discussed, generalities being held practically valueless and misleading. Illustrated, 344 pages. Price, \$3.00.

### The Spaniel and Its Training.

By F. H. F. MERCEUR. To which are added the American and English Spaniel Standards. Cloth. Illustrated. Price, \$1.

### Scientific Education of Dogs for the Gun.

By H. H. Cloth. Price, \$2.50. The instructions are the result of the author's amateur practical experience of 37 years. *Forest and Stream* says: "This work is a very well written treatise upon the subject, containing some new ideas and much that is interesting and instructive to the new beginner as well as not a little that will be beneficial to even old hands to study."

## YACHT AND CANOE.

### Small Yachts.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice. With numerous plates and illustrations. By C. P. KUNHARDT. New ed., 470 pp. of type and illustrations and 87 plates. Size of page, 14 1/2 x 12 1/2. Price, \$10. This book is intended to cover the field of small yachts, with special regard to their design, construction, equipment and keep.

### Steam Yachts and Launches;

Their Machinery and Management. By C. P. KUNHARDT. With plates and many illustrations. New ed., 267 pp. Price, \$3.00. A complete review of the development and present status of the marine engine and boiler as applied to steam yachting.

### Canoe and Boat Building.

A Complete Manual for Amateurs. Containing plain and comprehensive directions for the construction of Canoes, Rowing and Sailing Boats and Hunting Craft. By W. P. STEPHENS, Canoeing Editor of *Forest and Stream*. Cloth. Fourth and enlarged edition, 264 pages, numerous illustrations, and fifty plates in envelope. Price, \$2.00.

### Canoe Handling.

The Canoe: History, Uses, Limitations and Varieties, Practical Management and Care, and Relative Facts. By C. BOWYER VAUX ("Dot"). Illustrated. Cloth, 168 pages. Price, \$1.00.

### Yacht Architecture.

By DIXON KEMP, Associate of the Institute of Naval Architects and Member of Council. Second edition. Super-royal 8vo., 530 pages, numerous plans and designs. Price, \$16.80.

### A Manual of Yacht and Boat Sailing.

By DIXON KEMP, Associate Institute of Naval Architects (Member of the Council). 750 pages, with numerous plans and designs. Price, \$10.

THE ILLUSTRATED CATALOGUE OF FOREST AND STREAM BOOKS WILL BE SENT FREE.

# FOREST AND STREAM BOOK LIST.

## BALLOT BOX AND MOOSE HEADS.

As we all know, there has been excitement over the doings of certain political "bosses" in the vicinity of New York on Election Day; and public-spirited and patriotic citizens have come to the front with commendable activity and determination to insist that the purity of the ballot must be preserved. Among others, whose names are in print as taking part in the movement to enforce the election laws, is an individual of wealth and standing, who, by reason of his present and past services in this line, is held up to the rising generation as a shining example of what a good citizen should be. And yet this same man, so solicitous that certain statutes shall be respected, has a record of numerous moose killed in the summer months in Maine, in open, bold, impudent and contumacious defiance of the game laws of that State.

We would not pretend to say that the protection of game and the purity of the ballot are of equal importance; but we defy any one to show us why it is not the part of a good citizen to respect and abide by the statutes relating to them both, and we defy any one to tell us how a man, who shouts for the purity of the ballot in New York and slaughters moose out of season in Maine, can claim to be better than those Scribes and Pharisees, who make broad their phylacteries, and love the uppermost rooms at feasts and chief seats in the synagogue and greetings in the market, and of whom it was declared that they were like unto whited sepulchres.

The fact is that it is a poor brand of citizenship that cannot stand crossing a State line, and a very fragile conscience that must needs be left at home in a safe-deposit vault when its possessor goes into the woods.

## THE RED FLAG AND THE PARK.

WITH eyes starting from their sockets and hair on end, a correspondent rushes madly into the columns of a contemporary and advocates the building of a railroad through the Yellowstone National Park. A great fear has fallen on him. The Park is in danger, he [wishes to save it, and this can be done only by building a railroad through the reservation. Many schemes have been broached for protecting the National Park, but never, we think, one so novel as this.

This correspondent, a Mr. Brackett, describes the Park, as has been done so many hundred times before, and declares that he heartily desires its protection, and above all the preservation of its forests and its great game. He wants it protected, but he is in deadly fear of its destruction by the miners of Cooke City and the citizens of Montana in general.

The burden of his statement is that while the people of Montana are fond and proud of the Yellowstone Park and of the great game of their mountains, they have lately determined to burn the Park forests and to slaughter its herds of game. These methods of showing pride and affection are unusual, but Mr. Brackett—who appears to think that the shrewd and sensible people of Montana have suddenly gone mad—solemnly and repeatedly warns us that unless a railroad is allowed to be built through the Park or the northeastern corner of the reservation is cut off, the "desperate" citizens of Montana will rise in their affection and their pride, burn the Park and kill all the big game within its boundaries.

This would be a dreadful state of things were it true. But it is not. The alarm felt by Mr. Brackett is unnecessary. Old mountain men delight in relating hair-raising stories to frighten the pilgrim who will believe them, and the typical "bad man" hugely enjoys blustering and threatening and telling what a terrible fellow he is, and how many men he is accustomed to eat for breakfast. Such talk does not count for much with those who understand the people who live in Montana's mountains, but their stories are likely to scare the inexperienced.

Even if what Mr. Brackett states were true—even if the people of Montana were determined to rebel against United States law and to destroy the Park and all that it contains—they, with all other sensible men, should know that it is not by threats of anarchy and rebellion that they can accomplish what they wish. Threats do not move the American people.

It was by threats and dynamite and blood and fire that the anarchists of Chicago strove to coerce the citizens of Illinois, but such efforts did not succeed, and never will,

until the character of the American people and of American institutions shall have wholly changed. To say that the honest and industrious men of Montana will become anarchists and outlaws unless they can have their way is not only the sheerest nonsense, but is to circulate as foul and evil a slander as was ever penned against a great State and a class of citizens as worthy and as law-abiding as any within the borders of this broad country.

Mr. Brackett's letter voices the sentiments only of a little clique of local speculators who believe that the passage of a bill to permit a railway to pass through the Park would enable them to sell out their holdings of land at a profit. The vast majority of Montana's citizens believe that no railroad should be built within the Park borders.

We do not believe that the Park needs Mr. Brackett's remedy, and we entreat him to calm himself.

## WORLD'S FAIR AQUARIUM.

THE aquarium at the World's Fair will not be maintained in Chicago after all. The contents of the tanks were transferred by the U. S. Fish Commission to the Illinois State Laboratory of Natural History at the close of the Exposition. On the next day the South Park Commissioners asked to have the aquarium put in their charge, promising to assume the expenses from that date.

The State Laboratory consented to turn over the property on condition that the aquarium should be managed as a biological station as well as a living museum for the people. On November 8 the Commission reconsidered their action and decided that no money was available for maintaining an exhibit of the kind. Therefore the State Laboratory will take such parts of the collection as can be utilized for alcoholic preparations to be divided among schools and museums, and the remainder will be distributed by the U. S. Fish Commission.

The loss to the Chicago public will be felt when it is beyond repair.

Some idea of the extent of the work required to maintain a great aquarium may be gathered from the fact that nearly fifty loads of specimens were brought to the Exposition by the cars of the Fish Commission, about 50,000 gallons of salt water were circulated in the marine section, and in the fresh-water section as much as 38,000 gallons of water were used in one hour, the cost of the water at current rates having been nearly \$100 daily.

The marine section, contrary to all expectation, was managed very successfully and with scarcely any trouble. The fresh water of the city is so charged with fungus and fish parasites as to make the care of this section a great burden. If any man, scientific or unscientific, will publish a satisfactory method of destroying fungus without injury to fish, he will be regarded as a benefactor by aquarium directors. In spite of all difficulties, however, the number of species of animals in the Aquarium when the Fair closed was about 130, and all of them were in fine condition.

## SIDE-HUNTS.

NOW, NOT to take a one-sided view of the side-hunt, here are some considerations on both sides.

For the side-hunt it may be said that it gives a play-day for a large number of participants—the more the merrier. It is thoroughly democratic; every man-jack who can muster a shooting-iron is entitled to a place in the skirmish line; and whatever may be his individual score, the participant who finds himself on the winning side may claim some share in achieving the result, and an equal participation in the feast which crowns the victory. Taken all in all the side-hunt supplies an occasion for a crowd of jolly fellows to have a jolly time.

Against the side-hunt it may be urged that its essence is competitive, and that this shooting for count and to outscore the other fellows is not a high grade of sport in the field; that it encourages the inordinate killing of game and the destruction of much wild life which is in no sense legitimate game; that it breeds the kill-everything spirit, which is unworthy and baneful; and that, in a word, it lowers the tone of field sportsmanship in the community.

Side-hunting will last probably as long as birds fly and the competitive spirit endures in human nature; but it is a tremendous pity that Yankee ingenuity cannot devise something in the way of outdoor wildwoods contests more reasonable than rivalries in wholesale and indiscriminate destruction of animal life.

## MANSLAUGHTER AND SUICIDE.

We have alluded more than once to the suggestive fact that of recorded accidents with sporting firearms a large proportion may be credited to the ignorance or foolishness or recklessness of shooters who are at the moment in the act of violating the game laws. It often happens that the man, who is so hungry for venison that he cannot wait for the open deer season, is, likewise so eager to get meat that he cannot stay his hand long enough to determine whether what he is about to shoot at is a wild animal or a human being. So, too, the gunner, who is not sportsman enough to observe the appointed times and seasons, is not sportsman enough to observe the rules of carrying a gun in a proper manner, and brings woe upon himself or his comrades in consequence.

If this theory be well founded, game wardens would do well to be vigilant out of season, and fore-handed in the apprehension of transgressors, to the end that the life of the game and of the unlawful gunner as well may be preserved. It is certain, for instance, that if the game wardens of Staten Island had pounced down upon a certain untimely robin shooter in their district one day last week, and had arrested him in time, they would have rescued the life which he threw away, when in crossing a fence he pulled his gun muzzle foremost toward his own devoted head.

In some States, as in Michigan, it is declared an offense to point a firearm at a human being, even in play; and certain penal codes, as that of New York, punish a futile attempt at suicide as a crime. If these killings of one another and of themselves by game law breakers shall continue, it will be in order to lock up every out of season gunner as intent on manslaughter if he shall be found with others in the field, or as contemplating suicide if alone.

## A WOLF STORY.

In his interesting notes from Manitoba Mr. Ernest E. Thompson quotes from the *Canadian Sportsman* a story of a human skeleton and near by it the skeletons of five wolves, found "on the south side of the Lake of the Woods," in 1890. Near the human skeleton was a revolver; and seven empty cartridge shells told the story of a desperate fight for life.

Mr. H. W. Munson, of South Dakota, sent us the other day, clipped from the *Minneapolis Journal*, a special dispatch from West Superior, Wis., dated Oct. 24, 1893, which reads as follows:

WEST SUPERIOR, Wis., Oct. 24.—A very startling story has just been brought from the Rainy Lake gold country by R. C. Emmons, an explorer who has been quietly investigating the deposits there for Chicago capitalists. While following up a small stream tributary to Rainy River, Mr. Emmons came upon a deserted log cabin. Curiosity lead him to following a trail leading into the forest south of the cabin, when he came upon the skeleton of a large man. Near by was a rifle with a broken stock, and close beside the skeleton was a broadsword with a rusty blade, and within a radius of 60 ft. lay the skeletons of nine large timber wolves.

Now the Rainy Lake gold country is in Manitoba, south of the Lake of the Woods; and the Rainy River flows north into the Lake of the Woods. The region to which was assigned the location of the wolf story of 1890 is the region to which is assigned the wolf story of 1893. Who may doubt that the one is only a new version of the other? And no one knows how ancient the first tale may have been before it came to Mr. Thompson's attention; for this *Canadian Sportsman*, to which it is credited, is not only a most diligent literary thief, but never hesitates to steal a good yarn, even though it has been lying out in the woods a long time and is weatherbeaten with the sun and rain of years.

HERE is a bit of prognostication. The beagle is a coming dog. And here are some reasons which back up the prognostication: (1) Because he is cheap, so that any one may afford to possess a well-bred specimen. (2) Because he is easily trained. The veriest know-nothing may take a beagle out into the field, put him on a track and see him go. (3) Because he makes music while at work; and most hunters having heard the music once want to hear it again. (4) Because his game is commonly abundant, and is found in regions where there is no use for bird dogs or deerhounds. (5) Because the newly devised field trials have given an impulse to beagle interests in this country. (6) Because FOREST AND STREAM here and now says a good word for the breed. If you do not believe that this has anything to do with it, just keep your eye on beagles for the next five years.

## The Sportsman Tourist.

### NOTES OF A TRIP TO MANITOBA.

#### In Two Parts—Part One.

THE attitude of Bohemians in New York, Paris, and elsewhere is this—we will hear anything that is interesting, and it is all the more interesting if true, but if it be uninteresting, although true, we have no use for it. In many respects my trip resembled a thousand others, and these common parts are the ones which I shall be careful to omit. I was in search of what interested me. With sufficient confidence in my instinct of choice, but in doubt of my unprompted industry, I drew up and signed

LAKE CHASKA AND BURNT HILL.

a vow that I would have a skin, a sketch and a page of journal for every day I was away. Then I set out from Toronto via the Great Lakes.

Among the passengers was a young doctor, who told me: "Early in June, 1889, near Burlington, I found a nest of a yellow warbler, building in a Tartarian honeysuckle. In the morning the male was killed by a cat, and the next morning I found the female dead and hanging from the nest by the neck in a loop of horse hair, about 6in. long. After the death of the male I had seen a cherry bird stealing the materials of the yellow bird's nest, perhaps the robber had deranged the horsehair so the unhappy female had been entangled by chance, or was it suicide?"

His other story was that "Dr. I., of Toronto, had a snipe which broke its leg, but it made for itself a sort of splint of mud and feathers, which effectually bound the breach till it was perfectly healed."

At the "Soo" I saw some ravens picking up food from the surface of the water as they flew, and at Thunder Cape I made an observation on the perfect accuracy of oral tradition, which I am sure would interest Max Müller. No one on board seemed to know its height, and the most commonplace fellow passenger on board asked me. I didn't know, but having a vague idea that it was 800ft. high, I kept on the safe side and said it was "nearly 1,600ft." He set off to air his new-found knowledge, and I heard him tell the next man it was 1,600ft. high, and the next passed it on, saying it was over 1,600ft. high, and presently one came and said, with the air of a man bursting with information, "How high would you suppose that to be?" I said I didn't know; what height is it? "Well, sir," said he, "I hear them say it's 2,000ft. sheer at the cliff, and double that a little way back!"

Recent investigation has brought to light and clearly demonstrated the astonishing fact that Dante made the preliminary studies for his "Inferno" on the C. P. R. R., along the North Shore of Lake Superior, so that the sooner we get out of it the better. I positively saw nothing at all of interest till we reached the classic precincts of Rat Portage, and here, as there was time, I got out and was surprised to see that many of the telegraph poles were bored by woodpeckers. Such ill-directed labor looked, at first blush, like pure malevolence, for the poles are cedar and have no bore worms in them, while the spruce, which abounds on every side, is full of woodpecker food. But, when more facts are arranged, it seems that the woodpecker discovers the borers by hearing. They hear this tremendous humming in the poles and conclude that the father of all the borers is in there, and would be a glorious capture, hence the excavations.

The Laurentian Inferno runs out just about where the Manitoba Paradise runs in, *i. e.*, Long. 90° W. Here we begin to have a level alluvial country with aspen forests, and to make discoveries which were both true and interesting.

At Beauséjour Station was an Indian with two young moose for sale; they were much like little calves, with short thick necks and long ears. They were dullish red in color, without spots, and stood about 36in. high at the shoulder. But the stop of three minutes was not enough, either for a sketch or a photo, so I missed a good chance.

At Selkirk the Rev. Mr. McLaughlin, a missionary from Berens River, came on board, and I got from him all the information I could about the parts of every region he had visited. He remembered the abundance of moose, caribou and spruce partridge along the east coast of Lake Winnipeg, and the total absence of small deer and elk, so far as he knew. But his item on buffalo was the most interesting. In 1889, when he resided at a station called Victoria, north of the Saskatchewan, some Indians whom he knew personally killed 5 buffalo out of a herd of 11, near the Hand Hills. He saw a part of the spoils, including a large head, which was sold in Winnipeg for \$120. He said also that it is quite well known that there are a considerable number of buffalo still in the woods of the Peace River.

As new buffalo notes are at a premium just now, I give here all that I have:

The only buffalo now in Manitoba are those in possession of Sir Donald Smith in his park at Silver Heights. These I saw Sept. 7, 1892. They then numbered 10—2 fine old bulls, 3 old cows, 3 young bulls, 1 yearling calf, 1 three-months' calf. With them also is a cross between a buffalo and a highland cow, a rough, mean-looking animal.

These are all that are now to be found in Manitoba, as the famous Bedson herd is no more. Dr. Howden, of Winnipeg, related to me a curious adventure with the Bedson buffalo. While driving with a friend outside of Winnipeg some years ago, there was, on the road just ahead of them, the flaming red wagonette of an advertising tea house. The buffalo were feeding in the distance, but as the red rig approached they became much excited, and very soon came rapidly toward the tea cart with angry demonstrations. The driver tried to drive off, but they were too quick for him. The horse broke loose

almost immediately and the man escaped on its back, but the offensive red cart was totally demolished.

According to Rev. Mr. McKellar, missionary to the Saskatchewan, the last year in which the buffalo came in numbers was 1878. During the latter part of that summer the herds of buffalo in the South Saskatchewan were literally countless. As far as the eye could see in a day's travel the whole country was dull brownish with their woolly coats. But that was the last of them. No more great herds ever came to the north. The last wild buffalo noted in Manitoba were three, which, according to Dr. Shaw, of Carberry, crossed the Assiniboine 4 miles north of Grand Valley about Nov. 7, 1879, traveling rapidly northwesterly, and were lost in the region west of Riding Mountain. A Mr. McFadden saw them crossing the As-

CLAIM SHANTY, GALWAY'S LAKE, 1892.

siniboine, and Dr. Shaw saw their trail a few hours later where they crossed the Rapid City trail.

At Winnipeg I visited the shop of my friend Hine, the taxidermist, and saw there a very large timber wolf which had been killed within the city limits last winter. This was also the only one that had been seen near Winnipeg for years, while the prairie wolf is as common as ever. This, it seems to me, illustrates a curious sort of selection. These animals are similar in food and habits, and have the same enemies, and yet the larger and stronger animal succumbs. The sole reason for this that I can see is that the lesser one is enabled by its lighter weight to pass over the snow when pursued, while the greater weight of the timber wolf proves its destruction. Even in the timbered parts of Manitoba large wolves are very rare now, but occasionally one hears of some tragic adventure that reminds one that the timber wolf still exists and is a foe to be feared when hard pressed. Mr. Gordon Wright, of Carberry, informs me that in the winter of 1890-91 a man was attacked by wolves in the woods near High Cliff and entirely devoured.

In the Winnipeg Free Press, April, 1891, there appeared an account of a tragedy that took place in the St. Peter Reserve. A family of 18 Indians were in one tepee together when they were attacked by wolves and only two men escaped alive!

In the Canadian Sportsman for May 28, 1890, the following appeared: "A dispatch from Winnipeg states that a few days ago a party of loggers stumbled over a pile of bones on the south side of the Lake of the Woods that were the silent and ghastly record of the terrible death of some human being. The bones consisted of a human skeleton, and the skeletons of seven wolves. A revolver and seven empty cartridge shells were lying near the former, and it is supposed that the man was attacked by a pack of wolves, and had made a desperate fight for his life, killing seven of their number before being overpowered by the ferocious beasts. An old explorer named McManus, who has lived at Rat Portage for years, has been absent on the lake for a longer time than usual, and it is feared that it is he who has fallen a victim to the wolves. An Indian from Rat Portage is also missing, and it may be he who has met such a horrible death, but the revolver and remnants of clothing, it is said, resemble those worn by McManus."

I wrote to the Reverend Mr. McLachlan, of Berens River to learn the truth of the St. Peter tragedy, and received in reply the following interesting letter:

BERENS RIVER, March 9, 1893.—Mr. Ernest E. Thompson: DEAR SIR—Your letter came to hand by the last mail, and in reply I beg to state that I have made inquiry regarding the story of which you write and find it without foundation. I heard the story last winter, and a young man at Bad Throat River is said to be its author. There is no doubt whatever of its being a hoax.

Wolves are quite numerous here this winter, but do not seem to band together to any extent, and are not, so far as I know, dangerous. Last week one of the Indians on going to his fish cache, where he had been doing his fall fishing, found a splendid black wolf in a trap. He tied his mouth with a line, took him out of the trap, and hitched him up in his dog train and made him help haul home the load of fish. The H. B. Co. officer here had him chained up at the fort, and intends trying to make a cross with one of his dogs. I have seen a number of wolves, but none like this specimen. The fur is exactly like a silver fox in color, thick and beautiful. The ears are much more rounded than usual, giving the head more of the appearance of a bear than a wolf. I have handled it, but there is never any sign of crossness, and no attempt at biting.

Foxes have been very plentiful, and some splendid black and silver ones have been taken. Deer (reindeer) have been remarkably scarce this winter. I fully believe they have migrated on account of the wolves. Ptarmigan have been abundant this season, owing probably to deep snow to the north of us.

At any time I shall be most happy to furnish you with any information in my power. I remain, yours truly, J. A. McLACHLAN.

It is just possible that the Rat Portage tragedy may be similarly explained away.

These anecdotes refer to the great gray wolf, but the prairie wolf (*C. latrans*) figures much more conspicuously in the annals of the settlement now. They are so numerous that the skins of as many as seventy or eighty find their way to the main store at Carberry in a single winter, and one or more may be seen in almost any morning's drive.

Mr. Robt. McCullough related to me the following incident of one of these: "One winter's morning I went, with a boiler in my hand, to get some feed from the

driving shed. The door was slightly open and as I approached I saw an animal inside, which dashed about in the shed, its action showing it to be a wild creature. I ran to the door just in time to prevent its escape; barring the passage with the boiler, I rushed to the stable and back with a fork. The wolf, for such it was, took refuge under a reaper and there I speared him, but the fork only pierced the loose skin of his belly and he turned on me. I held the fork to the ground with all my strength and was barely out of reach of his jaws, for the handle was short, but I dared not withdraw the fork to strike him again and had nothing to finish him with, so that it was a deadlock. However, after a struggle, I got the end of the handle fixed under a beam and rushed off to get a club. When I came back the wolf was gone. I thought to see no more of him, but next morning I found him but a few yards from the same place, quite dead, the fork having penetrated his bowels when I speared him. But why should he return to this shed?"

And Mr. T. Kerr tells me that one winter a prairie wolf without any hair on it hid itself under his straw-stack, and although driven away it returned and ensconced

itself under the granary, where he shot it. It evidently had some disease which had entirely deprived it of its hair, except a little patch on the shoulder; it apparently had suffered much from the cold, judging from its violent shivering.

Notwithstanding the abundance of the prairie wolves, much attention is being directed now to sheep farming, for it proves to be very profitable, and a bell on the neck of each animal is found an ample protection from his traditional foe.

I scarcely stayed to see Winnipeg I was so anxious to get back to my own, my ancient hunting grounds about Carberry, so I boarded the train and sped westward. Part of my plan for the summer had been to sow wild rice (*Zizania aquatica*) in as many localities as possible, so with this object in view I laid in a supply, and whenever the train crossed a slough or pond I contrived to throw a paper bag of the seed into its deepest water. I fear it was rather late to be successful, but if it fails I shall try again at the next opportunity and do what I can to induce others to try it. At Carberry ultimately I sowed the seed in many ponds and lakes, but the lateness of the season and the fact that the seed was last year's, and therefore probably dead, was against the experiment.

At length I reached Carberry, the town that grew up after I came, the town which I felt almost my own, so well did I know every individual and building in it. Six years had flown by since I left it, and now of all the crowd about the station platform I saw not one familiar face and was recognized by no one. (I need not bother you with my personal feelings.) I went to the hotel of an old friend and found a stranger in possession, and on all the store signs were new, strange names. I was gloomy and sad when I turned in, but next morning brought a change. I did find that a few of my old chums were left and the changes in the country, it must be admitted, were decided improvements. The old prairie trails were all gone and, indeed, forgotten, for the new farmers do not know what a trail is, the Government roads are everywhere in use now, all fenced, ditched and graded in the most approved Eastern style. Virgin prairie is a thing of the past and the big plain is now a vast region of highly-cultivated farms.

In a long walk taken across the country next morning, I was surprised at several changes in the district. First—The meadow larks, shore larks and vesper sparrows seemed to have increased enormously. Second—The Missouri skylark has totally disappeared. Third—Wherever a little patch of the original prairie has been preserved, it is now covered with poplar trees (*Populus tremuloides*). Fourth—The amount of water has greatly decreased, what were bogs are now pasture lands, what were marshes are bogs, and what were great lakes with a belt of rushes are now great marshes with a little central pond, or no open water at all. So much for the changes of a few years. Another change in animal life I must not forget, viz., the striped gopher (*S. 13-lineatus*), seems to be nearly extirpated, while the yellow gopher (*S. richardsonii*) has been excessively multiplied. They have become a plague to the farmers, and I am informed that last season the county council at Carberry alone paid bounties on 40,000 gopher tails. I attribute the disappearance of the striped gopher to the plowing of the land, for this species burrows so near the surface as to be within reach of the plow, while the yellow gopher makes a burrow several feet deep. The great multiplication of the latter, however, I attribute to the destruction of the hawks, chiefly Swainson's hawk, which was once so very abundant throughout this region, and has of late been greatly reduced in numbers.

Two other changes in the wild life were noticed. First—The mourning dove, once rare in the country, and never seen on the big plain, is now abundant about every barnyard that is near trees and water. Second, and yet more surprising, is that the sharp-tailed sparrow (*Ammodramus caudatus nelsoni*), never before seen so far north, is now also abundant in the great sloughs about Carberry and has also been taken at Winnipeg. The common shore lark (*Otocorys alpestris praticola*), as already remarked, has also greatly increased and manifests a remarkable partiality for breeding on vacant lots both in Winnipeg and Carberry. At the latter place I found three of their nests on the baseball ground, and although the ground was played on every evening, the young were reared.

But on this, my first extended excursion, my heart was greatly cheered with the sight of two or three unchanged ancient landmarks. One or two were simply hills, pointed cones of sand and beyond the reach of harm by human hands; but the others were ancient historic trees; great tall spire-like spruces—old Stimson's spruce north of Carberry; Castleman's spruce north of Fairview, and the Lone spruce on Sewell Hill, and my heart leaped for joy to see them standing yet. When the first settlers came on this plain in 1878, ere yet there were roads or finger posts, these spruce trees stood silent sentinels on the hills and were their landmarks and their guides.

Butler when he crossed our plain in 1870, speaks of the solemn spruce tree standing on the hill by the crossing of Pine Creek (Murphy's), and away back in the buffalo days, when Lariviere's and McKenzie killed their winter's meat where Carberry now stands, these black pointed monuments were the witnesses of the slaughter and the fingerboards of their temporary camping grounds.

Long may they be spared from ruthless fire and wanton axe to be the mementoes of the past, the only visible memorials we have of the romantic days that are gone.

ERNEST E. THOMPSON.

#### Capt. Beardslee's Heroism.

Editor Forest and Stream:

It was very handsome in you to call attention editorially in your last issue to Capt. Beardslee's heroism at Port Royal. But while recognition is made officially and otherwise of this distinguished service, I trust that his equally signal efforts at Key West several years ago will not be forgotten or overlooked. It was mainly by his help and the assistance of his naval brigade on that occasion that the town was not entirely destroyed by fire. His mastery of that conflagration was a strategic piece of work, for which public credit has not apparently been given him. And if philanthropy and bravery will go still further back for illustration, why there was his efficient work in Alaska in 1878-80, and at Formosa several years before, in each of which critical occasions the sole responsibility was [thrown upon him, involving careful judgment, quick expedients and prompt action; and in never a case has he scored an error or a mistake. May his shadow never grow less.

### THE CHIPPMUNK.

He skips along ther orchard wall beneath ther autumn sun,  
With duffy tail tucked on his back wile work's a-bein' done,  
A pilin' heaps o' nuts, to pack um in his largest trunk,  
Thet serious leetle acrobat, knowed as the chippymunk.

I seen one in ther woods ter-day, en watched him on ther sly;  
He stopp'd off workin' ter give nuts (with twinkles in his eye)  
Unto a troubled feller "monk" wat couldn't climb a bit  
(Was waitin' with leg smashed up till natur' mended it).

Also he smoothed his fur, upstod like burrs up in ther tree,  
En didn't show he thot he'd sunk his rustic dignity.  
'Twarnt enny his own relations 'cause his coat was thin en bare,  
While ther chestnuts was a-fallin' an' frost was in ther air.

Some things we need remindin' ov, a chippymunk ken tell  
Er bout heart "eddycation" ef we only listen well.  
W'en he stroked ther little feller on his faded, rumped skin,  
He showed ther tetch o' natur' as binds ther hull world kin.  
Remarkin', "I won't notice w'at ther proud chipmunks 'ell say,  
For a brudder's bin is empty an' his fur is der wrong way."

CLARENCE PINNEO.

### SOME TRICKY LEOPARDS.

SHOULD any of the readers of FOREST AND STREAM during their visits to some traveling menagerie question the keepers in charge of the cat animals as to which gives the most trouble in escaping, I will warrant that the answer in a large majority of cases will be "leopards," and I am forced to acknowledge that my experience convinces me of the truthfulness of the assertion. The narration of some of my leopard scrapes smacks so strongly of fiction that I dare not describe them but for the fact that there were always other parties present on each occasion who can verify every statement which I shall make.

During the early portion of the '60s I was in the habit of making Boston my headquarters, and very naturally became acquainted with various parties in the different

HEAD OF ELK.

In possession of F. W. Stobart, Esq., of Winnipeg. It bears three distinct antlers. The burrs of the two on the right side were separated by flesh and hairy skin. The base of the antlers on this side bore traces of injury as from a rifle ball.

shipping offices, sailor boarding houses, etc., where I would be most likely to pick up news of the arrival of anything in the wild animal line, that might come into port. One day one of my scouts came in with the news of the signalling of a vessel from Calcutta, and proposed that I should accompany him down the harbor in a row-boat, so that the ship could be boarded before her arrival at the wharf, thus giving him a chance to pick up boarders for his house, and myself an opportunity to bargain for a stray monkey, or anything else in the way of wild beasts. We boarded the vessel just off Fort Warren, and found that the captain and first officer had made a venture on their own account for my especial benefit. It consisted of a tigress, pair of leopards, three sloth bears and four zebras; all on deck, while a portion of the cabin was occupied by a delegation of rhesus and bonnet monkeys.

Having bargained for the entire lot, I hurried ashore and immediately telegraphed Mr. Frost, manager of the Van Amburgh Menagerie, which was just going into winter quarters in the building on Broadway, New York, just above Spring street, formerly occupied by a Chinese museum. Before Mr. Frost's arrival I had landed all the animals, and in so doing just managed to escape a clawing from the male of the pair of leopards, which was about as wicked a brute as I had ever handled.

I disposed of the entire lot to Mr. Frost. They were immediately shipped to New York, and on their arrival were shifted to the different cages which had been prepared for them in the various portions of the building. This took place at night, and the leopards were taken up to the second floor to an apartment which ran back to Mercer street, and in which there was a large gothic window, glazed with frosted glass, which reached down to the floor. In shifting them into the stationary cage some one remarked that the bars seemed rather wide apart, but Van Amburgh instantly vouched for the safety of the grating, and nothing more was thought of it. When the last animal had been properly shifted Van proposed that the entire party should accompany him into the Prescott House, which adjoined the menagerie building, and take something in honor of the occasion. Just as they had ranged up in front of the bar the menagerie watchman burst into the room and yelled out, "There's one of those

infernal leopards loose." Thereupon the convivial meeting instantly adjourned and an immediate break was made for the door.

On returning to the menagerie it was found that the brute was promenading back and forth on the floor against the large gothic window, with nothing but the glass between him and the open street, on the opposite side of which was planted a gas lamp, whose light made the leopard appear like a huge moving silhouette. Luckily the shipping cage had not been removed, and to tear off the remaining portion of the front left after transference was the work of but a few seconds. It was then turned on its side with the open front toward the leopard. Two men crouched behind and shoved it toward him. He squatted and when it came within a short distance of him, ran into it and allowed it to be shoved against the glass. The removed boards were immediately thrust down between the case and the sash without a movement on his part, but the moment the case was turned top upward he commenced a series of charges which required a good deal of nerve and strength to withstand, and so to prevent a second escape while the boards were being firmly nailed down. After everything was properly secured Van moved a second adjournment "to see a man," and laughingly said, "I don't think the guests in the St. Nicholas Hotel would sleep much if they knew that a leopard had been loose in this neighborhood to-night."

About a year after the above-mentioned incident I went with a lot of animals by steamer direct from Boston to Philadelphia. They were stowed on the main deck forward, which was closed in and roofed by a hurricane deck. Among them was a female Indian leopard and a pair of Bennett's wallabies. On the first night out I was just in the act of turning in when one of the crew thrust his head into my stateroom door and said, "Mr. Thompson, that elephant cat of yours is loose. Will it do any harm?" I have a distinct recollection that my reply was terse. Hastily drawing on my trousers and thrusting stockingless feet into shoes, I hurried forward, and in so doing passed through the officers' mess room, a door from which communicated with the compartment in which the animals were stowed. On the table stood a lantern, which had evidently been left by the terrified seaman. Picking it up, I opened the door, stepped inside and by the dim light made out the leopard playing with the body of a wallaby, precisely as a cat would with a rat.

Immediately on my entry she dropped her prey and began to scramble toward the top of a lot of bags of potatoes which had been piled forward. Instantly placing the lantern on the deck I shouted out to her in the same unrefined language which I had addressed to the sailor. She suddenly turned, sprang down and in a twinkling was standing directly in front of me, with her nose not a foot away from my knees. I impulsively reached down, seized her neck with both hands, and as she threw up both paws to rake my arms swung her upward and slammed her down on the deck with sufficient force to knock the wind completely out of her. Just then I realized the critical position into which I had heedlessly rushed and began to call for help. The door was carefully opened for a few inches and I recognized the keeper's voice asking what I wished. I requested a rope on the instant. There was a shuffling of feet and I heard some one climb the stairs to the hurricane deck. By this time my attention was drawn to the leopard, which was reviving so rapidly that I was forced to repeat the slamming process. That being finished I again shouted for rope and was requested to exercise a little patience, as a man had gone on the upper deck to get it out of a locker. It seemed as if a full hour passed before he returned and then the keeper wished to know what I wanted done with it. In lurid language I requested him to make a halter knot in it and then join me, at which he showed a good deal of hesitation; but I finally bullied him into venturing alongside of me, when on looking down I found that the animal had again recovered, but was completely cowed by rough usage. Not daring to loosen my grip, with my feet I managed to get a bight of the rope under her chin, and by dint of sharp language forced the keeper to make fast the halter knot. He was then directed to pass the free end of the rope into the hole she had made in escaping and out again through the grating near the end of the case; from thence to take it to the parties on the outside, who were told to pull with a will when I gave the signal. All being ready, I raised one foot for a kick to hurry her, let go, and called out to pull; but she was too quick for us, as she darted into the case as if shot from a cannon, and the pulling party fell all in a heap. I instantly sprang forward and turned the case topside up, picked up the loosened bar and held it up-lifted, in order to keep it cowed. The keeper was then ordered to bring in a board, hammer and nails; but the moment he attempted to close the opening her claws just missed catching him, and I was forced to do the nailing, which was finished without the slightest protest on her part.

Some months later I secured a fine male from South Africa, which was forwarded to Philadelphia, and I followed shortly after. Not long after my arrival I determined to try and mate them. The male was shifted into a small cage, which was placed on trellises; immediately in front of the large one containing the female, with only about 6 in. of space intervening between the gratings. They remained in this position the greater portion of the day, without either animal showing the slightest ill will toward the other. Late in the afternoon I got up on the small cage, lifted a bar in the larger one containing the female, and then drew up one in the male's cage. The instant there was a clear opening, he sprang through like a flash, seized the female by the throat and pinned her to the floor. Impulsively I kicked the small cage off its supports, and sprang into the larger one with a piece of board in my hands, which I had picked up with the intention of using it for forcing the male to shift, if he showed any reluctance in so doing. The board was brought down on the male's head, with sufficient force to split it, whereupon he loosened his hold, and backed into a corner, while the female staggered into another, the pair spitting and snarling like demons, while I stood between them, with my back against the grating, beating a tattoo on the floor of the cage with the two pieces of board.

Calling out to the parties who had been assisting me and receiving no answer, I hastily glanced over my shoulder and found that the room had been suddenly vacated, with the door leading into the adjoining apartment tightly closed. A few strongly worded expressions caused it to

open slightly, and after some delay a few pieces of plank were brought in and arranged so as to make a temporary partition. I then backed out and slipped the loosened bar into its place. After which the small cage was replaced on the trestles, the male driven into it, and the female given the entire range of her cage. On the next day she scarcely showed any signs of her rough treatment.

FRANK J. THOMPSON.

[TO BE CONCLUDED.]

### The Fable of the Fox and the Lioness.

FORT SMITH, Ark., Nov. 8.—In your last issue Mr. Hough describes, among other things, a group of mounted lions at the World's Fair, two of which were "kittens," which he astutely surmises (because of the difference in their color) "were not of the same litter." Now I never raised any lions of my own, and am therefore unable to speak of them with authority, but I believe there is extant a moss-grown story to the effect that the "varmints" with which the footstool is provided once had a mass meeting, and the sisters got to discussing family matters, and some of them began bragging about the number of little ones they were in the habit of imposing upon the commissary department at each impose. When all but the lioness had "filed their claims" that lady was requested to state the extent of her accomplishments in this line. She adjusted her glasses and looking haughtily upon the crowd remarked, "One, but that one is a lion."

HOODOO.

[This is the ancient fable of the Fox and the Lioness; but however witty, it is not true to nature; there are sometimes three or four cubs in a litter.]

### The Linnaean Society of New York.

A REGULAR meeting of the society will be held at the American Museum of Natural History, Eighth avenue and Seventy-seventh street, on Tuesday evening, Nov. 28. Papers: L. S. Foster, "A Consideration of Some Ornithological Literature, with Extracts from Current Criticism. II. 1884 to 1898." Arthur H. Howell, "Birds in Our Great Cities." ARTHUR H. HOWELL Secretary (212 Madison street, Brooklyn).

### A Connecticut Wildcat.

PORTLAND, Conn., Nov. 8.—An adult wildcat (*Lynx rufus*) was killed this morning in Durham, Conn., by Frank Francis. It weighed nearly 25 lbs., and is now in the possession of Mr. W. P. Post, of Middletown. Mr. Post will present it to some museum. JOHN H. SAGE.

## Game Bag and Gun.

"Game Laws in Brief." Revised to Jan. 1, 1898. Game and Fish laws of all the States, Territories and Provinces. Correct, reliable, handsomely illustrated. Published by the "Forest and Stream." Sold by all dealers. Price 25 cents.

### THE LONG ISLAND DEER POCKET.

THE Long Island deer season, which lasts but six days, from Nov. 10 to 16, opened last Friday. On that day about fifteen deer were killed. Judging from previous years it is probable that fifty or sixty deer will be killed before the season closes.

Few people besides the local sportsmen know of the excellent hunting afforded by this Long Island pocket. One gets a vague idea from the daily newspapers that deer are hunted and killed somewhere on the island between Brooklyn and the jumping off place, but as a rule little stock is taken in these accounts. Every one knows that there are quail and rabbits on Long Island, but it takes an exaltation of the imagination that costs effort for those who have hunted in the Adirondacks, or Maine, or Michigan to believe that deer are to be found aside from semi-domesticated specimens within inclosures.

It is a fact, however, that good deer hunting is to be had on Long Island less than fifty miles from New York city. The hunting has its limitations to be sure, and there are many sportsmen to whom these limitations would appear insurmountable, but as far as the number of deer to the square mile is concerned there is very little to complain of. There are few localities, indeed, where sixty deer could be killed in six days within two miles of a certain spot.

And yet this is the condition of affairs that exists on Long Island to-day. The hunting country is a stretch five miles from Ronkonkoma on the southeast to Central Islip in the other direction, and of less width. The deer occupy in addition to this about 7,000 acres of land owned by the South Side Sportsmen's Club, Cornelius Vanderbilt, Robert Cutting and C. Roberts; but on this latter no hunting is allowed. It is on account of the protection afforded mainly by the South Side Club that they exist to-day. Otherwise the last deer would have been killed off a decade ago.

The evening before the season opened found a FOREST AND STREAM representative quartered at Trainer's Hotel, Smithtown. In the comfortable barroom were assembled a number of representative hunters who annually come together for the deer shooting. Plans were laid for the following day, and battles in which *Cervus virginianus* figured prominently were refofought. The conversation never lags in such a company of sportsmen.

One story with a curious moral was told. A hunter watching on a stand only a few rods from two others and in plain sight of them wanted to take a drink and remembered that he only had enough whisky in his flask for his own need. He did not want to share the precious remnant and he did not want to be seen drinking it by the others. So he determined to go behind the nearest bush, where he could have it all to himself without acquiring the reputation of being a hog. Scarcely had he reached the bush when up jumped a fine buck which the hunter straightway toppled over. Was ever selfishness so rewarded?

Friday morning an early start was made. Just at 4 o'clock the hotel contingent emerged from their comfortable quarters into the chill atmosphere of a frosty morning. Our team was in readiness and soon we were bowling along at a brisk rate in the direction of the hunting grounds. The distance from Smithtown is about five miles. Hauppauge, Ronkonkoma and Central Islip are all nearer. As we drove along the starlit road, conversing

in low voices, we caught up with other teams going in the same direction as ourselves, and soon we were an integer of a long procession that wound snakelike among the silent farms and stretches of woods. In the outskirts of Smithtown we passed the house of a German who had reported the night before that his cabbage patch had been ravaged by deer.

Several miles further we left all signs of civilization behind. On either side of the road, which was just the width of a wagon track, rose a forest of scrub oak and pines. The procession began to move slower, and presently halts became frequent. Some distance in front, at the head of the line, we could see lanterns moving about and every now and then ghostly figures stooping down and examining the ground. The leaders of our party were looking for tracks in the sandy road.

It is a common thing when tracks are found to obliterate them, the hunters marking the place by some sign known only to themselves. Then when it is light enough they come back with their dogs and put them on the most promising track. This early start and search for tracks before daylight is the most picturesque feature of the hunt, and one peculiar to the locality.

We reached our destination just as the sky was beginning to pale in the east. The horses were drawn up a side road and then hitched to the trees, and the hunters began stamping their feet and trying by various other means to start the blood in circulation. All hands allowed that it was a cold morning.

The stars were still shining brightly overhead as we proceeded to take our stations, under the direction of B. B. Newton.

The order of the day was to line the road, and hunters were stationed along it at short intervals for half a mile or more, making a cordon that meant death to any deer. Before all had fairly gained their positions the yelping and baying of hounds was heard to the northward. The dogs were driving our way, but it was too dark to see what they had.

Shortly after daylight a large buck which had circled on the dogs and thrown them off the trail, tried to run over the FOREST AND STREAM man from behind. The newspaper representative, fortunately, was armed and succeeded in repelling the onslaught. When the smoke of battle cleared away it was found that the first deer of the day had been killed—a fine buck weighing over 200 lbs. Soon after a second buck tried to run the gauntlet, but turn which way he would he was met by a volley of fire, and finally fell dead close to the road.

In the meantime frequent shots were heard to the eastward, where a party from Stony Brook and St. James were supporting the right flank of the Smithtown hunters. This party succeeded in killing two fine does. Many shots were also heard to the south, where Hauppauge, Babylon and Islip parties were guarding a stretch of railroad track. This latter point is one of the most celebrated stands on the hunting grounds. Most of the deer started north of the railroad, if they are not killed sooner will cross the railroad within a few hundred yards of the same spot. Only a short way off are the grounds of the South Side Club and safety. But few are the deer that gain this protection untouched. To do it they must mount the railroad embankment in the face of a terrible fire at buck shot.

A great many hunters argue that the deer make for the lands of the South Side Club because they know they will be safe there. Others say that most of the deer have been born and bred there, which is a much more logical statement. A third reason why they should take this direction, which would be sufficient were the former line, is often overlooked. That is the brook that flows through these grounds and eventually contributes to the trout ponds nearer the ocean. In the old days, when there was no protection on the South Side grounds, the deer used to take the same course. It is their inborn instinct to run to water when pursued by a swift dog, and when hard pressed no deer that ever lived would resist its promptings.

The stream enlarges as it approaches the ponds and is navigable for boats. It is said that years ago deer started at the head would run down the brook and sometimes even reach the ocean.

If the woods are full of deer it must be acknowledged also that they are full of men. This is the chief drawback to the sport. There are entirely too many hunters. It was variously estimated that from 250 to 500 hunters were out that day. These men were not scattered over a wide area, but mostly grouped in a few constricted spots where deer were known to pass. No accidents were reported on the opening day, but one could only thank an All Merciful Providence that such was the case. In large bodies of men there are always to be found some ignorant and thoughtless individuals.

In the afternoon the Smithtown party resolved to beat from the Sayville road westward toward the east border of the South Side Club grounds. A portion of the hunters got in their wagons and drove around to the low wire fence which marks the club territory, and there strung out *en cordon* to intercept any deer coming that way. The others formed a line, and with the dogs started to beat the intervening country. This country was very open. Small pines grew sparsely, but one could often see for long distances among them. The ground is flat, but intersected here and there by little valleys, which slope downward toward the club grounds. In the sandy soil could be seen many deer tracks. Some were old, and some only made the night before, but take it all in all they were more abundant than the writer has had the pleasure of seeing in localities celebrated for deer hunting.

The line of beaters extended nearly a quarter of a mile from end to end, and the hunt was what is commonly known as a breast hunt. When they had nearly reached the club fence a nice buck sprang up from a clump of bushes near one end of the line, and Geo. A. Smith, the popular president of the Smithtown Rod and Gun Club, knocked it over. It could not be persuaded, however, to give up the contest on the spot and ran nearly half a mile before the dogs pulled it down and put it *hors de combat*.

This was the third and last deer that fell to our lot. Three fine bucks should be enough to satisfy any one, however, for a single day's hunt. The last deer killed had had a hind leg broken some time before. The wound was perfectly healed, and the deer ran as well on three legs as other deer run on four. It was in good condition. Its horns, however, were mere stumps, which was probably a result of its crippled condition.

One other unpleasant result of the large number of men who congregate on the deer grounds, besides the danger to human life entailed, is the numerous quarrels that arise over the ownership of game. Our party fortunately was in no serious quarrel. Here is a sample, however, of what often happens. A party of hunters driving along the bridge road heard hounds ahead of them driving a deer. As they came in sight of the railroad they saw three hunters stationed there raise their guns and fire in succession. They hastily jumped out of their wagon and formed a line along the railroad, while one of their party took their dogs and ran ahead to where the shots had been fired. The men there reported that they had failed to drop the deer, and that the dogs had lost it. The fresh dogs were loosened and soon had the track. The deer made a short run, and then in attempting to cross the track was killed by one of the hunters last upon the scene.

All gathered around the deer and mutual congratulations were in order. The hunters who had first shot now appeared and demanded a share of the deer. They could not prove that they had wounded it, but as their dogs had been running it, although they had lost it, it was finally decided to let them share, and a hindquarter was skinned out and given to them.

Scarcely had this been done when a "howling mob" from the northward, to use my informant's expression, appeared on the scene. Their spokesman advanced with his fist raised in the air, and yelled, "Where in sulphur and brimstone is our deer?" There were thirty or more in the party, and a division with them would have meant scarcely a smell for the hunters to whom the deer rightly belonged. Fortunately it had been put in their wagon, and on a given signal the driver lashed his horses, and before the invading party realized the situation, had carried the deer safely away. The last comers claimed to have started the deer.

In counting up the spoils of the chase it was found that besides the three deer killed by the Smithtown party and the two already credited to the St. James party, three had been killed by hunters from Hauppauge, one near the east line of the South Side Club and one near the spot where our first deer was killed. An eleventh deer, a large buck, was killed in a cabbage patch just after daylight. Besides these, other deer were undoubtedly secured by parties from Islip, Sayville and other points, so that it is probable at least fifteen deer were killed on the opening day.

The Smithtown hunters are generally accredited to be the leading party both in point of sportsmanship and success. It is largely made up of members of the Smithtown Rod and Gun Club, who control several thousand acres of good gunning ground. The following gentlemen belong to this club: A. E. Hallock, G. H. Newton, Luther Hallock, Chas. Otton, Andrew Lamb, Geo. A. Smith, George Strong, Frank Strong, Melville E. Brush, Capt. L. Brush, James H. Trainer and Vail Blydenburgh. In addition to these, friends and invited guests of the club were present. One has to have an invitation to join such a party. Among the other hunters were J. W. Arthur, of Northport; Uncle "Lem" Carl and H. J. Hartman, of Huntington; Sydney Blydenburgh, Dan Sherry, Clark Waterbury, William Sheely and Messrs. Elsnerr and Delefsen, of Brooklyn; Capt. Rogers, Wm. Rich, Capt. Low Davis, Will Jeffrey Smith and Will Jones Smith, of Stony Brook; G. W. Smith, Devorex Emmett, Ben. Powell and D. Lawson, of St. James's, and B. B. Newton, Chas. Conklin, Louis Blydenburgh, C. Darling and Chas. Hunting, of Smithtown.

Uncle Lem Carl, who is an honorary member of the Smithtown Rod and Gun Club, is a shining example of what an outdoor life and a love of field sports will do for a man. He is seventy years young and more, but his three score and ten years sit lightly on him. His hair is still dark and he is sound as a four-year-old colt and just as full of spirit. One could look a long way and fail to find a more enthusiastic or successful hunter.

Years ago deer used to be found all over Long Island to within a short distance of Brooklyn. At that time they were generally hunted from horseback. Long and exciting chases were the rule. Now the deer are confined to a limited area and most of the hunting is done on foot, the deer being driven to the hunters by hounds.

Some time ago there was a period of ten years in which no hunting was allowed. The deer multiplied rapidly and it is reported that on the first day that the law permitted hunting no less than fifty-four deer were killed.

The season of 1892 was not a very good one so far as results are concerned, but a New York taxidermist, Fred Sauter, mounted thirty heads of deer killed on the island that year. This probably included half the total bag.

There is good sport to be had on the island if you are lucky, also plenty of chances for disappointment and some danger. If you wish to go next year you had better begin by cultivating the friendship of the local sportsmen. This is a pointer.

J. B. BURNHAM.

OKADALE, L. I., Nov. 13.—Deer have been killed to date as follows: By parties from Smithtown and Hauppauge, 11; Islip, 9; Sayville, 3; Bohemia, 2; West Sayville, 3; Bayport, 1.

A. A. FRASER.

### Told in One Sentence.

At the meeting of the National Sportsmen's Association, adjourned from last September, was held in Chicago, Nov. 1, seven members present, the name was changed to "National Game, Bird and Fish Protective Association;" these officers were elected: President, M. R. Bortree, Chicago; First Vice-President, A. L. Lakey, Kalamazoo, Mich.; Second Vice-President, Joseph Hunter, Washington, D. C.; Secretary, Fred E. Pond, Milwaukee; Treasurer, T. P. Hicks, Chicago; Attorney, F. S. Baird, Chicago; the annual dues were fixed at \$5 for a club and \$1 for an individual; and the meeting adjourned to Jan. 10, 1894.

### The Louisiana Snipe Flight.

FRANKLIN, St. Mary Parish, La., Nov. 5.—Such quantities of snipe have appeared that old hunters say that this season will be unequalled since "befo' de wah." Several splendid bags have been reported. Mr. L. S. Frère sent down 10 dozen to be distributed among his friends here. He found them in the "Floating Prairie," near New Iberia. He reports ducks unusually plentiful. Mr. J. J. Pringle has arrived, and was out with his gun Saturday. I haven't learned the size of his bag, but it is always a large one. The writer spent a very enjoyable day on the banks of Mud Lake and bagged 67.

CATS.]

## NEW HAMPSHIRE SIDE-HUNT.

"We have met the enemy and we are theirs," is the sentiment of one-half the active members of the Franklin Fish and Game League, whose first annual hunting match occurred Oct. 25 and 26 as announced. Beaten by a count of over 56,000, the unfortunate side claim, with reason, that such defeat was not administered by any art, cunning or craftiness pertaining to or associated with the use of gun or rod, nor by any means fair to them or creditable to those who accomplished their overthrow; but by that vulgar and invincible power, the almighty dollar, were they humbled. They also claim that much of the game was not killed during the two days, if within a week of the hunt, and should not have been counted. Each side chose four fishermen, and they in turn evidently engaged all the help they could, for the purpose of making a showing. P. C. Hancock captured the winning side and had on his list several "dudes"—men averse to taking life of any kind, but who proved capable of running up a score as was expected of them, procuring the goods at Faneuil Market, Boston. M. D. Woodward captained the unfortunate and sadly deluded party, who went searching the woods for what their opponents could procure in a city by the barrel with the assistance of neither dog or powder, or any established sportsmanlike methods. Game counted as follows: Gray squirrels, partridges, pigeons, woodcocks, wild ducks, rabbits, 100 each; hary wickets, crows, muskrats, 50; black squirrels, wild geese, owls, hawks, woodchucks, 200; foxes, minks, 300; raccoons 500. One amusing incident was the counting of a string from "out of town" for Woodward, when the "cart" and "expenses" were furnished by Hancock's side, through the sharp practices of the teamster. The captains did the counting, and a glance at the scores of individuals and groups, which follow, will make further comment unnecessary if one is acquainted with the New Hampshire game regions.

CAPT. HANCOCK'S SIDE.—G. F. Elliott: 16 partridges, 17 squirrels, 2 rabbits, 2 coons, 1 mink. C. L. Eddy: 6 partridges, 9 squirrels, 1 crow, 1 woodchuck. H. E. Colby: 6 squirrels, 1 rabbit. J. V. Goss: 7 squirrels, 1 duck, 1 partridge. G. G. Fellows: 16 squirrels, 6 partridges, 7 rabbits, 2 muskrats, 6 crows, 6 foxes, 3 woodcock. E. F. Pike: 9 crows, 9 rabbits, 1 owl. M. M. Fitzgerald: 1 fox, 1 coon, 2 crows, 3 muskrats, 1 owl, 23 rabbits, 3 partridges, 35 squirrels, 1 hawk, 1 mink. J. W. Dresser: 1 rabbit, 33 squirrels, 3 crows, 2 partridges, 14 squirrels, 1 partridge. E. A. Jones: 2 ducks, 6 partridges, 5 woodcock, 51 squirrels, 1 rabbit. The Ducks: 209 squirrels, 29,925 fish count. G. W. Stevens: 2 crows, 4 partridges, 1 muskrat, 12 squirrels. C. C. Bucklin: 6 squirrels, 1 owl, 2 muskrats, 1 rabbit, 8 partridges. Count: game, 58,900; fish, 28,035; total, 86,935.

M. D. Woodward's Side.—J. W. Russell: 1 fox, 1 hawk, 2 partridges, 12 squirrels. W. G. O. Thompson: 8 partridges, 6 squirrels, 1 crow, 12 rabbits, 2 rabbits, 1 owl, 1 muskrat, 2 squirrels, 3 partridges. G. E. Buell: 1 partridge, 7 squirrels, 1 owl, 1 muskrat, 1 rabbit, 1 partridge, 8 rabbits. F. W. Gordon: 4 squirrels, 1 rabbit, 1 partridge, 1 squirrel, 8 rabbits. F. W. Emerson: 27 partridges, 2 crows, 1 woodcock, 33 squirrels, 6 rabbits. Leach and Morrill: 3 crows, 1 partridge, 24 squirrels, 1 owl, 1 hawk, 1 fox, 5 muskrats, 2 squirrels, 3 rabbits, 2 partridges. Davis and Morrison: 1 coon, 2 hawks, 3 ducks, 6 crows, 1 owl, 2 partridges, 18 squirrels. M. D. Woodward: 2 foxes, 36 squirrels, 1 partridge. Count: Game, 32,500; fish, 8,000; total, 40,500.

The supper, for which the contest was inaugurated, occurs to-night in the new Franklin Hall, furnished by the defeated side without open protest, probably because, although they are aware their adversaries got into the mud to down them, they feel that their own skirts are a trifle dusty and think "settling" the wisest course. Ladies and other guests were invited, and arrangements are made for an elaborate spread and an enjoyable affair.

The New Hampshire Central House Club, of Goffstown, proprietor F. A. Condon, captain, 15 members, and an equal number headed by Mr. O. B. Pierce, were to have had a match hunt Saturday, the 28th, but the forenoon being wet only the former party started and brought in a count of about 3,000, enjoying a supper and pleasant evening at the Central House. Proprietor Condon is a hustler and is anxious to get at Mr. Pierce's team again.

PAYSON.

## ON A STAND IN WEST VIRGINIA.

The following extracts are from a letter written to a friend by a commercial traveler who, after reporting a good business trip, breaks off into this story of a deer hunt in the mountains of West Virginia:

I COULD not help it, but stole half a day Friday and dropped into the trough and took a turn at a deer with the boys, and as usual got a fine buck, whose branching antlers I have in my possession as evidence of the fact, and a splendid pair they are, four prongs and perfect. I took Frank Turley down with me, and told John Vanmeter I would not be there; wanted to surprise them. We left Moorfield at 6 o'clock in the morning and were on the stand nearly an hour before any of the hunters put in an appearance. I occupied my time in building one of my old time fires, which was blazing and melting the frost for about ten feet around, when they rode up the high stand on the road to Painter's Lick, where we watched some years ago. John V. was so much surprised to see me that he kept rationally quiet all day, and John Cunningham, who was along, grinned audibly immediately, upon which I asked for his coon dog, and that brought him to.

In no very parliamentary language I abused them for being late, and hurried the starters off with ten hounds for the big mountain in front of us to get to work and run the deer in, telling them to come when I shot, for it meant venison every time.

About half an hour after I heard one set of dogs running on the Tater Row, and going straight for Zadick's Hill, but they soon doubled and made for our stand, but turned at Clifford's Hollow and took back under full cry for the Sycamore, as I thought, but soon went out of hearing and I supposed they had run in at the rear. Just then I heard another set of dogs coming over the Back Bone, heading for the pastures where old Lou and John rode so majestically the day we watched and got the little deer. Nearer and nearer came the dogs, and I knew by the bee line they took that they had a right royal buck in front, and that they were running to kill by the way they were tonguing only once in about 50 to 60 yds., and they were close on him. I had watched there so often, I was sure he was coming straight to our stand, and soon I spied the buck coming through the little clump of wood over the fence fresh as a daisy about 500 yds. ahead of the dogs just topping the ridge opposite. He looked every inch a monarch of the forest, and I called to Frank Turley, the dead shot of the South Branch. The buck looked to be heading for Walnut stand, and I sent Frank up the road and stood on the fence to watch the chase and to be ready for him if he should change his course and come in my direction. The hounds were now in the field, and

five good ones in full cry which to me was worth all the venison in West Virginia; and the buck coming straight to Frank Turley.

The crack of a rifle was a serious interruption to the stillness of the crisp morning air, and shot after shot rang out till I counted five, and I could see the game old fellow stagger, lean against a bush and drop on his haunches, grit to the last, but struck every time. The dogs came up and he landed one of them ten feet up in the air, and dropped as dead as Hector.

The hunt was over and up the road the procession came, all riding two by two, the first time I ever saw as much order on a Hardy hunt. As I had the only buggy in the party the buck was loaded into my vehicle and we started for the Old Fields to butcher the deer and divide the spoils. As we were driving quietly over the rocky road all of a sudden there was the greatest commotion, in which my old horse joined, and all was hurry scurry. The set of dogs I had heard and supposed gone to the river were coming into the Gap full cry with another deer. With the companionship of the deer deer and a prancing steed I was almost run over by the retiring hunters, and there was a babel of orders to go to the Mill-bery, back to the divide, to Clifford Hollow and Saw Mill Mountain, High Bank and the Tumbly Dam, Zedick's Hill and Cousin Williams's gate. The road was full of dogs, horsemen and footmen. I sat and looked on. You can imagine the melee, having seen it once.

The Sycamore was occupied by Will Wirt Harness, a splendid shot, and if he went there it was sundown for the deer. Into the woods, over the rocks, rode the hunters; and after the road was cleared I drove to the trough gate, intending to tie my horse and watch for the deer. Then just as I got there, down came a full-grown doe, not 10 ft. from the head of my horse, and over the fence straight to the Sycamore. My gun was in the case and not loaded. From all quarters came the hunters, Big Ike bellowing at the top of his voice, "Open that gate, open that gate!" "Jump it, you fool," I exhorted. In the meantime the self-same gate was wide open and he and the dogs and a dozen men were through and into the fields, and the deer going over the upper end of Sawmill Mountain to the river. I sat there on the road listening to the chase. In a few minutes the rifle cracked; the soft eyed doe was stretched across the pommel of a saddle; and he continued the march to the old fields, where the decision of the day's sport was to be made.

To the starter of the dogs went the hide and the first choice of the meat; to the man who killed it second choice and the horns. For the rest of those engaged in the hunt the plan is this: Some one is chosen to put a stick on a piece of meat. The hunters all stand in a row looking to the pieces laid out. One man is placed facing them, his back to the venison, and the one chosen puts the stick on a piece and calls to him, "Whose piece is this?" "Big Ike's," he answers, and so on till the last piece is come to, which is his own. John Vanmeter held the stick while Will Harness named the receiver, and as you may imagine, neither he nor John got left. The stick was changed and I thought the voice too much like a mind-reader's who asks, "What have I in my hand?" Turley gave me the horns, and I asked for a piece of the neck, which I carefully wrapped up and gave to Joe Cunningham, who was too lazy to go, but not much elated over the venison I brought him.

The two we killed to-day make twenty-five so far this season, and they were out to-day; what luck I have not heard, but rather expect they got something.

Turley hit that deer five times in succession, and the last shot was in the head just below the eye, and the game running every inch it was able about 200 yds. away from him. This same man is a capital shot at anything on the wing. Harness shot his deer through the head, and they weighed, buck 177, doe 138 lbs., and both very fat and in splendid condition.

F. H. I.

## WASHINGTON CITY NOTES.

THERE is marked activity among the hunters of the seat of Government these days. At the railway stations and steamboat wharves are to be seen men, dogs and guns destined for promising hunting grounds, near to or remote from Washington. Deer, bear, moose, squirrel, ducks and quail are the great objects of interest, and not a few parties are planning their annual turkey hunt in the mountains of Pennsylvania and the Virginias. Deer and turkey are said to be plentiful, but reports of the scarcity of quail are rather discouraging. The severe weather last winter is to blame for this state of things. Reports from further south are better as to birds, and Messrs. Jos. H. Hunter and Chas. Simpson are taking a three weeks' trip to North Carolina. With the aid of Hunter's celebrated Black Wonder good bags of the savory Bob White are sure to be made.

Col. Cecil Clay has just left Washington for Canada, not as a bank cashier, but to bank some moose. The colonel, as is well known, has an empty coat sleeve, and is one of the best one-armed shots of the country. His hobby is moose, one of the finest specimens of which, a handsome bull, shot several years ago, is now the central figure of the magnificent group in the National Museum.

Messrs. M. A. Tappan, Chas. Laird, Atkins and Lanvoigt are going to Buckingham county, Virginia, after deer and turkeys. The reports from that section are very good for the game mentioned. An occasional bear relieves the monotony there also.

Reports of deer in the South Mountain, Pennsylvania, are favorable. They are said to be more abundant than last year, and hunters claim that there has been a steady increase in the number of deer in this section for the past three years.

Considerable game is being received here from Virginia. Catlett's Station, Fredericksburg and Millboro are the principal shipping points. Deer, bear and turkeys are plentiful in the mountains, and Millboro is a good point from which to reach the game. Good accommodations, reasonable rates and no restrictions barring strangers, are to be found there.

Nov. 1 the duck season opened on the Susquehanna Flats below Havre de Grace. It is estimated that several thousand ducks, consisting of canvasbacks (very few), red-heads, blackheads and coots, were killed. Ducks were there by the thousands, and the main object of the slaughter was for the pecuniary profit, most of them being shipped to the markets. Quite a number of Washingtonians go to the mouth of the Susquehanna for ducks. The fishing rods are not all put away yet. Bass fishing

for the past two weeks has been out of the question owing to muddy water. At this writing the water is just about "bass clear," and we know of several parties who are quite ready for the sport.

Messrs. Coburn, Otterback, Einstein, and other members of the Washington Anglers' Club, go to the foot of the Great Falls, fishing the river from there to Cabin John's Bridge; Chas. Laird and Ownes are trying the fishing at Tuscarora, just above the Monocacy; and Arthur McCormick and Harry Fiske go up Point of Rocks way for a bit of the same sport.

Perch fishing on the Eastern Branch is done for. Channel cat fishing furnished good sport early in October. Dr. Patten and your humble servant took a day on the Branch and caught a fair string of catfishes. They are very game, but the perch haven't as much pull in them as a good healthy minnow.

BART.

WASHINGTON, D. C., Nov. 10.—*Editor Forest and Stream*: Our gunners were busy on the marsh, while the rail and reed-bird season lasted. But they are gone and the quail season is now at its best. Very fair shooting can generally be had in Maryland and Virginia, with still better sport as you travel further South into North Carolina and adjoining States. This year it is not as good as usual here, because of the cold weather last winter which killed many birds. Still when two gunners can bag 40 quail in half a day's work or 14 wild turkeys, as I was told the other day, it is not bad sport, for this section.

But North Carolina is the favorite resort. Last Monday morning, the Washington papers recorded the arrival of William K. Vanderbilt, the millionaire railroad magnate of your city, on his shooting trip to North Carolina. He was accompanied by three friends, in the sleeping car Idler. He had a dozen fine dogs. They live on the train during the hunt. It is well stocked with provisions and all the conveniences of a comfortable roughing trip. They will be joined by George Vanderbilt, who is wintering at his magnificent home near Asheville, N. C., where he has thousands of acres, well supplied with game, reserved for his own use and that of his special friends.

Many members of the Washington Capital City Gun Club enjoy their winter sport in North Carolina and adjoining States, where the quail are always plentiful, and the open season extends to March 15. J. M. Green, treasurer of the club, leaves to-night with Captain West for some days' shooting in the Vanderbilt resort, and other members of the club will go later.

SEVENTY-SIX.

## NEBRASKA'S ABUNDANT GAME.

BROKEN BOW, Nebraska.—*Editor Forest and Stream*: Never before has Nebraska seen such abundance of game as this season has produced. First—prairie chicken yielded the hunter some tremendous bags in September and now the abundance of quail, geese, snipe and duck fills the sportsman's bosom with delight. Though the flight of wildfowl is no greater than in some former years, still the combination of land and water fowl that may be found in many localities in Nebraska cannot be excelled in any State of the Union and can be equaled by but few. As in former years, the Platte River from Columbus to North Platte affords shooting *par excellence* for waterfowl. At Clark's the well known hostelry of Col. West has entertained numerous parties of jolly sportsmen who have departed with well filled bags, and the remembrance of many a happy incident to relate to their less fortunate brethren who have remained at home, "Chained to business."

Cozad, Brady's Island and Gothenburg have had their quota of visiting sportsmen, and still they come. Any of the points mentioned along the line of the Union Pacific R.R. will be found *ne plus ultra* for all kinds of game, the accommodations good and the officials of the U.P.R.R. courteous and obliging to their patrons.

The variety of game that one can bag is surprising. Near Clark's I shot in one day seven distinct varieties of duck and geese, besides snipe, prairie chicken, sharp-tail grouse and quail. There may be localities where one can make larger bags of some particular bird, but no place where one can find good shooting on a different kind of game each day in the week as they can here.

The semi-occasional stir among Nebraska sportsmen to have the game laws better enforced has just broken out, and I hope will do some good. It is safe to say, however, that these spasmodic attempts will amount to little until an organized effort is made to protect game during the close season. The game warden system is the only one that has ever proved satisfactory, and until a fund is raised to support such system, local protection will be of little avail.

I am always willing to advise brother sportsmen who intend visiting Nebraska as to routes, locations, etc., for the best shooting, and am amply repaid in the knowledge that I have done a good turn. I will gladly answer any inquiries that may be made.

C. P. HUBBARD.

## Elk Hunting and Mule Trading.

ONE often hears of beginners, when over-anxious to shoot their first deer, having shot instead a cow or a mule, but little did I dream of such being my misfortune. We were driving a bunch of milch cows from Colorado Springs to Glenwood Springs, a distance of 200 miles, across the main range of the Rockies. When we reached Eagle River, a few miles beyond Battle Mountain, we decided to camp for a few weeks in order to let the stock, which was very footsore and thin, gain strength and flesh from the abundance of grass that grew there. The place was surely a hunter's paradise, game of all kinds was plentiful. I never failed, when watching the lick, located about a mile from camp, to get several shots at deer or elk, but did fail many times to hit one. After many unsuccessful visits I laid aside my rifle with disgust, substituting a shotgun heavily loaded with buck-shot, fully determined that the next elk or deer that got in range of the buckshot should be my meat. The night the unfortunate shot occurred was a dark one, which is the only excuse I have for making such a mistake. I had not been there long when in walked what I supposed to be an elk. No one but those who have had a similar experience can imagine my disgust and madness when I found my elk to be a mule. It was a costly shot for me, but might have been worse. The mule was cured, however, and after many trades and a final sale I came out with only a \$25 loss.

W. L. JENKINS,

## BOSTON RIFLES IN MAINE WOODS.

BOSTON, Mass., Nov. 7.—Still the exaggeration continues. The papers are full of it. There never was anything like it, the noise the daily and Sunday papers are making about hunting this fall. As a rule real hunters and successful hunters are not pleased with the fact that the papers are so greatly overdoing the matter. I have talked with several of the best sportsmen I know and they unite in condemning this feature in the papers. It is believed by them all that the FOREST AND STREAM will keep out of such stuff, and continue to stick to the truth. One of them asked me Saturday if I had seen the statement in the last issue by J. G. Rich, that 100 deer a day were being killed in Maine? I had read it with a good deal of surprise, and had been thinking how utterly absurd such a statement is. The next man I met was a gentleman from Maine, and from one of the best game sections in that State. He had not succeeded in getting a deer, however. But he had just seen Mr. Crosby or his representative, the Bangor taxidermist. That house had received up to last week, 10 moose heads, 5 caribou heads and 36 deer heads. Now, does this look as though 100 deer a day were being killed in Maine? If a sportsman kills a big-game animal the first thing he does is to leave it with a taxidermist—at least the head—to be mounted. One hundred deer a day for twenty days in October would mean 2,000 deer, and only 36 heads left with the leading taxidermists to be mounted! Although admitting that deer are remarkably plenty in Maine, and being certainly very glad of it, yet I hope that Mr. Rich will pardon me if I think that his statement is too utterly absurd to be worth disputing.

Mr. Geo. H. Lamphier, mentioned last week as having killed a cow moose at King and Bartlet recently, desires me to say that it was not a cow moose at all that he succeeded in getting, but a young bull. A gentleman who saw the animals on the buckboard coming out gave me the report, honestly thinking that the dead moose was a cow. Mr. Lamphier tells me that he has no use for a cow moose and he wishes that no sportsman would shoot them. He also got a fine deer on his trip.

Mr. Mark Hollingsworth, a well-known Boston artist and lover of the rod and gun, has been spending a vacation at Billy Soule's camps at Cupsuptic Lake. He has a friend with him and they ought to get their full quota of deer. Mr. C. E. Goodrich and wife, of Boston, have been on a hunting trip to the vicinity of the Katahdin Iron Works. They are reported to have taken three deer. Marketman H. W. Pickham, of Boston Highlands, has made another successful deer hunt in Maine this year. He is the gentleman who, it will be remembered, brought out the five deer from Maine last year, a young buck, described in the FOREST AND STREAM at the time. The wonder was how the deer was caught, but when a celebrated case of selling a deer alive to parties outside of Maine came to be tried in court there it was at once suggested that this was the Pinkham deer. This time Mr. Pinkham was accompanied by M. O'Haren, the Brooklyn contractor, and David H. Power, of Tremont street. At Eastport they were joined by some other hunters and they made a journey of some 75 miles into the woods beyond Calais. Mr. Pinkham got three deer, Mr. O'Haren got two and Mr. Power one, a score of six. Mr. Pinkham's market will doubtless have venison again hanging at the door.

An excellent guide in the Rangeley region, and a man inclined to tell the truth, writes that the deer are plenty, but that it is a very poor time to hunt them now. There is a vast body of fallen leaves, dry and crisp, on the ground, and it is impossible to move without a noise that will scare the deer so that they are off, even before the hunter gets a glimpse at them. The forests are now more open, it is true, but it is impossible to move without a great noise. The weather has been dry in the deer country, and every stick cracks that is stepped upon. The great bed of leaves covers every dry twig, so that it is not possible to avoid stepping upon them. He advises "his customers," he terms them, to put off their deer hunt till the ground is covered with snow. It will then be "good tracking," and the noise of the leaves and dry twigs will be avoided. Mr. Geo. H. Cutting, of Andover, another good guide, also advises the same thing. He has known of several deer being started in the lake region, and though running only short distances, not being wild at all, yet it proved to be utterly impossible to approach within gunshot.

Messrs. F. A. and B. Fuller, with Mr. F. A. Merriam and Mr. West of Boston, have been on a deer hunt to Sherman, Me. They are reported to have secured six deer in the vicinity of Hunt Mountain, west of the east branch of the Penobscot. They had Edward Whitehouse and D. H. Perry for guides. Dr. William Appleton and his brother-in-law, Mr. Geo. De Forest, have recently returned from their annual hunting trip to the Adirondacks.

A gentleman informs me that J. B. Garland shot, at North Grafton, Mass., the other day, a prairie chicken weighing 36oz. He supposed at first that he had killed a big partridge, but was later informed by a man more skilled in natural history that it was positively a prairie chicken. Later the newspapers spoke of "several prairie chickens" being killed in the vicinity of Grafton; all doubtless coming from this one bird. The Massachusetts Fish and Game Protective Association will doubtless be pleased to learn of this bird, since they liberated several prairie chickens in that section, or in the western part of the State, a couple of years ago. Doubtless the bird killed was one of the liberated birds or their progeny. That section of the State has thus far been rather barren of results in the attempted restocking with prairie chickens.

Mr. W. B. Phinney, well-known in the Boston coffee trade, has just returned from his annual gunning trip to the Cape. This time he was accompanied by some friends. They gunned pretty thoroughly over the vicinity of Marshfield and towns thereabouts. They found very few quail, though having good dogs along. Partridge they found to be more plenty than they had anticipated, from reports. They secured a good number. Mr. C. Z. Bassett, of Appleton & Bassett, and his friend, Mr. Thairwall, have returned from their annual gunning trip to New Hampshire. They were accompanied, for a few days, by Dr. Langmaid—all the time that gentleman could secure from a very active profession. They hunted the vicinity above Concord, and obtained a fair showing of woodcock, bagging eighty on the trip, covering some over two weeks. The greatest number for any day was only nine, however. They were there through what

might be termed the first flight, and staid till the second flight should have begun, a couple of weeks ago. But that second flight has been a mystery to gunners this fall. Mr. Bassett believes that it has gone long ago, though other gunners are still looking for the birds. Several sportsmen of Worcester county, in this State, will give the woods another trial this week, not believing that the second flight has yet gone south. The weather has been unusually warm this fall, though there have been one or two cold snaps. Mr. Bassett and his friends found it to be uncomfortably warm during a good part of their stay. This unusually warm weather leads the sportsmen to think that the second flight of woodcock may not have gone. Mr. Thairwall will go down to his commodious camps at Plymouth Ponds this week, in order to be there for the duck shooting. Mr. Bassett will doubtless find time to join him, for a few days at least. Probably there are not two men in the country that enjoy camping, fishing and hunting more; genial bachelors that they are. They have a host of friends among sportsmen.

Nov. 10.—A party of prominent business men left Boston on Friday evening, by Pullman train, on a hunting trip, and one that they are very likely to enjoy. They go into the woods some 15 miles beyond the Katahdin Iron Works, in Maine, into a celebrated moose and deer country. The party is made up of Messrs. Calvin Austin, manager of the Bangor and Boston Steamship Co.; Geo. C. Moore, manufacturer, No. Chelmsford, Mass.; John A. Faulkner, Lowell; E. A. Smith, Lowell; Leroy S. Brown, of Blaney Brown & Co., Boston; and Harry B. Moore, of J. E. Soper & Co., Boston. Mr. Moore's name is mentioned last, but he is not likely to be least if there is any fun in the party, as the readers of the FOREST AND STREAM may be able to remember. Mr. Brown is much interested in the Inglewood Club, in New Brunswick, of which he has for some time been chairman of the house committee. Mr. Moore and some other members of the above party have also become members of the Inglewood this year. The party will be quartered at Gerrish's Camp on the present trip. Mr. Moore and Mr. Brown left a day in advance of the others, in order to make all camp and other necessary arrangements. They go for moose and deer, but they have hunting sense enough to be aware that they may have to be satisfied with partridges and squirrels. Still they are expert hunters enough to find the big game, if such a thing is possible.

Mr. E. M. Gillan, commercial editor of the Boston *Advertiser*, spent a few hours in the Reading woods one day last week. He found that the partridges are scarce and very wild. He got one snap shot at a flying bird, just at the edge of the opening, and was sure that he saw the game fall to the ground. But he hunted high and low, and no bird could be found. There was a stone wall just at the edge of the opening, and his setter bitch seemed determined to go over this wall. He called her back once or twice, with a sharp reprimand, and ordered her to look after the fallen bird. She would begin to nose, but would be off for the wall in a moment. At last he let her go in disgust, and continued the search for the bird alone. But his time was soon up, and he had to give up the search in disgust. He whistled his dog in, but she failed to come till he was some rods away toward home. He is now satisfied of what he did not then stop to think; the bird fell with a broken wing, and had quickly run to the wall and doubtless over or under it, and the dog had trailed it away from the spot where it had dropped.

The opening of the Bangor and Aroostook Railroad, which goes far up into Aroostook county, is opening a big hunting section to sportsmen, or at least making it easy for sportsmen to get to the game. Mr. Geo. C. Cutler of Boston and Dr. W. H. Simmons of Bangor left the latter city Thursday for a hunting trip into the upper Aroostook country. The region is good for large game, and has not heretofore been much visited by hunters. Prominent Bangor sportsmen seem to think that caribou are getting to be more plenty in Maine. They were more plenty a year ago than on previous seasons, and the season of 1898 is beating even that record. It is certain that more moose are being killed in that State this year than last. Mr. E. N. Dickinson of New York came through from Bangor last week with a big moose. He got him in the upper Aroostook country.

Partridges begin to come into the Boston markets by underground railway from Maine. Several boxes and other packages were noted last week, that must have come from that State, though they were shipped from a station just over into New Hampshire. Then the chances for getting the birds to Boston illegally by water are many. Once the steamer has sailed and the game wardens are powerless. Game Warden Frisbie made a seizure of game being illegally shipped at the steamboat wharf at Belfast the other day. The package was apparently a barrel of apples. Apples were at the outside of the barrel, but inside, and nicely surrounded with apples, were 17 ruffed grouse and a gray squirrel or two. The barrel was addressed to Adams & Chapman, Boston. The penalty is \$5 for each bird that is attempted to be shipped out of the State, but at last accounts the shipper of the game was hard to find.

It is really wonderful how the deer have worked down into the inhabited towns in Maine. One was killed in Benton, a farming town some five miles from the city of Waterville, the other day. A boy is reported to have killed him with a Stevens single-shot rifle. The readers of FOREST AND STREAM will excuse me if I have referred to this feature of the habit of Maine deer several times, since it is a feature so remarkable. Thirty years ago a live, wild deer in the town of Benton would have been as remarkable as a full dressed native Esquimaux in the streets of New York. Game protection, and especially non-hounding and non-crusing, are working wonders in Maine.

## Quail in Florida.

ALTOONA, Pa., Nov. 6.—Some time ago you published some accounts of Florida camp hunts which had been written to me by my brother, who has been located down there about six years. He now writes me that quail are very numerous and that there is plenty of other game, too. He says that he can guarantee an excellent time to anybody who is willing to go down there for a good time among the deer, quail, turkeys, foxes, and later on snipe. If anybody who wants sport and does not want to pay too highly for it, will write to me on the above subject, I will cheerfully answer their questions. My brother has all the dogs necessary for either fur or feathers.

EDWARD BANKS,

## CHICAGO AND THE WEST.

[From a Staff Correspondent.]

CHICAGO, Ill., Nov. 4.—Mr. J. W. Redington, editor of the *Puyallup Commerce*, Puyallup, Wash., has been spending a few days in the city. Mr. Redington was one of the Government scouts in the Nez Percé campaign, starting with Gen. Howard's troops from Portland, crossing the range, and staying with the troops till the end of the campaign. He did correspondence for the *Salt Lake Tribune* and other papers on this trip, and was able, naturally, to send in some exciting stories. He says, as do all who were in that campaign, that Chief Joseph was a general of no mean sort. Mr. Redington insists that the best place left to find bear is in the Salmon River Mountains, basing this assertion on the abundance of bear found in that region when they crossed that country, in the Nez Percé pursuit, and on the fact that fur hunters have gone in there since.

Mr. J. W. Schultz, of Piegan, Mont., a well known Rocky Mountain guide, passed through Chicago this week on his way to New York, leaving regrets that he could not meet the Western end of FOREST AND STREAM, in which regrets said end unites.

Mr. H. M. Joram, of Denver, Col., leaves his card, and it would have been a pleasure to meet one who was once a light in sporting journalism.

## A Parting View.

This week saw almost the last of the Fair, it being simply wonderful how rapidly the exhibits were packed away for shipment. One of the most interesting of these vanishing attractions was the magnificent display of furs made in the Russian Department, Manufactures Building. Seldom has so beautiful a collection of furs been seen, and the handling in the arrangement was such as to interest the sportsman as well as the possible purchaser. The skins of the bear, the wolf, the fox, the sable, the otter and many other animals were mounted and grouped in a most fetching style. This section of the great building was safe to show a crowd of admirers at any hour of the day.

Another valuable display of similar sort was that of C. G. Gunther, the New York furrier, in the same building. This exhibit showed almost all the American furbearing and game animals, and the mounting, without exception, was artistic in the extreme. A striking feature was the gray wolves, which sat at the corners of the exhibit, as grim and gaunt as any that ever lapped a chop in life.

The Wolf & Periolot Fur Company, of Chicago, was another firm making a highly creditable display of furs and furbearing animals. It seems that the furrier's art to-day must include practical taxidermy. E. HOUGH.

909 SECURITY BUILDING, Chicago.

## LUCK IN NEW HAMPSHIRE.

MANCHESTER, N. H., Nov. 2.—September and October furnished an unusual number of quiet and bright days, no breeze to move the faded and falling foliage; such being the ideal weather to gladden the heart of the still-hunter, and the slack business, with a large number of mills and workshops running short hours or three or four days a week, gave many who love sport an opportunity to indulge their taste, and they have seldom come home empty handed. While birds have remained scarce, gray squirrels have proved unusually plenty in every direction from the city and have been taken in strings ranging from six to above twenty. Stephen Reed, of Amoskeag, shot a beautiful one on the river bank, near the falls, Saturday, the 28th, that weighed 2lbs. and 2oz. Frank H. Lamper and Arthur P. Spiller are among the most successful squirrel hunters in the still line, and their aggregate of birds for the season is getting quite large, considering the general scarcity.

Dr. Frederick Perkins and family and Mr. Frank Heald, have returned from a five weeks' camping tour in the vicinity of Moosehead Lake, Maine. They brought two deer as trophies of their skill. They spent a portion of their time fishing for camp supplies, and it is refreshing to hear the Doctor in his enthusiastic manner tell of his exploits with the trout and land-locked salmon he encountered. He was particularly pleased with the latter, this being his first experience with them, and his account of his capture of a 64-pounder on a fly-rod, with 75ft. of line, is extremely interesting. He declares that 60ft. of his line was taken before he could wink, and he showed a scar on his finger caused by a cut the line made by catching in a slight scratch previously there, and wearing it in deep before he could remove the finger from the coils. He thought he was an hour landing the fish, but his guide set it at twenty-five minutes. He says he was nearly as tired as the fish and greatly excited. Before going there was much discussion as to whether the party should attend the Columbian Exposition or make the Maine trip. They are now all well satisfied with their choice, and the Doctor says he not only enjoyed himself better in Maine, at about one-fourth the expense possible in Chicago, but gained 20lbs. in weight. Deer and bears were very plenty, but hard to find on account of the dry, fallen foliage.

Melvin Hall, of Auburn, and a small party, captured a coon Saturday night, Oct. 28, that tipped the scales at 22lbs. Chief T. W. Lane's dog Jack was out for the occasion. The old dog, sick and lame all summer, has recovered sufficiently to add a few more to his already long list of conquests, his record standing at 244 coons in five years, and I think is unequalled in New Hampshire. PAYSON.

## Between Press Day and To-day.

INTERESTING events of the week were the meeting of the Pennsylvania Fish Protective Association in Philadelphia Tuesday night, the annual convention of the Vermont Fish and Game League at Burlington Friday night, and the hunt of the Western Massachusetts Fox Club at Westfield, Wednesday and Thursday—all these between our press day and to-day.

## Ferrets and Ferreting.

FLINT, Mich.—If there is any one nuisance in the country it is hunting rabbits with ferrets. I would not take advantage of a rabbit in that way; one might as well shoot a bird sitting still. A man who cannot get his rabbit on the run or his bird on the wing does not deserve any game. Give me a Remington and a hound.

W. H. W.

### Thirteen Miles from Boston.

BOSTON, Mass., Nov. 5.—I have read the different articles on the amount of game in this vicinity which appeared in your paper, and agree with them on the general scarcity of it in all respects but as to woodcock.

I live some thirteen miles from the Hub and have a very fair chance to observe the comparative abundance of birds from year to year, and this season the woodcock have been far more plentiful than at any time during the past three or four years. I was away during the last two weeks in October, which are considered by me about the cream of the woodcock season, so I cannot tell how thick they were then; but despite the fact that I am not a crack shot and have been out but a few times, since Sept. 15 I have bagged twenty-five woodcock, the largest bag for a day being five, which I got inside of an hour and a half. This record will, I think, better show the amount of that particular game which has visited this section than any other method that I can think of at present. I wish that more writers would put their game statistics in a similar way, as simply saying that such a kind of bird has been "much scarcer than usual" gives me a very scanty idea of the actual amount of game in that locality. Last year I bagged seventeen woodcock, and was out about the same number of times as during the present season, my biggest bag of these birds (woodcock) being three.

Ruffed grouse and quail are unquestionably much scarcer than usual, which is greatly due to the severity of last winter and the increase of foxes, skunks, the farmer's tabby and other vermin. Last year I brought sixteen ruffed grouse to bag, while this year my record is but seven. The talk in the Sunday papers about the crowds of birds on Blue Hill is absolute rubbish, as I have been on the hill as much as most persons, I think, and if a man gets six shots at grouse he is doing mighty well, let alone getting six birds.

J. H. B.

### California Shooting Notes.

NORTH ONTARIO, Cal., Oct. 19.—*Editor Forest and Stream:* The shooting so far has been very unsatisfactory and many places that had abundance of birds early in the summer have been drawn blank; a state of affairs that is hard to explain except that the continual shooting at jack rabbits, stimulated by a bounty of twenty cents per head, has driven the birds into the light cover or foot hills. The weather which has been exceedingly warm may have driven the birds into the small cañons along the mountains, and as the weather is changing there may be a change for the better within the next thirty days. F. L. Lowndes of New York, and G. S. Hamilton of St. Paul, Minn., have just finished a four weeks' hunt that has not been all that could be desired, but owing to the weather they did little shooting after 10 A. M., and for the time spent did very well, averaging from ten to twenty birds. They just returned from a trip to Lower California, and report deer very plentiful in that country. There have been quite a number of sheep (bighorns) killed in the neighborhood of Mt. San Antonio, this county, recently, as well as several deer. The long close season has greatly benefited the sport on big game. What we need now is more protection for quail. As our (open) season lasts six months the quail have little chance, and unless the season is shortened it will be but a short time until we will be without birds. For gameness and cunning, our game excel, as they are swift flyers, lie well to a dog, and unless killed outright will get away in most cases, and often recover, as it is a very common thing to get birds with a badly healed wing or with one foot.

There is some good material in this county for a gun and game protective club, and we hope to soon be able to report the organization of one.

H. M. TONNER.

### Wisconsin Deer Season.

MARSHFIELD, Wis., Nov. 2.—The hunting in Wisconsin this fall has been very poor, not from the lack of game, but from the warm and dry weather which has prevailed. Partridges were very wild, it being impossible to get within eight or ten rods of them, and they would not lie for a dog at all.

The deer law now makes the open season from Oct. 1 to Nov. 1. For a number of years it was from Nov. 1 to Dec. 1. The law as it stands now in my opinion is a very poor one, as two-thirds of the deer killed around here this fall were does or fawns. The old bucks are just beginning to travel good. In my opinion if the law is allowed to continue it will exterminate the deer just as quick as running dogs. We have a game warden in our town, but the boys keep running rabbits all the time, but come in with a nice big deer instead of rabbits. I suppose the deer do not run into the holes as soon as the rabbits.

The little cottontails have not got up into our new country yet; all are large white fellows, and there are lots of them.

E. S. B.

### A Lost Hunting Party.

VANCOUVER, Wash., Nov. 12.—Gen. Carlin has organized four well-equipped parties of United States troops, about eighty men in all, to go to the relief of his son, W. E. Carlin, A. L. Himmelwright, J. Harvey Pierce, all of New York, and their guides, who were lost in Bitter Root Mountains, in Montana. Gen. Carlin is satisfied that everything has been done for the relief party; still, he is apprehensive that an accident, such as the stampede of their pack train, or separation in searching for the train, might endanger the safety of the members. Three of the relief parties have left points in Idaho and Montana for the head of the Clear Water. The fourth party left Fort Walla Walla last night.—*New York Times*, Nov. 13.

### Minnesota Game.

MY friend Harris writes me on Oct. 31, from Pelan, Minn.: "Have just returned from a ten-days' hunt fifteen miles south. Had poor luck. All I got was a two-year-old bear and about fifty partridges. Saw two elk and the tracks of about twenty others. Since returning I killed a deer within three miles of the ranch. Moose are now heading toward the Lake of the Woods."

G. O. SHIELDS.

### Gunning Experience.

OAKLAND, N. J.—*Editor Forest and Stream:* We notice in your issue of Nov. 4 a letter, signed "Tatters," saying that he is not getting such good penetration with E. C., as he is with black powder. We would advise him to try

the following load in a 12-gauge: 3dr. powder, one thin 12-gauge black-edge and two 11-gauge jin. black-edge, as made by the U. M. C. Co. Put firm pressure on the wads, with 1½ oz. No. 7 shot, thin top shot wad, and good crimp down. We recommend the 11-gauge wad, as from "Tatters's" letter we are inclined to think that, perhaps, his gun is not bored true to gauge. A shell with a No. 3 primer should be used. If "Tatters" will communicate with us direct we shall be pleased to help him out of his difficulty, and can assure him that he will get as good results with E. C. as with any black powder if he will do so. We are always glad to hear from any sportsmen who are having trouble with their load.

NOEL E. MONEY (American E. C. Powder Co., Ltd.).

### An Iowa Month's Score.

MATLOCK, Iowa, Nov. 2.—Following is a partial list of game killed in this immediate vicinity and it represents about the average bag: Oct. 1, B. Flesch—4 quail, 1 chicken, 1 rabbit; P. C. Bishop—3 quail, 3 chickens, 1 chick, 2 rabbits. Oct. 9, E. J. Bishop—3 quail, 1 chicken. Oct. 18, F. Wyman—8 quail. Oct. 19, P. C. Bishop—8 chickens, 1 rabbit. Oct. 28, W. Heitthetter—4 ducks, 2 chickens. Oct. 29, P. C. Bishop—1 duck, 2 chickens, 2 quail. Birds are fairly plentiful, but hard to find. Shooting should remain good for a month yet. Rabbit shooting will be excellent this winter. LONGFELLOW.

## Sea and River Fishing.

### AN ASTRONOMIC FISH.

*Editor Forest and Stream:*

The *Uranidea quiescens* or "little star gazer," was described by James E. De Kay in the Natural History of the State of New York as a small fish not more than about 3in. long when full grown, found in a rivulet that runs into Round Pond in Hamilton county and in that vicinage.

Dr. De Kay called it "curious" and placed it in the family *Triglidae*, which includes several species of marine fishes, some of which are rather rare in New York salt waters. The rose fish, hemdurgon or snapper was said to inhabit northern waters from Greenland to New York, its proper southern limit. This fish reaches a length of 2 or 3ft.

The American sea raven or Acadian bullhead, another northern fish of similar size, gets rather sparsely so far south as New York.

The common marine bullhead, not elegant, but good for the table, 1 to 1½ ft. long, frequents Long Island Sound. The "sea swallow," a sort of small flying fish, no more than 6in. long, and the *Pronotus lineatus*, called "grunter," "banded gurnard," sea robin or flying fish, are all other members of De Kay's family *Triglidae* occurring in the New York marine, the latter rather common and growing to the length of 18in., but seldom eaten. All these fish, like the little star gazer, have remarkably large pectoral fins, giving them the flying fish aspect.

I send you this reference to the *Uranidea quiescens* in order to learn from your readers of other localities in which this rather interesting fish is found. Dr. De Kay knew of it only in Hamilton county. It is a very singular and beautiful fish, its fins spotted, its body banded and prettily marked. Its specific name, *quiescens*, refers to its habit of lying most of the time at rest at the bottom of the pool or stream, like a sucker, but it darts quickly through the water if disturbed. The eyes of the little fish are on the top of its head, looking directly upward, whence it has received the name *Uranidea* or star gazer.

This fish in central Dutchess county exists, so far as is known, only in one or two streams. One of these passes through the farm of the late Macy Bowman in Stanford, Dutchess county. Small, lying generally close to the bottom, or occasionally darting swiftly through the water, it may easily escape notice. I shall be glad to hear of this fish, thought to be so rare, if it shall be seen in other localities.

Besides some species of stickleback and this little star gazer, there are no other members of the *Triglidae* family found in fresh water. All the others are salt-water fishes, and the sticklebacks frequent both salt and fresh water.

JAMES HYATT.

HONEYMEAD BROOK (Bagdall P. O.), N. Y.

### NETS IN PENNSYLVANIA STREAMS.

MUNCY, Pa., Nov. 1.—Bass fishing has been good the latter half of the season. Fishermen when they have been out generally speak of the large number of small black bass in the river. They can be counted by schools. We noticed during the season that the catch of large pike-perch was in excess of that of previous years. The small streams seem to be full of small ones from 2 to 2½ in. long. Evidently the planting is going to bear fruit.

It is gratifying to all lovers of the sport who fish honestly and squarely, that some of the worst offenders have been hauled in and fined. One man in particular who had previously looked upon the fish as all his if he could by hook or crook catch them, has changed his mind in regard to his exclusive property in them since passing over his \$50 fine. There is, however, an immense amount of illegal fishing, so much that a gentleman remarked the other day that "The fishing is annually spoiled by the innumerable number of nets and outlines which are set. I sat fishing on a bridge pier of the canal near Montoursville in September, and saw a man put six nets into the water. He set these while in sight. How many he set after he turned the bend, and before he came in sight I do not know."

If the warden who lives in Williamsport sees these lines I hope he will make himself a little more useful, and take some measures to put a stop to the wholesale capture of fish in this way. There are three here in Muncy yet, three or four parties in Montoursville, and a half dozen in Williamsport that need his attention. Fishermen do not like to turn informers unless requested to do so.

Considerable comment is heard on all sides near the headwaters of all our trout streams about the abuse of the streams in fishing. It seems to be largely the warden's fault or rather the fault of not having a warden there where and when he is needed.

It is conceded by those most interested that a local

warden is needed, especially during the trout season, in each trout district. They give as their reasons that the warden living forty or fifty miles away cannot find out who offending parties are, even if he does hear of their misdoings. It was common talk last May that Loyalsock Creek had been dynamited, and that Otter Run had been limed. These things were true; at least, reliable men who were in position to know said they were true. All the large trout in the latter stream were gone. We know this from personal knowledge, having been there in 1892 and again in 1893.

Another reason why they wish further protection is that fishermen, local and otherwise, will insist on taking every fish that bites, no matter how small. They say the law in regard to the 6in. limit is wholly disregarded. This they say is depleting their trout streams. We got a peep into the catch of two men on Wolf Run in June, 1893. They had between eighty and one hundred trout, and of all these but eight or ten would measure the required 6in.

### "FROZEN FISH THAWED OUT."

*Editor Forest and Stream:*

In the FOREST AND STREAM of Nov. 4 I notice a short article entitled as above. The same subject has been touched on several times recently in your paper. Whether a fish once thoroughly frozen and apparently dead will revive on being carefully thawed out, is a question of sufficient interest to justify any one in recording his observations who has himself fairly tried the experiment.

Mine were as follows:

On Christmas day two or three years ago we were camped in a log hut, if one might judge from the temperature, very near the vicinity of the North Pole. The thermometer was in the neighborhood of 40° Fahrenheit below zero. We were deer hunting, and the hunting was excellent. Having killed one big fellow and thus satisfied my thirst for blood, some other form of amusement was in order. Suddenly a discussion of this subject a few months before in the *London Fishing Gazette* came to mind. My temperament is such that the moment I hear any statement which seems curious or upon its face improbable, if the statement admits of the test of actual experiment I itch to try it. It is wonderful how unsuspected are the results thus sometimes directly or indirectly obtained, even in a field of inquiry supposed to be thoroughly thrashed out.

Remembering the discussion whether a frozen fish would revive on being thawed out, the temptation to try the experiment under such favorable conditions of time, temperature and locality was irresistible.

A hole was cut through the ice of a neighboring pond, and seven or eight trout of about 12in. in length were speedily caught with a small hook and deer meat for bait. When drawn from the water and thrown upon the snow-covered ice which hid the surface of the pond, the trout were almost instantly frozen as stiff as a stake. While fully alive to and appreciating the fact that one engaged in experiment cannot be too precise in his methods of procedure, it was so brutally cold that I neglected to note the period which elapsed between the time when the first and the last fish was taken, but I should say it certainly did not exceed twenty minutes.

The frozen fish were then collected as carefully as though made of glass, wrapped with equal care in a coat, and with the utmost possible care carried to camp some half mile distant. Within five minutes after camp was reached, the fish were put in a tin vessel of ample size filled with spring water. This was about noon. All that afternoon and all that evening until 10 o'clock I watched the trout, the vessel being all the time kept near enough the fire so that its contents could not freeze, yet far enough so that the water should not heat. I do not think three consecutive minutes passed during all that time when the fish were not under observation. That night the cold was so cruel that one of the guides sat up till morning to tend the fire. My orders were to examine the fish from time to time, and to be sure that the water in which they were, neither froze nor became perceptibly warm. I have every reason to believe, from my long acquaintance with the men and their interest in the experiment, that my instructions were carefully carried out.

On turning out in the gray of the next morning I at once examined the fish. The water was neither frozen nor warm. Till nightfall they were left undisturbed, their condition being examined at frequent intervals.

When first introduced into the water the fish appeared as dead as Julius Caesar; and though they thawed out perfectly, dead as Julius Caesar they remained throughout the experiment. Not the slightest sign of life was at any time detected or detectable.

I do not mean, be it understood, to call in question anything which has heretofore been said on this subject in your paper. I only mean to say that under the above conditions I obtained the above result.

NEW YORK, Nov. 4.

HENRY P. WELLS.

### Another Kekoskee Witness.

*Editor Forest and Stream:*

It seemed to me when I read that Kekoskee fish story that I had heard something like it before from my neighbor Chase. Chancing to meet him a few days ago, I questioned him concerning it.

"Yes," he answered, "I read the story in the paper. I was there an' I can tell you what I seen. The hole was so full of bullheads that a man couldn't drive a spear to the bottom of it, an' when he pulled it up maybe there'd be a dozen on it all stuck together by the horns. I rigged a bushel basket with ropes in the handles, an' we c'd push it just underneath the surface with a pole an' h'd it right out again chuck full o' bullheads, with now and then a pickerel, till we filled a thirty-bushel sleigh box as full of 'em as it c'd hold. An' while we was there there was eighteen such sleighs loaded with 'em runnin' over full, and the road for a mile was black and red with bullheads that had spilled out and got smashed and trampled. Yes, sir, that's what I see myself; but they did tell the almightyest lies about it in that paper!"

AWANSOORE.

### A Big Bass and a Tripped Anchor.

SING SING, N. Y., Nov. 7.—B. F. Kipp, of Sing Sing, caught to-day a 16-pound striped bass with rod and reel off Croton Point on the oyster beds. The fish fought so hard that Mr. Kipp had to trip anchor to save it.

W. S. S.

## ANGLING NOTES.

## Fish and Food.

It is perhaps unfortunate that there are times when one lacks the courage of his convictions, and this may be because the convictions are diametrically opposite to accepted facts, and to run counter to them only subjects the man of convictions to ridicule; but what are understood to be facts are not always facts when the conditions from which they arise are changed. But, to a case in point. Some years ago in a discussion with an angling friend I contended that fish preyed upon one another only because of a scarcity of other food, that it was unnatural for trout to prey upon their own offsprings or their relatives, and that they did so only in self-preservation in the absence of other food, and that this had come to be a habit with some old fish which an abundance of other food than their own kin would correct. My friend contended that trout were born cannibals and that he could prove it. A lot of trout were placed in an aquarium, the fish being in size from fingerlings to about 6oz. in weight, and with them were placed a lot of minnows. Some of the minnows were larger than the smaller trout, but no other food was provided, which I admit was rather rough on the minnows, and not all that I desired as a test of the cannibalistic tendencies of the trout. For a time all went well, the minnows gradually disappeared and not a single trout lost its mess number. Minnows were supplied at intervals as their number grew less and the trout waxed fat. On one occasion only large minnows were left in the aquarium, and then one morning one of the little trout was missing, then another, until more minnows were put in. I saw them put in and saw every trout, big and little, go for them and eat until they were gorged. This, to me, proved that famine had stalked in the tank (come to think of it I do not know as famine could stalk in the water, but it was a shallow tank and I will let her go at "stalked") and the little trout had been eaten only as a last resort to fill empty stomachs. With fresh minnows supplied to the trout they ceased to war on one another, and this state of things continued until there was a dearth of minnows. As this occurred frequently the trout grew gradually less in number until only two remained, and they were nearly of the same size. One morning one of the two trout was in the tank alone and the other was on the floor outside dead, with marks on its body that showed that his brother had tried to eat him. I stuck to my original belief, but I did not air my views, for they were not popular. The experiment itself supported my position, only I could not convince my friend to that way of thinking, for he argued, food or no food, fish were made to eat each other, and a continued round of Christmas dinners would not change their natures.

## Testimony from Europe.

In one of my notes in *FOREST AND STREAM* last August I made mention of a letter from a gentleman in Austria, who informed me that he had solved the food question for fish of all ages, by rearing natural food of various kinds by artificial means at slight cost. I continued the correspondence with him, and he gave me something of his method of rearing the food, and of the marvelous results obtained from its use. In a paper that I wrote for the Fisheries Congress of the World's Fair I gave an outline of what Mr. Von Scheidlin had accomplished after forty years of experimenting, but it is too long to rehearse here. This is a quotation from one of his papers: "Abundance of food still remains the very soul of all fishculture, with all its issues. A proof of this is that one with sufficient food can raise all kinds of fish, large and small, in a pond, without their preying upon one another." This is not guesswork, but the result of actual experiment. He feeds no mammal food, but various kinds of live natural food—insect, crustacea and amphibia. Of fat-producing food he feeds three parts to one part of flesh-producing food, and as a result has reared trout that in one year have weighed one to two kilogrammes each or 2½ to 4½ lbs. I have for three months been steeping myself in these papers and letters which give this new method of fish rearing, and even yet the results make me gasp, as I read them, and think them little short of the miraculous. I hope later that I may be at liberty to treat the system more in detail in these columns for the benefit of all concerned.

## Rearing Trout for Market.

A correspondent at Palmer, N. Y., describes a spring that he has, and the facilities for making a trout pond, and asks if it will be profitable to build a pond and stock it with trout for market. He has a flow of water that will sustain, perhaps, good adult trout, and temperature and other conditions are favorable, but I was obliged to say that the all important food item was lacking. With Mr. Von Scheidlin's system the scheme would be feasible. One of our best known fishculturists told me of his experience rearing trout for market on mammal food. He said he hauled his liver, etc., to the pond in a two-horse wagon, and carried the trout to market in a basket on his arm.

## Salmon in Fresh Water.

I believe that it is always in season to discuss what salmon may or may not do about eating in fresh water. There are those who contend most earnestly that salmon do eat in fresh water, but I think that most of the evidence is the other way. Mr. R. B. Marston is out with what he has gleaned upon the subject, and it should have a place in the testimony: "I have for many years past made inquiries in all parts of the world where salmon come up out of the sea into the rivers to spawn, viz., in our own country, in Germany, Scandinavia, Newfoundland, Canada, British Columbia and along the Pacific coast of the United States, especially on the Columbia River. \* \* \* My inquiries were directed to ascertain if food was ever found in their stomachs after they had been for a few hours in fresh—not brackish—water. The reply was always the same: food was found in salmon caught in estuaries in salt water, but nothing whatever after they had been any time in fresh waters. Of course I know salmon will rush at a bait, for I have caught them with artificial flies, with angels, with phantoms and with prawns, and I know they will take a bunch of lob-worms in roily water. My argument is that salmon when in our rivers required good square meals daily, as pike, perch, trout and other fresh-water fish do, they would destroy every living thing, because they are the most active of all fish, and come in such vast armies that the native fresh-water inhabitants could find no escape

from them. \* \* \* I think that Frank Buckland's theory is correct, viz., that they come into our rivers provided with a rich store of fat on which they can exist for a long time; he thought that the old kelts which are unable to get away to the sea may destroy other fish now and then." This is about the position taken by Mr. John Mowat, who has had 55 years' experience on the salmon rivers of Canada, and may serve as a compromise between those who hold extreme views on this subject of salmon eating or not eating in fresh water.

## Rods.

A correspondent writes me: "In looking over 'Stoddard's Adirondacks' I note your chapter on fishing, and am glad to see that you recommend an 8 or 10oz. rod. I use one of 10½oz., split-bamboo, for trout, black bass or other fish, and would like to fight a 10lbs. salmon on it. I have owned it eleven years, and it has won prizes at the tournaments of the National Rod and Reel Association, in other hands, and to raise over 80ft. of heavy line from the water is the most severe work that can be put upon a rod. The rod is as good to-day as it ever was. Of course, the whippers have needed replacing, and the rod is sent to the maker every spring to be varnished. Last summer when the black bass would not look at a fly, I hooked a small frog through the rudder post and cast it from side to side of the boat about 30ft. until a 2lbs. bass assaulted the frog—my frog, mind you—and I was obliged to defend my property and arrest the bass.

"I never had a liking for those viands which give no exercise to the biceps and allow a man to cast all day with one arm. My old rod compels a change and has made me ambidextrous in casting; although the left is not so strong as its fellow, yet is capable of giving its dexter brother a short rest."

It is true that I recommend such a rod as is mentioned in the letter, saying that with a short tip it would answer for both bait and fly fishing, and I believe it to be good advice for a man who does not care to burden himself with more than one rod, but I do not practice exactly what I preach in this instance, for I have no scruples about being burdened with half a dozen or more rods, and always like a rod to fit the fishing as surely as I like the line to fit the rod. I have two or three bamboo rods weighing between 4½ and 5oz., and have had good sport with them on occasions, when very possibly heavier rods would not have answered as well, but for fly-fishing for trout or black bass I confine myself as a rule to a rod that happens to weigh 8oz. It is true that I have several of the same weight, but I think that a man becomes attached to one rod even if he owns a score of rods that are similar. One thing I do not do, and that is to use a fly-rod for bait-fishing, or a bait-rod for fly-fishing; each has its place and I keep each in its place. A rod should not be judged by weight alone. If the action and balance fit the angler and he does good work with it easily, let the rod weigh what it will if it is somewhere around the 8oz. notch. A 3oz. rod will kill a big fish if there is plenty of water and no snags; and so a .22cal. rifle will kill a bear if the bear is securely chained and the cartridges hold out, but a man does not wish to spend his entire summer vacation killing one big fish or one bear. There is an eternal fitness of things even in fishing rods.

## Minnow-Casting Reels.

Mr. B. A. Warner, of Granville, N. Y., writes me: "I apply to you for information in regard to reels for bait-casting. Please inform me if any practical working reel has yet been devised which in casting revolves only the spool, leaving the handle loose. I have perfected such a reel, and if no other is on the market desire to secure a patent on it. You know the advantage of such a reel over the old style, the principal of which is the ease and freedom with which the spool revolves, and especially the smooth motion with which it may be started on releasing it at the cast, no force being required to overcome the inertia of the handle as in the old-style reels. The handle engages automatically when grasped to reel in the line, and disengages on the same principle when released. I am a constant reader of *FOREST AND STREAM* and any information given in its columns I shall see." There is such a reel now on the market; in fact, more than one, but I have tried only one, and that is patented by Wm. Mills & Son. Mills devised the reel at the suggestion of the late M. M. Backus, of New York, as I remember the facts, and the model reel was sent to me for trial. This must have been eight or nine years ago, for the reel was patented in 1885. The reel did all that was claimed for it, and my only objection to it was that the lever to engage and disengage the handle was on the same side with it. It was not a serious objection, but one that I imagine would be difficult to overcome. The reel mentioned by Mr. Warner may differ in its mechanism sufficiently to enable him to patent it, and I judge from what he says that it does differ from any that I have seen.

A. N. CHENEY.

## Minnow-Casting Reels.

NEW YORK, NOV. 11.—*Editor Forest and Stream:* At the top of the proof slip you sent me I notice the conclusion of an answer by Mr. Cheney to Mr. B. A. Warner, of Granville, N. Y., who says he has invented a minnow-casting reel, of which "the handle engages automatically when grasped to reel in the line and disengages on the same principle when released." Mr. Warner asks Mr. Cheney if he knows whether anything of the kind has already been devised. Mr. Warner should examine patent No. 431,142, dated July 1, 1890, to D. Harris for "Fishing Reels," which exactly meets this description. Of course it does not follow that Mr. Warner's method of accomplishing his result may not show a patentable difference from that of Mr. Harris.

HENRY P. WELLS.

## Pickerel of the Tioughnioga.

CORTLAND, N. Y., Nov. 2.—The pickerel fishing along the Tioughnioga and East rivers has been a surprise even to the oldest of the local anglers. Everybody has been taking pickerel during the last month or two. Bert Harranft and W. A. Baker caught eight large ones one forenoon recently. Messrs. White, Edwards, Fuller, Hillick and Lockhart have all taken nice catches from the East River and within three miles of Cortland. The largest catch is credited to Edwards, who in one afternoon caught an even dozen ranging from 4 to 2½ lbs in weight. The heaviest one I know of was taken by W. A. Baker. It weighed 2½ lbs. A few local fishermen have lately tried Lock Pond, Crooked Lake, Tisco Lake, Little York Lake and Dyden Lake for pickerel, but report discouraging luck.

M. C. H.

## CHICAGO AND THE WEST.

[From a Staff Correspondent.]

## The Natchaug Prizes.

CHICAGO, ILL., Nov. 10.—The interesting competition instituted by the Natchaug Silk Co., of Willimantic, Conn., and Chicago, closed Nov. 1, and the company, through their Western agent, Mr. H. L. Stanton, of Chicago, announces the following awards of prizes, in accordance with the conditions advertised in *FOREST AND STREAM* for the past season:

First prize, \$50 in gold, for the heaviest muskallonge, was won by John J. Huldebrandt, Logansport, Ind., who caught on Oct. 26 in the Kankakee River, a muskallonge weighing 26½ lbs.

Second prize, \$25 in gold, for the heaviest small-mouthed bass, was won by George J. Bradbeer, Detroit, Mich., who caught Sept. 30 on a No. 1½ Natchaug silk line, in the St. Clair Flats, a small-mouthed black bass weighing 7½ lbs. 2oz.

Third prize, \$25 in gold, for the heaviest lake trout, was won by Paul Lang, Orford, N. H., who caught May 14 on a No. 1 Natchaug silk line, a lake trout weighing 14½ lbs., in Newfound Lake near East Hebron, N. H.

Fourth prize, \$25 in gold, for the heaviest brook trout, was won by R. N. Parish, Oakdale, Conn., who caught in the waters of Rangeley Lake, Me., on Sept. 15, a brook trout weighing 6½ lbs. 9oz.

Fifth prize, \$25 in gold, for the heaviest large-mouthed bass, was won jointly by B. Waters, of Chicago, one of the *FOREST AND STREAM* staff, and Ben. Wolf, Ewart, Mich., each having caught a large-mouthed bass weighing 6½ lbs. 2oz.

Sixth prize, \$25 in gold, for the greatest variety of fresh-water fish caught in one day, was won by Will Cunningham, Attica, Ind., who caught 101 fish, including 11 varieties, in one day, the largest of which weighed 12½ lbs.

Seventh prize, \$25 in gold, for the largest fish caught on a No. 1 line, was won by J. B. Carlin, Ashland, Wis., who caught a 26lbs. muskallonge July 22 in Pelican Lake, Wis. The fish was not weighed until the fifth day after being caught. It measured 47in. in length and 19in. in girth, and no doubt would have weighed fully 28lbs. had it been weighed when first taken.

## Angling Information.

I had quite a talk with Mr. Stanton when he handed me the above, and it occurs to me that among the letters we looked over together there may be some angling information of interest to the general fishing public. For instance, Mr. Bradbeer's catch of a 7 lbs. 2oz. small mouth bass, is a fact worth remembering. This is the largest small-mouth I ever knew taken, and I should be personally glad if some one would tell us the small-mouth record. Certainly this beats the big Toledo small-mouth, which also, by the way, came from the Flats. Mr. Bradbeer's letter shows that he was tickled about to death. He was twenty minutes landing this fish.

More than twenty minutes must have been the fight which Mr. W. M. Cunningham, of Attica, Ind., had with a 2½ lb. catfish which he killed in the Wabash river, as he says himself, without gaff-hook or net. Mr. Cunningham, it will be noted, won the prize for the greatest variety. In his letter thereon he says: "On Sept. 22 I caught 60 rock bass, 3 pickerel, 1 salmon (pike-perch), a number of bullheads, not counted, 1 perch, 2 Oswego bass, 3 speckled bass, ('croppies'), 4 black bass, one of which weighed 4½ lbs., also several dogfish, and one catfish of 12½ lbs. They were all caught one day, in the Kankakee River, above Momerce." From all accounts, that must have been Mr. Cunningham's busy day.

## Rangeley Trout.

Mr. Parish's 6½ lb. 9oz. Rangeley trout takes the prize, and it must have been a noble fish. It is not, however, the largest trout of the season by any means. In Sept. (so it is stated, though no dates are given), Mr. J. C. Dougherty caught on the fly in the Rangeley waters, during one day's fishing, seven brook trout, weighing respectively 8½ lbs., 6½ lbs., 10½ lbs., 13oz., 4½ lbs. 2oz., 3½ lbs. 5oz., 3½ lbs. 4oz. I saw a photograph of these fish. The big one, held by the gills in the angler's hand, dragged its tail on the ground. It may be asked why this fish did not take the prize, and the answer is that Mr. Dougherty is a member of the Natchaug Co., and so they declared him not eligible.

## Lake Trout.

A fine catch of lake trout (Mackinaw trout) was that made by Mr. J. M. Kellogg, of Manitowoc, who says that "in twelve hours' fishing (in October) in Thousand Islands Lake, northern Wisconsin, I caught 20 lake trout averaging 7½ lbs. each, the largest weighing 13½ lbs." Mr. Kellogg sent in a photograph of 13 of these trout. The 12 weighed 12½ lbs. Yet he never got a prize.

Another man who made a good run and got nothing was Mr. L. F. Reed, of Ripon, Wis., who caught a brook trout near Wautoma, May 11, which weighed 8½ lbs. 1oz. Mr. Reed looks cross-eyed at the eastern catches, calling attention to the fact that the Wisconsin season ends Sept. 1.

## A Fishing Conductor.

Away up on the Ashland division of the Lake Shore road there is a fishing conductor, J. B. Carlin by name, who reads *FOREST AND STREAM* and sometimes writes for it. As nearly as I can learn, the Lake Shore road values Mr. Carlin most as a guide when some of the officials want to go fishing. Early in the season Mr. Carlin bought him a new No. 1 Natchaug line, and sailed in deliberately after prizes. He had some magnificent fishing, as his scores show. Of his trip to Thousand Island lake he has told in *FOREST AND STREAM*. In his detailed scores of his catch he notes, with railroad accuracy, the exact time when he landed each fish, thus, one 1:33 P.M., the next at 1:48, the next at 2:35, etc. On May 16 he caught nine lake trout, weighing from 2 to 8 lbs. On the next day, May 17, he caught twenty lake trout, running from 2 to 8 lbs. On the 18th he took 14 lake trout, from 2 to 9½ lbs.; and on the day following fifteen, from 2 to 12½ lbs., stopping at 1:10 P.M. In June he took one day 127½ lbs. of bass, pike and muskallonge. In July he went into commission to capture a live muskallonge for the World's Fair, and July 22 landed the famous live lunge which saw the World's Fair—and died. This fish, six days after its capture, weighed 26½ lbs. Mr. Carlin does not claim any prize for it, but lets that go to the Kankakee muskallonge (which I

would need some assuring before believing to be anything but a great northern pike), although he modestly says he thinks his fish might have weighed 28lbs. when first caught. Mr. Carlin asks how much his fish probably shrunk in its week of confinement. If killed and put on ice, it should have shrunk probably 3 to 5lbs. If it was alive and in the water all the time it may not have shrunk so much, though if you leave a 'lunge alive for a week he is safe to eat and digest several pounds of food. This fish had no chance to eat, and so just digested, which naturally means a loss of weight. Had Mr. Carlin weighed his fish at once, he would probably now be jingling in his pockets, provided he hadn't spent it for fishing tackle, an additional \$50 in gold for "heaviest mascalonge," and his little No. 1 line would have earned still more for itself.

"Forest and Stream" Was In It.

FOREST AND STREAM was in it also, of course. You can't keep it out of first money, and the best you can get out of it is a divide. Mr. B. Waters, a much better dogman than he is angler, divides fifth prize, for the largest large-mouth bass, with Mr. Ben. Wolf, of East Michigan. Of this FOREST AND STREAM bass I wrote last July, and told how we caught it in Giller's Lake, near Muckwonago, Wis. I say "we," and I say it advisedly. No dogman could have caught that bass alive, and it was due almost solely to skillful handling of the boat (for I was rowing Mr. Waters and J. B. H. at the time) that we saved the fish, to say nothing of finding the place where the fish was hid in the water, in the first place, which latter I did without word or advice from Mr. Waters. This was the second time I have piloted this same dogman to the biggest bass of the season, and he is beginning to put on airs and allow that dogmen are coming up in the world. To-day Mr. Stanton gave me \$12.50 gold to take to Mr. Waters. I expect we'd better spend that money—that is, if I conclude to give any of it to Mr. Waters. At present, I am not quite clear that he ought to have it, as he did nothing but hang on to the rod, while the bass and I did all the hard work. I may say, however, that if we had known that Mr. Ben. Wolf was going to catch a bass weighing 6lbs. 2oz., we would have caught a bigger one. I know where there is a good deal bigger one, up there, and next summer we will go up and catch him.

It is interesting to say, in conclusion, two things: first, that the Natchaug Silk Co. will renew this competition next year; second, that they base the success of this year's contest largely on FOREST AND STREAM, the bulk of their answers having come in through their advertisement in that paper.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

"FOREST AND STREAM" AT THE FAIR.

Reminiscences.

THE Fair has now become a journalistic reminiscence, for newspapers do not live in the past—at least, good ones do not. They find their opportunities in the present, and recognize them, and work them to their full. Yet some reminiscences of the Fair are still in order.

The Most Pathetic Thing.

The most pathetic thing at the Fair was the Chilean angler at the Anthropological Building. Hundreds of years old he was, and here were only his bones, his mummified figure. The curious woven fibre of his time had preserved the bones of his head, also those of much of the body. The humerus and ulva, the femur and some of the bones of the foot could still be seen. He was a man of good stature for his kind, as became an angler. Here, near by him, found in his grave, were the things he used and loved. Here were his bone fish hooks, his copper gravis or fish spear, his bow, his rude arrows, his paddle, his old spear heads, even his bone and copper sinkers, the latter, singular to say, shaped almost identically as the lead sinkers we use to-day, when we take our tobacco pouch and sundry-bag, as this man did, and our water bottle, as he did, and our boat, as he did this ruined *balsa* near by, and go fishing, as he did, and enjoy ourselves, as he did in years long past. His tackle was not so good as ours is, but his heart may have been as good and simple and honest as that of any angler of to-day. Here it is, here is his story. Here is his history, exhibited with himself. This man lived, hundreds of years ago, let us say, and in him was the instinct of sport. He had his loves, his griefs, his joys, his sorrows, his sins and his punishments therefor, just as we do now. He lived, he grew, he had his keen joy in the chase, his zest in the air of heaven, his exultance in successful use of strength and skill, just as we do now. He lived his day, and he lay down and died, just as we do now, and others took his place, as others yet will ours. Yet he had, as we have, that long clinging to life, that unreasonable but imperishable yearning for deathlessness, that rebellion against oblivion, which we have now, and ever will have. He wanted to survive. His friends, loving him as ours do us, placed with him in the grave not perishable flowers, but the sterner things he loved to handle. And so, surviving yet, pathetic enough with his poor belongings to make your eyes dampen, No. so-and-so, of Prof. So-and-so's collection of So-and-sos, holds out his bony hand, as good as yours or mine, to us across the years. He was an angler, and may God and nature rest his soul. Friend from Chile, was it good fishing, and did you have a pleasant day?

The Funniest Thing at the Fair.

The funniest thing that happened at the Fair—that is hard to say, since so many funny things came up all the time. No one on earth, who has not filled an attendant's place at some exhibit at the Fair, can have any idea what unspeakable idiots there are loose in the world, or how low is the order of intelligence shown by a great mass of the total of humanity. The prize "fool question" would be worth money, but it would be hard to determine. For instance, people, and hundreds of them, would stand before the FOREST AND STREAM big tarpon—whose name, by the way, they pronounced in all sorts of ingenious wrong fashions—and would ask the most absurd sort of questions, some of them almost too much even for the 12lbs. trigger pull politeness of the urbane Chief in attendance.

"Is that the real fish, mister, or just half of it?" one seeker would inquire.

"That is half of the original fish, bones and all, madam," would be the reply, as good as any for the purpose.

"Is that fish alive?" another would ask, and the Chief, tired out with the same question, would say, "No, sir, it is not, but it once was."

"Is it good to eat?" another curious soul would ask. "No, sir," he would learn, "it isn't good to eat now." Then there would be a grave silence.

Take it all in all, I have heard about as funny things at the sign of the FOREST AND STREAM tarpon as anywhere, but the funniest thing I saw was one evening at the Sixty-third street gate, and by the way, the Chief before-mentioned figured in it, too. He and Billy Hofer and I were coming into the Fair one night after dinner, and the Chief had a camera along. That was in the days of high-handedness in camera matters, and the guard at the gate said: "You can't make pictures in here without a permit."

"What, got to have a permit to photograph after dark?" said the Chief, who it seems had left his permit in the pocket of another coat.

"Well, you can't take that thing in there without a card," said the gateman, and though we guyed and chaffed him a good deal he stuck to it, and it looked as though we would have to lick him if we got the camera through. At length a thought struck the Chief. He pulled out a card about four by six inches in size, flashed the blank side in the face of the gateman and said: "I suppose that's what you want to see."

"That's good enough for me," said the guard pompously, and the turnstile clicked three times. This is what the card had on the other side of it:

WORLD'S FAIR:  
MANITOBA GOVERNMENT EXHIBIT.  
Visitors to the Fair should see the  
MANITOBA EXHIBIT ON STONY ISLAND AVENUE,  
bet. 57th and 59th Sts.  
Magnificent display of the Natural History and Products  
of this great Agricultural Province.  
Admission Free. Open from 8 A.M. to 10 P.M.

When Billy Hofer and I saw the true backwardness of this wrong but successful camera permit, we joined the Chief in a fit of laughter that nearly caused our arrest anyhow. I think that the whole incident, showing as it did the stupidity and inefficiency of an absurd system, and the lofty pomposity of its agent, made up the funniest thing I saw at the Fair.

The Most Popular Building at the Fair.

Probably the most popular building at the Fair was the Fisheries. Other buildings, such as the Manufactures or the Art Building, may have held more crowds, because they were larger, but the Fisheries caught the popular heart, and was visited and revisited by incessant throngs. This is the history of every exposition showing good displays of live fishes.

The Most Popular Paper at the Fair.

FOREST AND STREAM, being next to the door of the main entrance of the Angling Pavilion, had a location of extraordinary value. It was visited by untold thousands. No one, who has not stood there hour after hour, day after day, can imagine the numbers of the throngs that passed and tarried there, or can reproduce the original impressions conveyed by such multitudes. The FOREST AND STREAM register is a rare and valuable album of autographs. Few newspapers have ever had this singular opportunity of meeting face to face so large a per cent. of their constituency, or of learning so well the people, from which all constituencies are drawn. It was one continual levee, reception and review, and it would be strange indeed if the paper were not benefited by it all. Richer than ever in its life it is in the personal friendships, the congratulations, the handshakes of its friends. The silent friends came out, the ones of which a paper never hears, who buy the paper and read it, but never say anything about it to the publishers. These silent readers, truly by thousands, shook hands with FOREST AND STREAM at the Fair. To them all the paper could do no less than return thanks, and I should think the makers of the paper would go on in their work with an added sense of their responsibilities in trying to serve a constituency so large, so kindly and so friendly. It is easy saying that FOREST AND STREAM was the most popular paper at the Fair. One cannot believe there ever was a paper more loved by its family; and after this season's rare experiences the paper cannot help loving its family even more than ever.

The Most Beautiful Woman at the Fair.

The most beautiful woman at the Fair, and this is relevant, too, in a paper which goes into the best of families and among the best of men—blew into the FOREST AND STREAM exhibit one day last August. She didn't walk in, but just sort of floated up over the step, her feet never touching the floor at all. She cast upon the belongings of the place beams from eyes as bright, but a good deal softer than the search light on the Manufactures Building. A gentle radiance lit up the dark corner where we try to hide the carpet sweeper, and when she spoke the glass eyes of the fishes in the cases softened and grew kind. Everything kind of swam, and trembled, and grew melodious and sweet, and whether it was a case for scent, sight or hearing, I never could seem to rightly tell. The best of everything has been at the Fair, and the only way you could possibly tell what was the best was by the length of time through which you remembered a thing amid all the confusion of impressions. I mathematically figure out that this was the most beautiful woman, being, or angel there was at the Fair, because I remember her, or it, longer. I remember, too, that she, or it, was frank and courteous, and that she said she came from Kentucky, and the Blue Grass region (the same country about which Mr. Waters writes so feelingly in a late issue). Then, unfortunately, all becomes a blank, for just as I was asking her to illuminate the register with her name, her husband, or something of the sort, came along and told her they would have to hurry if they got through the Government Building before dark. So all there remained to do was to press into her hand the last sample copy left in the place, of the greatest paper on earth, and fall back exhausted into the chair, as she

floated away down the colonnade. Does any gentleman in Kentucky know who this, or it, was? There can't be any doubt about it, and there's only one Helen in this competition. As to color of hair or eyes, or any details of that sort, neither the Chief nor myself can tell, for we forgot to notice. All we know is, she, or it, never touched the floor, and that when she, or it, was there, you could see the tacks on the carpet sweeper in the darkest corner of the place. So we allow as how this was the most beautiful woman, angel, or spirit, there was at the Fair. As she is strong, may she be merciful as she goes through life.

The Biggest Gun at the Fair.

There seems to be doubt whether this was the Krupp cannon, D. H. Burnham, Director-General Davis, the photograph concession man, the restaurant waiter, or the unspeakable Turk.

The Funniest Man at the Fair.

The funniest man at the Fair was the "lecturer" in the ostrich farm. He kept even the ostriches stirred up.

The Luckiest Man at the Fair.

The luckiest man at the Fair was the sportsman. He could see the whole world of sport and the most improved implements for its practice. He could see every sort of wild animal he ever heard of, big game, small game, bird, quadruped or fish, of this or any other land. He could see paintings and photographs of the wildest parts of every country on the globe. He could see the boats, the vehicles, the means of transportation, of every people on the earth. He could see collections of weapons of all times in the history of every nation on the earth. He could see the most magnificent collections of modern weapons and implements of the chase ever gotten together in the history of the world. No gun ever made but he could see it represented here or equaled, and no rod, reel, line or appurtenance of angling did he ever dream but he could come here and see it actually, and more beside it. What a chance for outfitting the sportsman had! From elephant gun to collector's toy gun, from the ducking piece of America to the blow gun of Ceylon, from the gold mounted fly-rod to the long fishing arrows of South American river tribes, from jeweled reels to Alaskan bone-headed spears, from shining racing canoe to the Amazonian balsa or the East Indian outrigger—what could he not get? He could get anything and all things he wished, and be shown things of which he never would have thought. To the sportsman also the Fair served its purpose of education. The sportsman knows more than he did a few months ago. He knows how excellent are the products made for him by the makers of this and other countries. He has had the privilege of seeing and handling these. He has selected and bought with an aided and better judgment. The impetus to sporting trade must certainly be felt. In this FOREST AND STREAM must surely rejoice, and in this widening of the sportsman's horizon take a pleasure other than a material one. Of these it was its privilege and duty to tell.

Feb. 19.—United States Field Trials Club's Spring Trials, Grand Junction, Tenn. P. T. Madison, Sec'y, Indianapolis, Ind.

The N. J. K. L. Meeting.

A MEETING of the executive committee was held at Newark on Nov. 8. Present: Messrs. Radel, Kuebler, Hanschet, Eisele, Seidler, Morris, Winters, Browe, Linck, Christopher, Sattler, Hahne, Seitz and other members of the league.

The house committee reported that they had fixed up the hall ready to receive the benches and that the superintendent, Mr. Read, from Spratts Patent, had expressed an opinion that it was an excellent place for a dog show.

The printing committee reported receipt of the lithographs from the Buffalo Courier Co. and that all arrangements had been made for advertising the show very extensively.

The finance committee reported progress, that enough cash was on hand to meet all liabilities. This committee was requested to present a detailed account from the treasurer for the next meeting.

An offer from the Carbolio Soap Co., of New York, to disinfect the show was accepted. A silver cup was offered by Dr. George Hoenung and another from Harry Arthur for the best puppy in the pointer puppy classes.

Members elected: Dr. W. W. Varick, of Jersey City, and Mr. Wackmueller, of Newark. The meeting then adjourned till the following Tuesday, Nov. 14.

Give Him a Chance.

MONTICELLO, N. Y.—I have "Training vs. Breaking" and have been training a young pointer by it. I have been training him about ten months more or less. I have had him in the woods three times. He is a first-class hunter, very fast, and has a good nose; but as yet he has failed to point on scent. I have worked him as near as I could according to the instructions in the book. I am working him on grouse. I have killed two with him in order to let him know what they were and what he was to hunt for; but I do not want to kill any more unless he points them. Would you kindly inform me how to proceed with him? He is well bred, and I think he should make the best of dogs if properly handled.

A. C. A.

[You have not given your dog one hundredth part of the opportunities needed to develop his pointing qualities. Do not be discouraged if he does not point at first. There is every probability that he will do so sooner or later. If you kill a bird now and then so the dog can see it done, it will prove a great incentive to him to exert himself in seeking and pointing.]

## INTERNATIONAL FIELD TRIALS.

NOV. 7 TO 10.

THE fourth annual field trials held by the International Field Trials Club, were brought to a successful close last Friday morning. The trials were held on the grounds of the Big Point Club near Mitchell's Bay, about 14 miles from Chatham, Ont.

It is unfortunate that the club could not procure better grounds for their trials. Besides the inconvenience in being so far from town the country is not at all well adapted to the work. The open country is too well cultivated, and the cover is chiefly fallen timber and in this most of the birds were found. At the same time this sort of work was a good test for intelligence and hunting sense, for a dog that tried to keep up a fast gait, Dogwood for instance, in this rough stuff had to jump from one log to another, and while this looked very pretty either the dog misses the birds or flushed. Cleopatra, the winner in the All-Age Stake, proved her excellence in both styles of hunting, for she kept generally to the ground in cover, and went in and out of the nooks and crannies between the logs with a purpose that was rewarded. There were altogether too many fences for wide ranging and naturally the trials—all being on foot—had to be conducted at a comparatively slow gait. It partook more of an ordinary day's shooting than any trials we have attended, and this we believe is the aim of the club. The weather throughout, excepting the morning of the third day, was beautiful, though the warmth of the sun, was uncomfortable both for man and beast during the midday hours. The ground was dry, which made scent elusive. The judges, Messrs. John Davidson, Monroe, Mich., G. T. Guttridge, Chatham, Ont., and W. T. Tristram, Detroit, Mich., were very painstaking and conscientious in their work, and probably the unfavorable conditions under which the trials were run made them give several dogs another chance that might well have been left out of the second and third series. They seemed to pull well together and gave their conclusions promptly and with satisfaction to all. On Mr. W. B. Wells fell the burden of carrying details and he did his part well. Mr. Wells is a Game Commissioner for Ontario, and also a leading member of the Big Point Club.

Mitchell's Bay is a famed ducking resort and there is capital snipe shooting.

The scarcity of quail prolonged the running to twice the length of time that it should have taken. Last February the weather was very severe, and throughout the country the quail crop suffered. In some districts there is scarcely a bird and only on these grounds, where these birds were well taken care of, were any bevies left. It is more than probable that next year the trials will be held on the old grounds, nearer Chatham, as the grounds will be restocked.

Most of the hunting was on land about two to three miles from the hotel at Mitchell's Bay. The greater part of the sportsmen put up at Raymond's National Hotel, a sort of mixture of country grocery store, beds and a bar. The outlook was not very inviting when we reached the hotel on Tuesday night after a long day's tramp, but a good meal awaited us, and when we found we should not all have to sleep in one bed we began to take a more rosy view of matters. The beds were comfortable, at least those that Mr. T. G. Davey's forethought had set apart for the representatives of the two kennels, papers, and Mr. Raymond, our host, was untiring in his efforts to make all feel at home. His charges were reasonable, and there was no disposition anywhere to take advantage of the opportunity. Mr. Wells, Mr. Baughman and others had to drive some distance from the village to the club house, where they put up. Quite a number of sportsmen followed the dogs during the four days. Among them we noticed Paul F. Bagley, of Detroit, Mich., a son of Governor Bagley; Geo. Armstrong, from the same city; Mr. Hayne, Saginaw, Mich.; John Baird, George Briggs, C. A. Stone, from Toronto; R. Bangham, Windsor, Ont.; C. L. Atkinson, S. A. Wells, W. B. Wells, Dr. Kline, Chatham, Ont.; T. G. Davey, London, Ont.; H. W. Mitchell and A. McKill, Glencoe, Ont.; Rev. Mr. Franklin, Wallaceburg, Ont., with Mr. Lane, of England; Chas. Allen, Bothwell, Ont.; Ed. Warner, Woodstock, Ont., and Christopher Robinson, Q. C., one of the counsel in the recent Behring Straits arbitration case, who, with Sir Charles Gwoski, donated the cup in the All-Age Stake, and J. B. Stoddard, of Thomasville, N. C.

When all are anxious to see the work of the dogs and owing to the nature of the country a clear view for any distance could not be gained without some effort, it is perhaps excusable that there was not the order maintained that we are wont to see, spectators from the surrounding country often getting too close and in front of the judges and reporters. There is little more to add excepting that the rules say that the first and second prize winners must run together. This, however, was not done in the All-Age Stake, and this is commented on in its proper place.

The drawing for the Derby took place at the Rankin House on Monday evening, and afterward the annual meeting was held, when the officers for ensuing year were elected.

## TUESDAY, NOV. 7.

## The Derby.

For setters and pointers whelped on or after Jan. 1, 1892. Forfeit \$2.50 and \$2.50 additional for starters; eleven starters; 40% of entrance money to first, 20% to second, 15% to third and 10% to fourth. The dogs were drawn as follows:

Thos. Johnson's English setter Sancho (Manitoba Toss—Pitts) with Dr. Totten's pointer Warwick Nellie (Camden Dick—Windsor Fannie).

W. B. Wells's English setter Mars (Cincinnati—Mars) with T. G. Davey's pointer Ridgeview Comet (Lad of Kent—Ridgeview Lass).

Paul F. Bagley's pointer Dick (Duke of Hessen—Abbess of Kent) with Dr. Totten's English setter Speculation II. (Toledo Blade—Cambriana).

W. B. Wells's English setter Luna (Cincinnati—Daphne) with Forest Kennels' English setter Forest Trip (Druid, Jr.—Breeze K.).

A. D. Welton's Irish setter Fingaln (Finglas—Ruby Glenmore) with T. Johnson's pointer Paul Francke (Ightfield Upton—Genevieve).

R. Bangham's English setter Doc a bye.

## First Series.

Every one was up by daybreak this morning and soon ready for the drive of 12 miles to the Big Point Club grounds. The weather was gold and crisp, a heavy hoar frost covering the ground with its white pall. Arrived at the grounds the start was made about three miles from the village of Mitchell's Bay, a noted duck shooting resort. Game was not at all plentiful, and when found was generally hidden in the thick brush of fallen trees or in the fence rows. No time was wasted in starting the first brace with

SANCHO AND WARWICK NELLIE.—Cast off at 9:27 A. M. Sancho is a small black setter and was handled by "Seff" Hallam. Nellie is a light-weight pointer of fair body formation, but not by any means a show bitch. She was handled by Jos. Spracklin. She proved herself much the best in nose, pace and range, and showed a good deal of hunting sense in working out the fence bottoms where birds had been marked. Her style on point is rather slovenly, dropping on her belly invariably. She caught the second bird, she pointed, and then further on pointed the rest of the bevy. Afterward she nailed several singles. Sancho acted very puppyish, and was guilty of chasing one single that got up ahead of him. Dogs were down 32m.

MARS AND RIDGEVIEW COMET.—Down at 10:06 where others taken up, and sent off in large stubble field. Mars had the

services of Jos. Spracklin, and Ridgeview Comet was handled by Charles Allen. Mars is a good-looking English setter, hunts intelligently, and while not being particularly fast, covered more ground than the pointer, who was evidently not himself, having cut a pad on each hind foot, but he did not go lame. Whether this had much effect or not we cannot say. He is said to be a very fast and wide ranger, but here he kept very much to his handler. There was little work done on birds. Mars pointed one of the outlying singles of previous bevy; the point was honored by Comet. Mars afterward pointed false. They were ordered up at 11 o'clock.

DICK AND SPECULATION II.—Put down at 11:10 in same ground. Dick is a pointer and was handled by J. Huddleston, and the English setter Speculation had the services of Jos. Spracklin. Neither dog showed much inclination to get out and hunt, though the setter ran the best. He pointed once, but nothing was found, and a few yards further he just stopped as a bird flushed wild out of fallen tree. They found nothing else, though down till 12:30. A reporter put up during the heat a nice bevy of birds that the dogs had passed. Lunch was in order now. The keen morning air and the long drive had sharpened our appetites, and it was a pretty hungry crowd that fell to by the roadside. The next brace down was

LUNA AND FOREST TRIP.—They were cast off at 12:52 P. M. Luna is an almost white setter, marked on head and stern; Forest Trip is an English setter, white body and lemon marked head. Jos. Spracklin handled Luna and Mr. MacGregor had charge of Forest Trip. They started in very rough cover, but getting into open Trip got out to his work the best, going in a merry style and hunting intelligently. Here Luna did not do so well, but in cover Trip would scarcely hunt, and the honors fell to Luna, who seemed to be quite at home among the fallen timber. Luna pointed unsteadily once, Trip backed, but unsteady at shot. Luna pointed as bird flushed another time. Considering her better endurance and all-round hunting ability, she had the best of a rather poor race. The sun made us all uncomfortably warm and dried the leaves and grass. The scent was poor. These two ran 57 minutes.

FINGALN AND PAUL FRANCKE.—Down at 2:22. Fingaln, handled by Jos. Spracklin, is an Irish setter, and Paul, handled by Seffon Hallam, is a big white English setter with black marked head. Fingaln was the first to score, nailing birds at edge of a wheat field, Paul would not back, Fingaln steady to shot and kill, but Paul broke a little. Again Fingaln nailed a single, but moved a little as handler flushed. Fingaln got two more further on, and followed this up by another single. Fingaln showed himself to be a careful ranger, getting out fairly well, always under good control, good nose and lots of sense. He gained many friends for the Irish cause by good work in a rough country. Paul was headless, would not back and showed little hunting ability. Up at 3:12.

DOC (a bye).—Down at 3:20 with an outside dog. Handled by Jos. Spracklin. A great deal of varied ground was hunted out in a forty-five minutes' run, but no game was found, though Doc went out to his work well and hunted intelligently. The judges then consulted and called for

## Second Series.

WARWICK NELLIE AND MARS.—Down at 4:25. These two ran for fifty-five minutes, but could not scare up a feather, though Mars consoled himself for the lack of game by pointing a black cat in a tree stump in a very stylish manner, and was steady to a wild flush. Nellie proved the speediest and wider ranger, hunting out the likely ground independently. Though Mars was not so fast he also hunted out the likely places in a busy manner. This finished the day's work, three miles from the hotel.

## WEDNESDAY.

Another beautiful Indian summer's day. The air keen and frosty in the early morning hours, but genial and almost too warm, especially for the dogs, as the day grew older. The start was made in the same rough country that we hunted over yesterday. The first brace down was

SANCHO AND FINGALN, at 7:50 A. M. in a corn patch. The reason for Sancho's re-entry on the scene is not apparent, as he had done nothing in the previous heat to warrant it. He raced round as usual at a good speed, but with little intelligence or aim. Fingaln got out well and succeeded in finding a small bevy on which he acted nicely. Up at 8:18. It looked very much at this stage of the game as if there was some hope for Home Rule after all, as the Irishman had the sympathy of the crowd.

FOREST TRIP AND DOC.—Down at 8:25. Soon after starting in rough cover Doc made a *faux pas* in flushing a single from a fallen tree stump. He redeemed himself later by pointing two birds and then stopped on foot scent. He hunted industriously and with fair intelligence, quartering his ground more thoroughly and at greater speed than Trip, who, however, did somewhat better to-day among the fallen timber. Still he showed no good reason why he should have come into the second series. They ran 39m.

LUNA (a bye) had Speculation II. as a brace mate. They were cast off at 9:10. A great deal of varied country was covered, but they failed to find. Up at 9:26.

## Third Series.

WARWICK NELLIE AND FINGALN.—They were put down at 9:30 in a large stubble field. While Fingaln got out to his work well and quartered his ground systematically, the pointer had the advantage in wide and fast ranging. Two points were made by Fingaln, one of which scored. Up 9:46.

DOC AND MARS.—Down at 9:58 after a two minutes' run and a half-mile walk to different ground. Spracklin handled both dogs. In a corner of cornfield a bevy flushed wild, and on the scattered birds in fallen timber some lively work ensued, though the dogs were not very steady; the nature of this cover work does not conduce to steadiness. Doc was first to score, getting a small bevy and then a single, but he also flushed a bevy. Birds were scattered among the logs and each dog scored, though both unsteady at flush. Up at 10:44. In the style of work done and the way he ranged, Mars had slightly the best of it. Judges after a little consultation then announced Warwick Nellie first, Fingaln second, Mars third and Doc fourth.

## All-Aged Stake.

For pointers and setters. Forfeit \$5 and \$5 additional for starters. Purse—First 40% of entrance money and cup presented by Sir Cassimir Gzowski and Christopher Robinson, Q. C., cup to be held yearly until won thrice by same kennel or owner; second 30%, third 15% of entrance money. The dogs were drawn as follows:

A. P. Heywood-Lonsdale's Dogwood (Ightfield Dick—Ightfield Beda), 18mos., with W. Hutchins's Monk of Furness Fan (Monk of Furness—Faydith), 4½yrs.

T. G. Davey's pointer Jone (Lord Graphic—Devonshire Fan), 3yrs., with Frank Smith's English setter Joker, 2yrs.

W. B. Wells's English setter Cleopatra (Mingo II.—Cambriana), 2½yrs., with T. Andrews's English setter Glencoe Lill.

Eddy & Armstrong's English setter Toledo Bee (Toledo Blade—Maggie Bee), 3yrs., with A. P. Heywood-Lonsdale's pointer Mosa (Ightfield Dick—Ightfield Cleo), 2½yrs.

W. B. Wells's English setter Luke (Toledo Blade—Cambriana), 3½yrs., with T. Johnson's English setter Manitoba Psyche (Manitoba Toss—Pitts) 3yrs.

C. Clark's English setter Athol (pedigree unknown), 4yrs., with T. G. Davey's English setter Brighton Tobe (Locksley—Laddersdale II.), 5yrs.

Thomas Johnson's English setter Manitoba Patti (Duke

of Gloster—Flora), 4yrs., with H. D. Mitchell's Gordon setter Ned (pedigree unknown), 4yrs.

T. G. Davey's English setter Brighton Clip (Canadian Jester—Lassie), 2½yrs., a bye.

No time was wasted in commencing the first series in this stake, the draw having taken place the previous evening. The first brace,

DOGWOOD AND MONK OF FURNESS FAN, was called at 10:58. Dogwood is a stylish looking liver and white pointer and was in charge of "Seff" Hallam. Fan is a white and orange English setter and was handled by Charles Allen. They started in wheat stubble and ranged out well, especially Dogwood, who goes great guns all the time, but his legs go faster than his head, I should surmise, especially when the cover is rough. Jumping from log to log at speed while very pretty is not calculated to find birds in such cover. Though both made game they failed to find birds that flushed as judges came up. Further on Dogwood scored nicely on two birds and was steady to shot. Fan dropped to order. Dogwood had clearly the best of it in pace, nose and wide ranging. Up at 11:32. A break was then made for lunch by the roadside, but no time was wasted and we soon had the next brace.

JONE AND JOKER.—Down at 12:09 in open stubble. The ground was very dry and the sun so warm that the dogs soon became distressed and their noses failed them at critical times. J. Spracklin handled Joker and T. G. Davey had Jone in hand. They got among a lot of scattered birds in rough, fallen timber, and it was hard to tell once or twice whether dogs or handlers were responsible for the birds that flushed out of the brush. Joker was the first to stop as a bird flushed, Jone dropping to order. Jone nailed a single nicely. They should have pointed some birds in cornfield that were flushed after they passed. Neither dog did work that entitled them to much consideration, though certainly they ran at a bad time of day. Up at 1:25.

CLEOPATRA AND GLENCOE LILL.—J. Spracklin brought out Cleopatra and Glencoe Lill had the services of T. Anderson. Cleopatra is a small, nicely-formed bitch with markings on head. Lill is a large, loosely-made English setter, almost all white. Cleopatra was said to be fast, and she certainly did seem to go like the wind alongside such a slow coach as Lill. She hunted out her ground very much after the style of the celebrated Wun Lung, and is about the same size as he was, makes wide casts, covering the likely spots and always has an eye to the fences. She picked up the only bevy found, Lill backing nicely. A great deal of mixed ground was hunted out. Lill needed continued urging to get out and hunt. Cleopatra soon became a favorite. Up at 2 o'clock.

TOLEDO BEE AND MUSA.—Toledo Bee, a heavily marked rather good looking English setter was handled by Spracklin and "Seff" Hallam had the English pointer, a lightly built white and liver. Cast off at 2:08 in stubble. They ran till 2:45 and thrested out a lot of miscellaneous country. Several points, on footscent probably, were taken by both dogs. No birds were found throughout the heat, though both dogs hunted intelligently and at a good pace. The pointer was the faster, more stylish on point and was going stronger when called up at 3:16, after being down 1h. 8m. A severe test in the dry warm going.

LUKE AND PSYCHE.—Down at 3:17 in fallen timber. W. B. Wells handled his handsome heavily marked English setter Luke; and Psyche, a small black setter, was in charge of "Seff" Hallam. Luke scored a nice stylish point in cover and was steady to shot, but Psyche coming up went on and flushed a single. After hunting out a lot of ground in which Luke showed the most systematic range, he pointed the largest bevy yet seen in a stylish manner, a picture of which we hope to be able to publish shortly. Psyche is fast but has a slouching aimless style of going and by no means had the nose or ability of Luke. Up at 4:10.

ATHOL AND BRIGHTON TOBE.—Down at 4:15 edge of woods. Spracklin handled Athol and T. G. Davey Tobe. Both are rather plain looking English setters. Athol first to point, but bird got up after handler tried for it. Some birds were flushed that Tobe should have got. Athol then claimed a point, dogs were unsteady and birds flushing continually out of the old tree stumps. Neither dog behaving very well, handlers being a little too eager. Athol nailed a single nicely and was well backed. Then at finish Tobe stopped on a bird, but Athol not backing, went in ahead and flushed the bird, a bad piece of work, both steady to wing. There was little difference in speed and range, and both seemed off nose. Up at 4:50.

MANITOBA PATTI AND NED.—Patti, an English setter, nicely marked, was handled by "Seff" Hallam, and Ned, a Gordon, had the services of Tom Hallam. It was getting dusk now, and though they covered a good deal of ground no game was found. Patti had much the best of it in every way; Ned being something of a potterer, a handy dog for the gun, probably, in this fallen cover, but not a field trial dog. They will go down to-morrow. The finish was about two miles from the hotel.

## THURSDAY.

On looking out of our bedroom windows this morning it seemed as if we were doomed to a day of inaction. During the night a heavy fog had come in from the bay and the mist was so dense one could scarcely see across the road. Every one had expected that the trials would close to-day, and this would have been the case could we have commenced at the usual hour. There was nothing for it, however, but to wait. Anticipation soon gave place to *cnnui* as we waited for the fog to rise. It cleared a little by 9:30 and the dogs were called out. Although we could not scarcely see across the fields, the unfinished heat with Manitoba Patti and Ned was continued at 9:42. They were cast off near the hotel on ground not yet hunted over. They did not find, but Patti did much the best ranging. Up at 10:02.

BRIGHTON CLIP a bye. This he ran with Ridgeview Comet, Mr. Davey handling him and Chas. Allen having charge of Comet. Clip is a heavily marked English setter with a tan head. Soon after starting it was found that the pointer had something, and Clip was brought to back, which he did stylishly. Allen put up a nice bevy, both steady to wing. Clip pointed footscent and a field further, hunting alone on scattered birds, Clip nailed two nicely. Up 10:27. Clip showed fair range, but not an over keen nose.

## Second Series.

The judges then called for DOGWOOD AND JONE. Mr. Davey handled Jone the first part of the heat, but feeling indisposed, Allen took his place. Down at 10:47 in wheat stubble. This was a more cultivated part of the country and going was good for the dogs, but birds were scarce. The sun began to show himself at this time, and the mist was quickly dispelled by the aid of a north wind, the only semblance of a breeze we have had during the trials. Both dogs started well and ranged out, but Dogwood was the speedier, and the stubble just suited his style of action. Had he a little more intelligence in hunting out the likely spots and not be so intent on covering so much territory he would be a better dog and get more game probably. Nothing was found. Up 11:20.

CLEOPATRA AND TOLEDO BEE.—Jos. Spracklin had both of them in hand and sent them off at 11:27 in large stubble field. Cleopatra as usual went a fast gait but knew what she was after and missed few likely places. Bee hunted intelligently too, but cannot cover the ground nor quarter his ground so systematically as the bitch. Bee pointed two or three times in his peculiar dropping style, but nothing came of it. He was honored by the bitch. At 11:42 they were called up and it was decided to take lunch by the roadside and then move on to the old grounds. The sandwiches tucked away where they would be most appreciated, no time

was wasted on digestion, but jumping into the wagons we soon had the next brace down.

**BRIGHTON TOBE AND LUKE.**—Down in cornfield at 12:36. Working into fallen timber Luke was said to have flushed. Up at 1:11. Tobe hunted out his ground more independently and always had the speed and range of the other, who seemed to loaf a bit to-day. It was a pity more satisfactory work was not done on birds, ground was fast drying up and scent lay badly.

**MANITOBA PATTI AND BRIGHTON CLIP.**—Down at 1:13 in fallen cover. Another unsatisfactory heat; a lot of ground was threshed out, but not a feather found. Patti got out to her work the best and made wider and more intelligent independent casts.

**MUSA (a bye).**—Sent off alone at 1:43 and ran well till 2:15. She goes with equal vim either in stubble or over fallen timber, and it would be perhaps more to her credit if she didn't skip the logs quite so fast.

The judges then consulted and called for **DOGWOOD AND CLEOPATRA.**—A 45-minute wait for dogs to be brought up, as we had hunted away from the wagons, and these two fast travelers were sent off at 2:57 in bean stubble. This was a very pretty race, and led by Cleopatra may be termed the best approach to "high class" work yet seen in the trials. Both dogs are fast, the pointer having the advantage, but when it comes to intelligent, systematic range and nose Cleo must take the palm, and she is also under best control, though we do not mean to infer that Dogwood is at all headless. Getting into fallen timber Cleo did a pretty piece of work among the fallen logs. Pointing and roading up to a fallen tree she located the bevy and made a most stylish point, held it till Dogwood came up, and she stiffened out a yard or two behind, completing one of the prettiest scenes we ever saw at any field trials, the surroundings lending a charming background. A large bevy was put up and dogs were steady to wing. It was a proud moment for Spracklin. If the fates and the light are propitious this scene will be published in **FOREST AND STREAM.** They were called up shortly after 3:32. If Dogwood would hunt between the logs in fallen timber he would stand a better chance of finding birds, Cleo's more intelligent work in this respect was very noticeable.

**MANITOBA PATTI AND BRIGHTON CLIP.**—These were sent off together again at 3:35 after the scattered birds. Some time after Clip pointed by a fallen log, and Patti backed, but nothing found there, though a few yards to right as dogs were sent on, spectators flushed two birds. They were up at 3:54, with the running all in favor of Clip.

**MUSA AND BRIGHTON TOBE.**—Down at 4:04. This was a long tiresome heat and continued till dusk. Tobe seemed off nose, and did not avail himself of several good chances on bevs. They both ranged wide and intelligently. In rough plough birds flushed in front of Tobe, but whether he was responsible or not no one could see. Mr. Davey claims that he was urging his dog on with his hat in hand and scared up two outlying birds, and they getting up caused the balance to flush, but admits his dog should have found them. None of the judges or spectators were in a position to see what the dog did. Previous to this Tobe had flushed a bevy in long grass outside of woods. There was a little talk over the last flush, and there was some little feeling displayed, but we believe all was smoothed over afterward, and it was the only hitch during the trials. Every one was disappointed that the finish must go over till another day.

#### FRIDAY.

##### Final Series.

**MUSA AND BRIGHTON TOBE.**—The morning broke cloudy, and the air was raw and chilly, but there was little wind. The start was made in fields by the hotel, at 8:12, but it was some time, an hour or more, before we met a farmer who put us on to a "bird district," the dogs meanwhile ranging out well. Musa is said to have flushed twice on entering woods, then both dogs pointed staunchly in different places and each had a single. Previous to this both dogs made uncertain points and moved on. Dogs were called up at 9:24 and judges consulted. There was some discussion as to interpretation of rules of running first and second dogs together, but as handlers and owners were willing and anxious for a decision at once, the judges announced Cleopatra first, Brighton Tobe second, and Musa third. The first award was entirely indorsed, Tobe's previous day's work and Musa's flushes to-day should have caused Luke and Dogwood to be tried again. These named, however, were the best dogs in the stake. Congratulations over, we were quickly in the wagons where our baggage had already been stowed away, the fourteen miles to Chatham were covered in good time in spite of the rough roads, and every one seemed pleased that the weary tramping was over for this year.

H. W. LACY.

#### Finsbury Duke and Finsbury Dong.

Editor Forest and Stream:

Finding myself illy reconciled to the unfortunate results of my September pug importations, I sent immediately to England for the most promising dog before the public, as well as for the best obtainable son of the lamented Dong, and the pair was shipped, through Spratta Patent, from Southampton, Oct. 21, per the fast American Liner New York, which reached her dock on this side on the morning of the 25th or in four hours less than seven days. And I would here say that, while the expense of shipping by the fast lines is slightly greater, the results are far more satisfactory, as the dogs apparently receive more consideration and care; better quarters, and the nervous tension of the passage is largely reduced by the quicker time. Had poor Dong been forwarded by a fast mail steamer, it is fair to presume that he would be alive to-day, and impressing his character upon the fancy. On the other hand, had his excellent young son, who was sea-sick the entire trip, been sent by freight steamer, there is little doubt that he would have shared the fate of his sire. As it was, he arrived in rather poor condition, while his mate, who is a better traveler, landed in fine fettle.

Finsbury Duke (E. 3512) was born Oct. 6, 1891, and is by Champion Confidence ex Ladybird, the latter being better than half-sister to Pooty, the dam of Dong. Confidence is one of the most famous and successful show dogs and sires in England, and Ladybird herself is the winner of four first prizes at the Pug Club shows in London. Duke has been seen at quite a number of the best shows in the kingdom, among his wins being first at Newcastle-on-Tyne, two firsts at Edinburgh and first at the Pug Club Show, London, defeating Fair Masher, Bradford Silver King, Clarence, Bradford Chief and others. He is a beautiful little fellow, weighing only 12½ lbs., and if there are any who can beat him in all-round quality. He is, moreover, a fine sire, and with his royal breeding, which is entirely new on this side, a successful future may confidently be expected for him.

Finsbury Dong (Reg. E.) was born Aug. 16, 1891, and is by Dong ex Mabelle, the latter being by the famous King of Diamonds ex Daisy. He likewise is a small dog, weighing under 14 lbs. and of high quality, possessing in many respects the strong characteristics of his sire—the same immense head and wonderful wrinkle, the broad square muzzle, the magnificent eyes and the dense black trace and markings, while in body properties he is all that could reasonably be desired. Owing to his youth, he has never been shown, although it was the intention to bring him out at Birmingham, Oct. 26, at which time he was on the water; but his late owner writes: "I think he will do you a lot of good, both on the bench and at stud," and it is hoped and believed that this friendly prediction will be verified.

Altogether, I am well pleased with this little pair, and am sure the pug fancy will be similarly inclined on personal acquaintance.

F. C. NIMS.

PAINESVILLE, Ohio, Nov. 6.

#### POINTS AND FLUSHES.

[By a Staff Correspondent.]

FROM Mr. Eugene H. Lahee, Alton, Ill., a gentleman sportsman of the true type, comes the sad information that his setter dog, which he highly prized, is dead. The photograph of the dog which he mentions is that of a handsome, upstanding fellow, with every evidence of high breeding and symmetry of form. Mr. Lahee writes as follows: "I have lost my beautiful setter Ben Ruby (No. 27,966 A. K. C. Register). Some villain poisoned him. I think it must be one of a gang of thieves and house-breakers who have been working about here. He was one of the most intelligent dogs I ever saw and I feel his loss deeply. I send you a picture of him, which is the only one I have."

The practical workings of a field dog on game, as to the manner of the performance, seem to have caused a variety of opinions among sportsmen. Mr. Johnson and Mr. Hough may be the best representatives of the different views. Mr. Hough's standard is rather high, however, even for an extremist. To fill it fully a setter or pointer must be able to jump a twelve-rail fence, taking a whirl sideways at the highest point of flight. If run over harshly by a heavy truck wagon or folded up violently by the kick of a mule the dog should show no more emotion than mild surprise and suffer no physical inconvenience whatever. The dog should have a large head and large feet, the first for a large brain, the second because a dog with big feet is stronger than one with small feet. The dog is supposed to eat heartily at every opportunity and to work till he is choked off. I would like very much to see a discussion on the qualities of a field dog between the two gentlemen hereinbefore mentioned, and as I have been at some pains in describing the ideal of one of them it is but fair to give the views of the other. Under date of Oct. 28 Mr. Johnson writes me as follows:

"I note your little chaff *re* Mr. Hough's idea of a field dog. Mr. Hough and Mr. D. evidently have a sympathetic cord, *re* the work a dog should do and how he should do it. But men like myself, who watch a dog's every movement, who see things that create pleasure and delight in every motion—something that warns you up to think of, and who never have a thought as to whether the bag contains game or not, can never agree with men whose only interest in his dog is when some attendant or friend calls his attention to its being on "point," and the more he kills the more loudly will he bawl of the brilliant work his dog did.

"I am going on a moose hunt on Monday, so Chatham is not likely to see me this year.

"Sefton Hallam, late with A. P. Heywood-Lonsdale, England, is open for an engagement either as breaker or to take charge of a kennel. Mr. Lonsdale speaks of him in the highest terms, and for the short time he has been with me I have found him everything I could wish. He is running my own and Mr. Lonsdale's dogs at the International Field Trials on Nov. 7, after which he will be at liberty. His address is care of W. B. Wells, Chatham, Ont., or Thos. Johnson."

Mr. W. B. Stafford, the well known handler of Trenton, Tenn., met with an accident at the United States Field Trials which might have had serious results, but fortunately resulted in nothing worse than a general roughing and shaking up. He had a horse which was spirited and somewhat fractious. In mounting him after lunch, he slipped, the horse got out of control and dragged him by the foot 40 or 50 yds., kicking vigorously in the meantime. Most happily Mr. Stafford's foot got disengaged from the stirrup and the danger ended.

The trial of the fiend MacLin, who, it will be remembered, acquired notoriety for acts of inhumanity heretofore unknown in the dog world, takes place on Nov. 16. More funds are necessary for his prosecution. While it cannot be said that there is any direct claim on the dogmen to contribute there is a fraternal claim which should not be ignored. All organizations, or fraternities, or families, etc., have a pride in the good name and the good behavior of its members. Any flagrant violation of accepted laws, written or unwritten, is followed by an earnest denunciation of the offense and punishment is possible. *Esprit de corps* is necessary if favorable public sentiment is to be held, and if the fraternity hold its own self respect and confidence.

#### The MacLin Matter.

In some remarks on the MacLin matter which I sent in a day or two since, I mentioned that there was not sufficient money on hand to prosecute MacLin. That was true then, but not now. After lunch on Thursday, at Bicknell, after announcing some other business, Mr. P. T. Madison, secretary of the U. S. F. T. Club, gave a brief mention of the incidents pertaining to MacLin's inhumanity to the dogs in his charge, and that his prosecution was fixed for Nov. 16, and the prosecution fund was short \$50, and that those desiring to do so could contribute. It is a pleasure to write that there was a most generous response. Mr. J. M. Freeman for a few minutes could not take in the money as fast as it was offered. By the prosecution of MacLin there is a probability that the wretch will receive a richly merited punishment, but in any event the denunciation of the outrage is on record, and there is not the apathy among the fraternity which there seemed to be. Following is a list of the contributors: P. T. Madison, J. L. Adams, Royal Robinson, J. H. Kerr, B. Waters, Manchester Kennel Co., each \$5; G. T. Kerr, \$8; Prof. Edm. H. Osthaus, Maj. J. M. Taylor, J. M. Avenet and C. Davies, each \$2; Samuel Socwell, L. W. Blankenbaker, G. H. Reed, Frank Richards, J. H. Johnson, Geo. E. Gray and Theo. Goodman, each \$1; cash, \$1; total, \$49. It will be remembered that MacLin's outrage was in starving to death a number of dogs which he had in training for sportsmen. He was charged with the crime and arrested. The kennel the night following was burned with both its living and dead occupants. At the justice trial MacLin was not convicted. He was indicted afterward for perjury and arson, for which he will be tried on the date aforementioned.

The Glen Rock Kennels' black, white and tan setter dog Paul Dombey (Chance—Nettie Bevan) died recently. He was entered in the All-Age Stake of the U. S. trials. He had distinguished himself in the Southern trials and, I believe, was bred by Mr. H. S. Bevan.

As far as a rabbit supply and good coursing grounds are concerned, no better place for a beagle trial than Bicknell, Ind., could be found. During the running of the field trials a great number of rabbits were found, sometimes two at a time, and one time five were found. It would strain a beagle's voice were he to attempt to follow and give full measure of tongue to each trail he could run at one time. There are rabbits by the thousand and about Bicknell. They are found in the open weed fields and in cover alike.

B. WATERS.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

#### DOG CHAT.

##### Chicago K. C. Show.

The premium list of the Chicago Kennel Club show to be held Dec. 13 to 16, comes to hand as we go to press. The list is very liberal in some respects. Mastiffs, rough St. Bernards and great Danes get \$40, \$20 and \$10 in open classes, challenge \$15. There are other prizes of \$30, \$15 and \$10 for such breeds as pointers and setters, and collies and fox-terriers get \$20, \$10 and \$5 in open, and no class gets less than \$10 and \$5. Entries close Dec. 4 with Mr. Goodrich, Unity Building, 79 Dearborn street, Chicago. The judges are: For St. Bernards, mastiffs, great Danes, beagles, E. Bardoe Elliott, Maywood, Ill.; bulldogs, bull terriers, fox terriers, collies, rough terriers, greyhounds, black and tans, Yorkshires, pugs and toys, George Wilson, Chicago; pointers, setters, field and cocker spaniels, Tim Donoghue, La Salle, Ill.; foxhounds, deerhounds and Russian wolfhounds, Col. Roger Williams, Lexington, Ky.; Irish water spaniels, W. H. Colcord, Chicago; miscellaneous will be decided, under 30 lbs., E. Bardoe Elliott; over 30 lbs., Geo. Wilson. Further consideration must be left for next week.

##### Gordon Setter Trials.

The entry blanks for the Inaugural field trials of the Gordon Setter Field Trials Club, have been sent out. The entries closed last Monday. The president of the club is the popular sportsman, E. Knight Sperry, New Haven, Conn., W. H. Tellinghast, D.D.S., vice-president and secretary Chas. R. Taylor, Providence, R. I. Mr. Taylor also sends us a photograph of a handsome silver epergne that has been given for competition in the Derby, by Miss S. A. Nickerson, owner of the Inwood Kennels. Mr. C. M. Kenyon gives a similar prize in the All-Age Stake. Mr. Tom Hallam was thinking of entering Ned, the Gordon, that ran at Chatham last week, but we are afraid the entries closed too soon for him to have attended to it after those trials. Mr. Taylor thinks the trials will prove a success the prospects being very encouraging.

##### Rustic Beauty Goes West.

Not content with taking the crack St. Bernard Sir Bedivere from Mr. Reick's kennel, Mr. C. A. Pratt, of Little Rock, Ark., has purchased at a long figure a good bitch in Rustic Beauty, that Mr. Reick imported recently. We are not surprised at this sale for, judging from Arthur Tricketts, remarks when here, we thought perhaps this might be the good bitch he had in view. Rustic Beauty besides being in the first rank as a show bitch is also a good mother, and this is almost as an important consideration these days of disappointment. Mr. Reick has a good litter out of her now. Mr. Pratt deserves every good fortune in his plucky purchases. Rustic Beauty was shipped Nov. 7.

Entries closed last Saturday, for the local dog show to be held in Hamilton, Ont., Nov. 18, in the old armory.

##### N. J. K. L. Show.

The committee have made several changes in the premium list: In Russian wolfhounds a puppy class has been provided with cash prizes. In pointers two puppy classes will be provided with cash premiums and a silver cup as a special will be given in each of these classes. In bulldogs and collies a puppy class with cash premiums will be given. In poodles it is probable that separate classes will be made for dogs and bitches, as well as puppy classes in the curly division. In Italian greyhounds a challenge class with a cash prize will be provided, and probably a puppy class.

The celebrated English bulldog Found It has, it is stated, been purchased by a fancier on this side.

The once celebrated Duke of Marlborough is dead, having been killed through a kick from a horse.

Mr. R. K. Armstrong, manager of the Cragstone Kennels, cannot buy the collie Rufford Ormonde, so purchases a wonderfully good seven-months pup by the crack out of Rufford Daisychain, and also two good bitches in whelp to Rufford Ormonde. This kennel should be able to show a strong team even now.

Mr. Symonds writes us that he has withdrawn from the firm of Toon & Symonds, and that Mr. George Thomas takes his place. The firm will now be Toon & Thomas. We regret Mr. Symonds's decision.

Mr. W. J. Tulk, assistant secretary of the H.K.C. and owner of the Hamilton Greyhound Kennels, has gone into partnership with John G. Kent, of Toronto, in English greyhounds and Russian wolfhounds. All the dogs will be kept by the Hamilton fancier, and the kennels will be known as the Terra Cotta Kennels. Messrs. Kent and Tulk intend to lower the flags of some of the American kennels that are strong in the same breeds, and they are negotiating now for, and intend to import, some good dogs. Among the dogs they have on hand at the present time, is the wolfhound bitch Krimea, winner of first prize puppy class New York show last spring, as well as several others, at different shows. She is due to whelp this week to Champion Argoss. Mr. Kent is well known as an enthusiastic fancier, he having at one time owned the finest greyhound that ever came to America—Champion Memnon—now dead. He also owned several other dogs, but of late years has dropped out of the fancy. However, his old love for dogs has induced him to go into them again, and he is welcome.

We regret to hear that Dr. William Mole, V. S., of Toronto, is down with typhoid fever, and wish him a speedy recovery.

There was a mistake in the N. J. K. L. premium list, regarding the special offered by Mr. W. C. Reick, owner of the N. Y. St. Bernard Kennels. It should have read, "for the best St. Bernard dog in the show, barring Sir Bedivere." This bars Princess Florence and on Miss Whitney's previous rulings, we don't see where Mr. Reick could have been accused of working a point for Princess Florence, even had the original reading of the offer been correct.

The Toronto Kennel has changed its quarters to 49 King street. The club had a sort of house warming Nov. 9, and with Pres. J. F. Kirk in the chair, a pleasant time was passed. Mr. Kirk gave an interesting talk on the troubles of recovering lost dogs, recounting many of his own amusing experiences. The rooms are supplied with all the kennel journals of this country and England. The club has done and will do much useful work in Toronto. A smoking concert will be held in about a fortnight, Messrs. Williams, Elmore and Fraser, the secretary, having the arrangements in hand.

Mr. J. H. Laroche, of Binghamton, N. Y., appeals to the aid of "The Gentleman's Sporting Paper" to recover a pointer dog that escaped from a baggage car at Oil City, Pa., last Thursday. It is a large dog, white and liver ticked, short tail, wears a nickel-plated collar and answers to the name of Beavis. If any of our readers in that section drop across such a dog we are sure they will be only too glad to give information to this office or to the owner.

## THE UNITED STATES F. T. C. TRIALS.

NOV. 6 TO 11.

The old field trial grounds at Bicknell, Ind., were used for the running of Trials A of the third annual trials of the United States Field Trial Club, commencing Nov. 6.

The trials were wonderfully successful both in respect to the number of starters and the quality of the competition. There were \$2,400 in purses, of which \$600 was apportioned to the Setter and Pointer Derby respectively, \$250 to first, \$200 to second and \$150 to third; \$100 additional to the absolute winner; total value of stake, \$1,800. The All-Age Stake for pointers and setters respectively, had a total value of \$1,100, divided into \$200, \$175 and \$125, first, second and third respectively; \$100 additional to the absolute winner.

The first payment of fees on Derby entries amounted to \$790, the second to \$620, the third to \$300. In the All-Age Stake, the nomination fees paid in amounted to \$580; starting fees, \$800. Total fees, \$3,090.

There were seventy starters in all the stakes, which made a remarkably large trial.

There was a large number of visitors each day, who followed the trials with close attention. Among those present were Messrs. J. L. Adams, Louisville; J. E. Isgrigg and L. Rice, Chicago; S. H. Soewell, W. A. Hinesley, T. P. Whiting, J. H. Kerr, J. B. McGuffin, B. Schwinge and G. T. Kerr of Indianapolis; John A. Hunter, Bloomington, Ind.; Col. A. G. Sloo, J. R. Balmer, Vincennes; J. M. Taylor, New York; C. H. Proctor, Union City, Ind.; A. M. Young and Mr. Atherton, proprietors of the Manchester Kennel Co.; A. J. Latta, Jr., Denver; J. M. Freeman, Bicknell, and a number of others. From thirty to forty horsemen followed the trials each day, and there were spectators who rode in carriages. Several ladies showed their interest by honoring the trials with their presence, some following on horse-back, some preferring to follow in a carriage.

The weather as a whole was remarkably pleasant and mild—too warm, however, for the best field work of the dogs.

The grounds were too limited in area for such a large trial. Four or five times as much would be none too much. The same grounds were worked over once at least every day, and sometimes twice. Then too, the same objections prevail now as in times past. The fields are too small, there are too many fences and the grounds are strung together too irregularly. There were plenty of birds in a limited part of the grounds, while in others they were scarce. On the whole, the judges did remarkably well considering the limited test afforded by the grounds and the difficult conditions of weather, that is warm and dry weather.

The judges were Mr. John Bolus, Wooster, O.; Mr. Royal Robinson, Indianapolis, Ind., and Mr. John Barker, Racine, Wis. Mr. Robinson could not remain to judge the All-Age Setter Stake. Capt. C. E. McMurdo, of Charlottesville, Va., accepted an invitation to judge instead.

It was a great trial for the pointers, as the records will show. Indeed, pointers have improved greatly. The best ones do not potter or loaf, they carry a high nose, go to their birds quickly and accurately, and have the dash and fire of their rivals, the setters. Great advances have been made in pointer breeding in the past two or three years. The improvement is not limited to field quality. It includes physical form. The average or poor pointers of this trial would be equal to the best of ten years ago.

## MONDAY.

## The Pointer Derby.

The dogs were drawn in the following order:

Castleman Kennels' lemon and white bitch Nellie S. (Fritz-Telley), W. B. Stafford, handler, with Charlottesville Field Trial Kennels' black and white dog Wrecker (Rip Rap-Croxie Wise), Capt. C. E. McMurdo, handler.

Castleman Kennels' lemon and white dog Plute (Fritz-Telley), W. B. Stafford, handler, with Glen Rock Kennels' liver and white dog Twinkle (Duke of Kent II.—Bessie Capas), C. E. Davies, handler.

E. M. Beale's liver and white bitch Alice Leslie (King of Kent—Belle Randolph), S. J. McCartney, handler, with Geo. E. Gray's liver and white dog Strideaway (King of Kent—Pearl's Dot), owner, handler.

John H. Alexander's liver and white bitch Fayette Alexander (King of Kent—Lennie Bijon), B. W. Butterfield, handler, with G. R. Howse's (agent) liver and white bitch Lulu K. (Ossian—Pearl's Dot), G. R. Howse, handler.

Charlottesville Field Trial Kennels' liver and white ticked bitch Selah (Rip Rap—Dexter's Dolly), Capt. C. E. McMurdo, handler, with W. N. Kerr's liver and white dog Little Ned (Ridgeview Dazzle—Kate Claxton), F. Richards, handler.

Horace F. Wood's liver and white bitch Rose (Ossian—Forest Queen II.), B. W. Butterfield, handler, with George Catlett's black and white bitch Queen (Ossian—Pearl's Dot), G. R. Howse, handler.

Dr. John R. Daniels' liver and white dog Beppo's Genius (Beppo III.—Lord Graphic's Gem), C. Barker, handler, a bye.

After the drawing took place, a start was made and the trials began at a reasonably early hour. The weather was rather warm for good work. There was but little air stirring. Birds were not moving in the midday hours, and during that time the competition dragged slowly. The trials were started about a mile from town.

On the decision for first place the judges agreed unanimously. On second and third they could not agree. Messrs. Robinson and Bolus were agreed on Little Ned for second, while Mr. Barker's choice for that place was Selah and Ned for third. The majority preference prevailed. It was as follows: First, Strideaway; second, Little Ned; third, Selah.

NELLIE S. AND WRECKER started at 8:13. The work on birds was poor, though the opportunities were limited. Wrecker flushed a bevy which he had a good opportunity to point. Nearly all the work was in the open. Wrecker carried himself well and with spirit, though not diligent at all times. His range was wider than Nellie's. The latter was obedient, but not uniformly diligent. Up at 9:11.

PLUTE AND TWINKLE were cast off 9:18. Twinkle was a bit the wider in range. Both were industrious workers, though not wide rangers. Plute's work on birds was very faulty, he flushing three times when he should have pointed. Twinkle made a good point on a single bird; Plute refused to back, stole the point, and winding up by flushing the bird. Up at 10:26. Twinkle, while not a wide ranger, keeps busily at work and is cheerful and willing to obey. He carries himself well and with animation. The weather was quite warm at this time.

ALICE LESLIE AND STRIDEAWAY began at 11:05. Worked on some scattered birds marked down in woods. The dogs failed to find. On other scattered birds Strideaway made three excellent points. In pace, range and style Strideaway was the better, though Alice displayed high capabilities of speed and range when she exerted herself to do her best. She did not, however, maintain them uniformly. On birds she did not show the good results which the opportunities afforded. Strideaway was steady to wing and shot, staunch and true on point, obedient, works to the gun, and has a very superior range and uniform high speed, besides being most pleasant and easy to handle. Up at 11:05.

FAYETTE ALEXANDER AND LULA K. got the word to start at 11:10. The work of this brace was positively inferior. They ran till 12:10, and were again started after lunch at 12:40. Their range and speed were limited. Lula, though her range was irregular, showed in respect to it superiority over her competitor. They had not enough capability to make a further trial necessary. Up at 1:05.

SELAH AND LITTLE NED commenced at 1:05 and ran a good heat. Both were fast workers, Ned somewhat the better. The heat was run in woods and open fields. Ned pointed a bevy some distance from his handler, but moved and the bevy flushed. Ned had the better of the work on the scattered birds, and, sent on again to range, he located and pointed a bevy well. Selah pointed a bevy nicely in corn, and Ned caught the scent of it as he was called in to back; he then pointed it. Up at 1:36. Both showed good pointing capabilities, though Ned was not reliably steady at all times.

ROSE AND QUEEN began at 1:50, and after a run in the open were worked on some marked birds, which they failed to find, but many of which were flushed after them by the spectators. The conditions for good work were favorable, yet they made some points, however, not in the staunchest manner. After ranging about the open till 2:26 they were ordered up. Their performance was inferior.

BEPPU GENIUS being the odd dog ran a bye heat with an English setter, beginning at 2:39. Beppo made a decidedly poor showing, flushing repeatedly when he should have pointed. The dogs left in for the second tests were Twinkle, Selah, Strideaway and Little Ned.

TWINKLE AND SELAH were started at 3:25. A long search without any profitable results was made, during which Selah regaled herself with a rabbit chase which exhausted her somewhat for the time being. Each beat out the ground diligently and each pointed; Selah discovered error and moved on, while Twinkle afterward pointed steadily and was backed, nothing found. Twinkle was making game and flushed a single bird, and moving on into thick weeds he flushed the bevy. On the scattered birds each dog made two points. At this juncture they were ordered up and Wrecker was given an opportunity to display his abilities in locating and pointing, which he failed to employ satisfactorily. He had opportunities to make several points. Up at 3:45.

STRIDEAWAY AND LITTLE NED were ordered down at 4:23. Strideaway remained out at his work, Ned losing time and effort by coming in to his handler betimes. Their pace was fast and range wide, Strideaway being the superior in both. Both dogs disappeared over a rise in the ground and when seen again they were both on point on a bevy which flushed wild. Again sent on they sought well for beves, each maintaining a good range. At last Ned began to potter. Near a point which Strideaway made there were no birds, but five rabbits were started. A short distance further on a bevy was raised by horsemen. Each dog got a point on the scattered birds. The judges followed the dogs into corn for a while, but darkness setting in the running ended. Time 4:55.

## TUESDAY.

A light rain fell in the night and the morning air held a mist. The start was a trifle late. The hunting farm, about one mile from town, was selected for the beginning of the day's work. The vegetation was heavy with wet. A gentle breeze blew from the south.

## The Setter Derby.

The order of drawing was as follows:

Ed J. Brown's black and white dog Rock Roderigo (Roderigo—Queen London), C. Barker, handler, with Manchester Kennel Co.'s black and white bitch Callie White (Gath's Mark—Georgia Belle).

B. W. Butterfield's black and white dog Flying Jib (Max Noble—Daisy Belton), owner handler, with Avenet & Thayer's black, white and tan bitch Cigarette (Boderigo—Nora II.), J. M. Avenet, handler.

W. A. Hinesley's black, white and tan bitch Lottie H. (Gath's Hope—Lula Hill), B. W. Butterfield, handler, with C. P. Mings's black and white bitch Lady Gaiety (Gath's Mark—Queen Blade), J. Gude, handler.

F. R. Hitchcock's black, white and tan dog Solitaire (Roi d'Or—Tory Diamond), J. M. Avenet, handler, with J. A. Peabody's black, white and tan bitch Rod's Mollie (Roderigo—Lilly Boxer), F. Richards, handler.

Avenet & Thayer's black, white and tan dog Topsy's Rod (Roderigo—Topsy Avenet), J. M. Avenet, handler, with John T. Mayfield's black, white and tan bitch Nelly H.'s Lady (Antonia—Nellie Hope), owner, handler.

Jackson & Denmark Kennels' black, white and tan dog Earl Palmer (Frank Whiteley—Dulcinea), Thomas Bond, handler, with Chas. Proctor's black, white and tan dog Kenwood (Cinch—Steven's Ruby), F. Richards, handler.

C. P. Hartmetz's liver and white bitch Columbia (Gath's Mark—Queen Blade), J. Gude, handler, with Sunset Kennels' black, white and tan bitch May Win (Prince Lucifer—Lady Gladys), withdrawn.

St. Louis Kennel Co.'s black and white bitch Lady K. (Rock—Mudge), W. B. Stafford, handler, with John T. Mayfield's black, white and tan dog Roderigo (Antonio—Lady Hope), owner, handler.

P. T. Madison's black, white and tan dog San Antonio (Antonio—Nellie Hope), J. Gude, handler, with J. H. & J. A. Hunter's orange and white bitch Daisy Hunter II. (Antonio—Daisy Hunter), J. H. Johnson, handler.

## First Series.

ROCK RODERIGO AND CALLIE WHITE began their heat about 8:24 in the open. A short run with Callie in the front resulted in the flush of a bevy, Callie showing a tendency to unsteadiness. The dogs failed to find some scattered birds in stubble, after diligent search for them. In woods, Rock refused to back Callie's point, to which there was no bird. Callie made four good points and roared two birds to a flush in difficult cover. Rock made one point. Up at 8:53. Callie carried a high head and had a pleasing manner of working. She was speedy and ranged well, and was more obedient.

FLYING JIB AND CIGARETTE were cast off at 8:30. After the first part of the heat, Jib fell off in the speed and range he then displayed, though he did not seem to be seeking earnestly when at his best speed. Cigarette maintained uniform pace and was seeking birds. The dogs were ordered up at the expiration of half an hour to be put down again for a trial of point work. At 1:15, they cast off for such trial on scattered birds of a bevy which had been found by Kenwood. No find. Flying Jib pointed a bevy which Cigarette had passed and of which she had flushed an outlying bird. In cover he pointed well twice on singles. Cigarette was then sent on alone, and although there were several opportunities, she did not secure a point. Up at 1:30. Jib did not display good judgment in working out his ground, though he worked diligently. Cigarette made a poor showing on birds; she is a busy worker with a fair range.

LOTTIE HAND AND LADY GAITY began at 9:00. The dogs were taken to a point favorable to work up wind on a bevy which had been marked down. Gaiety flushed one. Lottie flushed intentionally and chased. Next, Gaiety flushed. Next she secured a good point. Up at 9:30 after a very ordinary performance in every respect.

SOLITAIRE AND ROD'S MOLL began at 9:45. A false point by Moll, and next a bevy flushed, which Solitaire was roading. Moll was found on point after being lost for a while. Solitaire made some listless points. Moll had a pleasant way of working. The heat ended at 10:32.

TOPSY ROD AND NELLIE H.'S LADY began at 10:45. They were both fast workers, with the best range and pace in favor of Rod. He sustained the good performance and promise made in the trials on chickens at Souris, Manitoba, this fall. Nellie showed excellent qualities and will undoubtedly improve with opportunity. Rod found and pointed a bevy and Nellie refused to back; she pressed forward and pointed, showing an intention to flush, Rod maintaining perfect steadiness under the trying circumstances. Nellie has capabilities of a high order which will undoubtedly be perfected by more training. Up at 11:23.

EARL PALMER AND KENWOOD began their heat after lunch at 12:40. The work on the first birds found was unsatisfactory. The bevy on which a point was claimed for Kenwood was on the wing at the time. The bevy took alarm and flushed again before any work was secured. Kenwood pointed a bevy nicely in woods. Earl on top of a high fence on which he had room to stand made an excellent, stylish back. Earl, working alone, was next tried on singles. He pointed, then roared to a flush. Next he made a flush and a good point. The heat ended at 1:13.

COLUMBIA AND MAY WIN were next in order. The latter was withdrawn by permission and Columbia ran a bye at the end of the series.

LADY K. AND RODERIGO were started at 1:51. Roderigo false pointed twice and Lady flushed a bevy. Roderigo next pointed where a bird had been flushed, after which he pointed a bevy. Both had superior pace and range. Lady often barked when running. She works out her ground skillfully. Up at 2:33.

The foregoing report was furnished by a competent gentleman, your reporter not having arrived sooner, owing to unexpected delay.

SAN ANTONIO AND DAISY HUNTER II. were cast off at 2:45. The latter has much the action and manner of seeking of her illustrious dam, Daisy Hunter. She displays similar intelligence and skillful searching. Her pace, too, was excellent, and San was content to follow her a great deal of the time. Daisy secured three points and two flushes. They were taken up at 3:24 and the party went to other grounds. Off again at 4:28, Daisy working with undiminished diligence. She found and pointed a bevy nicely. San refused to back, charged forward and flushed the bevy, Daisy holding her point steadily. Next she pointed a single well in open weeds. The heat ended at 4:36.

Columbia had run her bye, having Lady K. for a running mate, from 3:45 to 4:15. While she showed pace and range, she was too unsteady to wing and shot to be fairly rated in a competition. She shows qualities worthy of development by more training.

## WEDNESDAY.

The temperature was comfortably warm. Clouds overcast the sky. There was a light fog which was gradually dispelled as the morning advanced, and toward midday the clouds broke away. On some sections of ground birds were found in abundance. In other sections birds were scarce. Rabbits were abundant in every field.

The judges selected Topsy's Rod, Daisy Hunter, Roderigo, Columbia and Flying Jib to run again, with Callie White and Rod's Moll to be on hand if wanted. An early start was made and the first brace was cast off but a short distance from town.

TOPSY'S ROD AND DAISY HUNTER II. commenced at 7:50. A half hour of diligent work resulted in Daisy flushing a large bevy in the open while she was going at speed. She was a shade the faster in pace. Both took wide casts and beat out a wide scope of country, searching for birds intelligently and carrying themselves with spirit. On scattered birds Topsy scored two points. Up at 8:29.

RODERIGO AND COLUMBIA were cast off at 8:32. The latter pointed a single. She broke shot. Next she pointed a bevy in a thicket and was unsteady to shot. On the scattered birds neither was able to score favorably. Roderigo was the better ranger. The heat ended at 9:15.

CALLIE WHITE AND ROD'S MOLL ran from 9:23 to 9:45 without finding, when they were ordered up and the All-Age Pointer Stake was begun, the Derby dogs thus having in the meantime an opportunity to rest.

CALLIE WHITE AND FLYING JIB started at 3:45 and ran 40m. Callie had decidedly the better of the competition in judgment in locating and pointing birds, and also in finding. They were worked on a large bevy marked down in woods. Callie pointed a single well. Next both roared birds out of the woods into the open, Callie the quicker and more accurate. She located and pointed them, Jib having turned off in the opposite direction and pointed. Both were steady to shot. Next Jib pointed some scattered birds and was steady to shot. Each flushed excusably. In the open Callie pointed a bevy and Jib backed. Jib fell off in his performance in the latter part of the heat. Callie had a decided superiority in the work done. Still Jib was placed equal with her in the awards.

In the evening the judges announced Topsy's Rod first, Daisy Hunter II. second; and three were placed equal third, namely, Roderigo, Callie White and Flying Jib.

## The All-Age Pointer Stake.

Out of 20 nominations there were 20 starters, a remarkable percentage. They were an excellent lot of pointers.

The drawing was as follows:  
C. Proctor's liver and white dog Spotted Boy (Trinkett's Bang—Nellie Bow), F. Richards, handler, with J. H. Kerr's black bitch Midget (Hannop—Frankie), J. Gude, handler.

Jackson-Denmark Kennels' lemon and white dog Lehman (Gordon—Fanny), Thos. Bond, handler, with G. W. Amory's black and white dog Amory (Mainspring—Bairmaid), T. H. Fouldexter, handler.

Grand River Kennels' liver and white dog Maximus II. (Maximus—Jaue), C. Barker, handler, with B. E. Quick's black and white dog Hal Pointer (King of Kent—Daisy), Geo. E. Gray, handler.

R. C. Shannon's liver and white bitch Mamie S. (Brown Stout—Pearl's Pride), G. R. Howse, handler, with T. Tashford's black and white dog Kent Elgin (King of Kent—Vera Bang), J. M. Avenet, handler.

N. T. Harris's liver and white dog Rod's Graphic (Lord Graphic—Winning Ways), L. W. Blankenbaker, handler, with W. W. Peabody, Jr.'s, liver and white bitch Dame Bang (Trinkett's Cash—Van Bang), G. E. Gray, handler.

Major J. R. Purcell's black and white bitch Lady Margaret (Dick Swiveler—Countess Bang), owner, handler, with Glen Rock Kennels' liver and white dog Duke of Kent II. (Tempest—Nadji of Naso), C. E. Davies, handler.

Charlottesville Field Trial Kennels' liver and white dog Wild Damon (Damon—Flora), Capt. C. E. McMurdo, handler, with C. C. Paddock's lemon and white bitch Princess II. (Shot—Forest Queen II.), B. W. Butterfield, handler.

W. N. Kerr's liver and white dog Little Ned (Ridgeview Dazzle—Kate Claxton), with Lawrence Pointer Kennels' liver dog Brown Bang (Devonshire Sam—Nellie Bang), J. E. Fisher, handler.

A. P. Houston's liver and white bitch Frankie (Robin Adair—Blossom), L. W. Blankenbaker, handler, with W. Laird's liver and white bitch Winowing (Ranger Croxeth—Cannie), Geo. E. Gray, handler.

Charlottesville Field Trial Kennels' liver and white dog Jingo (Mainspring—Queen II.), Capt. C. E. McMurdo, handler, with J. B. McGuffin's liver and white bitch Maid of Ossian (Ossian—Pickwick), R. M. Riley, handler.

SPOTTED BOY AND MIDGET ran from 9:56 to 10:29, running an inferior heat. Their range was, but moderate and their pace was leisurely. Spotted Boy got four points on single birds which had been flushed and marked down. Midget refused to back.

LEHMAN AND MAINSTAY were cast off at 10:42 and ran thirty-one minutes. They worked fifteen or twenty minutes before finding. Lehman pointed a bevy in a ravine, which was the only bevy found during the heat. Lehman maintained a good working gait, beat out his ground well and a great deal of it.

MAXIMUS AND HAL POINTER began at 12:06, after lunch. Maximus followed up a bevy. Next he pointed a bevy in brush, and a remaining part flushed as the dogs moved for ward. Maximus pointed twice; nothing found. Each mad

a point respectively on singles. Hal flushed one and Maximus pointed one. Each had good speed, Maximus the better, and better, too, in working out his ground. He pointed birds with fairly good skill, and was more intent on working to the gun than was his competitor.

KENT ELGIN and MAMIE S. ran a decidedly one-sided heat. They were cast off at 12:40 and were ordered up at the expiration of thirty minutes. Mamie flushed an outlying single, then pointed the bevy. Next, Kent roared to a point on a bevy, Mamie following and pointing. On scattered birds Kent showed decided superiority. He got three points and Mamie two, one of which she got by cutting in ahead of Kent, the other she divided with him. Kent showed excellent range, speed, style and judgment in pointing. He was under good control.

ROD'S GRAPHIC and DAME BANG began at 1:10. Their heat was above an average one, Rod having much the better of it. He opened the work on birds by pointing well two in a ditch, and was steady to wing. Dame pointed at a clump of brush as a single bird flushed from it. On other scattered birds she missed many opportunities. She pointed very close to a single bird and dropped to wing. Up at 1:40. Dame, when ranging, returned frequently to receive orders. Rod ranged fairly well at good speed.

LADY MARGARET and DUKE OF KENT II. began at 1:53. Lady flushed a bevy. Next she flushed a single, after which she pointed one well and was steady to shot. Duke pointed a single. Each then flushed a single. Poor work considering their good opportunities. Lady pointed a single in open, Kent at the same time pointing on probable foot-scent to right of her, and she was unsteady to wing. Each got a point in corn, and Kent refused to back. Up at 2:23. Both ranged fairly well and had fairly good speed.

WILD DAMON and PRINCESS II. started at 2:26. Down 26m. Damon was much the better and steadier in his point work, and more finished in his work in every way. Princess flushed repeatedly, one a bevy flush. Damon pointed a single, a bevy and made two flushes.

LITTLE NED and BROWN BANG began their heat at 3:00 and ran till 3:40. Ned pointed a bevy in a clump of briars, and Bang backed indifferently. Bang was irregular in range. Ned had good speed and fair range and was looking for birds constantly. A large part of the ground they worked over was unpromising.

After this heat the Derby was resumed.

#### THURSDAY.

The day was delightfully pleasant, too warm for the best performance of the dogs, though they did remarkably well. It was a great field trial day, great in itself so far as good competition is concerned, and great in its portend of the pointer's bold ability to struggle with the setter on even terms for supremacy.

The start was made on the Horn Farm, about three and a half miles from town. There were not so many birds found as was desirable, yet on the whole there were sufficient to test the finding and pointing qualities of the dogs to a fair degree.

After lunch Mr. P. T. Madison, the secretary, called a meeting of the board of governors for the purpose of appointing a judge for the All-Age Setter Stake, vice Mr. Royal Robinson, who could not remain later than Thursday night on account of business interests which required his attention. Capt. C. E. McMurdo was invited to judge, and he most obligingly accepted.

Mr. Madison then mentioned that \$50 more were necessary for the prosecution of Maclin, and \$49 were contributed in a few moments.

A large, orderly crowd of spectators followed the trials all day. There were about forty horsemen. There were a number of carriages. Several ladies were interested spectators.

FRANKLIN and WINOWING began the work at 9:02. Franklin pointed a bevy nicely in briars near a fence, and was well backed. Both were steady to shot. Started on to look for the scattered birds. Franklin pointed part of the bevy which had lit in the open. He next pointed several birds of the bevy and got two points on singles. Winowing made a good point on a single, then in the open pointed a bevy well, but, being urged on to locate better, the bevy flushed while she was moving. Next she pointed a single and Franklin backed. Both showed good range, Franklin the better, and he, too, was surer and better in locating and point work. Down 28m.

JINGO and MAID OF OSSIAN were cast off at 9:33. Maid pointed nicely a bevy in the open. Sent on, she next flushed an outlying bird of a bevy, the latter flushing as her handler walked up. The scattered birds were followed into corn, where Maid got a point on a single and Jingo pointed a rabbit. Down 33m.

MAINSTAY and BROWN BANG were cast off at 10:12. In the open Bang flushed part of a bevy, took a short turn, came back and flushed the rest willfully, whereupon he was ordered up, his run being 17m. Mainstay was sent on alone for 20m., when the heat ended with no find to his credit.

The party then went to lunch, the judges in the mean time holding a consultation. They announced that Mamie S., Maximus II., Rod's Graphic, Franklin, Hal Pointer, Jingo and Kent Elgin would be next to run.

MAMIE S. and LITTLE NED were started at 12:37. Mamie in a deep ditch was near where a bevy flushed. Howse claimed point, but one of the judges told the reporters it was not. Both pointed a bevy in corn and were steady to shot. Up at 1:04. Mamie beat out her ground without any approach to regularity. Ned was the better ranger. Both were diligent.

ROD'S GRAPHIC and MAXIMUS II. showed a fair range and speed in the 12m. in which they ran, beginning at 1:17. No birds were found.

FRANKLIN and HAL POINTER were down 11m., beginning at 1:36. Franklin exhibited a wide range, beating out his ground with excellent judgment. No birds were found.

KENT ELGIN and JINGO were started at 1:56. Jingo made a point on a few birds in the open weeds and was steady to shot. The birds were followed. Jingo pointed twice, but nothing was found to the points. Kent pointed a rabbit, which jumped toward him and he bit it. Each made several points to which nothing was found. Up at 2:21. Kent had the advantage in range. Both were fast and diligent workers.

MAID OF OSSIAN and WINOWING were cast off at 2:33. In the open weeds Winowing flushed part of a bevy, then pointed and moved to get a more favorable position, when the remainder of the bevy flushed. The birds were marked down and the dogs were worked to find them, but they did not succeed. Up at 2:45.

SPOTTED BOY and LADY MARGARET were cast off at 2:47. Spotted Boy flushed a bevy in the open. In open he next made a very stylish point, Lady, about 40yds. away, backing handsomely and steadily. There was nothing found to the point. Lady was the better in speed and range. Up at 3:00.

FRANKLIN and KENT ELGIN came in competition in what proved the final heat of the stake, commencing at 3:22 in a large open ragweed field. Franklin led off in the cast, Kent following closely behind. A vent whistled to him to change his course to get on an independent cast, and Kent turned to the order. The handlers drifted apart. Kent took a cast across the field into a cornfield, and not reappearing a search was made for him and he was found pointing a bevy stanchly and accurately in the corn. He was steady to wing and shot. At the same time, about one-eighth of a mile away on opposite side of the weedfield, Franklin pointed a bevy nicely and was also steady to shot. After taking Kent out of the cornfield, and at the edge of it, Kent caught scent, roared again into the corn and pointed a bevy. Part of it flushed. Going on a few steps, he pointed the remaining part. In the

meantime Franklin had been giving an exhibition of excellent ranging. He beat out his ground with excellent judgment, had a steady gallop, went to his birds promptly and accurately, and required very little handling. Blankenbaker seldom blew his whistle. It was obeyed promptly and cheerfully. Franklin has a most finished training without in the least lessening his self-confidence. The brace was a most excellent one, and the heat was a close one. Kent's previous heat was inferior, however, and he was not equal in judgment in ranging and in skillful working to the gun as compared to Franklin.

The judges announced the winners as follows: First, Franklin; second, Kent Elgin; third, Little Ned.

#### The Derby Absolute.

STRIDEAWAY and TOPSY'S ROD, the two Derby winners, were started at 3:51. Mr. Madison announced to the spectators that the good order and quiet must be maintained. A long stretch was worked before a find was made. Strideaway showed very superior quality, carrying himself in a dashing manner and going at remarkably high speed, having in those qualities some advantage of his competitor. In an open weed field Strideaway wheeled quickly to a point on a bevy, moved on to locate better, when the bevy flushed. Strideaway next pointed one of the single birds in the open weeds and was steady to shot. In the meantime, the dogs being separated, Rod pointed twice, once on a bevy and again on some remaining birds of it. He then roared in some bad cover, the birds probably running. The judges consulted about five minutes and ordered them on again. Strideaway had had a shade better in range, showed more speed and dash. They were run ten minutes more. Up at 4:50. The work on birds was limited by too few opportunities. The brace was a remarkably good one, probably a better one than ever in a Derby ran off an absolute heat in this country, considering the excellence in both performers. The pointer and setter were both sharp and quick in point work, with skillful judgment in locating. They, too, ran in their different heats up to high class form, and therefore are reliable performers.

#### FRIDAY.

##### The All-Age Setter Stake.

Gen. W. B. Shattuck's lemon and white dog Dave W. (Gath's Mark—Daisy F.), G. R. Howse, handler, with H. K. Devereux's black, white and tan dog Spot Cash (Van Guard—Georgia Belle), Geo. E. Gray.

J. M. Freeman's black, white and tan dog Dan Burgess (Dan Gladstone—Lilly Burgess), J. Mayfield, handler, with Avert & Thayer's black, white and tan dog Lochinvar (Chance—Bessie Avert), J. M. Avert, handler.

J. L. Adams's black, white and tan dog Direct (Gun—Victoria Laverack), L. W. Blankenbaker, handler, with Avert & Thayer's black, white and tan dog Count Gladstone (Count Noble—Miss Ruby), J. M. Avert, handler.

J. M. Freeman's lemon and white bitch Nelly Hope (Gath's Hope—Lady May), J. Mayfield, handler, with J. L. Adams's black, white and tan dog Cecil H. (Dr. Maclin—Cossette), L. W. Blankenbaker, handler.

L. Rausch's black, white and tan bitch Bonnie Bondhu (Count Wakefield—Bonnie Bondhu), J. Gude, handler, with Henry Schwing's black, white and tan dog Teale Schwing, R. H. Riley, handler.

Manchester Kennel Co.'s liver and white dog Glean's Sport (Vanguard—Georgia Belle), A. P. Gilliam, handler, with Edward W. Watson's black and white dog Dashaway (Leo—Julia), S. J. McCartney, handler.

Manchester Kennel Co.'s black, white and tan dog Glean's Pink (Vanguard—Georgia Belle), A. P. Gilliam, handler, with Avert & Thayer's black, white and tan dog Chevalier (Jean Val Jean—Lucy Avert), J. M. Avert, handler.

P. Lorillard, Jr.'s, black, white and tan bitch Laverna (Count Noble—Emma B.), F. Richards, handler, with Avert & Thayer's black, white and tan setter bitch Bettie S. (Rodrigo—Bo Peep), J. M. Avert, handler.

P. Lorillard, Jr.'s, lemon and white bitch Miss Ruby (Gladstone's Boy—Ruby D.), F. Richards, handler, with Avert & Thayer's black, white and tan dog Kingston (Chance—Bessie Avert), J. M. Avert, handler.

Theo. Goodman's black, white and tan bitch Dan's Lady (Dan Gladstone—Lilly Burgess), J. H. Johnson, handler, with Grand River Kennels' black, white and tan bitch Fleety Noble (King Noble—Elsie Belton), C. Barker, handler.

As in the All-Age Pointer Stake there were twenty starters out of twenty-nine nominations, the largest percentage of starters ever known in the stake of a prominent club.

Capt. C. E. McMurdo, Messrs. John Bolus and John Barker were the judges. The weather was delightfully clear, calm and pleasant, but entirely too warm and dry for good work. Birds were at no time plentiful during the day. Some of the heats were run without finding birds. There was a good deal of time lost in dismounting, working out small fields, going to others quite as limited, etc. As on every preceding day, there was a large attendance of spectators, of whom several were ladies.

DAVE W. and SPOT CASH were cast off at 7:35. Spot was first to point on a bevy, Dave from the opposite side pointing it independently; a moment afterward and it looked as if it was his find, he being closer to it. Howse shot and the dogs were steady. Each got a point on singles. Each made a point to which nothing was found, and Spot wound up the work on birds by a good point on a single, which was well backed by Dave. Up at 8:13.

DAN BURGESS and LOCHINVAR commenced at 8:20 and ran 45m. without finding. Each ranged well, Dan the wider. Lochinvar was difficult to handle, and required much whistling and loud orders to keep him under control.

DIRECT and COUNT GLADSTONE were cast off at 9:12, the temperature then being quite warm. The grounds were unfavorable for the display of good speed. The larger part of the heat was in woods and corn. Each failed to point a bevy in corn, passing close by it. Direct made a good point on a bevy in a treetop and was steady to shot. The scattered birds were accurately marked in corn and the dogs worked over the ground without finding them, they probably holding their scent. Up at 9:35. Both ranged well, considering their opportunities. The work on birds was ordinary.

NELLIE HOPE and CECIL H., at 9:41, were started in an open weed field. Nellie pointed a bevy in corn, then moved on. Sent on, Cecil dropped to a point on a bevy and was steady. Cecil made two points on scattered birds and Nellie backed. Cecil backed Nellie's point on a rabbit. Both showed good speed and range. Cecil showed the better work on birds. Up at 10:09.

BONNIE BONDHU and TEAL SCHWING started at 10:13 on some scattered birds flushed by handlers. Bonnie pointed and was steady to shot. Teal flushed a single willfully. Teal pointed twice in woods, while separated from his competitor, and the judge who went after him reported two points to his credit. Bonnie pointed a cat and was backed. Bonnie showed the better work.

GLEAN'S SPORT and DASHAWAY began at 11:14 and ran one hour without finding, though a bevy was seen to flush in the open. Each ranged wide, Sport the better, he having a very wide range which he maintained at good speed. It was oppressively warm at the time this heat was run.

GLEAN'S PINK and CHEVALIER, after lunch were cast off at 12:56. Chevalier pointed a bevy in the open and was steady to shot. On the scattered birds, Chevalier was first to point, then Glean joined in the point and both were steady to shot. Up at 1:24. Both ranged well, Glean the better and wider ranger.

LAVERNA and BETTIE S., at 1:50, were started in the open. Bettie roared up wind to a point, which she left, then La-

verna willfully flushed the birds. Bettie displayed but average range, while that of Laverna was narrow and her gait was slow. Down 48 minutes.

MISS RUBY and KINGSTON commenced at 2:25. Ruby had gone about 100yds. when she pointed a bevy nicely in weeds in the open, and she was steady to shot. Kingston was off on a cast. The dogs became separated, working quite a while entirely apart. Each got a point on birds in woods and were steady to shot. Kingston made two points apparently on foot scent on which he dwelt too long. In open weeds he pointed a bevy well. It was difficult to compare their range, but so far as they ran together Ruby showed the better range and better judgment in beating out her ground.

DAN'S LADY and FLEETY NOBLE began at 3:43. Lady had two bevy points to her credit and one single-bird point. Fleety made several false points. Each ranged wide and fast, Lady the better in judgment.

In the evening the following list of dogs for further trial was placed on the bulletin board: Dashaway, Chevalier Dan Burgess, Glean's Pink, Lochinvar, Dave W., Dan's Lady and Glean's Spot.

There was much discussion and unpleasantness over the selection by the fireside in the evening. The fact is that the work on birds was too limited, owing to limited opportunities, to form any decisive opinion of the merits of the best dogs. Several heats were run in areas too small to give the dogs an opportunity range and seek bevy. There too was a great deal of turning and twisting made necessary by fitting the work to the grounds. The day too was warm, which added to the difficulties. To me it seemed as if it was an impossibility to determine with even approximate accuracy, the rating of the dogs on the limited work done by them. With the exception of a few which were palpably out of the money, on the score of insufficient range and disinclination to work industriously, the rest needed further trial to determine which ones were the best.

Later.—The balance of report did not reach us in time for publication, but the result was Chevalier first, Dan's Lady second, Glean's Sport third. Mr. Waters thinks Sport the best in the stake, and Glean's Pink should have had second money. Chevalier won the absolute.

#### New Jersey Kennel League Show.

##### Editor Forest and Stream:

Permit me, through your column, to remind exhibitors that our entries close on Saturday next, Nov. 18, and to ask for their support, considering that it is the first show of the young club and that if this one is a success, others will follow which will help to make a very desirable fall circuit.

We think it is to the interest of all to give us their general support. It will be found that our premium lists, with a large addition of specials and others announced below, make an array equal to those of older established organizations, with the profits of previous successes to draw upon. We felt that we had done enough, that we should not be called upon to assume further risks, but the members of the committee are disposed to be accommodating and have divided classes in some cases, opened others for puppies and are prepared to consider all requests that are sent in before the entries close.

Above all, we are anxious to see our city on an equality with others in regard to the character of its canines, and many of the club members and their friends are wealthy, it may be expected that many will take back dollars instead of dogs. We wish to see the best specimens on hand to attract the public, and if our first attempt is a success, we will do better in the future.

We therefore leave the matter in the hands of owners and exhibitors, feeling that we have done our best, and it now remains for them to do something which virtually is of importance to themselves.

W. F. SEIDLER, M.D., Sec'y.

NEWARK, N. J., Nov. 10.

#### Flaps from the Beaver's Tail.

TORONTO, Can.—The Toronto Kennel Club have removed to more central rooms at King Street, West. A special general meeting will probably be held this month to revise the winter programme.

I hear the Hamilton Kennel Club proposes holding another local show in the near future, but no particulars have reached me yet. Those friendly gatherings are always enjoyable.

The inmates of Mr. A. A. MacDonald's kennel of fox-terriers will in future be recognized by the prefix of Aldon, he having registered it with the C. K. C.

Mr. E. H. Caddy, of Bedington, Ont., recently bought the rough St. Bernard bitch Royal Mona, one of the best in Canada, from Major J. C. Guillot, of Windsor. Also a bitch puppy, one of her last litter.

Compton Vendue, the winning fox-terrier at Toronto, has been down with a bad case of distemper, but Mr. Wetherall tells me he is now on the safe road to recovery. Mr. Wetherall has prevented the spread of the disease by keeping his show dogs isolated, a wise precaution. H. B. DONOVAN.

#### Field Trials in North Carolina and How to Reach Them.

The Eastern Field Trials Club will meet at Newton, N. C., Nov. 20, and the Irish Setter Club's field trials will be held at Thomasville, N. C., Nov. 27 to 29 inclusive. The Chesapeake & Ohio Railway offers the quickest and best route from Chicago, St. Louis, Louisville, Detroit, Cincinnati, and the principal cities of the West and Northwest, making connection at Charlottesville, Va., with Richmond & Danville trains for Newton and Thomasville direct. The accommodations offered by this route are strictly first class, embracing solid vestibuled trains, electric lighted, steam heated, and equipped with Pullman sleepers, and the celebrated C. & O. dining cars. The physical condition of this road is second to none in America, and the scenery through the Virginia is a revelation to the traveler, presenting mountains, rivers and canyons in greater variety, extent and grandeur than can be seen elsewhere east of the Rocky Mountains. For tickets and full information inquire at nearest ticket office, or address C. B. RYAN, Assistant General Passenger Agent, Cincinnati, Ohio.—Adv.

#### Summer Homes.

A BEAUTIFULLY illustrated book; list of over 3,000 summer hotels and boarding houses in Catskill Mountains and central New York. Send six cents in stamps to H. B. Jagoe, Gen'l Eastern Passenger Agent, West Shore R. R., 333 Broadway, New York, or free upon application.—Adv.

#### A NEW-SUBSCRIBER OFFER.

A bona fide new subscriber sending us \$5 will receive for that sum, the FOREST AND STREAM one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals. For \$3 a bona fide new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Fleet's handsome work, "Bird Portraits for the Young" (the price of which is \$3).

## Hunting and Coursing.

### COURSING AT WINFIELD, KAN.

THE promises of a large entry to the two stakes were hardly met by those of whom great things had been expected. Dr. Van Hummel was here the week following the Goodland meeting, and in a rough estimate had made up twenty-two prospective entries for the Winfield Cup, but at the last moment he failed to materialize with even one entry. Mr. H. C. Lowe, we understand, was called to Chicago by friends unexpectedly, and several others who had promised an entry were not as good as their word, and the result was that the entry in the open stake only numbered seven all told, while it was confidently expected that there would not be less than thirty-two entries. However, the members' stake received twenty entries, and lively competition was entered by the selected dogs from last season's best, and a very interesting meeting was brought off. Mr. W. S. Vidler, of Colorado Springs, sent down his beautiful bitch Buenarita to cross swords with Willis H., owned by Mr. F. B. Coyne, of Huron, S. D., and Mr. Luse's Living Yet and D. M. Sidle's Norwegian—Buenaritero dog Laughed At.

In this stake the three States were represented, first money going to Colorado and second to South Dakota. These dogs were sent in charge of those who showed that they can act disinterestedly, even when they have dogs in competition with those in their care.

The meeting as a whole went smoothly, and several who last season were a bit loud were quite changed in their manner, and their example was well followed by others.

Fortunately there was no Prince Charlie—Meteor fiasco, and barring two or three courses we had plain and clear decisions.

Mr. E. H. Mulcaster did the judging, and he gave good satisfaction. He is quiet, intent on his work, and is considerate and courteous to all. Mr. J. R. Cochran handled the slips in his quiet and earnest way, and we perceive a tendency to add a little art to his careful work, and in two or three instances the slipping was quite a masterly effort. Not one particle of fault can be found or was found with his work. He gave up any idea of entering a dog in order to be entirely free from any entanglement in having a dog in the stake. He is thoroughly interested in his dogs and is a good fitter, but his place is with the slips, although he can ill be spared from the ranks of active courser. Clubs could look a good while and not find as good a slipper.

The officers of the day were either negligent or entirely helpless, for the crowd was positively the most unruly that we have ever seen on a coursing ground, and in the last course broke ranks and all went at a breakneck pace, but fortunately there were no broken bones as the result. Clubs owe it to the public safety to have men of authority to control the mass of spectators that visit the coursing grounds. You can scarcely expect men to take valuable dogs where they will be subjected to the risk of injury.

The grounds selected for the running were the same as the club used last season, but more fences had to be made, and the dry weather had deprived the hares of cover, and as a result we were obliged to take more time to run the stakes through. The club contemplate a change in the grounds for another year, there being several places near where a meeting can be held.

Several members of the club have taken hold of breeding with a will, and a Derby of 32 young dogs can be made easily another year. There are over 40 young pups in sight that will be eligible to the stake. Cold blood must go is what they all agree upon, and next year an open stake and the Derby will be the two stakes.

Mr. D. M. Sidle has taken an interest with D. C. Luse, and at present has a share of them from Dick's Darling and Lady Maud. Mr. D. O. Miller has recently purchased two valuable pups of E. H. Mulcaster, by Glenkirk and Miller's Rub, and a litter brooder of Laughed At and Buenarita and one from Lady Maud from D. M. Sidle. Others are negotiating for some good ones, so that in a couple of years the woods will be full of them. Two of the entries were by a son of Trales and Lady Graham Glendyne out of native bitches and they went well to the front.

The city of Winfield takes very little interest in the meetings, and we would not be astonished to see the meet next year held near some other live town.

There are dozens of good places where a coursing meeting can be held, and all that is necessary is for one or two active men to stir up the people and select good grounds and the active dog men will second their efforts.

The winner of the Winfield Cup, Buenarita, is by Norwegian, a half brother of the great Fullerton, four times winner of the Waterloo Cup, and out of Buenaritero, an importation from Col. North's kennel. She is the bluest of the blue blood, and is a most wonderful performer, consistent and reliable. She is a dark brindle, will weigh about 50 lbs., rather lightly built, but racy looking. She goes out of slips strong and keeps coming, and is very handy with her teeth. She is fit to go in any company, and hard to beat when in condition. She is owned by S. W. Vidler, of Colorado Springs, and was given him as a share of a litter that he raised for Mr. Luse. She is about twenty months old. At Goodland she was thrown out by Boomerang in a short, unsatisfactory course, but was thought a good one for all that. She won at Leoti, and now a second win is placed to her credit.

The runner-up, Willis H., proved a good one at the Huron meet, and was sent on this circuit by Mr. T. B. Coyne, of Huron, S. D. He is a good-sized greyhound, rangy, well up on legs, and is nearly black in color. He looks racy, and certainly goes away strong and fast and is a good killer. He is by Lights o' London (Trales—Dick's Darling) out of a native bitch called Nell.

The winner in the County Stake, Gold Dust, is a native bred one, the sire being Brindle Jack and the dam Winnie. He is a rather blocky, round-backed fellow, red in color, and will weigh about 58 lbs. He has a good burst of speed and keeps coming. He won by the hardest kind of work.

Witch Hazel is by Bob, a son of Trales and Lady Graham Glendyne, out of a native bitch. She is white with black markings, is a very neatly-tuned bitch and will likely weigh 45 lbs. She is not fast out of the slips, but soon gets to work and keeps increasing her "lick" and stays with it. She is about twenty months old. Every course was won on merit, her bye being her hardest course. Her staying qualities will be quite an item in her breeding. She is owned by Mr. Frank Sidle, the young man who judged the meeting here last fall and a resident of the county.

### TUESDAY.

It has been extremely dry in this locality for some time and in the morning there came up one of those peculiar freaky prairie winds, the air was filled with clouds of dust, and the coursing grounds being located eight and a half miles from the city made it a very disagreeable ride out, and on our return we might properly have been taken for colored men. The fields in which the coursing was done were stubble and meadow, and being so dry the dogs kicked up such a dust that it at times entirely obscured them from view. Some portion of the grounds were covered with rocks which lent a spice of danger to the sport. Wire fences were numerous, but openings had been made through them and in only one or two instances was the judge kept from following the dogs closely. Hares seemed to be very plentiful, but got up wild. There was but a small crowd of spectators for the opening day and they seemed to be more diffi-

cult to control than when they came in larger numbers. The owners of the dogs rode in ahead of the dogs at times and the admixture of the marshals seemed to have little effect. Most of the courses were good fair trials, but the hares do not work like those on the buffalo grass prairie. Open even grounds are far the best for coursing always. Mr. D. C. Luse while riding after his dogs in one of the courses took a header which fortunately only resulted in a badly sprained wrist.

### Winfield Stake.

#### First Round.

LADY MAUD (late Maudy Luse)—BUENARITA.—Buenarita led two lengths to the hare, turned to the white, and then before she had scored made her a racing go-by and knocking the hare about smartly, let Lady Maud in for the kill. Buenarita won.

LAUGHED AT—LADY CLEVELAND.—Laughed At led three lengths to the hare. They then chopped it between them for a quick kill. Laughed At won decisively.

WILLIS H.—NETTLEFIELD.—Willis H. seemed to be in good form, and fairly smothering the bitch, led her three lengths, turned and came back for a masterly kill.

LIVING YET.—A bye with Lady Cleveland, the hare escaping after a pumping course.

### Cowly County Stake.

#### First Round.

JULIETTE—DINAH'S PICANNINY.—Juliette got away eight lengths ahead of the "nig," reaching the hare as he went through a hedge into a cornfield, but getting sighted raced away again; but Dinah's Picanniny was coming to herself, and gave the older black a go-by. But when again in view Juliette was working the hare, Picanniny was unsighted. The hare went through a hedge again and Juliette raced after him, but Picanniny again gave her a go-by and killed. They were two blacks, nearly the same size and difficult to judge. The little black seemed to have the best of it, but the flag went up for Juliette.

JACK—LIGHTFOOT (Weakly's).—Lightfoot led six lengths to the hare and made a vigorous effort to kill, but the hare came around, giving Jack a look-in. Lightfoot would not stay out long, and being placed, worked up a good series. The big brindle, however, was able to take a hand now and then, and finally they mixed it between them for a kill. Lightfoot had the best of it, and won.

SKIP—DICKY.—Dick was too speedy out of slips for the big brindle; but Skip got in on Dicky's turn, and from there on carried her hare ahead, and killed and won. A good bit of work.

LADY GRACE—ZIP.—Lady Grace was too young, being but a 13mos. pup. Zip cut out the work, the little one acting as though she scarcely knew what was wanted of her; she being on one side of the fence and Zip on the other, but as they went out into a stubble field she had an opening, but Zip was too clever and kept possession till they lost sight of the hare, as it went through the hedge and directly through the camp ground and escaped.

GOLDIE—JERRY.—Jerry had the best of the out one of slips, but then Goldie was up for exchanges. Jerry took up the turn from Goldie and made two wrenches and killed. He went to the slips lame, and while the owners were securing their dogs the owner of Goldie carelessly allowed his horse to step on another foot. There seems to be little care taken among the owners of the dogs. Horses and dogs were mixed up promiscuously half the time. The course was short and unsatisfactory, and gave what might be called a chance to let them in again, but the flag went up for Jerry.

GOLDDUST—JO JO.—Golddust gave a good exhibition handling his hare nicely, working it along faster than Jo Jo could run. Jo Jo waiting for a kill and after two efforts finished the hare, but Golddust had won hands down.

This closed the coursing for the day, and it being 4 o'clock and a long ride before us, all were anxious to be away.

### WEDNESDAY.

The second day was only a continuation of the first. The wind came up with the sun and continued strong all day; but the dust having been nearly all blown off the road, it was less disagreeable, though the long ride to the grounds was very unpleasant.

It was rather too warm for pleasure or for the dogs, but none of them showed distress, although some of the courses were quite long ones. There was little of special note in the day's running. The crowd of spectators had increased considerably, and were disorderly in proportion. Never have I attended a meeting where there was as much go-as-you-please as here. The marshals made but feeble efforts to keep the crowd in order, and even when they did enter a protest they were met with some uncomplimentary reply. The smoothness of a meet depends largely on the proper management of affairs, and officers should see to it that order is maintained; otherwise it becomes a haphazard scramble.

The same grounds were coursed over as yesterday, but the hares had become frightened, and those we missed had changed locations. It was after 10 o'clock when the first brace was put in for the remainder of the Cowly County Stake.

PEDRO—FANNY.—Pedro was a bit quicker to get away from the slips, but Fanny soon drew up for a go-by, but the hare was beyond reach and going like the wind, occasionally taking a sly look back to see if the turtles were coming; and finally concluding that there was very little show for any amusement, went into the adjoining county.

SAILOR MAUD—MINNIE.—Maud went out of slips quite a bit to the good, the hare rather favoring Minnie. A few feeble wrenches and Sailor Maud gave her a clever go-by, worked the hare smartly, and killed. Maud won.

BOB—WITCH HAZEL.—This brace was a pretty pair of little white ones, Bob being the sire of Witch Hazel. Bob led five lengths to the hare, wrenched several times, placed Hazel and she took the hare clean away from Bob, turned him to a piece of stubble again, drove him away over the plowed field, and reached him near a school house, the children taking in the sport greedily. In a pasture Hazel played with Bob, gave him repeated go-byes, and killed, coming off a clever winner.

METEOR—SNOWBALL.—Snowball is a rough-coated bitch, probably half Scotch deerhound, and was scarcely able to keep in sight, and after a half mile quit and came back. Meteor was a good 100 yds. behind as the hare went over the stony bluffs. Meteor won with very little to his credit in points made.

### Winfield Cup—Second Round.

BUENARITA—LAUGHED AT.—This course was one of importance. The brace were brother and sister, and had showed themselves grand working dogs. They went from the slips with Buena lapping the dog, but when well straightened out she drew up on the outside and would have scored a go-by, but on the instant the hare slightly favored the dog, and he being hard by gave a couple of wrenches and a kill, but he had fairly got his teeth on it when Buena was assisting in the kill. It was a short dash, and there was little chance for competition, and we confidently expected to see the hat come off, but the red flag went up for Buenarita a winner.

WILLIS H.—LIVING YET.—A good slip and Yet drew away four lengths up to the hare, and then switched him about at a merry pace, wrenching repeatedly, brought the hare around to Willis, and he took up the work, placing a few wrenches and a turn to his credit. Willis came away and raced up for a meritorious kill. For a few seconds your correspondent was interfered with by the flag steward, who got

out of his place, and it was said that several wrenches were placed to his credit just before the kill, but they must have been very numerous indeed to enable him to wipe off Living Yet's score, but it may have been done. Willis H. had the decision.

### County Stake—Second Round.

LIGHTFOOT—JULIETTE.—Lightfoot rushed away from his black rival and fairly smothered her, with scarcely a look in for Juliette.

ZIP—SKIP.—Zip skipped up to the hare. Neither are fast, but Zip did most of the early work, and then Skip held the place for a long course, but too late. Zip's first work carried her through and gave her the verdict. Skip was inclined to look on.

GOLDDUST (a bye).—He was placed in slips with Van's O'Rell for a bye, Jerry being drawn lame, but it being past the hour for closing the day's running, was taken out. He should have had his course by all odds, as it was the last on the card, but his owner did not lodge an objection and it went over till morning.

### THURSDAY.

The wind changed to the north during the night, and by daylight was blowing a gale, which gave a very dismal outlook for the day's sport. Overcoats and gloves were in good demand as protection against the piercing wind, but by 10 o'clock it warmed up somewhat and the wind had lessened.

At the camp grounds the tent stoves assisted materially in cheering our souls. Before the regular running the committee decided to run Golddust's bye, which was highly improper, as the judge had not yet arrived, and in fact did not see the course. He ran with Van's O'Rell, and the latter made an example of him, racing up to the hare three lengths ahead, rattled him about, came back quickly and knocked him to Golddust for the kill without merit. After the course it was discovered that Van's O'Rell had cut his leg, as it was supposed on a stone, but others thought that Golddust bit him at the same time that he seized the hare. It was a wonder that more dogs as well as horses and men were not injured over the very rocky corner where this course was run.

FANNY—SAILOR MAUD.—This was fairly the hardest course yet run. Fanny was unable to give Sailor any assistance whatever. Maud had a regular merry-go-round course in a pasture, into the road, back to the pasture again, and round and round, the young bitch making efforts to kill; into a cornfield they went, and back again, and finally she wearied poor Fanny out. Fanny didn't seem to be able to gallop even.

WITCH HAZEL—METEOR.—Meteor had the foot of Hazel up, and made the first turn. Hazel coming in, wrenched several times and exchanged with Meteor, Hazel getting in went from sight, wrenching strongly, and it is said threw the hare to Meteor for the kill.

### Winfield Cup—Deciding Course.

Buenarita led three lengths to the hare, placed Willis H., but with little parleying raced by him, opening a gap of four lengths and making a beautiful kill, won. Her victory was decisive and unquestioned, and left the impression that she is a hard nut to crack.

### County Stake—Third Round.

SKIP—LIGHTFOOT.—Lightfoot was given very little help in this course. Skip threw up the sponge and Lightfoot finished with a kill and won.

GOLDDUST—SAILOR MAUD.—Golddust scored a decisive victory over her younger rival, although Sailor Maud did remarkably well after having such a trying course but a bare hour before. The course was in a cornfield and the ground very yielding. Another year and Sailor Maud will show some strong work, she being only sixteen months old now.

WITCH HAZEL (a bye) with her kennel mate Laughed At. In a pretty long course she showed great staying powers, fairly making an example of the fast son of Norwegian and Buenaritero. The Glendyne blood kept her trotting.

### County Stake—Fourth Round.

LIGHTFOOT—WITCH HAZEL.—Lightfoot led three lengths, did some merry work and letting Hazel in she rattled up a pretty scale of points, forcing the hare into a stone corral for a kill and decisive victory.

Golddust ran a natural bye with some brindle dog, and a most trying course he had, too. The work was on a very large whitetail, which I am told is rarely ever seen in this part of the State.

During the course a farmer's sheep dog joined in and made two go-bys on the very tired dogs in his efforts to kill, but he quit and let the greyhounds make the kill. It was quite amusing to see the woolly fellow outfoot the greyhounds, and was scarcely believed by the spectators, who were unable to see it in the distance.

### County Stake—Deciding Course.

GOLDDUST—WITCH HAZEL.—Both dogs showed the effects of the two previous courses and went out sore, Golddust leading four lengths but was unable to score; the hare carried them nearly a mile away, then they brought him around, Hazel making several wrenches, but Golddust came by handily, but could not reach his hare for a good half mile, but bunny had spent his force and they literally tired him out; both bounds and hare were but just able to gallop when Golddust killed and won. The spectators became fairly frantic and nearly all joined in the course. A sad ending, perhaps, was averted by the voices of two or three cooler heads who called to them to desist. We would dislike much to see another sad ending like the Pearl of Pekin fiasco, but it is likely to be repeated if such unseemly breaks are made in the final course at these local meets. G. IRWIN ROYCE.

### The Winfield Cup.

Open stake for 16 or more greyhounds, entrance fee \$10, winner 50 per cent. of entrance and \$75 cash donated by the citizens of Winfield, the runner up 25 per cent., third dog to receive 15 per cent., and fourth dog 10 per cent. of entrance money:

D. C. Luse's (as S. W. Vidler's) brindle bitch Buenarita	beat	D. M. Sidle's white and fawn bitch Lady Maud (late Maudy Luse)
D. M. Sidle's fawn dog Laughed At	beat	D. C. Luse's white and brown bitch Lady Cleveland
F. D. Coyne's black dog	beat	J. R. Ballard's (as D. C. Luse) Nettlefield
D. C. Luse's Living Yet, a bye.		Willis H. beat Living Yet.

### III.

#### Final Course.

S. W. Vidler's bdl b Buenarita (Norwegian—Buenaritero)	beat	F. B. Coyne's bk and w d Willis H. (Lights o' London—Nell) and won.
--	------	---

### County Stake.

For dogs owned by resident members only, entrance \$2.50. Winner to receive 50% of the entrance money, runner up 25%, third to receive 15% and fourth 10% of entrance money.

S. S. Raper's black bitch Juliette	beat	Ricks & Smith's black bitch Dinah's Picanniny
John Weakly's black dog Lightfoot	beat	D. S. Hanna's brindle dog Jack
C. C. Stevens's brindle bitch Skip	beat	D. S. Hanna's black bitch Dicky
E. B. Condit's fawn bitch Zip	beat	E. A. Grace's Fisher's bitch Lady
James Ramsey's fawn and white bitch Goldie	beat	D. S. Hanna's black and white dog Jerry
John Weakly's red dog Golddust	beat	A. E. Johnson's brindle dog Jo Jo
Jas. Ramsey's brindle bitch Fanny	beat	E. P. Condit's fawn dog Pedro
Ricks & Smith's black and white bitch Sailor Maud	beat	D. O. Miller's brindle bitch Minnie

Frank Sidle's white and black  
bitch Witch Hazel  
Jas. Ramsey's red bitch Me-  
teor  
Lightfoot beat Juliette.  
Skip beat Yip.  
Goldust a bye, Jerry drawn.  
Lightfoot beat Skip.  
Goldust beat Sailor Maud.  
Final Course.  
John Weakly's red dog Goldust (Jack-Minnie), beat Frank Sidle's  
white and black bitch Witch Hazel (Bob-Unknown), and won.

NORTHWESTERN BEAGLE TRIALS.

THE inaugural trials of the Northwestern Beagle Club of America were successful and important enough, in entries and interest, to encourage the club to further effort. It was a remarkably good trial for a first event. Next year the club intends to hold a much larger and more important one. They will furthermore endeavor to make friendly arrangements with the National Beagle Club to arrange dates so that parties who desire can enter their dogs for competition in both events. This matter is an important one and worthy of the serious consideration of both clubs. An amicable arrangement for mutual benefit in respect to dates would of itself be great encouragement for the formation of other clubs, which clubs would also arrange events to take part in the circuit.

The trials began on Wednesday, Nov. 1, five or six miles from Whitewater, Wis., a town of about 5,000 inhabitants, on the Chicago, Milwaukee & St. Paul Railway. That town was the headquarters of the field trial party. A most restful, peaceful town it seemed to be, quiet as a country village, the only visible sign of life being a straggling pedestrian now and then or a rustic team plodding leisurely along. A bus and large three-seated carriage furnished transportation for the entire party.

The tiny hounds merely occupied room in the wagons as thinking. Taken as a whole, they were good in looks, most of them showing good quality and breeding.

In the party were Mr. G. A. Buckstaff, the president, who hailed from Oshkosh, Wis. a sportsman in every sense, who took victory or defeat alike with no change in his amiability; Mr. Louis Steffen of Milwaukee, the secretary, who, with Mr. Buckstaff, has worked diligently to make the trials a success, and to the efforts of these two gentlemen the success is chiefly due; there were also Messrs. Fred. F. Merrill, Charles C. Sidler, C. Niss, Jr., Rudolph Engelman, A. Hirtreiter, E. Remmele, John Mennier and L. J. Pettit of Milwaukee; H. A. Dillingham and Theo. Zschetzsch, Jr. Sheboygan, Mich., and Edw. Bender and F. W. Bender, Oconomowoc, Wis. There were a few local gentlemen who were present from curiosity. The club members and those who participated directly in the trials were the club's colors, black, white and tan. Mr. John Davidson judged, and a most laborious task it was. The running was all done in a hilly country, the cover varying much in character. Part of it was open woods, free from undergrowth, part was two or three-year-old oak suckers which grew about stumps on land which had been cleared of wood, and part of it was woods with a thick growth of underbrush. Great activity was necessary at all times, but in some heats where the rabbits would lead the hounds a good run in wide circle, the whole party would scurry away, up and down hill, through brush and bramble, to some better point of vantage, and betimes glimpses of the judge could be caught as he fitted through the openings with a knee action like Directum's. He worked conscientiously and frantically. His decisions, too, were good and sound. As a whole they were well received, and in the few instances where they were not well received they were, nevertheless, right. He openly and persistently questioned the judge's decision, even after the judge was kind enough to minutely explain his reasons for it, was in shocking bad taste, aside from the fact that it was wholly wrong. Yet one of the competitors, who is also a club member, was guilty of that act. I learned that he told Mr. Davidson later that he was sorry for it and that, of course, pardons a great deal. The proper way to receive a decision is to be quiet and respectful. The day of the blatant kicker is past. There is no encouragement for him other than to stay away. As this was a first trial and a partial *amende* was made for the offense, his name is withheld.

But one thing the club ought to do next year without fail. The guide, Mr. Junius Finch, who also was a handler in some of the heats, felt that it was incumbent on himself to loudly, ceaselessly comment on the work and interpret every detail to the judge. He was most offensively impertinent, did not even have the merit of being correct in his interpretations, but was consistently a foul-mouthed vulgarian at all times.

At a recent meeting the following list of officers was elected: President, G. A. Buckstaff; Vice-Presidents, Chas. Niss, Jr., and H. A. Dillingham; Sec'y-Treas., Louis Steffen. Executive Committee, E. B. Elliott, E. H. Remmele, Fred F. Merrill. All officers of the club are members of the field trial committee, of which Mr. Dillingham is chairman.

The work of the dogs was quite good as a whole, some of it excellent. Nearly all were true workers and there was very little babbling. The grounds were not considered as being first-rate, both on account of a large part being too heavy in cover and the whole too limited in area.

The Derby.

There were four entries in this stake, which was for dogs and bitches, 15in. or under, whelped after Jan. 1, 1892, \$2 to nominate, \$8 to start; 40, 80 and 10%, first, second and third. Following is the order of drawing:

Dillingham & Remmele's black and tan bitch Mayfly (Beebe's Doc-Beebe's Peg), handled by J. Finch in the first heat, by Mr. H. A. Dillingham in the second one,

Louis Steffen's black, white and tan dog Tony W. (champion Tony Weller-Topsy), owner, handler.

G. A. Buckstaff's black, white and tan dog Ilwaco (champion Royal Krueger-champion Elf), owner, handler,

E. Bender's black, white and tan dog Little Coony Duke (champion Little Duke-Lottie), F. Bender, handler.

Mayfly, winner of first, is a slender built black and tan, with little beagle type or expression, but she is a wonderfully eager and industrious worker, follows a trail closely when the scent is good. She also has great speed and endurance. Her voice is pitched and squeaky; she was a diligent hunter, with no inclination to loaf betimes or trust to another dog to do the finding. The slender, tough little freak proved not only too formidable for anything in the Derby, but in the Champion Stake, under better working conditions, outclassed all with ease her competitors.

Ilwaco, a gamy, tidily built little dog, was quite a close competitor. He exhibited great merit in hunting, following the trail closely and was fairly good in working out a loss. His voice is quite good. Little Coony Duke and Tony W. ran a very even competition, and exhibited good working abilities.

WEDNESDAY.

Rather a late start was made. It was a little late when the beaglers were ready to beagle; then it took the livery man a long time to get his team ready, and then there was more time lost in hunting up a saddle horse for the judge.

Finally, a kindly faced yellow equine was secured, a conservative beast which was happiest when standing still—then its face was placid, and its eyelids half closed, bulged out with dreamy contentment. On account of the wire fences the horse could be used but little, and on the second day the judge followed the beagles afoot.

The weather was delightfully pleasant, but too dry for good work. The hounds followed the trail with extreme difficulty and losses occurred frequently; in fact, a few yards' run and a loss was the character of the running till the evening hours, when the atmosphere and ground were damper. A warm, dry, southeast wind prevailed. The grass was so dry that it soon put a polish on the soles of one's shoes, which made difficult walking on the hillsides, and in the woods the dry leaves rattled noisily under foot. The work, as can be imagined, was patchy and unsatisfactory under the circumstances.

First Series.

TONY W.—MAYFLY began the competition at 8:46. Mayfly showed a decided superiority, Tony depending largely on Mayfly to do the leading and work, although he followed her closely. Up at 9:29.

ILWACO—LITTLE COONY DUKE began at 9:35. Duke was a bit too fat for active work. Duke was first to open on a track, but soon lost. Ilwaco was the sharper and better hunter, and was quicker and closer in trailing. The heat ended at 10:20.

Some heats were next run in the All-Age Stake to give the puppies a rest. The time given in the heats will indicate the order of running.

TONY W.—LITTLE COONY DUKE started at 2:50. On their first rabbit they first performed fairly well, doing work about alike, and better than that of the forenoon. Both trailed well and worked out a loss with fair skill. Up at 3:40.

MAYFLY—ILWACO began the deciding heat for first place at 3:47. Ilwaco in the mean time having run a heat in the All-Age Stake. Ilwaco took the lead on the trail of a marked rabbit, Mayfly following it closely. They ran it about 125yds. to a hole. On the next rabbit both seemed over eager and excitable. The wind had subsided and the scent was better at this juncture. Mayfly took a cast and appeared to be picking out a trail, but lost it. On the trail of the next rabbit Mayfly was first to open on it, Ilwaco soon joining. Both gave tongue merrily, Ilwaco having incomparably the better voice. After a few moments Ilwaco lost the trail and took a cast in the open while Mayfly made eager pursuit on the trail in the woods. Up at 4:45.

The winners were announced as follows: Mayfly first, Ilwaco second; Tony W. and Little Coony Duke divided third.

The All-Age Stake.

The All-Age Stake had two classes, Class A and Class B, the former for dogs, the latter for bitches, each for competitors 15 to 18in. in height. Prizes same as in the Derby.

CLASS A.

G. A. Buckstaff's black, white and tan dog Royal Rover (Rover-Singer G.), owner, handler,

Chas. Niss, Jr.'s, black, white and tan dog King Lead (Goodwood Driver-Missis of Goodwood), owner, handler.

Dillingham & Remmele's black, white and tan dog Base (Spelo-Gypsy Belle); first heat, Finch; second heat, Dillingham,

G. A. Buckstaff's Ilwaco.

The puppy Ilwaco, already mentioned in the Derby, won the stake with something to spare.

Base, winner of second, follows a trail well, is industrious, though not uniformly so. He has but an ordinary voice. Quite speedy on a trail, good at casting and finding a lost trail; he showed superior merits.

Royal Rover was a good third. He has a good voice, sticks well to the trail, but does not perform so quickly as his more successful competitors.

ROYAL ROVER—KING LEAD—Began at 10:30. Rover was first to open on the trail of a rabbit which was started by spectators. King was close to his handler and gave no heed to Rover for some moments, but joined in and went to the rabbit hole which Rover found. On the next rabbit Rover gave tongue, and King a moment later started the rabbit and gave chase. 12:04 and the party went to lunch.

BASE—ILWACO began an interesting heat at 1:27. Base had a record of second in the National Beagle Club's trials, and he was looked upon as the invincible competitor of the trials. Ilwaco, on the first rabbit, opened joyously and followed the trail close and well, considering the day. Base heeded him not, and though he crossed the trail two or three times, he paid no attention to it. Sent on again. On the next rabbit, Base took the trail first, Ilwaco joined, both puzzling along 30 or 40yds; at the top of the hill, Ilwaco sprang forward and opened first, though it was most strenuously claimed and maintained by Base's supporters that he opened first. Mr. Davidson saw the matter correctly as above. The writer was a bit to one side and nearer, so he could see and hear the whole performance clearly. Base led away, following the trail closer to a loss. Then Ilwaco took up the trail and carried the rabbit in a long swing, Base not joining in again for several moments. The rabbit finally ran to earth. Up at 2:15. On the second rabbit the honors were very nearly even, while on the first rabbit it was entirely one-sided in Ilwaco's favor. The description of the heat is drawn out as some length on account of the unpleasant discussion which ensued immediately at its close.

There was but one entry, Lottie, in Class B, for bitches, same conditions governing as in Class A.

Also, there was but one entry, Judy, in Class C, for dogs or bitches, all ages, 13in. or under. Same fee to start as in the other classes.

LOTTIE—JUDY were called to run together. The former was owned and handled by F. W. Bender. She is by Drummer out of Lofly. The latter was owned and handled by T. Zschetzsch. She is by Spelo-Nell. They began at 2:20. This heat was simply a walkover heat, neither dog having any competition in her class. The little beagle, Judy, showed excellent merit, following with great dash and accuracy. Lottie was getting heavy in whelp and was rather soft in flesh. She had a good voice and showed excellent sense and judgment. Up at 2:45.

THURSDAY.

The weather was much cooler and cloudy, with signs of rain. A drizzly rain set in in the forenoon and fell for an hour; making excellent hunting conditions. The character of the work on this day was incomparably better. The rabbits too made longer runs. There were some magnificent chases. The running was on the same grounds as that of yesterday.

BASE—ROYAL ROVER were started at 8:10. Rover was first to give tongue on a trail which both dogs carried about 200yds. to a hole. Both afterward worked on a cold trail, which Base gave up and Rover followed patiently out into the woods to a find, giving tongue melodiously. Both joined in and ran the rabbit in a circle an eighth of a mile in diameter, Base leading part of the time, and he was quickest to recover a loss. It was a magnificent heat. Up at 8:58.

KING LEAD—LOTTIE ran a bye, starting at 9:10, ending at 9:50, doing barely average work on a lively rabbit.

JUDY—BASE ran a working heat merely to put the former on an equality of conditions for the Champion Stake. The heat lasted 57 minutes, beginning at 9:50.

The judge announced the winners of Class A as follows: First, Ilwaco; second, Base; third, Royal Rover.

Champion Class.

Class E, open to all dogs and bitches which won a first prize at these trials. No entry fee. Prize, gold medal, donated by Mr. G. A. Buckstaff.

LOTTIE—ILWACO were started off at 11:10. Lottie showed greater judgment and skill in hitting off the trail, and had rather the best of it in following and leading. Up at 12:11.

JUDY—MAYFLY began at 12:15. This was a well contested heat, but Mayfly showed more dash and could follow the trail better, though Judy made a most meritorious competition in a long run. Up at 12:35.

MAYFLY—LOTTIE—The former really excelled herself in this heat, which began at 12:43, and was, according to conditions, the last one home. It seemed as if Mayfly had let out all her reserve forces to show just what she could do, and she did astonishingly well, far ahead of anything previously done in the trials. She carried one rabbit at great speed in a wide circle through the brush alone, and it was really a one-sided race. This heat ended the trials, with Mayfly the winner.

The party then went to lunch, where they were photographed in a group. The champion medal was exhibited. It is designed in skillful style, emblematic of the beagle fancy, and is a trophy to feel proud of. Silk ribbons, donated by Mr. Steffen, with the prizes in gilt letters on them, were distributed to the winners. Next year the club intends to give a prize for voice, a most desirable act, as voice is quite essential to the best performance of a beagle. They may get other grounds, as those used are full of holes, which the rabbits would take when pressed the least. Several entries were lost through the death of one dog, through another being in season, etc. If signs go for anything in making a forecast, next year will prove a banner one for beagle field interests.

B. WATERS.

Corsicana Coursing Meeting.

Editor Forest and Stream:

A new ambition has captured the minds of the sporting public in this section of Texas. On account of their symmetry and beauty, for many years we have kept the greyhound as pets and enjoyed the pleasure of the chase as a pastime, but until now never, in any section of this State, has there been a club organized, with money to back the respective favorites. "Miles were scattered" behind the flying jack and the pursuing hound in rich profusion, the dogs and the hare only touching a few prominent points in transit across the broad prairie.

We have had no rain since June, and the ground was rough and hard, terminating a three-days' race in one.

The drawing commenced at 11:30 A. M. on Nov. 5, with eight dogs, drawn as follows: Gibbs's Brillet against Kissinger's Queen. Queen won. Witherspoon's Frankie K. against Sheet's Fannie. Frankie won. Borden's Clark against King's Looney. Undecided. Kenner's Maud D. against Petty's Queen. Queen won.

Second Round.

Petty's Queen beat Witherspoon's Frankie K. after a hard contest, and much dissatisfaction at judge's decision. Kissinger's Queen beat Borden's Clark.

Third Round.

Petty's Queen beat Kissinger's Queen and won first money; Kissinger's Queen second, and third and fourth divided between Witherspoon's Frankie K. and Borden's Clark.

There was no jockeying in these races and very little funny business. The natural ambition and pure eagerness of the blooded dog to capture, and the liberty and even life of the hare, all combined to make the races honest and interesting to the carnivorous bipeds. Two rabbits out of eleven escaped. Frankie and Queen, I neglected to state, started first a crippled rabbit, Frankie killing, but no decision.

The consolation race was won by Maud D. There will be another meet, probably about the Christmas holidays, of which you will have due notice. The rabbits were large and well-developed, and acted on the principle that he that runs and gets away may live to run another day.

C. L. W.

Cowly Coursing Club Meeting.

At the meeting of the Cowly County Coursing Association the following officers were elected for the ensuing year: President, D. M. Sidle, Winfield, Kan.; Vice-President, C. M. Scott, Arkansas City, Kan.; Secretary, E. Cochran, Winfield, Kan.; Treasurer, Ivan A. Robinson, Winfield, Kan.; Executive Committee, H. E. Steinhilber, E. A. Fisher and J. R. Ballard, of Winfield, Kan.; Ground Committee, J. R. Cochran, Frank Sidle, Winfield, Kan., and D. O. Miller, Oxford, Kan.

Action was taken to name a stake for the next meeting, the Derby for dogs under eighteen months, in place of the Members' Stake, and also to have an open stake to be named by the journal bidding the highest for the privilege. Moved that the secretary be admitted as honorary member of the club without dues during his term of office. The judge was to be paid \$10 per day and expenses, and slipper \$5 a day for services during this meeting, with special vote of thanks for the very efficient way they performed their duties. Moved and carried that the Cowly County Coursing Association adopt the rules known as the National Greyhound Club rules, with the following modifications, that, wherever the name of the National Greyhound Club appears in said rules, there shall be substituted therefor the name of the National Coursing Board, this board is composed of the following named members: From the American Coursing Club, Dr. N. Rowe and J. Herbert Watson; Kenmore Coursing Club, Dr. Q. Van Hummel and H. C. Stone; Huron Coursing Club, John Longstaff and E. H. Alpin; Western Kansas Coursing Club, W. O. Alphin and R. Howard; Cowly County Coursing Association, John R. Ballard and Ivan A. Robinson.

Adjourned to meet at call of the president.

Altcar Coursing Club.

Mr. L. F. Bartels writes: "We have started a new coursing club called the Altcar Coursing Club. We want to make this the banner club of this country. We have a membership now of twenty, and all of them are practical coursing men. We are going to give a meeting in the spring—probably the second week in March—at Goodland, Kas. The Goodland boys have guaranteed to hang up \$400 and will try to make it more. We will dispense with the puppy stake usually given and will give the Altcar Stake for 33 or more dogs, the Altcar Plate for the dogs defeated in the first round, and if the entries in the stake warrant it will give the Altcar Purse for the dogs defeated in the second round of the stake. The Goodland boys assure us that March is usually very mild and nice with them up to the 21st or 22d. Any information desired can be had from Sam W. Vidler, the secretary, at Colorado Springs, Col. As this is the first spring meeting talked of we want your assistance to make it a good one. We want an early notice in FOREST AND STREAM so that every coursing man can make arrangements to leave his business in March and come to Goodland, and also that every one will have ample time to put his dog or dogs in condition."

Mr. Geo. W. Roraback, of Westfield, Mass., sends us word that he has lost his foxhound Kate, blue mottled and black, 18in. high, and will pay \$10 for his return or information leading to her recovery.

## N. E. BEAGLE CLUB FIELD TRIALS.

THE first annual field trials of the New England Beagle Club were held at Oxford, Mass., Nov. 6 to 10, and the club has reason to congratulate itself on the number of high class beagles which started in the various events. All the classes were strong, but the work in the Derby and 15in. champion class was particularly good.

The grounds selected for the trials furnished an abundance of rabbits, but the Oxford cottontail does not run as well as his Nanuet brother, and is all too ready to seek refuge in the stone walls which bound the fields. Then, too, the cover at Oxford is in many places so thick that it is quite impossible to follow the beagles closely, and consequently only a fraction of the work can be seen by the judges. This in a close race is apt to cause dissatisfaction.

The arrangements for the comfort of the club members and their guests were admirably carried out under the direction of Vice-President H. S. Joslin. The Bacon Hotel gave us a good breakfast at an early hour, and a hearty dinner after the work of the day was over. Hot lunches were served in the field, and barges conveyed all who wished to ride to and from the hunting grounds. The beagles were comfortably kennelled in a barn near headquarters.

Among the gentlemen present during the week were F. W. Chapman, H. S. Joslin, Mark Lewis, A. D. Fiske, E. O. Cornforth, Thomas Shallcross, Henry Hanson, H. V. Jamieson, R. D. Perry, W. R. Dear, F. G. Stewart, O. F. Joslin, W. S. Clark, F. W. Cliffield, O. J. Smith, Bradford S. Turpin, Cassius Hoyle, A. W. Barber and many others.

The judges, Geo. F. Reed and A. C. Krueger, did not attempt to follow the beagles as closely as has been customary in former trials. Their decisions, however, were well received, except in the 15in. open class which is spoken of elsewhere.

Among the winners are some previously unknown to fame. Louie Fitz Lee, winner of first in the Derby, third in the open class, and specials for the most effective ranging, greatest sustained speed and best starter, is a handsomely marked, strongly built white, black and tan dog. The record he has made here has never been equalled. Buckshot, second in the Derby, is a blue ticked dog, already fit to run in any company and sure to make a great record in the future. Lady Novice, winner of the 15in. class, is a strongly built, handsome little beagle of great intelligence. The other winners are all well known and need no description.

On Monday evening the annual meeting of the club was held in the smoking room of Bacon's Hotel. President F. W. Chapman was in the chair and the roll call was answered by H. S. Joslin, H. V. Jamieson, Henry Hanson, Geo. F. Reed, E. O. Cornforth, A. D. Fiske, Thos. Shallcross and Bradford S. Turpin; the latter, in the absence of Secretary Clark, was appointed secretary *pro tem*. After routine business had been disposed of the election of officers for 1894 took place, with the following result: President, F. W. Chapman; Vice-President, H. S. Joslin; Secretary-Treasurer, W. S. Clark; Executive Committee, A. D. Fiske and Henry Hanson.

It was voted that the N. E. B. C. should apply for membership in the A. K. C. as a field trial club, and that the time of application should be left to the discretion of the executive committee.

Bradford S. Turpin's resignation as a member of the field trial committee was accepted, and Geo. F. Reed was elected to fill the vacancy. The meeting then adjourned.

The field trial committee was at once called to order, those present being F. W. Chapman, H. S. Joslin, Henry Hanson, Geo. F. Reed and H. V. Jamieson. It was voted that the judges should name a reserve dog in each class in addition to the winners of money prizes, and that the Derby should be started on Tuesday morning.

The beagles nominated in the various classes were then called upon to fill. In the Derby H. L. Kreuder's Lee III. and Queen of the Forest, Henry Hanson's Olaf, Forest Beagle Kennels' Clio, Glenrose Beagle Kennels' Ruin, and Geo. F. Reed's Flash failed to appear. In Class A, H. L. Kreuder's Grayburn Daisy and Glenrose Beagle Kennels' Marguerite were absent, but in Class B all the nominees were present.

The drawing in the various classes then took place. This completed the work of the evening, and at a late hour the field trial committee adjourned.

## TUESDAY.

Tuesday morning was clear and cold, a heavy white frost covered the ground and there was no wind. The day was an excellent one for hunting, and the running in the Derby was completed. The quality of the beagles competing in this stake has never been equalled at any previous field trial, and there were at least two hounds in the class that could easily have defeated any former winners of this event. So evenly were these matched that the judges had it difficult to make a decision. One of them, Louie Fitz Lee, was run nearly six hours during the day, and his rival, Buckshot, was down for about four hours. The endurance of these pups, combined with their splendid work, made a noteworthy performance.

## The Derby.

For dogs and bitches 15in. and under, whelped on or after Jan. 1, 1892. First prize \$40, second \$25, third \$15; H. A. P. Smith's Louie Fitz Lee (Fitzhugh Lee—Maid) with Glenrose Beagle Kennels' Molly Dean (Sam—Baby Dean).

H. S. Joslin's Jean Val Jean (Chubb—Mystic II.) with Thos. Shallcross's Buckshot (Dave—Daisy). Glenrose Beagle Kennels' Little Lee (Fitzhugh Lee—Dill) with Rockland Beagle Kennels' Blanche (Frank Forrest—Ira).

## First Series.

LOUIE FITZ LEE—MOLLY DEAN.—This brace was put down at 8:00 on a side hill in Plaistead's pasture. Louie was handled by Bradford S. Turpin and Molly by F. W. Chapman. Louie covered his ground rapidly and showed great dash and hunting sense in his work. Molly did not work as well as she did at Nanuet the previous week. In thick brush Louie started a rabbit and drove to a stone wall, where the game took to earth; Molly did not get on till the run was nearly over. Soon after two rabbits were put up by the spectators, but the scent did not lie well and neither beagle could follow. Finally Henry Hanson, who has a happy faculty of jumping a rabbit whenever one is particularly needed, supplied the game. Molly took the track first, but Louie carried the rabbit under a stone wall, led off through thick brush and marked the burrow where bunny sought refuge. They were taken up at 10:00.

JEAN VAL JEAN—BUCKSHOT.—This couple was laid on at 10:07, the former in charge of E. F. Barnes and the latter handled by Thomas Shallcross. After a long hunt in which both beagles tongued, but neither could start, a rabbit was jumped by a spectator. Jean was put on the track, Buckshot harked to him, and in a thicket where the judges could hardly struggle ahead the beagles drove to a final loss. Then Buckshot hit the track of another rabbit which had been started by the crowd, but he could not carry it, nor could Jean aid him. Judge Krueger was the next to supply a rabbit, but this was also lost, and then for variety the beagles succeeded in driving one across the field to a wall very prettily, Buckshot leading. Taken up at 11:20.

LITTLE LEE—BLANCHE.—This brace was ordered down at 11:25. Lee was handled by F. W. Chapman and Blanche by Mark Lewis. Blanche, who is a larger and stronger beagle than Lee, worked with more life than her competitor. The scent was still poor and two rabbits were lost. The second one, however, was driven for some distance by Blanche,

while Little Lee struggled along far in the rear. Ordered up at 12:05.

This finished the running in the first series, and after lunch at the Huguenot Monument, erected in memory of the founders of the town of Oxford in 1687, the judges ordered down the first brace in the

## Second Series.

LOUIE FITZ LEE—BUCKSHOT.—These rivals for first prize were put down at 12:45. Judge Reed started a rabbit, but on the dry leaves neither beagle could follow, and bunny was safe without the necessity of running far. Worked to a large alder swamp, Louie, who is a splendid starter, jumped a rabbit. A long and very hot race followed in the swamp, where the trailing was good. This rabbit was the very king of runners, and though pressed hard refused to go to earth. Back and forth through the swamp, now in the open and again in thick cover, he led the eager hounds. The judges could not follow the brace, and from points of vantage on stumps and stone walls saw what they could of this great run. During the first part of the race Buckshot had the advantage, but after that Louie did the better work, catching more turns and running at greater speed than his rival. They were taken up at 2:37 while still driving.

JEAN VAL JEAN—MOLLY DEAN.—At 2:42 these beagles were cast off on the track of a rabbit which some enthusiastic hunters had taken from a wall where it had taken refuge. The brace drove a short distance and then were at fault in a road, where they made a final loss. Drawn away to an old orchard, a rabbit was seen in its form, and a hot race in thick cover followed. It was possible to see only a small fraction of the work. Taken up at 3:25.

LOUIE FITZ LEE—BLANCHE.—They were put down in thick cover at 3:25. A swamp and several pastures were worked without result. Then a rabbit was bolted by a spectator, Louie hit the track before Blanche, and had the best of the race through the woods to an open field, where they lost. Up at 4:30.

LOUIE FITZ LEE—BUCKSHOT.—This brace, which had already run together for nearly two hours, was put down again at 4:30. They beat out their ground well and Louie jumped a rabbit, which was lost after a short run. At 5:12, when it was so dark that one beagle could be distin-

THE FOXHOUND LOGAN.

Winner of Principal Prizes at Brunswick Fur Club Trials, 1893. Owned by Messrs. B. F. Kinney and John M. White, Worcester, Mass.

guished from the other with difficulty, they were ordered up. In the evening the judges made the awards, giving first to Louie Fitz Lee, second to Buckshot, third to Blanche and reserve to Jean Val Jean.

## WEDNESDAY.

The club was again favored with excellent hunting weather. The day was still and cool, and the sky overcast with clouds, so that the scent lay well. Game was not found in as great abundance as on Tuesday and the entire day was spent in running six couples. The first series in Class A was completed and one brace was run in the second series.

## Class A.

For dogs and bitches, all ages, 15in. and over 13in., that have not been placed first in any class at any field trials. First prize \$55, second prize \$35, third prize \$25.

Rockland Beagle Kennels' Fanny Racer (Racer W.—Nellie) with E. O. Cornforth's Kitty (Rowdy—Music).

H. A. P. Smith's Louie Fitz Lee (Fitzhugh Lee—Maid) with Glenrose Beagle Kennels' Gypsy A. (Kenneally's Lee—Tone).

Middleton Kennels' Model (Stormy—June M.) with Forest Beagle Kennels' Vick R. (Fitzhugh Lee—Nell).

Thomas Shallcross's Daisy with Glenrose Beagle Kennels' Jennie of Orland (Spot of Orland—Fanny S.).

Rockland Beagle Kennels' Jack Bannerman (Bannerman—Kate) a bye.

## First Series.

FANNY RACER—KITTY.—This couple was cast off on Clark's farm at 8:05. Fanny was handled by Mark Lewis and Kitty by her owner, E. O. Cornforth. Both worked well, but Kitty was inclined to range where she pleased and paid little regard to her handler. We had a long and tedious hunt through thickets and pastures; Fanny who is inclined to be noisy tonguing now and then but failing to make a start. Finally on a swampy side hill a woodcock was flushed and at the same time Fanny trailed very prettily to a start. The rabbit was an excellent runner. Three times he circled the large pastures and for a half hour furnished good sport and then was lost by the beagles. Much of this race was in cover where it was impossible for the judges to see more than a fraction of the work. Occasionally Fanny was seen in the lead, but more often Kitty was in front cutting out the work and setting a very fast pace. Ordered up at 9:20.

LOUIE FITZ LEE—GYPSY A.—Louie, the Derby winner, notwithstanding his hard luck of yesterday was as full of life and energy as ever, and covered his ground in the splendid style characteristic of him. He was handled by Bradford S. Turpin, and Gypsy A. was looked after by F. W. Chapman. The brace was cast off in cover at 9:25, and working through a swampy thicket, Louie made game. Gypsy was quickly with him and together they jumped a rabbit which led straight away for a stone wall, Louie driving at great speed and leaving Gyp far in the rear. Drawn away to thick cover, Louie trailed to a start and ran the rabbit to earth before Gypsy was fairly started. The beagles were then worked further into the cover and Louie again started a rabbit which almost ran over Gyp, who was 40yds. or more distant from her running mate; this fluke gave her a long start but Louie quickly passed her and drove the rabbit into a stone wall. Not long after another rabbit was seen by a spectator and the beagles were put on the track. Gypsy hit it first but could not hold her advantage and Louie ran on even terms with her, driving the rabbit to earth. Up at 10:30.

FANNY RACER—KITTY.—At 10:45 these beagles were put down for the second time that the judges might have an opportunity to see more of their work than was possible in the

first race. They were cast off in a pasture and Kitty soon hit a cold track which she worked to the wall. While she was making it out the rabbit was jumped by the spectators and in the race which followed Kitty was never overtaken. She showed herself to be a clever and rapid worker. The brace was taken up after a half hour's run.

MODEL—VICK R.—These well known beagles were cast off in a pasture at 11:15. Model was in charge of Mark Lewis and Vick R. of H. V. Jamieson. For forty-five minutes they worked through a fine rabbit country without making a start, and then the judges, catching sight of the lunch wagon, ordered them up. After enjoying a hearty New England lunch of baked beans, brown bread, doughnuts and coffee, the hounds were again put down and once more the weary hunt was resumed. The beagles became widely separated and Vick jumped a rabbit, ran him some distance, and lost in an almost impenetrable swamp before Model could be got on the track. Both the handlers had to flounder through the mud and water of the swamp to get their beagles, who could not be called off. At last we all got out of the wilderness, and in a field overgrown with bushes and briars Mark Lewis kindly jumped a rabbit. Model at first ran alone; then Vick struck in with him, worked a fling handsomely at the stone wall, and led the way across the pasture to a heap of stones, where the rabbit went to earth. Vick drove at a good pace and Model was content to follow. They were taken up at 2:15.

DAISY—JENNIE OF ORLAND.—This brace was ordered down at 2:35 at the place where the last brace had forced their rabbit to take to his burrow. Both were handled by their owners, Thomas Shallcross and F. W. Chapman. For a few moments the hounds amused themselves by running the old track. Then they were drawn away to another section of the brush field, where Daisy trailed to a start. The race that followed was a short one. Jennie was the faster of the pair, but neither did well, and the rabbit was soon lost. They were taken up at 3:12.

JACK BANNERMAN (a bye). The bye, handled by Mark Lewis, was put down at 3:20 to run with Kitty. They were worked through the brush field, where nothing was found, and then away to a side hill thickly covered with alders. Here the beagles quickly jumped a rabbit for whom the hounds had no terrors, and who absolutely refused to take to his burrow. A pretty race was run in the cover, but portions of it only could be seen. Kitty was the faster and seemed to have the best of it, though Jack caught a number of turns and was in the race all the time. At 4, while still running, they were ordered up and the handlers had a lively scramble in catching the gamy brace, who were driving like mad on the hot trail. This race finished the running in the first series.

## Second Series.

GYPSY A.—VICK R.—This couple was put down in oak woods at 4:12 and a rabbit was immediately started by H. V. Jamieson. Vick drove alone for some time and lost, and Gypsy refused to take the track, though started with Vick. The rabbit made one circle and then went to ground in a culvert. An unsuccessful effort was made to get him out, and then the beagles were started again in another part of the woods. Gypsy soon jumped a rabbit and led through the valley and across the road into thick cover. Here another rabbit was started by the tonguing of the excited beagles. Each hound took one and both were driven to earth. Taken up at 4:40. The driving in this race was very fast, the scent lay well and the tonguing of the beagles was as regular as clockwork—a most enjoyable run.

## THURSDAY.

The clouds which threatened rain on Wednesday evening disappeared during the night and Thursday proved to be an excellent hunting day. The scent lay well, rabbits were found in plenty and the running in both the open classes was completed.

LOUIE FITZ LEE—KITTY.—This brace was put down on Huguenot Hill at 8:08 and was handled as in the first series. Louie, comparatively unacquainted with his handler, covered his ground at a pace which made it difficult to keep track of him in the thicket, and was under little control. Kitty worked carefully and with less speed than she displayed on Wednesday. A rabbit was jumped by Judge Krueger and the beagles were ordered to this place. There was a long wait to find Louie, and when he was brought to the starting point the scent was cold. The hounds trailed slowly through thick cover to an open field, where the track was lost, the work being very even and without advantage to either. Soon a second rabbit was jumped by a spectator. The hounds were called up and put on the hot track. Louie worked the turns and led the chase to a ledge where the rabbit went to earth. Taken up at 9:05.

This race finished the running in the 15in. class and in the evening the judges announced the winners. First went to Gypsy A., second to Vick R., third to Louie Fitz Lee and reserve to Kitty. These awards were a decided surprise and occasioned much adverse criticism and dissatisfaction. It was difficult to see in what respect Gypsy A. was superior to Louie Fitz Lee and Vick R., and no one could understand why the latter should have been placed over Louie without meeting him in either series. It was surely an injustice to the Nova Scotia beagle, and was not in accordance with the field trial rules, which provide that the first and second and second and third prize winners shall run together.

## Class B.

For dogs and bitches, all ages, 13in. and under that have not been placed first in any class at any field trials. First prize \$30, second \$20, third \$15.

Rockland Beagle Kennels' Lou (Keno—Fly) with Glenrose Beagle Kennels' Molly Dean (Sam—Baby Dean).

Glenrose Beagle Kennels' Little Lee (Fitzhugh Lee—Dill) with A. D. Fiske's Lady Novice (The Rambler—Lady Vic).

Middleton Kennels' Adam (Sport—Trill) with Forest Beagle Kennels' Gypsy Forest (Frank Forrest—Sue Forest).

## First Series.

MOLLY DEAN—LOU.—At 9:17 this brace was cast off in a pasture. F. W. Chapman handled Molly, and Lou was in charge of Mark Lewis. Lou started off in the careful, methodical style characteristic of her, but Molly showed little spirit and interest in her work. Mark Lewis started a rabbit, and when the beagles were put on together Lou caught the scent first, but neither could carry it any distance on the dry leaves. A second rabbit was jumped by Mark Lewis and again the hounds were unable to drive. Once more they were put on the hot track and this time they succeeded in running a short race, Lou doing most of the leading and working the turns prettily. Taken up at 9:55.

LITTLE LEE—LADY NOVICE.—This brace was laid on at 10:00 where the last couple had been taken up. Lee was handled by F. W. Chapman and the interests of Lady were looked after by Mr. Morse. Lady was a merry, rapid worker under excellent control; Lee showed some interest in his work, but is too small for a field trial performer. After working through several fields Lady Novice trailed to a start and until the run was over did all the work, Little Lee being unable to come up with her in the briars. The rabbit was driven into a stone wall. The brace was ordered up at 10:38.

ADAM—GYPSY FOREST.—At 10:40 this lively couple was put down in a field covered with tall weeds. Both worked well, the former in charge of Mark Lewis and the latter of H. V. Jamieson. Gypsy soon trailed to a start and away went the game—either a fox or a rabbit—straight through the field, across the road and down into a strip of woodland, where two foxhounds joined the chase and the beagles were caught off. In this race the little hounds ran at a killing

pace, first one and then the other leading, but Gypsy set the pace during the greater part of the run and caught more turns than Adam. When they were brought back to the weed field both tongued and trailed, but failed to start, and the judges ordered them up at 11:10.

This finished the running in the first series and the judges after a short consultation ordered down the first brace in the second series.

Second Series.

LADY NOVICE—GYPSY FOREST.—These merry little workers were laid on in a weed field at 1:15. Worked away to thick cover a rabbit was started by the spectators. The beagles were called up and Lady caught the scent before Gypsy. Away they went driving the rabbit in hot haste to a stone wall, where he attempted to find refuge, but no sooner had bunny popped into the wall than he jumped out again, and once more the chase was on and finally the game was lost. Lady had the best of the race, doing more than her share of the leading and working the majority of the turns. It was a very pretty race. The hounds were taken up at 1:40.

Just as the run was over the lunch wagon came in sight and was heartily welcomed by the hungry crowd of sportsmen. While we were eating a party of eleven men straggled by, each armed with a gun, and in the rear of the procession came a mongrel dachshund. We all wondered that there was any game left in the county.

ADAM—LOU.—This couple was cast off at 12:45 at the place where we had lunch. They were worked through a number of open fields to a pasture overgrown with weeds and brush, where a rabbit was jumped by the crowd. Lou led the chase till the rabbit made a fling; then neither could carry the trail further. Adam, as usual, tongued here and there, but nothing came of it, and the brace was taken up at 1:25.

The awards were posted by the judges in the evening. First was given to Lady Novice, second to Gypsy Forest, third to Lou, and reserve to Adam.

Class C.

For bassets and dachshunds, all ages, \$10 to start. First prize, 40%; second prize, 30%, and third prize, 20% of entrance fees.

Glenrose Beagle Kennels' Rodeur (Mauprat—Lottie), a bye. There was but one entry in this class, Rodeur, and he was handled by his owner, F. W. Chapman. A. D. Fiske offered Lady Novice as a running mate, and the ill-assorted pair were cast off at 1:28. A rabbit was seen in its form and started within a few feet of the hounds. Neither of them saw it, and when put on the hot track neither could follow. Both circled, Rodeur casting very wide; but all in vain. Finally the rabbit was discovered by a spectator and the hounds drove him into a wall some 20 yds. from the start. This race occasioned much merriment, and the judges were so pleased with the grace and beauty of the "Chapman lope" that they divided first between Rodeur and his owner.

It was now 2 o'clock, and as the entries in the champion class had not yet been made, further work was postponed till Friday morning.

FRIDAY.

The day was the coldest of the week, but the hunting conditions were good and the running in the champion classes was most interesting.

The entries in the champion classes closed on Friday morning with six nominations.

Champion Class—13 to 15 in.

For dogs or bitches, all ages, 15 in. and over 13 in., that have been placed first in any open class at any field trial, \$10 to start. First prize, 80% of entrance fees and title of field trial champion.

Middleton Kennels' bitch Snow (Stormy—Lucy) with Forest Beagle Kennels' bitch June Rose (Frank Forest—June II.).

Glenrose Beagle Kennels' bitch Gipsy (Kenneally's Lee—Tone) a bye.

First Series.

JUNE ROSE—SNOW.—These well-known winners were cast off at 8:20 in Plaisted's pasture, on Huguenot Hill. June was in charge of her owner, H. V. Jamieson, and Snow was handled by Mark Lewis. Both started well and showed hunting sense in their work. In a thicket June trailed to a start and led the race for some distance; checked at a stone wall Snow caught a turn, but June again took the lead and held it till the rabbit went to earth. Drawn away June tongued, Snow harked to her, and they trailed together; but before they found the rabbit it was started by a spectator. Both hit the hot scent at the same moment, and away they went at speed, June catching three turns while Snow had to be content with one. They ran to a loss on the dry grass. Soon after both trailed for some distance on what was probably the feeding trail of a fox. Meantime F. G. Stewart had caught the rabbit which had been driven into the wall, and by order of the judges it was set free on a rocky side hill. The beagles were put on and June did a beautiful piece of work trailing, slowly but surely, over the stones to the wall, while Snow followed. Taken up at 9:50.

GYPSY—A BYE.—Gypsy drew the bye and handled by her owner, F. W. Chapman, was put down at 9:57 to run with Snow. Working in cover Snow gave tongue but failed to start. Then Thomas Shallcross discovered a rabbit in its form. The beagles were called up and Snow taking the lead drove the rabbit quickly to its burrow in a stone wall. Gypsy meantime circled and happened upon another rabbit which she followed for some distance and lost in an open field, this rabbit, however, seeking refuge in the wall close by the place where Snow had driven hers. Drawn away to an alder swamp Gypsy made a start and ran the game to a stone wall. Then in a weed field Mr. Shallcross once more provided a rabbit, and in the run which followed Gypsy's work was superior to Snow's. Up at 11:18. In these races with June Rose and Gypsy A., Snow did not work as well as she had done at Nanuet, N. Y., and failed to do herself justice.

Second Series.

JUNE ROSE—GYPSY A.—This brace was put down at 11:25 where the last couple had been ordered up. A rabbit was started by Judge Reed, and June got away on the trail before she could be caught, but no harm was done, for Gypsy harked to her and they ran an even, pretty race till the game was lost. Then June jumped a rabbit, but soon lost in the multiplicity of trails with which the field was now covered. Drawn away to new territory Gypsy started a half-grown rabbit; June was on at once and did some fine trailing, catching the turns and leading her rival easily during the greater part of the run. The judges now consulted and finally ordered the beagles on. Mr. Jamieson then borrowed a gun from a spectator that he might work his beagle as in an ordinary hunt, but on protest by Mr. Chapman the judges directed him to return it to its owner. Soon after this episode Gypsy jumped a rabbit some distance from the judges and ran him alone, June being too far away to get on running terms with her mate before the game ran into an accommodating wall. At 12:50 the judges announced that they were unable to agree and asked that a third judge be selected to aid them in reaching a decision. The owners failed to agree upon a third party and it began to look as if the deadlock would not be broken. Just then F. G. Stewart joined the party with a rabbit in his pocket and by request of the judges he liberated it in the middle of a large field. Bunny quickly crossed two open fields and disappeared in the woods. The beagles were then worked to the track, June took it and led across the fields to cover, doing all the work and showing her wonderful trailing powers to the best advantage. At 1:08 the hounds were ordered up and one of the most eventful

races in the history of beagle field trials came to an end. First was won by June Rose and reserve by Gypsy A.

Champion Class, 13 in. and Under.

Bradford S. Turpin's dog Clyde (Frank Forest—Sue Forest), by Bradford S. Turpin's bitch Belle Ross (Ross W.—Cricket).

Rockland Beagle Kennels' bitch Zillah (Racer, Jr.—Nellie). Withdrawn.

Zillah was necessarily withdrawn. All the others filled and ran.

CLYDE—BELLE ROSS.—This brace was put down in cover at 1:15, handled by owner. For an hour and a half the beagles hunted without finding a sign of a rabbit. Then Belle gave tongue; Clyde harked to her, quickly trailed to a start and easily outstripped his kennel mate in the run to the wall. Belle drove true and steadily, but was much too slow for Clyde. Up at 2:40. Clyde won first and Belle Ross reserve.

This run brought the trials to an end, as there were no entries in the brace or pack stakes, and but one, Louie Fitz Lee, in the endurance stake. The judges then awarded the specials as noted below.

SPECIAL PRIZES.

Most musical voice, Rockland Beagle Kennels' Jack Ban-nerman.

Most accurate trailing, Forest Beagle Kennels' June Rose. Most effective ranging, H. A. P. Smith's Louie Fitz Lee. Most stylish worker, Thomas Shallcross's Buckshot.

Best starter, H. A. P. Smith's Louie Fitz Lee. Greatest sustained speed, H. A. P. Smith's Louie Fitz Lee. Best Derby entry bred by owner, Thomas Shallcross's Buckshot.

Best All-Age entry bred by owner, Middleton Kennels' Model.

BRADLEY.

\*\*\*\*\*

Logan.

THE record made at the Brunswick Fur Club field trials by Logan, whose picture we print to-day, places him among the notable bounds of the country. His winnings at North Acton, Mass., were first in trailing, speed, tonguing and style; second in endurance and third in hunting. He has won the highest honors in the foxhound world for '93, and his owners, Messrs. A. B. F. Kinney and John M. White, Worcester, Mass., are to be congratulated in the possession of so fine a hound to lead their well-known pack.

Yachting.

New York Yacht Racing Association.

A MEETING of the New York Y. R. A. was held at O'Neill's, Sixth avenue and Twenty-second street, on Nov. 10. Com. B. F. Sutton, the president, being in the chair. When the meeting was called to order delegates from the following fourteen clubs were found present: Audubon, Bayonne, Brooklyn, Columbia, Harlem, Hudson River, Indian Harbor, Jersey City, New Jersey, Oceanic, Shrewsbury, Staten Island Athletic, Tappan Zee and Yonkers Corinthian yacht clubs. The minutes of the previous meeting were read and approved. The report of the treasurer as submitted showed a balance after all debts were paid of \$101.

The resignation of the Baywater Y. C., of Baywater, L. I., was read and accepted. It would seem that at a meeting of this association held just before its Labor Day regatta a resolution was introduced and adopted concerning a proposed regatta that was to be held by the club on Labor Day. The resolution disapproved of such regatta. The resignation was undoubtedly the result of such action. The Newark Bay Yacht Club of Bayonne, New Jersey, and the North Shrewsbury Yacht Club of Red Bank, N. J., having disbanded, were dropped from the association.

The more important feature of the meeting was the report of the Regatta Committee, which was read by its chairman, Mr. George E. Garland. A synopsis of the report follows: "The committee says that '41 entries had been received, 12 less than last year; that it is to be regretted that the tide did not serve the contestants on their return, that while last year everything was in its favor there being a good southerly breeze and the tide serving, this year although the start was with the tide it did not run long enough to be of much service to the large yachts that were compelled to sail the longer courses. With a breeze the race could have been finished by sunset, but the Committee were compelled to remain until after 12 P. M.

The report also calls attention to the two recent storms just previous to the regatta, ascribing to them the keeping away through partial or total loss of at least 35 starters, considering which fact, the actual number of starters, 75, was a very good showing.

It goes on to say that the preparatory signal was given at 11:40 A. M. and Classes A to H to 10 were started at intervals of 10 minutes thereafter, the handicap signal being given at 12:20 P. M. The wind at the start was west by north, weather clear, tide late of ebb. The wind gave every promise of increasing, there being a good breeze in the Upper Bay that completely died out by sunset. It also calls attention to the fact that many of the contestants turned the Bell Buoy just below Swinburne Island instead of the Swash Channel red bell buoy, and says that an excuse had to be made for this mistake, as the circulars contained full, clear and complete description and diagram of the course.

It speaks of three protests having been received, the first by Mr. Louis Wunder, of Vixen, against Lurline, Mr. B. Barnett claiming the Lurline did not go the full course.

The second was by Lizzie F. of the Hudson River Club, against Maud M. Harlem, in which case the latter was found to be at fault. The third was by John A. Cameron against Clara S., both of Hudson River Club, making same claim as two former protests.

The committee sustained all three protests, and awarded the race and prizes to Vixen, Lizzie F. and John A. Cameron respectively. The committee disqualified the cabin cat Willie K. and open cat Little Dean for fouling the stakeboat at the finish, but says that the result was not affected by their disqualification. The following were named as prize winners:

Class A—Com. B. F. Sutton's Loyal over Com. A. J. Prime's Florida by 38. 7m. 41<sup>1</sup>/<sub>8</sub>s.

Class B—Mr. J. G. Meehan's Fair Wind, Brooklyn Y. C. over May B. by 33m 18<sup>1</sup>/<sub>8</sub>s.

Class C—Ex-Com. J. T. Lalor's Peerless, Harlem Y. C., over Henry Ward Beecher by 3m. 13<sup>1</sup>/<sub>8</sub>s.

Class D—Mr. W. W. Vixen over Star by 2h. 6m. 45<sup>1</sup>/<sub>8</sub>s.

Class E—Mr. M. Flynn's Lizzie F., H. R. Y. C., only boat sailing proper course.

Class F—Mr. J. McCarthy's John A. Cameron, H. R. Y. C., only boat sailing proper course.

Class G—Mr. W. E. Elsworth's Mary. Bayonne Y. C., only boat finishing in this class.

Class H—Vice-Com. F. M. Randall's Hit or Miss, Pavana Y. C., wins from Surprise by 21m. 37s.

Class I—Norman, Mr. George Hansen, H. Y. C., wins, her competitor, Edna, Messrs. Dickson & Kellock, Y. C. Y. C., not crossing finishing line.

Class J—J. M. Sawyer, Jr.'s, Arrow, Shrewsbury Y. C., wins from Pauline B. by 13m. 16<sup>1</sup>/<sub>8</sub>s.

Class K—W. W. Roof, Jr.'s, Gertrude A. wins from Harry C. Miner by 3m. 7<sup>1</sup>/<sub>8</sub>s.

Class L—F. Fabian's Chip, Bayonne Y. C., over Crest by 4m. 45<sup>1</sup>/<sub>8</sub>s.

Of the eighteen classes, there were entries in all and starters in all but class B. No boats in classes C or F finished, and in classes D the Avalon, H. the Bessie and I Mosquito, sailed over, and under the rules are not entitled to a prize, but the committee have awarded them the pennant in their respective classes.

The report of the committee were \$187.42, the principal item being \$111.69 for printing. The total expenses of the regatta were \$544.45, receipts from all sources \$416, leaving a deficit of \$128.45. This deficit may be slightly reduced. The committee say further that under the conditions this is an excellent showing when we take into consideration the absorbing interest manifested in the trial and international races, the general depression of business, and the two severe storms of which tended to distract attention and lessen interest, and conclude by congratulating the association on the successful termination of its fifth annual regatta. The report was signed by Mr. Gartland, Judge Charles E. Simms, Jr., and Wm. Cagger.

A motion was made to receive and adopt the report, which was amended by adopting all but that part relating to class 7. The amendment was carried. The committee were then, on motion, thanked by the association.

Com. A. J. Prime, of the Y. C. Y. C., now rose to a question of privilege and made a statement concerning class 7 in which he claimed

that the Edna had finished properly and that sufficient evidence, in his opinion, was presented to the committee to support this statement, and that notwithstanding this alleged fact the committee had thrown Edna out and awarded prize to another boat, and asked that it be referred to the executive committee by the regatta committee. The regatta committee voted to so refer it and asked that they be notified of the meeting of the executive committee and be allowed to present evidence in the matter, which request was granted.

Three very important amendments were noticed for action, but because of the absence of two-thirds of all the clubs, it requiring 16 and 14 only being present, action was deferred. A resolution was offered by ex-Com. Prime to the effect that when this meeting adjourns it will be to meet on Friday, December 15, 1893, and that the secretary instruct the clubs and delegates. The resolution was adopted.

It may not be amiss to call attention to the proposed alteration to the Constitution. Article VIII relating to Assessments, add after the words annual meeting "and any club failing to be represented at a regular meeting of the Association shall be fined the sum of \$1.00.

Also add the following to the clause: "Any yacht club in the Association giving a race or regatta open to one or more clubs in the Association, under any rules contrary to the Association, shall be fined such a sum as the delegates of the Association shall determine."

We question whether the adoption of the above would be a wise move, as it is certainly an innovation, and tends to conflict with the individual rights of the clubs to hold races under special conditions.

American Model Y. C.

PROSPECT PARK—BROOKLYN.

Tuesday, Nov. 7.

A FAIR breeze of wind favored the model yachtsmen in their last races of the season, being from N. E., blowing about eleven miles an hour according to Sergt. Dunn.

It was evident by the late arrival of some of the yachtsmen that they were detained by voting "late" and often, and great credit must be given to Mr. Thos. Clapham, in voting early and not often, thereby arriving in good time to start his boat in her class, if being a long journey from Glen Cove, L. I. His efforts were not without reward, his yacht, a Clapham model through and through, winning in three straight heats.

Neola proved that she is at the top of the heap, and it will probably be a long time before she will be dislodged from that eminence; it would be worth the while of some of our yacht designers to take a look at her.

Amperre showed her speed under the skillful handling of her owner, the little Mischief pushing her closely. Taken all in all a very pleasant day was spent.

Next year the club will have a salt water station where the capabilities of the models will be fully tested, and streaky winds will be of the past.

Course, Southwest Cove to Point of Rocks and return, in heats, best two out of three, distance one-half mile. Weather pleasant, wind N.E. about eleven miles an hour. First class:

FIRST HEAT.				
	Start.	Finish.	Elapsed.	Corrected.
Neola, J. E. Pfeiffer .....	1 23 00	1 35 50	12 50	12 50
Ohyesia, C. Van Ness .....	1 23 30	1 37 55	14 25	14 17 <sup>1</sup> / <sub>2</sub>
May, H. Fisher .....	1 23 12	1 36 45	13 33	13 21
SECOND HEAT.				
Neola .....	1 40 43	1 54 10	13 27	13 27
Ohyesia .....	1 40 52	1 55 06	14 14	14 05 <sup>1</sup> / <sub>2</sub>
May .....	1 41 21	1 55 52	14 31	14 19

Second Class.—To windward  $\frac{1}{4}$  mile:

FIRST HEAT.				
	Start.	Finish.	Elapsed.	Corrected.
Skimmaug, C. Mallory and Thos. Clapham .....	11 41 06	11 52 10	11 04	11 29
Marjorie, H. Fisher .....	11 40 45	11 51 59	11 14	11 39 <sup>1</sup> / <sub>2</sub>
Comet, Geo. W. Townley .....	11 41 03	11 52 51	11 48	12 27 <sup>1</sup> / <sub>2</sub>
SECOND HEAT.				
Skimmaug .....	12 02 32	12 11 57	9 25	9 50
Marjorie .....	12 02 13	12 12 28	10 15	10 55 <sup>1</sup> / <sub>2</sub>
Comet .....	12 03 03	12 13 14	10 11	10 25 <sup>1</sup> / <sub>2</sub>

Third Class.—Start from buoy off club peninsula to buoy off point at Southwest Cove, to Point of Rocks, thence to finish off club peninsula, distance  $\frac{3}{4}$  mile, in heats, best two out of three:

FIRST HEAT.				
	Start.	Finish.	Elapsed.	Corrected.
Dolphin, J. Smith .....	2 35 35	2 56 20	20 45	20 45
Amperre, J. E. Pfeiffer .....	2 35 22	2 51 43	16 21	16 14 <sup>1</sup> / <sub>2</sub>
Mischief, H. Fisher .....	2 35 22	2 53 00	17 38	17 08
Anna, J. C. Meyer .....	2 35 40	2 54 42	19 02	18 58 <sup>1</sup> / <sub>2</sub>
SECOND HEAT.				
Dolphin .....	3 02 09	Disqualified.		
Amperre .....	3 01 55	3 20 12	18 17	18 10 <sup>1</sup> / <sub>2</sub>
Mischief .....	3 01 50	3 19 48	18 18	17 48
Anna .....	3 02 10	3 25 18	23 08	23 04 <sup>1</sup> / <sub>2</sub>
THIRD HEAT.				
Dolphin .....	3 29 02	3 59 05	23 03	23 03
Amperre .....	3 28 45	3 46 45	18 00	17 53 <sup>1</sup> / <sub>2</sub>
Mischief .....	3 28 33	3 47 20	18 47	18 17
Anna .....	3 28 50	3 52 48	23 53	23 49 <sup>1</sup> / <sub>2</sub>

FRANK NICHOLS.

YACHT NEWS NOTES.

Valkyrie is now lying alongside of Utowana in Tebo's basin, her ballast and all her fittings having been removed. The bottom inside has been cleaned and painted with red lead, and the yacht put in excellent condition for the winter. On the north side of Tebo's new pier lies Colonel's mast still on end, but slushed down and carefully canvassed. A very large number of yachts, both sail and steam, are lying in this popular winter berth, and the adjoining section of South Brooklyn is becoming quite a yachting center. Mr. Bishop, the yacht plumber, and Mr. James Gregory, the brass worker, have established branch stores near Twenty-third street on Third avenue. The new drydock at Tebo's is now in position, replacing the old one, which has been moved to the boat of the slip. The building of the new one is completed and it will soon be ready for service.

At Winttingham's yard the old building shed originally erected to cover the Yama in building, and also the closed house built for the Norwood, have both been torn down, and a much larger and permanent building shed, completely inclosed and well lighted, has been erected on the spot occupied by them. In this shed the cutter Gavian is housed for the winter. The first keel laid in the new shed will be for a cutter of the semi-fin Wasp type, designed by Mr. Charles Olmstead. She will be of 12 ft. l.w.l. and 15 ft. o.w.l. On the railway is the schooner Iroquois, being scaled and repainted. The usual number of yachts are laid up in the basin.

The Treasury Department has decided in the case of Mr. Geo. H. Thornton, No. 79 White Building, Buffalo, that a sailing skiff 21x4ft. beam, to be used as a pleasure boat, is, if made in Canada and brought to the United States, subject to duty according to component material of chief value. Such classification is made by the collector of customs at the port of entry, subject to the protest of the importer and ultimate decision by the Board of General Appraisers at New York and the courts.—*Marine Journal*.

Yankee Doodle, the fast launch built by McBride Bros., of Philadelphia has recently been launched after being on the dock for about seven weeks for important alterations, including a new engine, her wheel is of bronze, three bladed, 34 in. diameter, and is expected to make 600 revolutions.

The wrecked steam yacht Feisen, recently purchased by the representatives of the Brazilian Government, has been rebuilt at Wood & Sons yard, City Island, the work being hurried as much as possible, 28 men being employed on her. She is now 7 ft. longer, or 85 ft. over all. She has been fitted with a steel conning tower of 3 ft. plates, in place of her pilot house, and on this conning tower a machine-gun has been mounted. On the deck forward of the tower is a Howell-Hotchikiss torpedo gun, carrying an 18 in. torpedo, and on the deck aft is a one-pounder Hotchkiss rapid fire gun, on a cone mount. Provision has been made for carrying two torpedoes in addition to the one carried in the gun. The steam yacht Nada, sister to Feisen and the Javelin have also been purchased and will be similarly equipped. In addition to these three a Yarrow torpedo boat is expected this week from England.

Bouncers.

ROSLYN, L. I., Nov. 9.—*Editor Forest and Stream*: I notice that several papers, in reporting the fall regatta of the Brooklyn Model Y. C. at Prospect Park on Nov. 7, give the name of the winner in Class 2, as "Nameless." I entered and sailed this boat as the Skimmaug. Why she is called Nameless in the reports I do not know. The Skimmaug was built by me last winter from the lines of the Bouncer, which design was the work of the late Mr. Wm. C. Clapham, and was of the "overlapped" type ever designed for racing and cruising purposes. The Bouncer was a centerboard boat, and won all her races without lifting ballast. The Skimmaug was designed to test the Bouncer model with a weighted fin-keel, and her performance of last Tuesday proves it to be probably better adapted to that questionable method of acquiring power without paying for it than any other form of boat. These boats sail over the water, not through it, and the Skimmaug is of the following dimensions: Length over all 39 in., length on waterline 44 in. Horsepower 16 in., draft of hull proper 2 in., depth of fin 9 in. She is uncapsizeable and unsinkable.

THOMAS CLAPHAM.

## Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

THE annual meeting of the A. C. A. executive committee was marked by a rather more businesslike mode of procedure than is usually the case, and the work of the committee was carried out very thoroughly and completely. Each matter which was brought up was very thoroughly discussed before final action was taken, all present being permitted to express their views. Apart from the various changes in the rules, the present condition and the prospects of the Association were discussed at length, the question of a semi-permanent camp receiving a good deal of attention.

THIS same question is likely to become a vital issue in the near future, as many old members hold that the moving from place to place each year, while not realizing the theoretical benefits expected from it, involves a very large annual expenditure and also an amount of labor on the part of the officers which would be greatly lessened if the meets were held for a period of years in the same place. On the other hand, many uphold the present system as fairer to each locality and as bringing new members into the Division in which the meet happens to be held. As far as the question of membership is involved, we are of the opinion that the transient gain in the shape of men who join for one meet and are not heard of again, will be more than offset by the men who will join because the Association is strong, vigorous and active, and who will come to meets wherever they may be held, because they are good meets and make a most enjoyable outing at a small expense. Besides this class of new members, a meet in the same place for several years is likely to attract the old members by its convenience and low cost, thus retaining as active participants in each meet many who have found the annual expedition from place to place to be entirely too expensive. One leading feature of the fixed camp would be the construction of two or three necessary buildings, kitchen, mess shed and ice house, by the Association, and the use of one of these for the storage of members' effects, tents, tent floors, cots and perhaps an open canoe, from year to year, thus doing away with one of the most troublesome and expensive items of transportation. Many a man who now hesitates about going to a meet on account of past experience of the great expense and trouble, would decide in a moment if he knew that his tent, tent floor and cot were already on the ground and could be made ready within an hour after his arrival.

It goes without saying that one radical feature of this plan would be the prohibition of all cottages and wooden buildings, and the rigid enforcement of the rule that tents only would be allowed on the property. Against the scheme is urged the experience of the Western Canoe Association at Ballast Island, but the cases are by no means parallel. Ballast Island is a small summer settlement of cottages, existing as such long before the Western Canoe Association was formed. On the island there is no room for camping or camp life, and the neighboring islands offer the attractions of summer hotels and large ballrooms. In the event of the selection of a permanent or semi-permanent site for an A. C. A. camp, every precaution would be taken to secure an isolated locality, apart from hotels and cottages, and to preserve this isolation as long as possible. If it should be decided to purchase instead of leasing the property, then any improvement in the neighborhood which would make it too public for a camp would almost of necessity be accompanied by an increase of value in the land, which might be sold, and a new and more distant site purchased.

A BALANCE in the A. C. A. treasury is a novelty that is likely to be fully appreciated by the members, as it is some years since anything of the kind has been seen. The very expensive meets of the Atlantic and Eastern Divisions in 1890-91 left a heavy debt which was only wiped out by the strenuous exertions of Com. Winne in 1892, leaving an empty treasury to the incoming administration. In resigning their offices, Com. Cotton and Sec'y-Treas. Burns turn over to their successors a sum of nearly \$300, with some assets which makes the real balance still greater. A meet near New York is likely to be more than ordinarily expensive, but we hope that the financial report for 1894 will show at least an equal balance. The work of the officers this year is a matter for general congratulation, and we hope that it may be many years before a deficit is again met with.

### Our Trip Down the Grand.

We had been preparing for the trip and thinking about it and talking it over at morning, noon and night, until our respective wives were nearly frantic, and we suspect looked forward to the auspicious day with almost as much eagerness as ourselves, although prompted by different feelings. They longed for the respite from our incessant boat, river and camp talk, while we looked eagerly forward to the anticipation of our dream.

During the fall of 1892 we bought a couple of canoe yaws, 20ft. x 46in., with 9ft. cockpit, a boat made by a party at Traverse City, Mich., who has lived all his life on the shores of Lake Michigan and who has studied and experimented until his boats are as near perfection for cruising these waters as it seems possible to make them. Our plans now being to invite a couple of friends and take our boats from our busy Western city of Grand Rapids, down the Grand River to Grand Haven, and thence to the small body of water known as Black Lake, some twenty-five miles south of Grand Haven, and which sets in some six miles from Lake Michigan. Ye Scribe is the happy owner of a small summer cottage situated on the south shore of the lake, and known in these parts as "The Bandbox."

What a cold, mean, disagreeable, wet spring we have had here this year to be sure, for weeks the sun never showing his welcome face, until we almost begin to despair of its ever getting warm. However, in desperation, we at length set it down that May 30 would certainly find us afloat on the raging Grand, even if we had to wear our arctic overshoes and ear muffs; and so we will pass over the time intervening until the appointed morning arrived, bright, pleasant and springlike.

The two large canoes had been stored through the winter in a dry, warm room, and they had not been in the water many minutes before the unwelcome fact became evident that they both leaked, and leaked pretty bad, too. A short trip to an adjacent tin shop supplied us with a couple of dippers, and, after carefully stowing our many baskets of provisions and bundles of blankets, etc., so as to take the least possible damage from the watery element, we shoved off, and in a moment we were swiftly rushing down with the current under one of the different bridges which span the river—a score or more of spectators waving us *bon voyage* from the railing.

Fifteen minutes of this swift current brings us well down toward the lower part of the city, and we soon steer both craft in to the shore of Robang Island, where we bale out, set sails, mainsail and mizzen on each boat, and again push out, and the hands of the town clock point to 9:30 A. M.

Oh, what a time we did have for the next three hours! What with leaking boats and the very meanest wind which ever blew, coming from fully three points of the compass in as many minutes (it is perhaps quite unnecessary to state that none of these points were over the stern of our craft) we felt a little discouraged, and at 1 o'clock ran the bows of our boats ashore below a little patch of willows up on to a green bank and just where a pretty little stream came tumbling

down from the higher hills beyond. We discover one bundle of blankets are soaked, also some of the provisions, and we very soon have them spread out on the fence drying (not the provisions, but the blankets). We then proceed to publish a varied assortment of eatables in true camper's style, after which we wait under the trees for a lull in the wind. Ye Amateur Photographer takes one or two views, and at 3 P. M. our boats are again pointed down the river. How far have we proceeded on our way, do I hear some one ask? Well, really that is a rather ticklish question; but if you must know, we are just five miles from our starting point, and we expect to reach Black Lake to-morrow night. The wind is not as vexatious now, it blows from one direction at a time for several minutes, so that during the next hour a number of miles are reeled off. The boats are not leaking quite as badly, although very far from dry yet.

The early evening finds us some two miles above the village of Lamont, which is about twenty miles from our starting place. We hold a council of war under a shady hill as to whether to go into camp at once or to proceed toward Lamont.

About a week before our start ye Scribe had evolved a stunning plan for a canoe tent, his idea being to set this tent over the 9-foot cockpit, and thus form a very snug little berth for two on the floor of the boat. The tent had been finished at the last moment, at a considerable expense, and safely stowed under the after deck; but when the "leaking business" commenced was transferred to the top of the deck, from whence, during some of the morning buffeting with wild and wave, it had no doubt slipped off, unobserved, into the river, as it now was very painfully conspicuous by its absence.

Adding this disaster to the wet boats and the wet bed clothes, we

CAMP AT LAMONT.

decided to push on down the river, and just before dusk our two boats are on the bank at Lamont. The inevitable youngster appeared ten seconds after our landing, and to our inquiry as to whether there was a hotel near, answered in the affirmative. Ye Scribe and his first mate at once started off under the leadership of the youthful inhabitant, and after walking in our wet shoes what seemed an interminable distance we had the "hotel" pointed out to us—a neat white butler set well back from the street and surrounded by a number of apple trees, a porch, or as it would be termed in the South, a "gallery," ran the entire length of the house.

We mounted the steps, and looking through the screen door, a cosy and comfortable looking room, lighted by a kerosene lamp, met our view. Our repeated knockings, however, met with no response. "Blamed funny hotel," remarked the First Mate. Ye Scribe, who was cold and wet and hungry, said, "Yep, very funny." First Mate shined around the house to a large barn, but not a sign of a proprietor. "Well, gee whizz," again remarked First Mate, "this is the funniest deal I ever struck. What shall we do?" I had thought I heard voices over across the street, and I started in that direction, leaving the First Mate to capture the landlady as he appeared during my absence. A short walk brought me across the yard and the wide street, where down a short distance I found three or four old men sitting on

"THOSE ONE-MINUTE TASKS."

the ground with their backs against the fence, evidently engaged in some weighty discussion. I at once inquired if they could inform me as to who ran the "hotel" across the way.

"Why yes," answered an old man at the end of the row, "an old covey by the name of — keeps it."

"Ah, does he live very near here?" I inquired.

"Why yes," came the reply, "fact is I'm him; thought the old woman was over there," and getting on to his feet, we trudged across the street, making arrangements as we went for supper and accommodation for four weary travelers through the night.

By this time it was about dark, so we made as quick time as possible back to the landing, only to find our companions had decided to row across the river and camp out for the night. We tried to persuade them to take up their abode at "the hotel," but, as their boat had not leaked as badly as ours, and as they had managed to keep bread and butter, cold corned beef, plum sauce, cheese and cake soon on our own boat over to them for protection and tugged back to the hotel, stopping on the way long enough to buy a couple pair of dry socks, of which we stood sadly in need.

We at length reached our haven and before many minutes, with well washed faces and hands and our feet encased in warm dry socks, we drew our chairs up to a truly welcome repast. Hot tea, good bread and butter, cold corned beef, plum sauce, cheese and cake soon played their part so well that our hard day's work with wind and weather and leaky boats passed into the land of "the things that were" and we felt serenely happy.

The landlord and his wife, with a boy, their grandson, appeared to be the entire household, and we soon discovered the landlord to be quite a character in his way. He had moved into this neighborhood, so he told us, in '46, and was evidently a walking encyclopedia of the surrounding country. I asked him if he was in Lamont when the bridge was built across the river.

"Oh, yes," he replied, "it was built in '68."

I told him my father-in-law was the contractor who built the bridge.

"What, Mr. B.?" he asked.

"Yes," I answered, "did you know him?"

"No," he said, "I dare say I have spoken to him when the bridge was being built, but I would not know him now."

After musing a few minutes he remarked, "That puts me in mind. There's an old fellow lives just a little way down the street—old old fellow, deaf as a door post now—makes guns—rifles—never sells any gun now. They are heavy rifles that I ever heard of, he's got a lot of 'em now. They are heavy rifles—carry a four ounce ball—about such guns as the fellows use who go to kill elephants and tigers and lions down in Africa. Can't imagine what he makes such guns for, but I guess he is a little cracked in the upper story." I asked him once what in thunder he was going to do up to Duluth, Minnesota, and he said, "I guess some day he would take 'em up to Duluth, Minnesota, and see if he couldn't sell 'em. I told him there wasn't any elephants around Duluth to kill—but about the bridge—"

About the time the bridge was begun this same old fellow started off to get married, he was going to marry some girl down in Ohio. He didn't though—no—came back without her. He said the girl wanted him to be married by a Catholic priest and he didn't want to be married by a Catholic priest, and besides he said the girl didn't like her the first thing he would have to give in right along, and so they didn't splice, and he came back here and settled down right over where he is now, fooling along making guns. Well, about twelve years after that I was over talking to him one day and something wuz said about the bridge, when he told me he never saw the bridge. The bridge, says I, "why what you been doing here these twelve years?"

"Makin' guns," he says, "bridges ain't in my line. I never had any occasion to go to see the bridge and so I never see it."

"He's mighty odd, he is, sure." We thought so too and agreed with our host that the man was probably "a little cracked."

I cannot take the space to tell all the history our landlord gave us, but at length we grew sleepy listening to how he built a lumber wagon one winter which he used for two or three years and then sold it, and had been running right along for thirty-six years, and for all he could see it would last thirty-six years more—"looked pretty tough—wheels were dished some" but "it was a mighty good wagon yet," etc.

We had promised to put in an appearance at the landing at 6 A. M. the next day, and just one minute after that time found us hustling our boats down the river, the boats lay the bows all in ship shape, the leaks evidently swelled up and our companions waiting for us. They had erected a tent, using the mainsail of one of the boats, lashing together the handles of two pair of oars, spreading apart the blades in the dry grass and laying the boom across the crossed handles with the head of the sail sloping back to the ground, the ends filled in with brush, etc.—a good camp-fire right in front, which, reflecting its heat from the sail down to the two weary campers, they slept like lords—warm and dry. Several juvenile inhabitants crossed the river in boats and paid them a visit, lured no doubt by the fire. Boys, bonfires and boats have a natural affinity, and are drawn toward each other as naturally as the magnet draws the needle.

Again we are on the move. A light breeze comes fitfully from the way we are going, but we depend on an "ashen" or rather a "spruce" breeze for the first hour, then the breeze gradually fades away, and we take in the oars and begin the rather discouraging task of "beating" down the river. However, our boats prove themselves flyers and we do not despair of reaching our destination, Black Lake, by nightfall. What a glorious morning it was—the trees just freshly clad in their spring suit of vivid green, the banks and fields stretching away back from the river great green patches of velvet grass, the spring flowers showing along the banks, cowslips and dandelions, and I remember sailing along a stretch of at least half a mile where the bank rose abruptly from the river perhaps 7 or 8 ft., and along the top the entire distance shone among the green grass thousands upon thousands of the pretty white "wake robin" or trillium.

And the birds, the birds, the birds! It seemed as though every tree held a congregation. The robins with their gurgling notes; the phoebe with his *phoebe-phoebe* ascending and descending notes; and I remember with the brilliant oriole with his full, deep song; and the catbird with his querulous, genuine mockingbird palaver. It seems to me when I listen to this mockingbird of the North that he is always just "getting ready" to sing—tuning up, as it were. Whenever we passed the low-lying meadows we would find the bobolinks in countless numbers, and every once in a while a "Is life worth living?" To such an one we say, "Go out into the woods on a bright spring morning and get your answer from the trees and the flowers and the birds."

By 9 o'clock our breeze is pretty steady and strong, although dead against us. Along the river on either side are fishermen and fisherwomen and fisher-girls, all intent on capturing the finny denizens. Even if we had the time, there is not one in our party who can lay claim to even being a passably good fisherman; to use the phrase of the street gamins, the fish are all evidently "dead on to us," and our bad luck to a man is proverbial.

Our companions are perhaps half a mile ahead, and we all at once notice as they near the shore that they are holding a short talk with a large, roughly-dressed man, who is standing on a low dock at the edge of the river. He shouts something after them in German as they come away from the shore, and a moment later begins to dance around on the dock and sing some rollicking German air in a rich, melodious baritone voice. We at once decide him to be, as our host at Lamont would say, "a little cracked," and so are not surprised at his actions or conversation as we direct our helm so as to bring our boat close in to where he is still clumsily pirouetting around the dock. As we approach he stops his dancing and asks earnestly, "Where you go, ah?"

"Oh," we reply, "we are going to Grand Haven."

He says nothing in reply until we have come about and are leaving him, then he shouts with strong German accent:

"Going to Grand Haven, eh, vell, Grand Haven ish a pritty place, ha, ha, ha," and he goes off into hearty laugh. Then suddenly he shouts after us, "Who vas der richest man, eh?"

My companion cries back, "Jay Gould!" and the reply comes back: "Shay Gould? Nein. Jesus Christ vas der richest man," and he stands silently watching us until we are out of sight. Poor fellow. We wonder if he enjoys with his clouded mind the glorious sunshine and the green fields and trees and birds as we do this lovely morning.

The river grows deeper as we proceed, the wind stiffens until, timing our boat in her reaches, we find in the narrower portions of the river we make the tack from bank to bank in just a matter of minutes. We are out saying that at these points we are kept pretty busy and have little time in which to admire the scenery. Further on, however, when nearing Spring Lake, we come to some long, wide turns, which give us two or three long reaches of perhaps a mile or more each. We pass several abandoned saw mills where our Western lumber barons have piled up their big round dollars, even as their workmen have piled up the big stacks of pine lumber on the many docks which here line the shores.

About 1 P. M. we land on one of the slab docks and eat a hurried lunch. We are nearing Lake Michigan. The breeze is stiff, and we are anxious to get away on our lake trip of twenty-three miles from Grand Haven to Black Lake. We find, on again taking to the boats, that the breeze has grown yet stronger. We are delayed a few minutes to wait for the swinging of the bridge to enable us to pass, but are soon rapidly nearing the huge sand dunes which stretch along the shore of Lake Michigan. We now meet and pass many boats of every description, from the simple row boat to the huge lumber barge whose bow cuts the waters of all our chain of lakes. The wind is now steady and strong, and we sing out to the other boat, asking if it would not be well to reach before getting out into the big lake. They think, however, we can do it just as well when we reach the piers which form the Government Channel, and so we fly along toward the channel, through the city of Grand Haven.

As we near the channel, however, the very unwelcome fact becomes apparent that our steady breeze which we enjoyed on the river is evidently a land breeze, as Old Lake Michigan lies beyond the harbor peaceful and glittering under the warm sun, and we are actually obliged to resort to the oars to get our boats beyond the piers. As Koko says in "The Mikado," "Here is a pretty state of things."

Our boats idly toss on the sun-kissed waves, and all that, but at present we are in no mood to be "idly tossing." Here we are twenty-three miles from our haven, time 2:30 P. M. We are all business men and have made arrangements to be back in Grand Rapids before noon to-morrow, and so for want of any better occupation we still "idly toss."

We "scratch the mast" and "whistle" for a breeze, but all to no purpose, and across from the other boat comes the request, "Isn't it time to reef?"

We at length decide to land, and as we have drifted and paddled perhaps a couple of miles down the beach, we turn our boats shoreward and land on the shore of Grand Haven. We hold a consultation and decide that as we have considerable time and provisions on hand we might get up a good dinner, and if a breeze should spring up in the evening we could then be in good physical condition to take advantage of it, and as it would be a moonlight night could continue on our way. So very soon a coffee pot is simmering over a beach fire, while just below a layer of hot sand with a bed of coals on top repose several small tables, and a table with a table cloth is set out on the wood, on it are placed our stock of eatables—bread and butter, blackberry jam, bologna, beans, bananas, corned beef, cake, crackers, eggs (hard-boiled), sardines, water. We have not been able so far to gain any believers to our statement as to carrying the latter article, but nevertheless it is a fact. Of course you know as well as we do that the sun coming down on the water does burn a person's nose terribly, but it seems that the reason why our friends have forgotten this fact. Well, there is no use in talking, we did have a great dinner.

"Oh, who can clog the hungry edge of appetite By bare imagination of a feast?"

Not we forsooth, for surely there was no need of exercising our imagination. The food was there, also the appetite, and how the victuals disappeared.

The long afternoon at length reached an end. With everything taut and trim, our dunnage safely stowed, we waited for the favoring breeze, but it came not, and so at 7:30 we pushed off with sails all set, but with a man in each craft wielding the oars. Occasionally a little breath of air would come from the land and drive us on our way, only to die away again, when we would resume the oars, and thus we went until about 9 o'clock, when a smart little breeze came over our beam and we spun along merrily for about 30 minutes, when again it died away, and we had just manned the oars when we felt the breeze again freshen, and this time it stayed by us steady and strong, at times driving us ahead furiously, then settling back into a steady, wholesome breeze.

The North Star was directly over our stern. We could easily make out the line of the shore on our left as we sped southward. The moon was about half full and slowly sailed her way through the arch above us. We expected to reach the Holland Piers, the entrance to Black Lake Harbor, before the moon sank below the horizon, and we kept an anxious eye out for the red harbor light on Holland Pier. The revolving light at Grand Haven showed plainly behind us and we could see the light of some large steamer as she steamed out into Lake bound no doubt for Chicago or Milwaukee. It was of course too dark to see our companion boat more than 500 or 600 ft., and as she proved a faster sailer than our boat, we kept within hailing distance most of the time, so as to be ready to help each other in case of any accident.

It must have been nearly 11 o'clock when we first sighted the Holland Light, a mere red speck on the horizon, and if we allowed our eyes to wander from it we would be obliged to search a considerable time before sighting it again. Gradually, however, the light grew more distinct as the lights at Grand Haven faded from view, but it did seem as though we never would reach the pier. From keeping my eyes on the light ahead and consequently holding my head in one position, the back of my neck at length got very tired and painful, as well as my right arm and shoulder from holding the tiller.

The moon sank lower and lower until at about 12:30 she disappeared from view in a mass of haze clouds, presenting a most wondrous and weird scene of beauty. Our companion craft occasionally falling behind us and then forging ahead, with her two white sails shining indistinctly in the uncertain light, reminded one forcibly of Maryatt's phantom ship the Flying Dutchman.

At 1:15 A. M. we made the pier, and we found it hard and dark work beating our way through the channel and up into Black Lake. It was, however, familiar work, and at just 2:15 we grounded our boats on the sand in front of the Band Box. We had now been going twenty hours since our start at Lamont and were almost too tired to tell our own name. It took but a few minutes to open up the hospitable doors of our little hotel, less time to build a warm fire in the little box stove in the corner of the main room, put fresh sheets on a couple of beds, and just three minutes after our heads struck the pillow we were in the land of dreams.

"Who'er has traveled life's dull round,  
Where'er his stages may have been,  
May sigh to think he still has found  
The warmest welcome at an inn."

The following morning when I awoke I reached for my watch, and looking at it, I nudged my bedfellow and asked him, "D., what time do you think it is?"

After getting his faculties collected, he made reply, "Well, about half-past 7."

Poor fellow, he made all his arrangements before leaving home to take the 9:40 A. M. train from Holland for Muskegon. My reply paralyzed him. "Just 10 o'clock."

We soon have the coffee pot simmering on the little stove and proceed to fish out the remnants of our various viands. We find a considerable supply still on hand, but the supply diminishes perceptibly before our campers' appetites.

We now pull the two boats up on the beach, clean them out thoroughly, stow them away safely in our 16x24 boat house, during which procedure we hail a small passing steam yacht and make a bargain with the captain to land us at Holland dock in time for the afternoon train to Grand Rapids.

Well, take it all through, our trip has been a success. The wind was certainly against us most of the time, but we had good weather, and have added another leaf to memory's pleasant pages; and none of us need have a fear of straining the covers of our book of life by binding in too many of such leaves. J. B. B.

The A. C. A. Reports.

In addition to the reports of the Divisions, published last week, we print the following reports of the secretary-treasurer and regatta committee.

Through an error the new amendment creating a board of trustees was published last week in the form in which it was first published in the FOREST AND STREAM, and not as it was passed. The correct amendment is printed herewith:

REGATTA COMMITTEE REPORT.

Dr.		Cr.

Balance.....	23 94		

REPORT OF SECRETARY-TREASURER OF A. C. A., 1898.

Hemenway & Son's bill for \$3.50 was paid out of balance, \$1.58, and \$5 received out of last year's dues in Year Book, making actual cash balance from last year (1897) \$3.08.

Year Book, \$424, made up as follows:  
Printing and binding.....\$348 50  
Colored plates and express charges.....60 00  
Music electrotypes.....12 00  
Expenses (trip to Gananoque to solicit ads.).....2 00

Receipts for advertisements.....\$361 00  
Transportation on New York Central.....25 00—\$886 00

Net cost of Year Book.....\$38 00  
There was an expenditure for stamps in soliciting ads. which it was impossible to keep separate from general expenses; it would probably amount to \$5, which would increase the cost of the Year Book to \$43.

Code Signals.—Two hundred of these were procured from the Atlantic Division and paid for to J. C. Rankin & Co., the printers. Only a few were sold, \$4.30 being the receipts. Some were used and the balance sent to the librarian with other property from the camp.

Camp expenses were made up as follows:  
Labor.....\$149 35  
Lumber.....171 30  
Badges.....20 70  
Hardware.....18 16  
Tents (rent).....19 75  
Flagpoles.....15 00  
Fire.....18 85  
Meals for porters and helpers.....28 00  
Sundry small items.....20 20

Deduct from this  
Camp dues.....\$340 00  
Lumber sold in camp.....317 34—\$457 34

Net cost of camp.....\$6 85  
Bank commission, \$6.31. This is an item which has not appeared in former statements, but as the bank would not collect drafts and checks for nothing, it appeared simpler to lump the commissions in one sum than to deduct from each payment and short credit the amounts.

The assets of the Association available for the use of Mr. Douglas are:  
Cash balance.....\$189 40  
Transportation on N. Y. Central.....25 00  
Amount due by Northern Division.....88 74  
Flags and buoys from regatta committee.....15 00

\$318 14  
Regatta committee.....33 91  
This amount may be decreased by the following items:  
Flags purchased and not used.....\$10 00  
Two barrel buoys.....5 00—15 00  
Making net expenditures of regatta committee.....8 94

The correct amendment reads as follows:  
Board of Governors.—Sec. 4. In each division at its next annual meeting the active members thereof shall elect in the same manner as their regular officers, one member of that division to serve on the board of governors of the Association, whose duty it shall be to have general control of the funds and finances of the Association. The board of governors at their first meeting shall by lot determine their terms of office, one to retire on Nov. 1, 1895, one to retire on Nov. 1, 1896, one to retire on Nov. 1, 1895, and one to retire on Nov. 1, 1898, and thereafter all members shall be elected for a term of four years or until their successors are elected. The commodore shall be a member ex-officio.

Duties.—Sec. 5. It shall be the duty of the board of governors to appropriate and apportion suitable sums to the officers and committees for necessary expenses for the running of the association and the meets, etc., from the finances in the hands of the secretary-treasurer, and the Association shall not be responsible for any amount in excess of the sums so appropriated. They shall hear and determine a questions of dispute on appeal from the decisions of the regatta or executive committees when referred to them.

Quorum.—Sec. 6. At all meetings of the board of governors three shall be necessary to make a quorum, but in the event of the absence of any member from any cause, the executive committee of the same division from which he comes may select any other member of the Association to represent him during his disability only, and in the event of a vacancy occurring, the same shall be filled for the unexpired term by the active members of the division in the same manner as for a full term.

Meetings.—Sec. 7. The stated meetings of the board of governors shall be held during the annual meeting of the Association in August, and at the annual meeting of the executive committee in November, but special meetings may be held at any other times and places at the call of the president or at the request of three members of the board.

Officers.—Sec. 8. The officers of the board shall be president and recorder, whose duties shall be as in other organizations, and they shall be chosen annually at the stated meeting in camp.

Rifle Range and Gallery.

EXPERT RIFLEMEN.

WISSEL's Cypress Hills Park was on Nov. 7 the scene of the most successful and best contested rifle tournament ever shot in this country. The riflemen engaged in the contest were the representatives from the most prominent shooting societies in New York, New Jersey and Connecticut. Not since the summer of 1885 has New York seen so many expert riflemen engaged in a contest for championship honors as were gathered together on Tuesday.

The match in 1886 brought together twenty-five contestants who were at that time the best in the country. The match on Tuesday included the most expert of those engaged in the contest in 1886, as well as many new candidates for championship honors, who have become prominent since the last contest.

From New York, New Jersey and Connecticut came the entries, and included the best marksmen of the many societies located in these States. The magnitude of the entries was a great surprise to every one. Even our working committee hardly dared to hope for an entry equal to that of 1886. But like everything else that seems to be a success, when our local shooters found that everybody was going in then they also, even the lamenters, began to climb over one another in their haste to get in, with the result of 33 paid entries on Saturday night, Nov. 4.

As early as 8:30 A. M. the expectant riflemen began to arrive in the park, and when the hour for opening the shoot drew near the shooting house was well filled and the riflemen present were busily engaged in getting themselves as well as their rifles into shooting trim.

The preliminaries preparatory to the opening of the match were very much simplified. Dr. A. A. Boyken, who after Mr. Plaisted had called the shooters to order to elect a committee to take charge of the shoot, made the motion that inasmuch as the organizers of the shoot had brought it to a successful head, that they be requested to finish their work by continuing their good work.

This motion seemed to meet the desires of all present, and Messrs. C. G. and B. Kettler and Plaisted were requested to act as the committee of the shoot.

Promptly at the time set (10 A. M.) the contest was started. The shooting house contains ten shooting stands, eight of which were occupied by the shooters in the match. They were distributed three and four on a target. At most all shooting contests there are sure to be incidents of a more or less humorous nature.

M. Harrington of the N. Y. Rifle Club on his first shot, being in a state of mental aberration, neglected to insert a bullet in his barrel, the result was a goose egg. Mr. Harrington felt that he had received what the pugilists call a knock-out blow, and he was inclined to retire from the contest then and there, but on the advice of a bystander that he still had ninety-nine shots to score with, he reconsidered the matter. Another contestant who struck ill luck on his first shot was Wm. C. Collins of the Greenville (N.J.) Rifle Club; in his case the rifle was properly laid, and the shooter claimed, properly held, but the marker at the target was unable to locate the shot, and Mr. Collins was forced to accept a goose egg for a starter. To a young shooter like Collins, this experience was a decided "Douché" to his ambitions, but William has plenty of grit in his personality, and a little upset of that nature was only an incident to be soon forgotten. Collins again stumbled on his tenth shot, making another miss, here was more discouragement for him, but from this point on to the end he kept his shots on the target.

We noticed that all of the contestants from the expert down to the lay shooter were at times disinclined to accept the results of the markers' showing, but during the day there was not one who had faith in himself or his rifle to risk challenging the markers' showing.

There is a rule among the New York shooters which is enforced at all shoots, that if a shooter doubts the correctness of the marking at the target, he can, on depositing \$1 with the committee, challenge the marking and have it investigated. If the shooter's challenge is sustained his \$1 is returned to him, otherwise he forfeits it. All riflemen know the uncertainty and the eccentricities of the lubricated bullet in cold dry weather. It requires the best kind of management upon the part of the shooter at such times to keep his rifle in normal condition, and his temper as well. All riflemen are afflicted with streaks of crankiness in their nature, and like the cracks in the work of the older (in experience) the shooter the more pronounced becomes his crankiness. But on Tuesday the most that could be heard from any of the contestants was a quiet growl over the results of an unfortunate shot, and when the eccentricities of the bullets became too pronounced, the individual would lay aside his rifle and seek out John Wissel, who seemed to be possessed with the means to remove the wrinkles from his countenance and return him to his work with a renewed spirit. And thus the day rolled on, here and there a shooter rolling up good scores and building up hopes for champion honors, and at other times cast down by the success of some other contestant in the race.

It was expected that the contest would result in a new record being made, but such was not the case. The new record was made was due to the lateness of the season, and also to the fact that those from whom the breaking of the records was looked for were under too high a tension. The contest in many respects resembled an individual race and each contestant was sinched to the last degree. Fred. C. Ross, Brooklyn's favorite rifleman, led his competitors, and at the close of the contest he was 13 points ahead of M. Dorrier, with a total of 2194. His last single score for the Wissel Trophy was 229.

THE WISSEL TROPHY.

The hopes and aspirations of all of the contestants centered in the Diamond Locket, presented by Mr. Wissel. The first man in the group to show up as a likely candidate was C. G. Zettler. This old shooter started off in the race like the old racer that he used to be, but like many another, the pace was too hot for him, and at the finish C. G.

was in the rear with the other unfortunates who had found the pace too hot and the distance too far.

The next man to show in front was Henry Holges, with the fine score of 239. Many thought that this score must remain high, and Mr. Holges was the recipient of many congratulations from those present.

Whatever Holges' inner feelings may have been, he openly expressed his belief that the Trophy would never come his way. In this he was right, for not long afterward Louis Flach succeeded in putting up 230, which proved to be the high score of the day. This score was followed by another made by Chas. Hutch.

Fred Ross had a grand opportunity at one time in the race. He had a possible 234 on the ninth shot. A twenty-one would tie and a twenty-two meant victory. The result of his shot was a twenty; total 229, one point behind the leaders.

After each man had finished his 100 shots his scores were footed up and his total chalked up.

The tie for the Wissel Trophy between Messrs. Flach and Hutch was, after a consultation with the two shooters, ordered by the Committee to be shot off, three shots each. In the meantime the day was fast drawing to a close and the light uncertain. Hutch ruined his chances by making a 14 on his first shot. He finished his score with a total of 57. Flach made 60, thus winning the much-coveted emblem of expert marksmanship.

With the finish of the shooting came a desire on the part of the shooters for something to stay in their inner man. The Committee, however, had anticipated their wants by a previous consultation with mine host Wissel. After a sufficient time had been given the thoroughly tired marksmen to remove the stains of the contest, they were escorted to the dining hall, the tables of which were laden with one of those game dinners for which Mrs. Wissel is so justly celebrated.

By the natural fitness of things, Wm. Hayes was placed at the head of the table, with the two champions, Ross and Flach, at his right and left. With the finish of the dinner came speeches and the presentation of the trophy, and the division of the entrance money to the winners.

Mr. Hayes in his remarks paid a high tribute to the memory of an old comrade and fellow-rifleman, George Schalk, of Pottsville, Pa., who only a few days since passed over to the great majority.

Other speakers were: Mr. Fabarius, that worthy old shooter, who, although his age is nearly four score (70), takes as much pleasure in his rifle as he did in his boyhood days; Mr. Dorrier, Mr. Holges, N. J.; Mr. Brooks, from the same city; Mr. Dorrier, Mr. Holges, from the Harlem district; L. C. Watts, of Newark, and others. As all things are said to have an end, so had this meeting of expert riflemen. Each and every man expressed his utmost satisfaction over the match and its arrangement. To mine host Wissel and his worthy wife was voted the best wishes: a long life and a happy old age. The scores of each contestant will be found appended:

PROBABLY NOT. THE UNIVERSITY OF CHICAGO PRESS

of the Cosmopolitan Gun Club of Plainfield and Charles "Dutchy" Smith of the same town, who challenge Albert Rust of Philadelphia and Wm. Wolstencroft of Frankford to a match at 100 live birds each under American Shooting Association rules, the losing team to pay for the birds, the stake to be nominal. This affair should be a closely contested one, as there is scarcely any difference in the shooting strength of the teams. If possible the match will be shot at the Fanwood grounds of the Climax Gun Club. Then there is the prospective match between T. W. Morley and the Trenton expert Ed Hill, the date not yet arranged, and a chance for the return match between "Little" Neaf Apgar and Ed Hill, this to be shot, if at all, at Paterson. Each of these will be at 100 live birds per man. Again W. S. Cason, the one-armed expert of Newark, and Howard Gasper of New York, are likely to have another at one another, so taken all the way through there will be plenty of sport.

About fifty sportsmen went to Pine Brook, N. J., on Saturday, Nov. 11, to witness a 100-bird match advertised to be shot between T. W. Morley of Paterson and T. E. Morford of Newton. The visitors however were disappointed, as Mr. Morford failed to appear. It transpired that neither of the principals were interested in the making of the match, the terms being arranged, and a forfeit of \$25 each being placed in the hands of Mr. Frank Faber of Butler by other parties. Mr. Morford knew nothing of the arrangement until the above preliminaries had been gone through with, and then he at once put his foot on the whole business, refusing positively to shoot a match for money, his position not allowing him to do so. Messrs. Martin & Gottschalk of the Pine Brook Hotel, where the affair was to take place, received no notice of Mr. Morford's refusal to shoot, and were allowed to go ahead with advertising the shoot, procuring the birds, and knowing him favorably, everything was correct, and at the appointed hour he was on hand ready for business. His disgust as well as that of the others who were on hand can be better imagined than described when they learned that there would be no match. The parties who pretended to be acting for Mr. Morford are of course responsible for the outcome of the affair. Mr. Faber, the stakeholder, turned over the forfeit money to Mr. Morley, and this ended the affair.

The live bird shooters of New Jersey and those of Kings county, N. Y., know positively that they are to meet at the traps in an interesting contest at live pigeons. Mr. Jacob Pentz, the projector of the contest, has all preliminaries arranged and that he has 5,000 New Yorkers and Jerseymen who wish to make water their shovels and at the same time witness some of the liveliest kind of shooting. This match was brought about by a remark made by a Kings county expert in the presence of Mr. Pentz, the remark in substance that no State could turn out a team to defeat a Kings county contingent. As a loyal Jerseyman "Uncle Jake" could not allow such an opinion to go unchallenged, and he at once offered to show the Kings county gentleman that Jersey could put up a team to make water their shovels. Hence the match should be one well worth the witnessing. Each team will comprise 30 men, each man to shoot at 15 live pigeons under Hurlingham rules for honors, the price of birds and a nominal stake of \$10 a man. The match will probably be started at 9 A. M., in order to finish before dark. Both New Jersey and Kings county are well stocked with expert shooting men and as a matter of course each will put out their choicest men, and that a battle royal will result.

A small party assembled at Erb's grounds in Newark on Election Day, and amused themselves with trap practice. Among them were J. A. R. Elliott, of Kansas City, and M. F. Lindsley, of West Hoboken. The opening event was a 25-bird practice shoot between Elliott and Lindsley, the result being Elliott 23, Lindsley 21. Then followed three 10-bird sweeps, \$5 entry, with two moneys in each, the scores being: Canon 877, Lindsley 10109, Elliott 888, Erb 688, Hollis 989. This was an unusually light attendance for a holiday, but was doubtless owing to the absence in the field of a number of the usual frequenters.

Everybody who shoots a gun knows George A. Mosher of Syracuse, and everybody who probably ever heard of course be pleased to learn that he has assumed the position of assistant manager of the newly formed Syracuse Gun Co., an organization which promises to put on the market the simplest high-grade hammerless gun ever made. Mr. Mosher has our best wishes as well as those of his hosts of shooting friends for his future success.

Miss Annie Oakley and her manager, Frank E. Butler, have been at the Continental Hotel in Newark for the past two weeks awaiting the completion of Miss Oakley's new house at Nutley. "Little Sure Shot" is in perfect health and spirits despite having given two performances every day for six months when in Chicago.

The monthly shoot of the Roseville Gun Club, of Newark, will be held on John Erb's Bloomfield avenue grounds, on Thursday, Nov. 23, and all shooters are invited to be present and take a hand in the sport. The shooting will be at artificial targets. Shooting will begin at 10 A. M.

Elliott and Class are to come together again to-day in a 100-bird contest at the Morrisstown Driving Park. The match will be called at 1 P. M. They were to have shot on the White Plains track on Thursday, but were unable to do so, as the track is undergoing extensive repairs.

"L. H." Asbury Park, is informed that under the conditions he mentions "E." would be entitled to second money.

C. H. TOWNSEND.

#### Class in Great Form.

Those who visited Paterson on Oct. 27 with the intention of seeing Frank Class of New Jersey "snowed under" in his match against Jas. A. R. Elliott of Kansas City, and instead of that saw a tie at ninety-six kills each on the 100th round, were rather surprised at the skill and nerve of the Jerseyman in holding his own so gamely in a contest that was nip and tuck from start to finish. The final round was a dead-out-off-the-hardest kind of a nerve tester by losing a bird he lost the shoot and the birds were willing to acknowledge that Class still retained his old staying powers. The birds on that occasion were a fairly good lot but the weather conditions were all against them, else the above figures would probably not have been reached. The consensus of opinion seemed to be that while Class was off in the use of his second barrel, his first barrel form was superior to that of Elliott, the latter being a shade slower.

The second match was to have been shot at the Morrisstown Driving Park on Nov. 4, but on that day the rain fell in torrents and it was postponed to Nov. 11, which proved to be better as far as weather conditions went than the day of the Paterson match, but far from what was desired. The light was dull during the entire afternoon, while a raw breeze from the north-east blew with just force enough to give the pigeons life, clear away the smoke and send an occasional chill up and down the spine.

The attendance was fair, the more prominent among whom were Mr. Mrs. and Miss Lindsley and Eddie Collins, of West Hoboken; A. Heritage and wife, of Jersey City; T. W. Morley and Henry Wolf, of Paterson; Dr. P. J. Ziegler, of Warrenville; John Rothacker, of Germantown; Neaf Apgar, of Newark; J. S. Petersen, of New York; Chas. Smith, of Plainfield; Mr. Campbell of Dover, and a number of Morrisown sportsmen whose names could not be learned.

It was 1:50 P. M. when the match began, T. W. Morley acting as referee, Henry Wolf pulling the traps and the scoring being done by his representatives of the sporting journals. Class won the toss and went first to the score, pulling down a fast driver from No. 2 trap, one wheel doing the work, the other going a fast one, a right-quarterer wheel doing the work, which was stopped with a clever first. Everything progressed swimmingly until Elliott went to the score for his tenth shot. "Pull" was called, over went No. 2 trap, and the fall of the rap was instantly followed by two reports from Elliott's gun, but most useless was the act of pulling the trigger, as the bird, a slim, atty blue one, jumped fully 50 yds. as the trap went down, caught its wings in a tree, and must have been not less than a yard from the trap before the second barrel was cocked. The bird was dead, was on its way. Fly! Well its speed was simply wonderful, while as to being hurt we do not believe either charge flew close enough to even frighten it.

Neither man lost again until the twenty-first round, when Class got a bird which was almost identical as to form, color, speed and method as the one above described. Class, however, hit this flyer with all four barrels, but his great speed caused it to go behind the line of fire. The round ended with 23 kills for Class and 22 for Elliott, both of Class's and one of Elliott's being dead out of bounds, and all the best being good ones.

At this stage of the game it was plainly seen that Class was in by far the best form, quicker by several yards and centering his birds all with his first barrel. His second also was used with much better effect than in the previous match. Elliott was certainly out of form, being slow and draggy in the use of either barrel and not getting his birds down as cleanly as of old. At times he would for a few rounds how his usual snap, but this was soon followed by a lapse back.

On the first quarter the birds were good enough for any one to notice on, there not being a genuine "duffer" in the 50. The round was shot in 30 minutes.

On the second quarter Class was the first loser, on a right-quarterer driver fast enough to get away from any one, but which got the benefit of both charges and gave up the ghost just beyond the fence. Elliott had similar luck on his eighth bird, an incomer to the right and fast one at that. It was barely touched with the first barrel, but caught the second in full only to fall dead outside. Class lost no more in this round. Elliott's twelfth and fourteenth were lost and the fifth showed Class 7, Elliott 4, with everybody conceding the race as good as won by the Jerseyman.

On the third quarter Elliott seemed to pull himself together, and not until the thirteenth round was he scored against, this being a dead out of bounds of one of the ugliest flyers of the day, a right-quarter-

ing driver from No. 5 trap, which never stopped zig-zagging until its life left it just beyond the line. Elliott also lost a circle to the right and finished the round with 23 kills, Class scoring 24, his last bird being dead out of bounds. The figures now showed 71 for Class to 67 for Elliott, with the same fine form on the part of Class and a lapse by Elliott to his slow shooting.

The final quarter was almost a repetition of the one preceding it, Class losing thirteenth bird dead out of bounds and getting the rest, while Elliott had a driving twister carry two full loads over the fence, missed another and scored 23.

This ended the race with a total of 95 kills for Class against 90 for Elliott.

The birds were a fine lot and not more than three or four refused flight when the trap was sprung, requiring flagging. Only one bird was called. Had the day been a few degrees colder and the light clearer the birds would have been veritable "hummers," and even as it was they were fast enough to keep the shooters thinking.

The Jersey crack once more surprised the talent, his score of 95 being more creditable than the 96 killed at Paterson, birds and weather considered. And it must not be forgotten that he did not miss one of his 100 birds, while his score in an 80-yard boundary would have been 98 kills. His form is now better than ever and if he retains it he should quit even with the hottest of the cracks.

Both men used Greener guns, Elliott using American wood and Class Schultz powder. The time of the race by quarters was 30m., 30m., 33m. and 32m. The longest runs were, Class 20, 32 and 26. Elliott 23.

Class used his second barrel 47 times and Elliott 45 times. At this point we must give the score of the shoot by throwing in a whole lot of 1s, 2s, 3s and 4s, but FOREST AND STREAM has got beyond that stage. Instead of using a column to explain to you the direction of flight of each bird and leaving you to guess as to whether the principals did their best work on drivers or incomers, on right or left quarters, we show you in a neat, handy form, readily understood, the approximate direction of flight of each bird, using for this purpose our own exclusive pen and type, one of the many good things which has helped to make FOREST AND STREAM what it is—the greatest journal on earth for sportsmen and everybody else.

Here is the score and the trap score type; the first line of figures showing the trap sprung and the third the barrel used.

Figures in third line: 1, first barrel kill; 2, second barrel kill; 3, dead out of bounds; 0, missed.

C. H. TOWNSEND.

#### "Father Time" Wins a Buggy.

PHILADELPHIA, Nov. 11.—Trap-shooting around Philadelphia has been very slow since the game season opened the first of the month, but promises to be lively in a few weeks. On Saturday next the new club at Fitzwatertown, about 12 miles from here, will have a live bird shoot for several prizes, and on Thanksgiving Day the Forest Gun Club will hold a tournament. In this shoot there will be no dividing of purses until the pro rata equals the entrance, this will make the boys shoot, and the club there will not be so much dropping for place. About the middle of December the Keystone Shooting League will give a three days' tournament, two days at targets, one day at live birds, and with such men as A. J. Rust, W. and J. Wolstencroft, H. ("Landis") David, W. Garvin, H. Thurman, Capt. Pack and the rest of the League boys as hustlers it should be a great success. One of the main events will be a team race between residents of Pennsylvania and New Jersey, as we expect a delegation of good shooters from New Jersey it will make a very interesting shoot. We have consented enough here to think we can hold our own with any State in the Union at the traps at either targets or live birds.

The only shoot advertised for to-day was on the grounds of the Flourtown Club and for a buggy as the prize. The grounds of the Philadelphia city limits. The club is quite a lively one for the number of members, and they have some very good shooters in their ranks who will be able to hold their own next year at the Pennsylvania State shoot. The club has just joined the Association and say they intend to take part next year and try to win some of the trophies.

The small number of shooters on the grounds compelled those that were present to take extra chances, so as to get the buggy shot off. J. S. Petersen shooting for J. H. Matz, M. T. Sheets, D. D. Yeakel, W. S. Kerger and himself, A. Petersen for W. Rhodes, D. D. Yeakel.

These grounds are very hard to shoot on, there being a hill right in front of the traps covered with trees and bushes, and the scores were very poor, as some of the trees had their leaves on them and some were bare, making a very broken background.

Shoot for a buggy, miss and out: J. H. Matz 0, Worthington 1, H. Thurman 4, Landis 2, David 3, W. Rhodes 5, M. T. Sheets 1, H. Thurman 0, Landis 1, David 4, David very wide shot, 5, Petersen 1, H. Thurman 15, Landis 12, David 0, Landis 13, A. Petersen 8, D. D. Yeakel 3, David 8, Thurman 2, W. S. Kerker 12, H. Thurman 0, David 14, C. H. Kerker 0, J. S. Petersen 1, David 4, Thurman 3, J. S. Petersen 0.

A few one-money miss-and-out events wound up the day's sport.

H. T.

#### Waverly Gun Club.

The monthly shoot of the Waverly Gun Club, at Dexter Park, on Monday, Nov. 6, brought together only four members in the club event. The day's shooting was devoted to smashing the bluecock targets. In the regular club event for the club medal the honors went to O. Hillner, who succeeded in breaking 6 out of the 10 shot at 100 yds. with Pop Van Staden, Hillner and Rugen tied at 5 each. The third sweep resulted in a tie between Van Staden, Hillner and Rugen, each 5 each. In the shoot-off the old veteran's staying qualities abided with him to the end and he got the verdict. The fourth event resulted in a tie between Van Staden and Hillner with 6 breaks each. The shoot-off resulted in another victory for the veteran. The fifth and last event of the day was a repetition of the fourth; Van Staden pulled 7 of the 10 shot at 100 yds. and pocketed the shot. Messrs. Hillner, Fehlesien and Rugen tied for second money with 5 each, and on the shoot-off Fehlesien shot out his competitors. The scores are here appended:

No. 1.		No. 2.		No. 3.

#### Rochester Defeats Onondaga.

ROCHESTER, N. Y., Nov. 2.—Twenty members of the Onondaga County Sporting Club, of Syracuse, came to this city to-day and tried conclusions at clay pigeons with the Rochester Rod and Gun Club on the Monroe avenue grounds in the morning and afternoon. The contests consisted of seven sweepstake events of ten, fifteen and twenty birds, and a team shot of twenty men on a side of twenty-five birds. All of the sweepstakes were closely contested, and many excellent scores were made.

The local club had made arrangements for making the occasion one long to be remembered with pleasure by the visitors, and that their efforts were most successful the happy crowd of Syracuseans who left the city at an early hour this morning gave evidence. Lunch was prepared for the guests at the grounds, and in the evening all the marksmen enjoyed a banquet at Worden's. After partaking of a sumptuous meal—for every one had a ravenous appetite—a programme of toasts was delivered.

President Fulton announced W. C. Hadley as toastmaster. Mr. Hadley proved himself the right man in the right place. He is a crack shooter, but he is also a crack at presiding over a banquet table. The speeches were not of the "cut and dried" sort. The listeners were hardly in a mood for such. Jokes at the expense of one another, lively stories and reminiscences were the order, and for several hours all had a royal good time. Letters were read from C. O. Barrett, the well-known Rochester sportsman, August Schmitt, ex-Vice-President of the Rochester Gun Club, and others.

Here are the subjects of the toasts to which responses were made: "Onondaga Sportsmen's Club," Harvey McMurry; "Syracuse Athletic Club," C. H. Mowry; "Rochester Rod and Gun Club," President Fulton; "What About the Score at Parma?" W. J. Mann; "How I Missed That Bird," L. C. Meyers; "What I Know About Wheeling," G. H. Keady; "What I Know About Shooting and Hens," C. Wolcott; "Gun and Sporting Goods," G. E. Mann; "The Sworn of Bunker Hill," a song, Dan Lefever; "The Laws for the Protection of Fish and Game," C. Ayling; "What Part His Bitters Took in the Convention," G. Holloway; "How I Made 79 Miles in 68 Minutes," Jimmy Wood.

The summary of the days shooting contests follows: Team shoot, 25 single Kingbird targets:

Onondaga.....		Rochester.....	
D. Walters 19, Crutenden 6, G. H. Mann 31, C. Howell 19, Herman 16, Mowry 22, Tuttle 19, Carr 23, McMurry 21, H. Howell 20, Lefever 20, Macomber 17, Perry 21, Marble 21, C. Green 20. Total 394.		Rochester: W. J. Mann, 21, Stewart 24, Glover 19, Tassel 21, Quirk 14, Foley 21, Borst 21, Meyer 21, Hadley 24, Van Ostrand 21, Lane 23, Byer 23, Hicks 22, Babcock 15, L. Kessinger 22, Norton 20, Glover 22, Wolcott 20, Hunt 20, Newton 23. Total 417.	

#### The Newark Gun Club.

The turnout at the November shoot of the Newark Gun Club, held on John Erb's Newark grounds on the 9th, was better attended than the preceding one, but still the members do not show up as they should. Not a resident member was on hand, those present being T. W. Morley, Henry Wolfe and T. C. Wright, of Paterson; M. F. Lindsley, of West Hoboken; Dr. P. J. Ziegler, of Warrenville, and W. G. Hollis, of

## Election Day at Dexter Park.

In order to accommodate some of his regular patrons, whose political aspirations are "passe," Louis Miller opened his grounds on Election Day for live birds and bluecock shooting.

The shooting opened with a sweep at 15 bluecocks, in which Shortemeyer and Phister divided first. The second event was at 6 live birds, which went to Phister, with a clear score. The third event was a repetition of the second and resulted in a tie between Phister, Fessenden and Shortemeyer, with 5 kills each. The fourth was the same as the second and third, and was won by Fessenden with a clean score. The fifth event was at 15 bluecocks. The result was a tie between Shortemeyer and Short, each with 13 breaks to their credit. The sixth and last event of the day was at 10 bluecocks, 6 entries. In this sweep Shortemeyer came to the front with 9 breaks to his credit. The scores:

No. 1, 15 bluecocks:			
Shortemeyer.....	11110111111111-14	Levens.....	10110110111011-11
Phister.....	11011111111111-14	Short.....	01111111110111-13
No. 2, 3 and 4, 6 live birds, 28yds.			
	No. 2.	No. 3.	No. 4.

## Crescent Gun Club.

The monthly shoot of the Crescent Gun Club at Louis Miller's Dexter Park grounds, on Thursday, Nov. 2, brought together only five members in the regular club event. A match between Capt. Shephard and J. W. Coulston, at 25 birds each, both of whom are members of the club, which was shot off just previous to the club event, was robbed of much of its interest on account of Coulston's inability to give the Captain a close race. The birds were as a lot good, hardy flyers, and Capt. Shephard, although a good shot, could only bring 19 of them to grass. If Coulston will only remove the extreme drop in the stock of his gun to the normal, he will find that his birds will be more liable to receive the contents of his cartridges. Extreme drop in gun stocks is one of the failings of the novice in trap-shooting. In the club event at 7 birds, L. Hopkins was high with a clean score to his credit. He was, however, kept on the "ragged edge" by President Gilman up to the end of the contest, when the latter dropped out with a clean miss on his seventh and last bird.

After the close of the club event the members indulged in a series of sweepstakes at 3 birds, miss and out. Hopkins continued his good

form by killing all his birds. John Cottier, a man prominent in Kings county politics, came on to the grounds late in the day and tried his new Diamond Daly ejector at the birds. Want of practice and the new gun, coupled with the good quality of the birds, was too much of a handicap for Mr. Cottier. The scores:

## Parkway Rod and Gun Club.

The monthly shoot of the Parkways at Dexter Park on Wednesday, Nov. 3, did not have its usual representation of class members. The election the day previous and the hunting season now on were no doubt responsible for the light attendance. Of the first class members Leo Helgans was the only one on the ground, and the result was that he had a walkover for the A class prize, on a score of five out of seven. In Class B there were four entries, and the class winners proved to be H. Bramwell, with a clean score of seven kills to his credit. In Class C Col. Selover got the bulge on his class competitors and captured the parachute on a clean score. The club appropriates a certain amount each month for the purchase of prizes to be divided between the three classes. On this occasion the prizes were three silk umbrellas. There is also a gold medal, which goes to the member

who makes the best score at each monthly meeting, the same to be worn by the member winning it until the next monthly shoot. The result of the club event was a tie between Bramwell of Class B and Col. Selover of Class C. In the shoot off Bramwell won the medal with two kills out of three to Selover's one. After Bramwell had paid the penalty to which all such honors are subjected, a sweep at three birds, miss-and-out, was made up with eleven entries. The result was a victory for Leo Helgans on his ninth bird. The scores are appended:

## Nassau Gun Club.

The Nassau Gun Club held its monthly shoot at Louis Miller's Dexter Park grounds on Tuesday, Oct. 31, eight members participating. The regular club event called for 10 birds per man, American Association rules. The shoot was opened at such a late hour in the afternoon that there was no opportunity for sweepstakes shooting, and the consequence was the shooting was confined to the club event. The birds were a fairly good lot, and there were some instances in which the ability of the shooter and the quality of his gun and cartridges was made prominent. An interesting feature of the shoot was the shooting off of the tie between Messrs. Selover and Young. Both killed 10 straight in the regular event. Jim Bennett was also a tie with them, but in the shoot off, 3 birds, miss and out, Bennett dropped out. Messrs. Selover and Young fought it out nip and tuck to the eleventh bird, when Young slipped up on an easy left quartering incoming bird. It was one of those shots where the over confidence of the shooter plays havoc with his winning chances. The scores are appended:

E Helgans.....	2200212112-8	H Selover.....	121121121-10
J Young.....	1212111122-10	C Magee.....	1112301112-9

IF he is a friend of yours; if he is interested in shooting or fishing; if he is not a reader of FOREST AND STREAM; if you would like to have him see it for three weeks; and if you will give us his name, we will supply him with one of the

FOREST AND STREAM'S SILVER BULLSEYE  
Cards, which will make it easy for him to send for the paper. . . . .

SOME CANINE COMPLICATIONS.  
THE courts have been considering a batch of canine cases lately; and some knotty points of dog law have been unraveled, which it would be just as well for us all to know about.  
Thus, if one happens to be a fragile young woman, she should understand that a big powerful dog has the right of way on city sidewalks; and the owner cannot be held liable for injuries sustained by those against whom the beast runs amuck. This has just been determined in a New York case where an action was brought by a young woman, who, while walking on Sixth avenue had been thrown down, and had one of her legs broken, in collision with a dog big and powerful as aforesaid. She sued the owner for damages. The Court held that inasmuch as the animal was not trespassing, but was going along the public street, where it had a perfect right to be, the owner could not be held responsible for the results of the collision.

A more complicated dog and woman collision is now before the Vermont courts. The point to be determined in this instance is whether one man may be held in damages for injuries inflicted by another man's dog in the owner's own house and upon the owner's own wife. To the unsophisticated lay mind it would appear that at all events in this case, too, the dog was not trespassing. The cause is that of Isham vs. Dow. Dow had some sheep. Isham had a dog. Isham's dog attempted to eat up Dow's sheep. Dow had a gun. With it he set out to kill Isham's dog. Isham had a wife. Isham's dog, wounded by Dow's gun, ran into Isham's house and jumped against Isham's wife, knocking her down, and injuring her so severely that she was critically ill afterward. Isham vs. Dow for \$10,000 is the result. What became of the dog is not told.

What is a person to do when a stray and friendless dog persists in casting itself upon his good graces and adopting him for a master? The Brooklyn police courts have gone so far at least as to say that he may not hurl the animal through a window. The other evening a citizen set out to make a call. On the street he encountered a wretched stray dog, which made up to him, licked his

hands, and then and there, in canine dumb show, took him for better or for worse. The man responded with a kick, and boarded a street car. The dog followed him in and nestled down at his feet. Brooklyn street cars do not carry dogs, and when the conductor spied the animal, he asked the man if it belonged to him. The man looked down at the dog, and the dog, misinterpreting the glance, responsively wagged its tail in content and good will. Then the man swore some, grabbed the dog, swung it in the air and dashed it through a window. The glass crashed; the astonished dog went yelping up the street; the man swore some more; the women in the car made a commotion; the conductor called a policeman; the policeman carried the canine catapult off to the station house; the judge fined him \$25 in court the next morning for cruelty to animals; and he made himself square with the car company by paying for the smashed glass. All of which teaches us that a dog, as well as a human being, may sometimes be mistaken in his man. This Brooklyn citizen was not at all the kind of person the dog took him to be.

Dogs have certain recognized legal privileges, one of which is that of proceeding in an orderly manner along the public highway unmolested by other dogs; and the courts will sustain a man who endeavors to uphold this right for a dog, even when the dog belongs to somebody else. The Massachusetts case of Matteson vs. Strong, damages for dog bite, is the one in point. Daniel B. Matteson, of Palmer, was out walking, attended by Albert King's dog. The quadruped was set upon with ferociously felonious intent by the dog of Homer C. Strong, Esq. Matteson attempted to restrain King's dog when Strong's dog attacked it. He was bitten by the aggressor, brought suit in the Superior Court and recovered \$375 damages. But Strong contended that the plaintiff had attempted to separate the dogs after they had begun fighting and that by so doing had unnecessarily put himself in danger—had cast himself into the breach when he should have stayed out of it. He carried the case up to the Supreme Court. There the finding of the lower court was sustained in a decision which it will be well for one to note carefully for future guidance. It reads:

We cannot say, as a matter of law, that the plaintiff was not in the exercise of due care in putting his hand on the collar or neck of the dog which was in his custody, in order to bring him along and prevent a fight. Under the circumstances it may have been a very proper thing for him to do, and at the time it may not have seemed to expose him to much, if any, danger. In cases of this kind a great deal depends on the size, the apparent disposition, the conduct and the situation of the two dogs, and upon other circumstances which are usually proper for the consideration of a jury. There was other testimony which would have warranted the jury in finding that the plaintiff was negligent, but neither the undisputed evidence in the case nor the hypothetical statement embodied in the defendant's second request for a ruling was enough to justify the court in ordering a verdict for the defendant.

THE ANARCHIST ARGUMENT.  
THE letter elsewhere printed to-day came to hand last week after FOREST AND STREAM had gone to press, but before it had been published. It is written by an Eastern banker, whose connections with railroads and mines in Montana is close and has extended over a number of years. In the course of his business journeyings this gentleman has become familiar with the Park and Cooke City miners, as well as with ranchmen and miners in many localities in central and southern Montana. We are not surprised to see our correspondent take up cudgels in behalf of the good men of Montana. They are abundantly able to take care of themselves and need no defense, but it is irritating to see one's friends called bad names in print, and the impulse is strong to say a word.

Most of this ground, except where wanton attacks are made on the character of Montana people, has been thoroughly gone over in past years, and the communication of Mr. Brackett only brings to the surface old straw to be threshed over again. It would be a simple matter to take his letter, paragraph by paragraph, and pull it to pieces, showing by conclusive testimony that he has failed to inform himself on many points in connection with the National Park. It is absurd, for example, to any one who is familiar with the Park in winter, to read his statement that the game has long since been driven from the vicinity of the Cooke City wagon road and never returns to it, for it is perfectly well known that the greatest winter range for elk within the borders of the reservation is along the Cooke City wagon road, thousands of them being seen there daily throughout

the winter. No one expects to find game camped along the roadside in summer, for then it has withdrawn to the higher lands and to the timber.

But it is not worth while to go over this ground, which must be thoroughly familiar to all readers of FOREST AND STREAM. Those who have forgotten the details of the case are referred to an article in this journal about a year ago entitled "Cooke City vs. the National Park."

## SNAP SHOTS.

Here is a foreign minister of whom any country might be proud, and it is the privilege of these United States to take pride in him. Minister W. W. Thomas, Jr., representing our Government in Sweden, took part in the great elk hunt given by King Oscar, the other day, in the forest of Hunneberg, in honor of the Emperor of Germany. When the hunt was over the diplomatic representatives of France, Germany and Italy were all present and accounted for, but Minister Thomas had disappeared, and much solicitude was felt lest he had been wounded by the game or some other calamity had befallen him. It was not until 10 o'clock at night, and when the party was about to break up, that he came in, worn out with fatigue, all tattered and bespattered with mud; and explained to King Oscar that having wounded an elk he had thought it the sportsmanlike thing to follow it up and give it the *coup de grace*. The chase had been long and arduous, but the American had to show for his reward the finest specimen of all the forty elk killed in the hunt; and for his pluck he received the congratulations of both the sovereigns.

Nine of the Montana elk which were exhibited near the Cliff Dwellers in the World's Fair have been secured by Mr. Edward H. Litchfield, of Brooklyn, for his game preserve in the Adirondacks. The elk were last week taken to a farm in Rome, N. Y., where they will winter. With them are three black-tailed deer, also destined for Mr. Litchfield's preserve. This experiment of restocking the Adirondacks with elk, for such in effect it is, will be watched with decided interest. The elk was indigenous to the North Woods; and was exterminated only by foolishly persistent pursuit. There is much ground for believing that once again restored to its native home the species would thrive; and that with the protection accorded it by wise laws and by an enlightened public sentiment, it would become a permanent factor in the game supply of the region.

Major J. Fry Lawrence, of Louisville, Ky., who died suddenly while on a hunting trip, on Nov. 11, was president of the Kentucky Fish and Game League, an organization numbering 1,500 members, and one of the most powerful institutions of the State. He was a member of the World's Fisheries Congress, and attended some of its meetings in Chicago last month. The discussions bearing upon the protection of fish awakened his liveliest interest. The extensive distribution of fish by the U. S. Fish Commission in Kentucky waters was due largely to the personal influence of Major Lawrence, and no one appreciated more fully than he the lasting benefits to be derived from intelligent stocking of streams.

There is a clause of the New York game law which forbids one person to kill more than three deer in a season. From what we can learn this law is on the whole beneficial, but it does not restrain the raids of some of the meat hunters who live on the borders of the Wilderness and make annual autumnal forays on the venison supply. Some of these hunters take out wagon loads of game just as they did before the law was enacted.

As we go to press the meeting of the American Ornithologists' Union is being held at Cambridge, Massachusetts. The attendance is large, and many interesting papers will be presented to the Congress. The hospitalities of the Nuttall Ornithological Club, which might almost be called the father of the A. O. U., will be offered during the meeting.

The subject of the alarming decrease of food fishes in the waters of the Atlantic coast is one of importance which it would be difficult to over-estimate. The consideration of it, set on foot by the New York Commission, should receive attention from every one who can contribute suggestion or information.

## The Sportsman Tourist.

DANVIS FOLKS.—XV.

### The First Fox.

SAM moving about cautiously in his stockings was attempting the impossible feat of building a fire in the stove without making a noise, for it was early and he hoped that he might not disturb any of the family.

The wood tumbled about in the box as if endowed with perverse life. The griddles would slip and clatter and the doors bang as if they were made for no other purpose, Uncle Lisha being a light sleeper was roused and came forth to learn the cause of the unseasonable disturbance, with his waistcoat in one hand and buttoning his suspenders fumblingly with the other.

"What on air is the motter, Samwil? Baby haint got the croup er nuthin', has he?" he whispered anxiously.

"No," was answered in a hollow whisper, "goin' huntin'." Thought I'd hev me a baked tater and cup o' tea to start on 'f I c'd get 'em 'thout wakin' the hull neighborhood, but this consarned stove's ben dancin' a jig sence I fust touched it an' the wood, turnin' summersets. But I've got the taters in. Sorry I waked ye, Uncle Lisher. Drive, you ol' fool, quit yer whinin' an' caperin'. We haint goin' yit."

"I'd slep' a plenty," and Uncle Lisha drew a chair to the stove and toasted his feet comfortably on the hearth. "Where be you goin', Samwil?"

"Well," said Sam, carefully filling a powder horn while Drive watched the operation with intense interest, whining and treading the floor with his front feet, "I'm a-goin' to take Peltier a fox huntin'. I b'lieve 'f I c'n git him int'rested in 't an' hev him kill a fox er tew it'll git him over mopin' an' honin' himself to death arter that misible gal. The' haint nothin' like huntin' to take a feller's mind offem trouble."

"Wal," said the old man in a draughty whisper that set the candle flaring, "I d' know but what it'll help some, but I shall reckon more on fishin'. But I tell ye, I b'lieve he's kinder taken a shine to that aire Varney gal, 'at was here to the apple cut, an' that's a-goin' to cure him."

"T wout 'mount to shucks. Peltier haint that kind o' chap to shift his likes sudden. I don't b'lieve he'll ever kee a row o' pins for any other gal. The best 'at can be done for him is to git him from dwellin' on his trouble, an' I don't know o' nothin' better 'n huntin'. The quiet of the woods an' the noises which is nigh about the same thing, is mighty soothin', an' the smell o' the dead leaves an' the spruce an' balsam is stren'thenin' to the narves an' when you git raly woke up with the bootin' o' the haound a-drawin' nigher an' you hear the fox a-rustin' the dry leaves an' snappin' the dry twigs, it sets your heart afire an' burns out all the foolishness an' trouble."

"Mebby," said the other, "but fishin' is turrible soothin'. I'd rather chance it on fishin' an' that Varney gal. She's a stornary nice gal."

Sam opened the oven door and tested his cookery with a pinch. "My taters is done. Set by an' ha' some, Uncle Lisher?"

But the old man chose to wait for a more elaborate meal, and Sam hastily swallowing his tea, potatoes and cold meat and assuming his equipments was ready to depart just as Pelatiah appeared, and the two held forth in the growing whiteness of the winter dawn with the old hound sobering down to the business of his life, ranging steadily before them.

There had been a hoar frost in the night and every fence and tree was turned to misty silver and pearl, and the mountain arose before them against the paling azure like a great cloud of pearl, unstable, ethereal, as if the lightest breeze might waft it away. There was a haziness in the atmosphere giving it an apparent softness that seemed to belong to another season, and make one almost expect to hear the songs of birds coming from the silver foliage and see the stir of insect life among the feathery herbage of the frost, grown in a night upon the snow.

But the few sounds that scarcely broke the silence were all of winter. The smothered chuckle of the ice-bound brook, the resonant crack of a frozen tree, the muffled crow of a housed cock, and the discordant cries and flicker of the gay plumage of a jay early faring abroad were the only signs of life astir save the hunters and their hounds.

Old Drive soon found the warm trail of a fox that had been mousing among the snow-covered aftermath, and he presently set the mountain side and hills to bandying melodious echoes that awoke all the valley from its slumbers.

A dozen house dogs burst into vociferous baying at the distracting multitude of airy voices and as many cocks sent forth their ringing challenges, and one by one the farmhouse chimneys began to lift their slanted pillars of smoke against the pearl-gray hills and blue of the sky.

There began to be signs of choring, the creaking and slamming of barn doors, the lowing of cattle, and men calling them to partake of their brown loaves, the stacks. Then were heard the mellow notes of horns and conches, presently followed by a cessation of the sounds of labor. These, after a time, began again, with the clear, woody ring of ax strokes, the muffled thud of flails, the shouts of ox-teamsters and the drawing creak of their sleds.

The hunters gave heed to none of them. Only to the voice of the hound were their ears attentive as it tended toward the hills that buttressed the mountain side, letting here an echo fall asleep, there awakening another to wild mimicry.

"Ef he haint got him up, he will in less'n five minutes," said Sam after a moment of breathless listening to the hound's eager baying. "You pull foot for the south end o' Pa'tridge Hill. The's a big hemlock in the aide of a leetle clearin'. Stan' there. If he gits past ye goin' he'll come back that way. Stick to 't as long as the dawg stays on the hill. I'll go to the north end."

He struck off at a swinging gait and Pelatiah in a divergent course made his way to the point indicated. He reached it much out of breath with climbing and excitement, his heart beating such a tumultuous accompaniment to the music of the hound, drawing nearer and nearer, that he could scarcely hear it.

He cocked his gun and strove to settle his trembling nerves while he strained his eyes to catch a glimpse of the fox, for he could hear the hound crashing through the

brush and whining and panting as he puzzled over a double of the trail. Then his heart stood still at a sudden flash of ruddy fur among the brush, his gun was at his shoulder, his finger feeling the trigger, and with a qualm of disgust he saw a red squirrel scampering along a log.

The music of the hound swept past, and Pelatiah's heart sank with the sense of lost opportunity. But he remembered Sam's assurance that the fox would come back, and took hope again. He backed into a comfortable position against the hemlock and listened half dreamily to the pulsing diminuendo of the hound's bugle notes and to the minor voices of the woods. A party of inquisitive chickadees sounded their cheery call close about him, a nuthatch piped nasally as he crept in a downward spiral along the branching trunk above. A woodpecker industriously tapped a dead tree, the squirrel dropped a slow shower of cone chips, and a company of jays attuned their voices to unwonted softness as they discoursed together.

Yet he was continually aware of the hound's mellow notes overbearing all these sounds, though faint and far away, till suddenly there broke above them all the short, thin report of a rifle, and almost with the fading out of the brief echo the baying of the hound ceased.

"Wal," said Pelatiah, letting his hopes down to the earth with a sigh. "The fox 's dead, that's sartin, but I shouldn't ha' thought Sam would ha' cut in ahead on me an' shot him. That wunt the Ol' Ore Bed! 'Twant laoud enough! It's some skunk that's sneaked in an' stole aour fox, an' by gol, he'll hafta hump hisself if I don't ketch him er run him in."

He pushed rapidly forward in the direction that he heard the shot. His course was lengthwise of the ledge, with so few obstacles that a half hour's walk brought him to the end of the fox's track, marked with a great blood-stained wallow in the snow. Leading straight away from it toward the little valley behind the hill went the tracks of a big pair of boots with a disproportionate stride.

"A short-laiged critter," Pelatiah remarked, as he settled himself upon the trail, "an' I guess my shanks' hosses 'll fetch him."

The trail presently led him to a narrow clearing and a little gray house that stood in forlorn nakedness of shade trees and outhouses, close to an untraveled highway. The big boot tracks held straight across the poor little garden with its feeble array of bean poles bearing their withered garlands of rustling vines, past the starved woodpile and its dull ax, to the neatly swept doorstep.

"Consarn his picter," and Pelatiah waxed hot with wrath as the trail grew warmer, "he's sneaked into Widder Wigginses. But he needn't cal'late petticoats 'll save him. I'll skin 'im if the's a dozen women stannin' round, The blasted thief."

He stepped softly upon the plank doorstep, and was about to enter, when he heard the excited voice of a boy and stopped to listen. He also heard the sibilant rush of air from the nipple of a gun and the soft pop of a withdrawn patch mingling with disconnected words and knew that the speaker was cleaning a rifle.

"Oh, ma," cried the voice with a grunt that indicated the pushing down of a patch, "I tell ye, it was fun. I popped him right plum through the head, an' sir, I dropped him right in his tracks. An' haint he a neat one. An' neow I'm goin' to skin him an' stretch him an' take him daown to Clapham's an' sell him an' git you some tea an' sugar."

"It'll be turrible good to hev some agin, 'specially when a body is feeling so peaked," said a feeble voice. "An' haow did you happen to kill a fox, Billy? That's men's game."

"Oh, I was up on the hill tryin' to git a pa'tridge, an' I heard a haoun' dawg a-comin' an' I jes' stood still as a post, an' fust I knew it, I seen the fox come bobbin' along an' up an' let him hev, an' daown he flopped, an' sir, I couldn't b'lieve 'twas true, an' when I rally got a holt on 't I got dizzy an' all of a tremble, an' the nex' thing I thought on was the tea an' sugar fer you. An' then the haoun' dawg come up an' chawed him a spell, an' then I slung him on my back an' p'inted fer him."

All the fire of Pelatiah's wrath was quenched and he was about to retire as silently as he had come, when he was arrested by the voice of the woman pitched to a tone of earnest reproof.

"O, Billy, you hedn't ever ortu done that. You'd orter waited an' gin the hunters the fox. It's jest stealin'. Father allus said so. O, Billy, they 'll be arter you, an' nob'dy knows whot they won't du to ye. Whose haoun' dawg was it, Billy?"

"It was Sam Lovel's ol' Drive. It's the fust fox 'at ever I shot," Billy whimpered, "an' haow be I ever goin' to git yer tea an' sugar?"

"It don't make no diffunce, you mus' take that aire fox right stret to Samwil Lovel. You've got to take it to them it belongs to. Mebby the Lord 'll pervide; but I d' know, it's long a-waitin'. Hang up the gun an' start right stret off. Take the fox an' start right off like an' hones' man."

Pelatiah broke in unceremoniously upon poor Billy's mournful preparations for departure, his unannounced appearance startling alike the boy and his sick mother, who stared at him half frightened, half indignant, from her uncomfortable support of scant pillows.

"The' don't nob'dy want no fox, M'is Wiggins," he burst out impetuously. "Samwil an' me don't want him, ner won't hev him, nuther. Bub c'n take him right daown to Clapham's 'at git all he can fer him. Dollar an' a half, I shouldn't wonder. We won't hev it, I tell ye. We wouldn't tech to take the fust fox 'at a boy ever shot. We know how he feels, me an' Samwil."

Certainly not by experience did Pelatiah know; but by sympathy, perhaps he did, to-day.

"Be ye much sick, M'is Wiggins? Bub hed better git Darktor Stone to come up. I'll hev mother come over. Good day."

He hurried to go, in as great confusion as that in which he left the widow and her son, who found not words but only grateful looks to thank him.

He stopped at the meager woodpile and plied the dull ax with sturdy strokes till three or four armfuls of wood were ready for the stove, and then hurried away up the long eastern slope of the hill. He laughed at himself as he recalled his recent small adventure. "Poor leetle shaver, a-floppin' raoun' in his dead father's boots an' me a-bilin' myself up to lick somebody. Gol!"

Then through the stillness of the woods the mellow cadence of the old hound's bugle notes stole upon his ears, and all his thoughts were turned to the day's pur-

pose. Listening to get the direction, he became assured that the earnest, insistent baying was almost confined to a fixed point.

"By golly, he's started another, an' holed him, I guess. But I'll mog over and git the dawg."

As he neared the place, the steep western side of the hill, he found that the hound was moving in small circles and felt renewed hope, and his heart gave a great choking bound as he caught a glimpse of the fox dodging among the rocks and brush of the steep hillside. So steep and slippery was the footing that Pelatiah was obliged to slip his arm around a sapling to hold his position, and so standing he cocked his gun and waited, his heart rising and sinking as Drive's notes approached and receded.

Suddenly, like a ruddy blossom that had burst from the wintry hillside, the fox appeared on the top of the rock and turned to look back at the dog. The sight was drawn against the arched side, the trigger was pulled, there was a kick of reassuring force, a responsive roar and a writhing, slowly-lifting cloud of smoke that for one moment of sickening doubt Pelatiah tried to peer through, and then he was filled with unspeakable joy at sight of the fox lying beside the rock, gasping spasmodically, while his magnificent brush was moved with tremulous undulations. And then he knew how Billy Wiggins had felt. Not till he had laid hold of his prize did he find voice to halloo to Sam, but then he did it with such repeated vociferations that there was danger of alarming all the valley.

Sam soon appeared on the scene, imperturbable but congratulatory.

"You done almighty well, Peltier, but where's your t'other fox? I learn a shot an' the dawg come to me."

"Wal," said Pelatiah, hesitating a little, "Widder Wigginses boy shot him, an' I hedn't the heart to take it away from him. An' she's sick an' they're poorer 'n snakes. No tea ner no nothin'."

"An' ye done almighty well, Peltier," Sam said, after attentive consideration of the case. "Huldy an' me 'll go over there to-morrow an' see to 'em. An' neow le's skin that aire fox. By the gret horn spoon, he's a buster."

ROWLAND E. ROBINSON.

## NOTES OF A TRIP TO MANITOBA.

In Two Parts—Part Two.

(Concluded from page 425.)

ONE day I met with a curious example of the readiness with which some people adopt and repeat the opinions of others rather than see and judge for themselves. I was out driving with a young friend, fresh from England, and he gave utterance to that stale, groundless, but too common remark, that bird life was rare in this country and bird music unknown. At the moment he was speaking, half a dozen meadowlarks were pouring out their finest strains, twenty shore larks were within hearing, and the chinks of the music were filled up with the notes of innumerable vesper sparrows, longspurs, savanna sparrows, and shattuck buntings, while crows, kingbirds and wild ducks were within sight and hearing.

In my journal, next, I find these two notes. The first relates to an extended published account of my last hunt, in which D. was a successful participant.

"G. W. tells me that on the Sunday when D. received the account of the hunt in which he figured so prominently, he spent the whole day in reading it over till he had it nearly by heart, and this was all his conscience would permit him to do on that day, though he eyed the old rifle tenderly from time to time; but he went to bed very early and arose soon after 12 to thoroughly clean out his old 'blunderbuss,' although the hunting season was half a year ahead."

Another note runs: "Two of the farmers have been out gunning after each other for some time, and I heard Mrs. D. describing them as two persons who had a great disregard for each other."

One day while driving in the hills with a friend we came face to face with a bear. Of course, we had no gun. This is the third time in my life that this has happened, and in every case I was gunless, also in every case bruin went off at racehorse speed.

On another occasion a number of the old settlers were swapping wild pigeon yarns. One had fired into a great flock and brought down eleven pigeons with a shotgun; another had fired into a vast cloud of the birds with a rifle and brought down thirteen; then another speaker had fired both barrels into a solar eclipse of billions of pigeons and brought down nothing but a wretched little sparrowhawk.

Late in August a farmer came to tell me that while driving his binder he put up a strange beast that seemed slow and stupid. He had never seen its like before, it appeared to be a cross between a deer and a lynx, as it had long ears with black tips on them, but yet had the head, tail and color of a deer. It was only 20yds. away when he started it, and it moved so slowly that he set his dog after it. But although the latter, a collie, was close at hand the strange slow animal suddenly developed into a gray streak and was out of that field (one of 100 acres) before the dog could get started. This last piece of information was enough. "My friend," said I, "you have struck a narrow-gauge mule," and sure enough when I went to the same place I put up the same mule, brought him down on the wing and went home in triumph with the first jack rabbit (*Lepus campestris*) I ever killed, and the only one I ever heard of being killed north of the Assiniboine!

I subsequently learned that since my last residence in Manitoba the species had greatly increased and is now abundant in southern and western Manitoba, with the natural consequence of occasional occurrence in the adjoining regions.

Late in August I went with a medical friend for an extended buckboard trip into the sandhills. We were far beyond the furthest settlement and not even looking for a trail, when suddenly we came upon a fresh track, and on following it were led to an Ojibway camp of two teepees. The Indians had a freshly-killed moose, and I tried to buy a quarter of it, but they would not sell any. I then tried to buy the head, but no, they still said "no sell" and even refused to sell enough for a meal. "Well," said I, "we want some meat for our dinner." To this the spokesman replied only by handing us his knife and intimating by a gesture that I was to cut what I needed. That done

I asked "how much for this?" "No sell. Give," he replied with emphasis.

Then a bright idea struck me; so, beckoning to my comrade over by our camp, I said, "Shaw, let me have your whisky flask." Then said I to the redman, "Will you have some of this?" His English before was broken and labored, but now he replied promptly, "You bet!" He then produced a little tin vessel into which I poured a proper quantity, which he swallowed joyfully. "Call your friend," said I, and the other Indian was duly made happy in the same way. Now, all this time the squaw was toiling and moiling about the fire, cutting wood and drawing water for us as well as for her lord, so I held up

I am afraid I early lost all hold on his respect by asking him if Scotland was a large town, and also if it was not named after Sir Walter Scott, who first made it famous.

But on a certain day I fell forever in his estimation. He was a carpenter and I was using his saw. A nail loomed up in my plank just in the line of cutting. I stopped and said to the Scot:

"They say that there is nothing that pleases a carpenter more than to hear you sawing a nail with his best saw."

The carpenter dropped his hammer and his lower jaw; for a moment he regarded me dumbfounded. Then, with a rough ejaculation and a voice seething with scorn and disgust, he vehemently burst forth, "Well, that just

"Of course not," I said.

"Besides, real good cedar ain't so plenty as it used to be."

"I know all that, but what is it to cost?"

"Then I've seen the time I could just step to the swamp with a spade, and git all the tamarac ribs I wanted in five minutes, but it ain't like that now, I suppose I'd ha' to go a half a mile or more for 'em."

"I know all that, what I want to know is"—

"An' maybe you think it's no trick to git jest the right sort of gun jest when ye want it for caulking."

"Botheration! are you going to tell me or not?"

"Another thing, it ain't every man you meet can build a canoe."

"Do you think I'd be here fooling around if I thought it was?"

"Well, I dunno, there's a terr'ble lot o' work about it, it's near a two weeks' job, an' wages is away up now, it ain't like it was twenty year ago, I tell ye, canoe building was cheap then, but ye got to squeal for it nowadays, 'specially when they is built to order."

"Now, look here," I said, "I'm not beating you down, and I don't want any more explanation. Once for all, what would she cost?"

"Well, I dunno, ye crowd a man when he's busy, ye have to pay for it; I dunno, but I guess ye can't git that canoe under fo' dollars, an' I ain't partic'lar to do it at that even."

MULE DEER—SKETCHED AS SHE RAN.

the still available flask and said, "Shall I give the squaw some?" Her eyes sparkled with the pleasure of anticipation. But the redman shook his head, and with an air of stern rebuke said, "No, bad for squaw."

My sitting room at Carberry had become a sort of resort in evenings for those of the inhabitants who had tastes artistic or for natural history, and the usual belt competitions in yarns were often observable. I have already mentioned briefly a pigeon match we had there, and another evening wolves was subject of contest. Two of the latter stories ran as follows: A friend of the narrator was making a trip on foot 100 miles through the Canadian woods in March, when, toward one evening, as he was drying his clothes over a brisk fire, he heard the cry of wolves rapidly approaching him. He was entirely unarmed, and there being no time to lose, although at the moment he was stark naked, he quickly shinned up the nearest tree, and there the wolves kept him until next day, when they left him. He came down unhurt, but nearly frozen, reclothed himself and got back to a settlement all right. But he died six months afterward from nervous prostration induced by the horror of that night.

The next contribution was to this effect: "We were snowed up in a shanty on the Petawawa, some six of us, and at last were about starving, when one evening we heard wolves close at hand. Then a struggle on the porch of our shanty. We rushed out with axes and firebrands, just in time to drive back a pack of wolves and secure a fine fat buck, killed, neatly bled and ready cleaned for us, and all done while one could count three; and so we were saved."

The crowning glory of another pinnacle ran thus: "Yes, I knew him; that's young McHooly; awful sight now; terribly mangled he was; the doctor didn't think he would pull through; but they are good stuff those McHoolys. Ye see, he had just got his first watch, a brand new Waterbury of the old-fashioned build, and like all youngsters, he was forever winding it. Well, that's all right for a Waterbury, you know; but it was all wrong for him. Ye see, he got it out one day on the prairie and kinder recklessly exposed the machinery, and first thing he knew the breeze blew his coat tail in among the cogs, and he never knew till he was dragged in. Fortunately, it was the hour movement; for it was twenty minutes before help came. They say if it had been the minute movement he never would have known what he died of. It seemed to affect his brain, too; so he'll never be no good only for a bookkeeper or a school teacher, or something of that sort."

On one occasion no one had a yarn ready and I was called on for a story. I could not think of one so gave the following excuse:

A hundred years ago a famous hunter was killed by a buck on the banks of the Ohio. His friends buried him where he fell and each one placed over the grave a pair of antlers, and each one made it a duty to bring a pair of antlers whenever he found himself in the neighborhood. The custom continued for years, until there was a vast pile of deer horns 30 or 40 ft. in diameter and even more in height to mark the grave of the old deer slayer; the additional pairs were always thrown on top, and loose ones were also pulled away and piled on top, so that when last seen this wondrous pile was perfectly tightly interlocked. There they were, hundreds of antlers, but so securely intertwined that it is absolutely impossible to extract a single specimen.

"Now," said I, "that is just the way with my stories. I have hundreds of them piled up right in sight, but I'm blest if I can pull one out of the pile or find a loose one to offer you."

But it wasn't needed; my yarn set the rest agoing.

A newcomer from the land of Burns afforded us some amusement by his truly national manner of taking a joke.

shows how much you know about it, for there is nothing worse for a saw."

I groaned a little and went away to lie on the prairie for a while, but presently an Irishman came along. I related the incident to him and he fairly bellowed over it. This made me feel so much better that, like Diogenes, having found a man I was contented, and went again about my business.

On another of these evenings the subject of conversation was the difficulty of getting a decided answer out of a half breed, and I was able to contribute the following personal

By this time, you see, I was once more quite at home in Carberry, but my visit was drawing to an end, for the summer was nearly over. I had more than carried out my programme, for I had one and a half sketches, three pages of notes and three skins for every day of my trip. Besides, I had sown wild rice in fifty different localities, and had renewed my acquaintance with the scenes of my early days. Once more the Bald Hill, the Lone Spruce, and Lake Chaska were familiar friends, and the song of the prairie lark my daily delight.

Among my sketches from life are two at least, which I prize out of all proportion to their artistic worth. They are drawings of wild deer as they stood or ran, and in one instance I might have used my gun instead of my pencil had I been so inclined.

On Sept. 6 I gathered up my accumulated treasures and returned to Winnipeg, and there proceeded to make a careful search among the taxidermists, etc., for interesting items of natural or other history.

The Albion Hotel is a place that all visitors speedily find, for the yard in rear contains, besides some bears, lynxes, etc., in cages, three moose, three elk, a mule deer and a Virginia deer, running loose, following and sniffing suspiciously at the strangers who venture near them. I had not much time for sketches, but procured a snap camera, and exposed twenty plates with the usual result, as I found out when too late, not one picture! This was the more disappointing, because the moose were very fine animals and had given me several opportunities of photographing them while they fed on grain that was lying on the ground. This, according to some books, is not

THE REMAINS OF FORT GARRY—SEPTEMBER, 1892.

experience, which was to the point and also illustrated the vast size and purchasing power of a dollar in the back country, where nearly all business is done by truck and swap.

In the summer of '85 I was traveling among the back lakes of Ontario and thought I should like to take home a good birch canoe. There was a half-breed named True-axe, who was famous for his canoes, so I sought him out and asked him if he could build me one. He was reclining in the sun by his door, and whittling a stick at the time. He replied slowly:

"Well, I dunno, I'm terr'ble busy, what size do you want?"

"To hold two men and a hundred weight of baggage."

"Well, I dunno, there's a terr'ble lot of work about a canoe like that."

"I know that, I don't expect to get it for nothing."

"Ye see it ain't like it was twenty year ago, when I could cut a dozen canoe barks right at the door."

possible, and, according to others, it can be done only if the animals kneel or straddle grotesquely, but these moose neither straddled to any extent nor knelt, they simply lowered their heads and fed like horses.

I also went a good deal among the Hudson Bay Co.'s men, and in particular was regaled with the conversation of two old factors, whom I shall call Cumberland and Garry. We went together to the remains of the old fort, and in this, the best of company, I saw it thoroughly, and learnt much I never knew before. The old gateway is almost all that now stands, but the outlines and remains of the walls are clearly visible. The soft maples (*Negundo aceroides*) that were planted in the central courtyard twenty-five years ago—Garry told me, are still there; they are about 40 ft. high, and the largest measures 4 ft. 11 in. in circumference a foot from the ground; the next in size is 4 ft. 7 in., and all the rest are but little less.

Down toward the river front are the remains of the south bastion, and here as we stood together I heard the

story of the old fort for the last forty years told by eyewitnesses. "Here's where I stood" said Garry, "where Riel shot Scott. Here were we held under the rifles of the half-breeds. I could see the puff of smoke, out of the corner of my eye, but I could not see Scott without turning my head, and this we dared not do, for we did not know but that that might decide our own fate. Here's where they imprisoned the Governor, and here is where he leaped from the window to escape."

And so they talked on and exchanged little bits of gossip, and asked after this one that went to Ungava, or that one who was sent in command to the Mackenzie Delta, and remarked on the degeneracy of the present times. Yes! this was a favorite topic, and in connection with it Garry gave a brief sketch of his own life.

When a boy in Edinburgh, forty years before, he had read Ballantyne's "Young Fur Traders," and became forthwith fired with a desire to enter the Hudson Bay Co.'s service, and see this great Red River with its plains, its buffalo and its wild life. It was no easy matter in those days to get an appointment in this great exclusive corporation, but he had influential friends, and after his well backed application had been on file nearly a year he was ordered to join their ship at Liverpool, and ultimately found himself at Fort Garry as an article clerk.

"These were the happy days," said he, "all we of the company were like brothers together, we had lots of work, but also lots of play, we lived merry lives and had as much of adventure as was necessary to vary them. The Indians in those days were never starving, they had plenty of buffalo and gave us no trouble. For thirty-five years I have roamed this region in the service of the company, and during all of that time I have never once had to defend myself from Indians, though I had to fight many times to save myself or my goods from white men."

"In books we read continually of the North American Indian, either as a 'bloodthirsty savage' or as the 'noble redman'. One description is as false as the other; we have always found them like a lot of big children, whimsical and capricious at times, but usually disposed to be kind, and always manageable if humored a little. Things went smoothly enough in those days, and the first to break the general good feeling was the advent of missionaries. I don't say it is religion that was the cause, but the fact remains, and we all observed it, that wherever a mission was established trouble began, and the Indians, from being wild men with no vices, became mere beasts, without a single manly quality, with their own vices grown rampant and every evil passion and disease of the Old World added. The reason in part was no doubt that the missionaries demolished one set of moral ideas without replacing them with others, and also these teachers exerted themselves continually to make the Indian settle down in one place to be taught. Now, this is incompatible with hunting, and being a hunting race they had no taste for agriculture, therefore they were simply reduced to destitution, and the destitute population of the village naturally became depraved and criminal. This, at least, is partly an explanation, but of one thing every trader in the company is sure, as long as an Indian remained wild, that is, a real nomadic redskin, we could give him a year or even two years' credit with perfect safety, but as soon as the missionary influence began to manifest itself and the Indian cut off his long hair and wore breeches, we knew from wide and invariable experience that we could not trust him as far as we could see him, and were not allowed to give him credit to the value of a single copper."

ERNEST E. THOMPSON.

## RAILROADS AND THE PARK.

Editor Forest and Stream:

Col. Wm. S. Brackett, of Fridley, Mont., in a letter recently published, conveys the idea that there is but one possible way to reach Cooke City by railroad, and that by way of the National Park. This statement is not correct, as a line of road has already been surveyed from Billings, on the Northern Pacific road, to a point near Laurel, where the Yellowstone is crossed, the road then following Clark's Fork of the Yellowstone River, crossing Rock Creek and Bear Creek, to the mouth of the cañon of Clark's Fork. Entering the cañon, the line of road will pass completely through and thence west by north into Cooke City. As far as the cañon of Clark's Fork the road can be built at a very low cost. That portion which will have to be built through the cañon will present the same features as the engineers had to contend with on the Northern Pacific, the Union Pacific and the Rio Grande & Western. This survey was made by Philip M. Gallaher, chief engineer of the Billings, Clark's Fork & Cooke City road, and the members of the engineering corps were one of the best set of men that have ever run a line through the Western country; so that there can be no doubt as to the feasibility of such a line, with the additional advantage of not having heavy snows to contend with.

Cooke City, as I know it, consists of a low grade silver camp, containing an immense amount of ore, also gold ore in paying quantities, and I fear that perhaps it is the fact that there being such a valuable franchise to be secured that is making it more apparent that it will not hurt the Park or tend to cause the disappearance of game, as it was considered it would do only a few short months ago.

As to the danger of fire, I think the people of Yellowstone and Park county, on the line of the Northern Pacific Railroad, can and will testify that there is nothing more dangerous as far as fires are concerned than to have the locomotive running through that country. If they succeed in putting a line of road through the Park and should use steam—as they certainly will if successful—we may depend upon it that all the timber land will be burned.

Mr. Brackett intimates that the people of Cooke City, or at least a portion of them, threatened to burn the forests of the Park and slaughter the herds of big game within its boundaries. If Mr. Brackett pretends for one moment to say that the desperate men, as he terms them, or men who have become desperate through waiting for a road to be built in to Cooke City expect to do anything of this kind, I can assure him that any jury of his fellow citizens in Montana are perfectly competent to handle any such characters. As far as my experience with Montana men, miners and mine owners, goes, I have found them as a class to be men of a great deal higher grade than anything Mr. Brackett would wish us to believe, and far above any dirty incendiarism, and I fear that Mr. Brackett must have received his information from rather a poor source if he wishes us to believe anything of this kind.

Mr. Brackett must know as he is familiar with that portion of Montana that a road built in through the portion of the Park that is spoken of would be impossible through the winter and early spring months, the snow being anywhere from 15 to 40 ft. deep along part of the line and remaining always until late in the spring. This I understand they expect to avoid by a system of heavy snow sheds, but the fact still remains that all this trouble can be avoided if the other road is built, that is the road reaching Cooke City from the east. It would seem as if this question of opening the Yellowstone Park to railroad companies should be settled now once and forever, and all corporations taught that the land given by the United States to the people, either for the protection of game or forest lands, as sanitariums for future years or as a source of protection of the water supply for the large river systems either east or west, cannot be encroached upon in any way or manner. If this could only be understood thoroughly so that the question could never come up again, it would seem as if some good work had been done this year. I trust that the Government will put the stamp of disapproval so strongly on this matter that it shall never be heard of again. There is but one objection that I can imagine can be brought against a road through the Clark's Fork Cañon, and that is that elk crossing from the Park to the Prior Mountains cross the lines of the surveyed road at a point say from fifteen miles south of Dilworth to the mouth of the cañon. This ranch, if I remember rightly, is known as Brown's, and the elk crossing over through this gap are generally on the move and are not apt to remain for any length of time between through the two hills, so that I do not think the danger of either frightening or killing would be at all excessive.

I do not know Col. Brackett, and presume that his letter was written in good faith and with a thorough feeling for the preservation of the Park, as he claims it was; but I feel that the other side of the case should be stated before anything further is done in this case. Mr. Brackett is thoroughly mistaken if he thinks that sportsmen—or "misguided sportsmen, who, as lobbyists," as he terms it—are opposing the wishes of the people of Montana. I fear "the people" to whom he refers occupy a very small portion of Montana, as the Montana people that I have met and lived with are very proud of their Park, and always, I trust, will be. I have yet to find any of these men who are, as he states, incensed against the Eastern dudes who are fighting the proposed railway to Cooke City. Mr. Brackett must remember that these men are not fighting a railroad to Cooke City by any other route; and in fact, many of us have interests in Cooke City which we would most gladly see something done with, and are only too anxious to see a railroad built from any other part of Montana into Cooke City as long as it does not interfere with the Park.

I agree thoroughly with him when he says let us preserve the forests and preserve the game of our park in an enlightened, rational and broad-minded spirit. The last clause fills the bill exactly. I trust Mr. Brackett will be broad-minded enough to see another route is possible, and let his line of road from Cinnabar along the Yellowstone to Cook City fade away, for I am sure in later years Mr. Brackett would not be proud of having had a hand in opening up our Park to the innumerable roads that would be built through it. He must know that this is a case of one out all out, or one in all in. He says that he wishes to avoid impending and overwhelming disaster to the Park, and at the same time do justice to the Clark's Fork miners. On this point I am sure we will agree and I trust he will see the justice of this course.

YELLOWSTONE.

## THE QUEBEC WINTER CARNIVAL.

QUEBEC, Nov. 11.—*Editor Forest and Stream:* A winter carnival, in the historical city of Quebec, has been decided upon, and the citizens of that grand old Gibraltar of America have been heartily tendered the cooperation of the sister cities of Montreal and others who will send down large contingents of several hundred members of military, snowshoe and athletic clubs.

Quebec, with its grand old fortresses, walls mounted with cannon, and warlike surroundings; its natural to-boggan slides in many directions, its imposing gorges, forming arches, which may be appropriately decorated, its spacious skating rinks, covered, and in open air, where thousands may enjoy such exercise and take part in hockey and lacrosse matches on ice, its renowned curling rinks and curlers, its beautiful drives, outside and inside the walls of the city, its grand citadel, frowning forts, batteries and glacis, with the military guards and fine regimental bands, its Indian tribes from the great Lake St. Jean and Lorette district, who will be encamped in their wigwags, with their dogs and sleds; there will be also the typical Canadian trappers' huts, with all the accessories connected with the hunters' life.

Every foot of Quebec and its surroundings, in all directions, has seen the fierce battles and struggles of two great European powers, and the memorable disaster by which Gen. Richard Montgomery, of the Continental Army, on Dec. 31, 1775, lost his life while scaling the cliff, fighting for its possession. Its history is filled with the most important early records of America.

Although Canada, by the fate of war, was changed from a French to an English colony, a great portion of its people have retained the use of their language and love for fatherland. Thousands above and below Quebec can only speak French. Time has made but little change in their customs and habits, and there are many peculiarities connected with their life, making them a remarkably attractive and interesting people. Quebec has long been renowned for the amiability and hospitality of its citizens of all nationalities and stations in life, and has always been the favorite garrison town of the British Army.

The magnificent new Chateau Frontenac Hotel, one of the finest in America, controlled by the Pacific Railway people, will be open. It is built on a site unequalled in the world (on the Dufferin Terrace), and will be conducted in the very best style of a high-class hotel, and is now one of the great attractions of the place.

The enthusiasm shown by the Quebecers, and their united efforts to make this carnival a success, will, no doubt, be well rewarded. All the railroad companies are heartily entering into the scheme, and cheap excursions to the far-famed city during the first week in February will no doubt attract an immense number of excursionists, who will greatly enjoy their visit.

The carnival is under the distinguished patronage of their Excellencies the Earl and Countess of Aberdeen, and

the Lieutenant-Governor of the Province, and the executive committee is composed of some of its best citizens. Quebec, in mid-winter, is in all her glory; the weather is cold, but dry and invigorating, and it is the gayest period of the year; every one is ozonized, full of vim, and outdoor enjoyments are in great vogue, and once enjoyed are never forgotten. J. U. GREGORY.

## Natural History.

### HORNS OF FEMALE CARIBOU.

BOSTON, Nov. 13.—*Editor Forest and Stream:* Your editorial in issue of Nov. 11 on "The Woodland Caribou" surprises me in one particular, viz., in the statement that "the female usually has horns." My own impression was that only about one female caribou in a dozen had horns. I have personally seen no great number of caribou, but of these only one female had horns. I have the head of this one now in my possession.

I think the guides and hunters in Maine whom I know and with whom I have talked about this matter have all agreed with my observation. If I am wrong in this I would like to be corrected and hope you will receive and publish enough testimony from such sources to settle this point.

The last bunch of caribou that I saw was composed of one bull and four cows, and not one of the cows had any trace of horns. Apropos of your items about "Abino Specimens," let me say that Owen Chase, of Brownsville, Me., recently showed me the skin of a young white otter secured somewhere in the neighborhood of Passadumkeag, and he reported another specimen as having been previously taken in the same region. C. H. AMES.

[As stated in the editorial to which our correspondent refers, the female woodland caribou usually has horns. All the authorities agree that in the genus *Rangifer*—which includes the caribous of the new world and the reindeer of the old—both sexes bear antlers, and if we are not mistaken it was Mr. Montague Chamberlain, who first called attention to the fact that a considerable proportion of the females of the woodland caribou in Maine and New Brunswick were hornless. We have been told by hunters of the district north of the Bay of halours, that, in their experience, it was the exception to find a female caribou without horns. Mr. Ames's testimony as to the proportion of horned females among those that he has seen in Maine is interesting so far as it goes. We refer our correspondent to Caton's "Antelope and Deer of America," pp. 199 to 210, and "Standard Natural History," volume 5, page 305, or to any good work on natural history or almost any work on hunting in northern latitudes.

A recent letter from Mr. Chamberlain, in answer to a request for latest advices on the point in question says: "Regarding the hornless cow caribou of Maine and New Brunswick, I still have the opinion that I expressed in my letters to FOREST AND STREAM. After the letters appeared I continued my research among the hunters, and all that I learned confirmed the opinion that very few of the cows have horns. Some hunters had not met with any cows wearing horns, some had seen many examples."]

### SHARK AND REMORA.

PROBABLY none of the fishes in the Aquarium at the World's Fair have attracted more attention than the sharks with their almost constant attendants, the remoras. Many visitors have mistaken the remoras for young sharks and have expressed wonder at the wise provision of nature by which the young are carried around and protected by their mother. Some even went so far as to suppose that the mother nursed the young while attached to her body.

As a matter of fact, the remora differs widely from the sharks in structure and habits. It belongs to the spiny-finned fishes, near to the crab-eater and the mackerels in the modern systems of classification, while the shark has its nearest relatives among the skates and chimaeras, fish-like vertebrates with cartilaginous skeleton and other peculiar characters.

The remoras are commonly known as "suckers" or "sucking-fish." They have a very wide range, being found in all seas, though most abundant in temperate and sub-tropical regions. Four species occur on our coasts and all of them are parasites on larger kinds of fish or other aquatic animals. Some of them are found attached to vessels, other fasten themselves by preference to sharks, swordfish, billfish and turtles. One of them is so constant in its attachment to the swordfish that it is called the swordfish sucker; another one is equally well known as the billfish sucker.

The largest of the remoras, individuals measuring 4 or 5 ft. in length, according to Mr. Silas Stearns, are to be seen about vessels on the red snapper banks, in the Gulf of Mexico, where they remain to secure the bait that is thrown overboard.

The peculiar sucking organ by means of which the remoras attach themselves to their hosts, is shown in the accompanying drawing by Mr. Baldwin; it is a modified dorsal fin, moved forward to the top of the head for the convenience of its possessor. This disk is a very powerful organ, as may be discovered when a living fish is allowed to attach itself to a table and one attempts to pull the fish away.

Does the presence of the parasite worry its host? Certainly, if we may judge from the efforts made by sharks to rub off the remora by contact with the rockwork in the aquarium. The sharks often become greatly emaciated and worn out by their efforts in swimming with such impediments. It is not unusual to see two or three remoras attached to the same shark in captivity. The parasite does not feed upon its host, but darts away to consume any fragments of food remaining from the meal of the shark, and as quickly returns to its lodging place. Although perfectly able to swim well, it prefers to be carried around without unnecessary exertion.

The early discoverers of North America saw the remora and wrote about their habits, especially their use by the natives of the West India Islands in fishing for larger sea animals. The following account, from Ogilby's "America," is published in the "Fishery Industries of the United States." "Columbus from hence [from Cuba] proceeding on further Westward, discover'd a fruitful Coast, verging the Mouth of a River, whose water runs Boyling into the Sea. Somewhat further he

saw very strange Fishes, especially of the *Guican*, not unlike an Eel, but with an extraordinary great Head, over which hangs a Skin like a Bag. This Fish is the Natives Fisher; for having a Line or handson Cord fastened about him, so soon as a Turtel, or any other of his Prey, comes above Water, they give him Line; whereupon the *Guican*, like an Arrow out of a Bowe, shoots toward the other Fish, and then gathering the Mouth of the Bag on his Head like a Purse-net holds them so fast, that he lets not loose till ha'd up out of the Water."

The U. S. Fish Commission has been very successful in keeping remoras alive at Wood's Holl, at Washington and in its great Aquarium at the World's Fair, and the species has been under observation for six months at a time. Mr. L. G. Harron has been immediately in charge of the salt-water fish, and to him we are indebted for the notes on habits here recorded.

In the aquarium the remora is nearly always attached to sharks or turtles, leaving its host only when fed. It prefers to consort with the sharks, but when there is a scarcity of these animals, it will accompany turtles of suitable size. The big green turtle sent by Mr. Blackford has seldom been without a guest of this kind. The

all. When continuous night has become continuous day without any perceptible approach to spring an Alpine traveler naturally asks whether he has not reached the limit of perpetual snow. It is true that here and there a few bare patches are to be found on the steepest slopes, where most of the snow has been blown away by the wind, especially if these slopes face the south, where even an Arctic sun has more potency than it has elsewhere. It is also true that small flocks of little birds—at first snow buntings and mealy redpoles, and later shore larks and Lapland buntings—may be observed to flit from one of these bare places to another looking for seeds or some other kind of food, but after all evidently finding most of it in the droppings of the peasants' horses on the hard, snow-covered roads. The appearance of these little birds does not, however, give the same confidence in the eventual coming of summer to the Arctic naturalist as the arrival of the swallow or the cuckoo does to his brethren in sub-Arctic or sub-tropic climates. The four little birds just mentioned are only gipsy migrants that are perpetually flitting to and fro on the confines of the frost, continually being driven south by snowstorms, but ever ready to take advantage of the slightest thaw to

although it was three miles wide, and we were in the middle of a blazing hot summer, picking flowers of a hundred different kinds, and feasting upon wild ducks' eggs of various species. Birds abounded to an incredible extent. Between May 29 and June 18 I identified sixty-four species which I had not seen before the break up of the ice. Some of them stopped to breed and already had eggs, but many of them followed the retreating ice to the tundra, and we saw them no more until, many weeks afterward, we had sailed down the river beyond the limit of forest growth.

"The victory of the south wind was absolute, but not entirely uninterrupted. Occasionally the winter made a desperate stand against the sudden onrush of summer. The north wind rallied its beaten forces for days together, the clouds and the rain were driven back, and the half-melted snow frozen on the surface. But it was too late; there were many large patches of dark ground which rapidly absorbed the sun's heat; the snow melted under the frozen crust, and its final collapse was as rapid as it was complete.

"In the basin of the Yenisei the average thickness of the snow at the end of winter is about 5ft. The sudden transformation of this immense continent of snow, which lies as gently on the earth as an eider-down quilt upon a bed, into an ocean of water rushing madly down to the sea, tearing everything up that comes into its way, is a gigantic display of power compared with which an earthquake sinks into insignificance. It is difficult to imagine the chaos of water which must have deluged the country before the river beds were worn wide enough and deep enough to carry the water away as quickly as is the case now. \* \* \*

"The alternate marching of this immense quantity of ice up and down the Kureika was a most curious phenomenon. To see a strong current up stream for many hours is so contrary to all previous experience of the behavior of rivers that one cannot help feeling continuous astonishment at the novel sight. The monotony which might otherwise have intervened in a ten-days' march-past of ice was continually broken by complete changes in the scene. Sometimes the current was up stream, sometimes it was down, and occasionally there was no current at all. Frequently the pack ice and ice floes were so closely jammed together that there was no apparent difficulty in scrambling across them, and occasionally the river was free from ice for a short time. At other times the river was thinly sprinkled with ice blocks and little icebergs, which occasionally 'calved' as they traveled on, with much commotion and splashing. The phenomenon technically called 'calving' is curious, and sometimes quite startling. It takes place when a number of scattered ice blocks are quietly floating down stream. All at once a loud splash is heard as a huge lump of ice rises out of the water, evidently from a considerable depth, like a young whale coming up to breathe, noisily beats back the waves that the sudden upheaval has caused, and rocks to and fro for some time before it finally settles down to its floating level. There can be little doubt that what looks like a comparatively small ice block floating innocently along is really the top of a formidable iceberg, the greater part of which is a submerged mass of layers of ice piled one on the top of the other, and in many places very imperfectly frozen together, the bottom layer becomes detached, escapes to the surface, and loudly asserts its commencement of an independent existence with that commotion in the water which generally proclaims the fact that an iceberg has calved.

"Finally comes the last march-past of the beaten forces of winter, the ragtag and bobtail of the great Arctic army that comes straggling down the river when the campaign is all over—worn and weather-beaten little icebergs, dirty ice floes that look like floating sandbanks, and straggling pack ice in the last stages of consumption that looks strangely out of place under a burning sun between banks gay with the gayest flowers, amid a buzz of mosquitoes, the music of song birds, and the harsh cries of gulls, divers, ducks and sandpipers of various species."

## Game Bag and Gun.

### THE BUFFALO REMNANT.

WINNIPEG, Manitoba.—Away up in the northern part of the Canadian northwest, almost as far from New York as London is, there are a few herds of buffalo, numbering in all between 200 and 300 head, the probability being that there are not more than 200. The Indian is still, however, their greatest enemy and is making good use of his knowledge of the haunts of the buffalo.

A law was passed at the last session of the N. W. T. Legislature to preserve this game, but notwithstanding this their numbers are fast diminishing. There is no treaty with the Indians living in the Vermillion District, where the buffalo are found, so the operation of the law does not extend to them. Even if it did there are not enough mounted police in that country to enforce it. The possibilities are that the slaughter which has been going on with more or less regularity all summer will be resumed with increased energy as soon as the snow gets deep. Then the fleet-footed Indian on his snowshoes chases the unwary animal into the drifts, where, becoming imbedded in the snow, he falls an easy prey to his pursuer. I have discussed the subject with several trappers who have come to Winnipeg from the far north and they all agree that the law cannot preserve the buffalo as long as they are within gunshot of the Indians. The scarcity of food in the Vermillion District is another thing that makes it evident that the buffalo must go.

ROD RANDOM.

### Washington Wildfowl.

SPOKANE, Wash., Nov. 8.—Sportsmen now are paying their attention to ducks, geese and chickens. While it is unlawful to offer them for sale, we who do not "shoot" sometimes get hold of them. Four gentlemen went out a few days ago I understand, near Davenport, forty miles west, and returned with 86 geese and other game. Other parties have succeeded in bringing back 50 and upward. Sunday seems to be a big day with the average sportsman; on that day the trains leaving the city take a goodly number of people, the success is varied, but on Monday numerous families enjoy the toothsome duck. A. B. K.

SHARK AND REMORA.

remora is just as well contented to be on the upper side of its host, in which case it is upside down, as on the lower side.

When swimming free, it moves as easily and gracefully upside down as when upright, and it rolls over without any apparent effort. When the remora becomes sick it leaves its attachment and lies on the bottom, where it either recovers or soon dies. It is very quick in its movements, darting after its food "like a shot," and returning at once to its resting place. It is fond of beef but it is particularly devoted to clams.

In the aquarium at Wood's Holl, one of the remoras became a universal pet, and would come to the surface and feed out of the hand. Its attitude when at rest was singular, the head and front part of the body being always raised a little above the level of the tail, thus resembling the poise of some water snakes. T. H. B.

### THE COMING OF THE ARCTIC SUMMER.

In his address before the Geographical Section of the British Association for the Advancement of Science, Dr. Henry Seebohm paints a vivid picture of the sudden coming of the Arctic summer, and we quote from the *Geographical Journal* for October the following paragraphs:

"The sudden arrival of summer on the Arctic Circle appears to occur nearly at the same date in all the great river basins, but the number of recorded observations is so small that the slight variation may possibly be seasonal and not local. The ice on the Mackenzie River is stated by one authority to have broken up on May 13 in latitude 63°, and by another on May 9 in latitude 71°. If the Mackenzie breaks up as fast as the Yenisei—that is to say, at the rate of a degree a day—an assumption which is supported by what little evidence can be found—then the difference between these two seasons would be nine days. My own experience has been that the ice of the Pechora breaks up ten days before that of the Yenisei, but as I have only witnessed one such event in each valley too much importance must not be attached to the dates. According to the Challenger tables of isothermal lines, the mean temperature of January and July on the Arctic Circle in the valleys of the Mackenzie and the Yenisei scarcely differ, the summer temperature in each case being about 55° F., and that of winter—25° F., a difference of 80° F.

"On the American side of the Polar Basin summer comes almost as suddenly as it does on the Asiatic side, but the change appears to be less of the nature of a catastrophe. The geographical causes which produce this result are the smaller area of the river basins and the less amount of rainfall. There is only one large river which empties itself into the Arctic Ocean on the American side, the Mackenzie, with which may be associated the Saskatchewan, which discharges into Hudson Bay far away to the south. The basin of the Mackenzie is estimated at 590,000 square miles, while that of the Yenisei is supposed to be exactly twice that area. The comparative dimensions of the two summer floods are still more diminished by the difference in the quantity of snow.

"The arrival of summer in the Arctic regions happens so late that the inexperienced traveler may be excused for sometimes doubting whether it really is going to come at

press northward again to their favorite Arctic home. They are all circumpolar in their distributions, are as common in Siberia as in Lapland, and range across Canada to Alaska as well as to Greenland. In sub-Arctic climates we only see them in winter, so that their appearance does not in the least degree suggest the arrival of summer to the traveler from the south.

"The gradual rise in the level of the river inspires no more confidence in the final melting away of the snow and the disruption of the ice which supports it. In Siberia the rivers are so enormous that a rise of 5 or 6ft. is scarcely perceptible. The Yenisei is three miles wide at the Arctic circle, and as fast as it rises the open water at the margin freezes up again and is soon covered with the drifting snow. During the summer which I spent in the valley of the Yenisei we had 6ft. of snow on the ground until the first of June. To all intents and purposes it was mid-winter, illuminated for the nonce with what amounted to continuous daylight. The light was a little duller at midnight, but not so much so as during the occasional snowstorms that swept through the forest and drifted up the broad river bed. During the month of May there were a few signs of the possibility of some mitigation of the rigors of winter. Now and then there was a little rain, but it was always followed by frost. If it thawed one day it froze the next, and little or no impression was made on the snow. The most tangible sign of coming summer was an increase in the number of birds, but they were nearly all forest birds, which could enjoy the sunshine in the pines and birches, and which were by no means dependent on the melting away of the snow for their supply of food. Between May 16 and 30 we had more definite evidence of our being within bird flight of bare grass or open water. Migratory flocks of wild geese passed over our winter quarters, but if they were flying north one day they were flying south the next, proving beyond all doubt that their migration was premature. The geese evidently agreed with us that it ought to be summer, but it was as clear to the geese as to us that it really was winter.

"We afterward learnt that during the last ten days of May a tremendous battle had been raging 600 miles as the crow flies to the southward of our position on the Arctic circle. Summer in league with the sun had been fighting winter and the north wind all along the line, and had been as hopelessly beaten everywhere as we were witnesses that it had been in our part of the river. At length, when the final victory of summer looked the most hopeless, a change was made in the command of the forces. Summer entered into an alliance with the south wind. The sun retired in dudgeon to his tent behind the clouds, mists obscured the landscape, a soft south wind played gently on the snow, which melted under its all-powerful influence like butter upon hot toast, the tide of battle was suddenly turned, the armies of winter soon vanished into thin water and beat a hasty retreat toward the pole. The effect on the great river was magical. Its thick armor of ice cracked with a loud noise like the rattling of thunder, every twenty-four hours it was lifted up a fathom above its former level, broken up, first into ice floes and then into pack ice, and marched down stream at least a hundred miles. Even at this great speed it was more than a fortnight before the last straggling ice blocks passed our post of observation on the Arctic circle, but during that time the river had risen 70ft. above its winter level,

## THE FIRST "CLOSE SEASON."

From the new "Game Laws in Brief."

WHEN you come to think of it, that prolonged voyage of Father Noah with the animals shut up in the Ark was the first "close season" of which we have any record. Old Noah, as one might say, had the first game preserve in history. Thus it appears that game protection is an ancient and honorable institution, its origin coincident with the Deluge. The beneficent results of that close time were far-reaching even to the uppermost parts of the earth, and far-extending even to the present time. If the human race owes its own preservation to the fact that Noah had sense enough to get in out of the wet and knew enough to stay in while it rained, quite as truly do we owe all our shooting to the sagacity and enterprise of the pioneer game preserver of the earth.

As a game protector Noah was a decided success. He shut in all species of game, and the inclosure of gopher wood was pig-tight, bull-proof and horse-high, as the law demands. No poachers presumed to trespass on the preserve. There was nobody to say that he didn't know it was close season, or he didn't know that elephants were included in the law. During all the year and more that Noah was in command not a gun was fired on any kind of fur or feather.

There is nothing in the record to indicate that Noah himself had any sporting instincts or cared particularly for hunting big game; but among his claims to distinction it must be put down to his credit that he was the great-grandfather of the most renowned sportsman the world has ever known. For Noah begat Ham, and Ham begat Cush, and Cush begat Nimrod, who "was a mighty hunter before the Lord." The very fact that Nimrod's achievements in the chase are thus referred to in the chronicle of the times, and were thought worthy of record along with the story of the Deluge and the peopling of the earth, shows us that even in that primal age his fellow men accorded to an expert sportsman recognition and honor for his sportsmanship. The fame of Nimrod has endured from that day to this; his name still stands for prowess with the weapons of the field; and budding sportsmen for these thousands of years have swelled with pride when local editors have tickled their vanity by dubbing them "mighty Nimrods."

Inasmuch as Noah lived for three hundred and fifty years after his voyage in the Ark, it would not be in the least unreasonable to assume that he survived long enough to witness some of the hunting exploits of his own posterity; to take a just pride in the redoubtable skill of his great-grandson, and to hear, with the indulgence of an old man for the exuberant fancy of the young, the hunting yarns which Nimrod used to spin as they sat around the fire in the cabin at night. We may almost fancy the venerable patriarch at such times beaming on the story teller with senile smile, and making reply, "Yes, son, you are a great sportsman, let you tell it; but when I was a younger man than I am to-day, away back in my six-hundredth year, long before you were born, I had a little game pocket of my own, such as the world will never see again. And come to think of it," he would add, reflectively, "I allow it was a lucky thing, Nimrod, that a man with your true sportsman proclivities was not in the Ark along with me and the game."

For as it is now, so was it in the days of Noah. From the time of the Flood to your own, my dear sir, who shall read these pages, never yet has youngster told a hunting story that his elders could not go him one better.

Our curious and interesting picture of the Ark is from one of the rare volumes of De Bry's Voyages, printed at Frankfurt-on-the-Main, in the year 1591. It has been engraved for the *Brief* from a copy of the book now in the possession of the editor. Old as is the drawing it is yet of a date some two hundred years more recent than that of the manuscript preserved in the British Museum, from which we have taken for our title page vignette the quaint picturing of the Hares leading the Dog to the gibbet.

There were artists in those days. This picture of the animals coming out of the Ark and the older caricature of the Hares and the Dog are inimitable in their way.

## As Seen by a Caribou Hunter.

Editor Forest and Stream:

The picture of the woodland caribou in last week's supplement is beyond criticism; simply perfect.

PINE TREE.

## The Saginaw Crowd.

Editor Forest and Stream:

Now that "Podgers" the Commentator has given over his commenting, and more's the pity, it appears to be in order for some of the rest of us to take upon ourselves the duty of saying that Mr. Mereshon's story of the "Saginaw Crowd" has been admirably well done throughout; and for one I can testify to appreciation of it. May the Crowd gather together for many years to come and the Crowder-in-Chief be there to tell of it for the rest of us.

HENRY R. BROWN.

Mr. Mereshon notes "There have been a few typographical

errors from time to time, one in the issue of Nov. 11, near the bottom of page 402. The way you have it punctuated it reads, "the little wolf Briggs," whereas I meant to have paragraphed this and used "The Little Wolf" as the title to the narrative. In the eighth line from the last, on page 403, in speaking of the way Bigelow was rigged up, you have it that he borrowed the Kid's "shape." This was, I think, written "the Kid's shaps," for I meant the leather riding leggings most of the cowboys wear.

This year's trip was very successful, beautiful weather, everyone well and no accidents. While Dakota is full of hunters we had no difficulty in finding fair shooting. Sharp-tailed grouse were very plentiful, some ducks, and we had two good days of goose shooting. One afternoon five of us got fifty-five.

W. B. M.

## WAS HE HIT OR PLAYING POSSUM?

WE had feasted on rank bacon for more than three months and were as meat-hungry as only hunters can be, with all chances against us, when one morning old Snoozler growling savagely, called our attention to the hillside opposite camp, and I mentioned to my partner that there must be a deer over there. S. grabbed his gun, and had not gone over 200 yds. when I heard him shoot and call me. Not knowing what might be the matter, I picked up a rifle and started on a run to join him. "No hurry," he calls, "I got him. Just step up and pass your opinion on that shot." I joined S. and he pointed out a large buck down on his back and beating the air with all fours, apparently in his death struggle. I could see the bullet hole a trifle above the tip of the shoulder, and the distance being nearly 200 yds., praised S.

ENDING OF THE FIRST RECORDED CLOSE TIME ON ALL SPECIES OF GAME.

Fac-simile from De Bry's Voyages—LeMoyne's Brevis Narratio—printed in the year 1591. Engraved for the *Game Laws in Brief* from the original in the possession of the editor of the *Brief*.

for his excellent marksmanship. "I'll go around and bleed him and bring him down." My pocket knife being rather dull I told S. to go ahead and I would bring him a skinning knife. I returned to camp, got the knife, and upon rejoining S. on the spot, where I only a few minutes before had seen a large buck in his death struggle, there was nothing but a few blood spots and some hair, while S. stood scanning the surrounding brush with eyes as big as saucers.

Well, we looked for that buck for a whole day and never found him, not even with Snoozler's help, and to this day, had I not seen the fresh tracks and blood, I would be hard to convince that the whole thing was not a day dream, caused by a stomach overloaded with musty bacon.

MUX.

## Alabama Game Conditions.

SELMA, Ala., Nov. 8.—For a number of years following the war game of all descriptions became very scarce, as all the newly made citizens had old army muskets and blazed away at everything from a tomcat up, wild or tame. But now affairs have changed; thanks to a wholesome game law, game has again become plentiful. Squirrels and quail are found within a mile of the city limits, turkeys within two miles, ducks in the river at the city wharf nearly every morning that is cold, and on the ponds close around throughout the day; deer within 20 miles, the grounds being easily reached by rail. Ducks are coming in earlier and in greater quantities than has been known for years, consequently the market is well stocked with game killed by pot-hunters of dusky hue. The sportsmen have had but little sport owing to a long drought that makes hunting difficult. A party of gentlemen went on a deer hunt a few days ago, but it was too dry to be a success, only one deer being the result of a two days' hunt. As soon as the remainder of the cotton crop is gathered, fox and cat hunting will be in order, as there are several fine packs of hounds here, and great sport is anticipated.

Fishing for trout and perch has been excellent throughout the year, and is still fine. I shall tell you of a bear hunt that I am going on shortly.

MAY.

"BINKINS went out hunting this morning." "All alone?" "Yes; didn't even take a dog." "S'pose he'll kill anything?" "No; not unless he gets melancholy and commits suicide."—*Washington Star*.

## THREE DAYS IN PENNSYLVANIA.

ALTHOUGH the reports from most all of the eastern counties of Pennsylvania are that quail are very scarce, and most of the gunners are bringing in very small bags, there are some counties that still have a few left.

Two of us—Landis H. Davin and H. Thurman—left Philadelphia Oct. 31 to pay a visit to our old trap-shooting friend Wm. Spicer, at his home in Danville. And on our arrival at 6:30 the next morning Spicer was there to meet us and hustled us off to his home, where his good wife had a steaming warm breakfast ready for us. Then we were hurried into the wagon with two fine ponies attached, and in a jiffy were off along the river road almost before we had time to look at the dogs or anything else, as Billy said we were late and everything would be shot off before we got there. There were lots of gunners out, this being the first day of the season. The rabbit shooters were thick and their hounds had the birds pretty well scattered before we got at them, but we had a fairly good day and came back at night with two quail and two rabbits, and I certainly think we could have gone over the same ground the next day and doubled it. We returned with such appetites that I thought we would dismay Mrs. Spicer, but the more we ate the better she seemed to like it.

This day our team left us about five miles from town on the farm of Mr. Davis, one of the finest in this part of the country. The son of Mr. Davis gave us a hearty welcome and told us to pitch in, but that there was not much game, as a party of eighteen the day before had only been able to get two rabbits and one quail. Before we had been out a half hour a covey of birds flushed wild and went to cover along a small creek, where we marked

them down, and from that time until 12 o'clock we had some good shooting. When we came in for lunch the count was thirty-three quail and one rabbit. After an hour's rest we took another short tramp and succeeded in bagging ten more quail before the wagon came for us. The bag this day was forty-three quail, one rabbit, one squirrel, two snakes. The next morning it was raining, but nothing daunted, we started for pheasants in Wolf Hollow, fourteen miles off. The day was a disappointment to Spicer and J. Kessler, who was with us with his dog, as we found that the men in the neighborhood had skinned out the pheasants very materially; in fact Mr. Crawford told us that he had killed only the day before nine pheasants over the same grounds that we hunted, and we only got four pheasants, three quail and one rabbit. Spicer and Kessler said they could have started a great many more close to town, and we would not have had a ride of twenty-eight miles, which up and down hill in this country takes considerable time. But we were more than satisfied with the trip, and hope at some future time to be able to repay our friend Spicer for his kindness. They were certainly three pleasant days. Total bag: Sixty-seven quail, four pheasants, four rabbits, two squirrels and two snakes. The best that has come into this town so far this season.

LANDIS AND THURMAN.

## American Dog and Chinese Pheasants.

HOLLAND, Mich., Nov. 13.—*Editor Forest and Stream:* I inclose letter which you have forwarded me from Mr. C. J. Ashley, Shanghai, China. As I am unable to take advantage of Mr. Ashley's excellent offer, I send you his letter for publication, if you desire, so that any one wanting Mongolian pheasants and having such a dog as Mr. A. wants, can exchange to advantage. A. G. B.

SHANGHAI, Oct. 11.—A. G. B.: Dear Sir—I see in *FOREST AND STREAM* of Aug. 26 that you are anxious to get the pure-bred Mongolian pheasant. It was from here that our Consul, Judge Denny, sent several lots of pheasants to Oregon. I can send the pure-bred pheasant from here to New York. I am not in the business of shipping pheasants, being a resident here many years and fond of sport. I am anxious to get a good dog, either an Irish setter bitch about two years old and well trained, especially to retrieve, as very few English dogs that we get here retrieve, or a pointer bitch of good breed and well trained, to cross with dog that I have. I will guarantee to deliver in New York city two dozen pheasants (as you may direct, so many cocks to so many hens), you to deliver the dog in New York city. Of course I should have to ship several lots of birds to insure having two dozen, but if a few more than two dozen should arrive safely you are welcome to them all. If we can agree to exchange an early answer will oblige, and the pheasants can be landed in New York in time for breeding next spring. If you look up the *FOREST AND STREAM* of March 16, 1893, page 230, you will see something of our shooting last winter.

C. J. ASHLEY.

## Pennsylvania Wild Turkeys.

MUNCY, Pa., Nov. 13.—Last week some bags of 6, 8 and 10 ducks each were brought in. Wild turkeys are reported very plenty on the Bald Eagle Mountain, west of this place. They have come down to the corn fields. Pheasants are plentier than last year. There was some fun with the squirrels, but it did not last long—the knowing ones had all the fun, the rest had the hunting.

J. M. E.

## MUD AND MISERY.

A YEAR ago this winter I was in Caddo Parish, La., building a mill. On Saturday there was to be a circus in Shreveport, and the hands all said they wanted to go. This met with my approval, as I had been wanting to work in a day's shooting at Soda Lake. So I paid off on Friday and bade the boys be on hand by sun-up Monday morning. They all returned except one, who met with a female that—but of this in future.

The accounts which I had heard of the ducks on Soda Lake were enough to cause one to adopt the creed that all men are liars. There live a civil engineer and his rodman at the house, who, when I told them of my plan, said that as it looked like a spell of wet weather, when they, of course, could do no work, they would like to go along, besides the U. S. engineers were working somewhere about the lake. I did not find out what that had to do with the case. Then there was Church, of course he would go. Church was a "dead game sport" of the sort peculiar to some sections—warm-hearted, reckless, generous to many faults, but a good shot and rider. Also, he knew the trail to Soda. The civil engineer was not just a plain engineer, but rejoiced in the title of assistant engineer. That night we found Church in his favorite seat by the big open fire at the back of the store, playing "sell out" with the Doctor. In about five minutes we had borrowed two horses and a mule and gotten down from the shelves our grub for a couple of meals. As ducks were to be so plenty we did not need to take much—just a hunk of bacon, a little salt, two bottles of pickles and some crackers. No use to fool with canned corned-beef. However, I stuck into the sack two cans from Armour's, and as the rodman had a predilection for onions, I put in about a peck. Have you ever noticed that an amount of stuff which seems more than ample in the store dwindles down to a most ridiculously small portion when you open up the sack at dinner time? Church told us of a colored woman who would get some hot coffee and biscuit at 2 o'clock the next morning, and offered to ride and tell her to have it ready for us. In about an hour he returned, said "all right," and took up the game with the Doctor.

When I woke up at 1 o'clock and called the leveler and rodman it was cloudy and cold, the wind blew hard, and the scummy clouds dashed across the moon in a wild race. Old Uncle Felix, who held the keys to the yard, was hard to rouse, though I knew he heard me pound on his cabin door. When he came out, slowly rubbing his eyes, he said, "Youse gwine hab rain to-day," and after catching up and saddling the stock he remarked, "Boss, done fouget dat nickel!" This was the first I had heard of "dat nickel," however, I gave him one. "Got your slicker?" Mine was tied on to my McClurmen saddle. "I'm going to leave mine and wear this big coat," said the Engineer. "Guby Boss," said Uncle Felix, as his legs cast swift shuffling shadows while he swings the lantern.

As we rode out of the little lane from the yard the geese hiss and scold, and some pigs grunt and scramble out of the way. The clouds cast strange moon shadows and it is cooler. In a few minutes we see the fire light showing in red streaks through the sides of Aunt Susan's cabin. She is on time with her biscuit and coffee, and as a work of special courtesy has some "salt meat" in the pan over the fire. Her husband, *pro tem.*, objects to her charge of fifteen cents and urges her to collect twenty. We settle the matter by giving her twenty-five cents. Now it is quarter after two and almost dark; the clouds are thick and heavy as we ride past the mill and take the road along the river toward "Hayti," where we expect to meet Church at the crossroads. We ride through miles of cottonfields and acres of dead cotton woods, bleached skeletons of trees. Before we are within a mile of the crossroads we hear furious riding behind us and Church comes loping along. "I had to stay and finish my game with the Doctor. When you all come to the crossroads take the right hand trail by the row of cabins and I will overtake you about the Gum Spring. I've got to ride on and get Walter Ivy's maverick." Church always called Ivy's gun "maverick," because there was no name on the rib. It had done wonderful shooting in the past, according to tradition, and I saw it bring down 115 ducks on

another trip. The Engineer was armed with a Colt's 10-gauge, his rodman had an old Scott gun, and I had a Parker 12-gauge and a .45cal. Colt's six-shooter. Church had been a deputy sheriff in '84 and always had a .41cal. Colt's at his saddle horn. The rodman rode the mule, an old gray sway-backed relic of the War. His chief had a pony of which its rider stood in awe, I had a pretty good horse, the best swimmer of the lot, and Church rode a little black stallion that was always having to be hunted whenever he was not being ridden. We had been riding now for two hours or more and were past the Gum Springs. It blew harder every minute, and began to rain, the fog drifted through the trees in great clouds, every now and then a branch torn off by the wind would come crashing down.

Church had overtaken us with the miraculous gun and assumed the lead. We soon came to Red Bayou, which we could not cross, for the ford was too deep and swift to attempt before day. "We will have to ride up the bayou to the bridge at Nute Smith's and cross there." The wind had gone down but the rain descended still; there was no end of the water. We had to partly reconstruct the floor of the bridge before it was safe to cross. In the bayou were heaped up cabins and outhouses which had been brought down by last spring's floods, the water was rising

but it was an hour later when we broke out of the willow brush and saw the lake in front of us and the Caddo hills on the opposite side. We had come in to the lake about fifteen miles from the point where the cabin was situated. Our horses were up to their knees in water now as we began our return march, skirting along the edge of the lake.

As yet we had not seen a duck. Church said it was too warm, but our fingers were numb and I don't think Church was competent to give an unprejudiced opinion.

At last we came in sight of our cabin, but there was Red Bayou between us, much deeper and almost as swift as it had been in the morning when we refused to cross it about ten miles above. As we dismounted to rest and consult, a fat mallard drake dashed out of a little clump of willows, four guns came up, and the poor old drake fell as though he had flown against a board fence. Each one asked the other "What made you fire?" and each one said, "I did not want to have any more turkey scrapes."

It was decided by a majority vote, with only one dissenting voice, that Church should swim across and get the old punt which we could see fast to a tree by the cabin. In the meantime the mallard should be picked and our grub gotten ready to cook as soon as we should be across. At the first attempt Church's pony got bogged

up, and after being helped out refused to go into the water again; so Church waded out as far as he could and struck out for the other shore. The water was cold, as we all found afterward. At last the leaky old boat, which the Engineer called a "canoe," arrived; our saddles and guns were crossed safely, and I was to work up the dinner while Church crossed the horses.

The cabin had lately been under water and the inside was soft mud, not an inviting place for a banquet, but we were hungry and the Engineer and Church were thirsty.

The horses were crossed in a most unique way, the rodman made the bridle fast to the stern of the punt, and Church grasped the horse's tail with one hand and a thick club in the other. The rodman paddled and Church swam and pounded, sometimes under the water and occasionally above, until one horse was over.

The mule was the last to undergo the ordeal. Judging from the language and noise, he made it very interesting for Church. I was too busy trying to keep a fire in the smoky hut to look out at the fun. It was beginning to get dark when all were across and Church had found his pony, which he had forgotten to tie and which had wandered off as usual. The duck was devoured in a minute, the crackers (nothing but dough now) were sent after the duck, the cornedbeef was not fit to eat, having a "sort of greebs pus" over it, in short, we cleaned up everything but a dozen or so of the onions.

Church removed his clothes and tried to dry them, with poor success.

"Are you sure of the trail back? If you are not, let us stay here to-night," said I.

"Certainly I am; I know every tree in the parish," said our guide.

Our horses had had nothing but water and were shivering and tired, but I made up my mind to a twenty mile ride, and we were soon in the saddle again. Still it rained, and it was "plumb" dark. I suppose we had gone about a mile when Church had the grace to acknowledge that he had not the remotest idea of where he was. We could hear the rushing of water on all sides and seemed to be surrounded by torrents.

"Here is where the old bridge used to be, we will have to swim this bayou."

"All right, guide."

We had tried the foolish experiment of loosening the bridle and giving the horses their heads; they at once made motions as though they would roll, instead of immediately taking the right course, as they should have done according to the books. The little horse swam boldly over—and back.

"The bank is too steep to land. I'll try it further up."

This time they did not return and it was my turn. I did not like it. The cold rushing water with no shore visible was not inviting, but Church yelled "Come on," and I thought of the fun of hearing the Engineer cross, so I thrashed my horse until he slipped into the water with a deep grunt. When we reached the opposite bank there were logs in such a jam that we had to swim up

AMONG THE WILDFOWL.—XXI.

THE DUCK THAT NEVER COMES UP

fast. It was beginning to get a little light now, and the high water marks left on the trees by the last flood could be seen above the reach of our gun muzzles as we sat on horseback and splashed through the mud and water in single file.

About three miles further on we were riding in profound silence except for the slosh, slosh of the horses' feet in the mud, when two beautiful turkeys sailed across a little opening in the woods just ahead of us. Church tried to fire his gun without any cartridge in it, dropped it with a withering denunciation, pulled his Colt's and shot twice, the second ball broke the wing of the last turkey, which fell floundering in the short brush. I did not know whether to congratulate him for the shot or revile him for not having his gun ready. We had been in line, so that I, who rode next, did not like to risk a shot for fear of hitting him. Unfortunately for us, when Church jumped off his horse at the exact spot where the turkey fell, no turkey was visible. It had vanished, and though we hunted for half an hour we had to abandon the foolish bird at last. We rode on again in silence, save a few mutterings from Church in reference to his luck. I noticed that our guide turned his horse's head oftener than it seemed necessary to me. We were in the heart of an interminable swamp, and still the rain fell and the water rose to meet it.

At last I hinted that we should be somewhere near the lake now as it was after 2 o'clock P. M. and we had been riding steadily for about twelve hours. Church said he could put his finger on the lake at a few moments' notice,

stream for a good bit before finding a suitable landing. I could hear the engineer and rodmán as they took the water together; neither wanted to be last.

Church said he was dead sure of the way now. "This is Black Bayou, all we have to do is to follow along this bank." We followed the bank for about 200 yds. and then came on another slough, which Church called "Cow Hide."

We kept this game up until we had crossed five bayous; our horses were worn out and had to be more than coaxed before they would cross the last, which was wider than any of the others.

"Let us find a spot above water and camp until day," said the engineer.

Church said he now knew exactly where we were.

"That is a fine thing," said I; "I do, too." It was with difficulty that we found a "high spot" to camp on. When we found it, it was only a few inches above the water level. Still the rain fell; the water seemed to be rising at the rate of an inch an hour.

We dismounted, stiff and heavy, and tied the bridles to small bushes so the horses could eat the twigs, which they did so thoroughly that a spherical space was soon cleared about each animal with a diameter twice the length of the tie line.

After several unsuccessful attempts, we made a fire by soaking lead pencil chips in whiskey, and then the rodmán and engineer holding my slicker over me, I used the last match and got a blaze. It was lucky that the engineer had such a supply of Fabers. At last we had a monster fire, and were warm, though soaking wet.

The rain had dwindled to a heavy fog and after a while the moon showed us a little light. We sat around the fire on rotten and soaking logs, but there were few jokes retold. Suddenly a large cur dog appeared. He was so hungry that his behavior was most friendly. I gave him the spoiled can of beef and we were friends at once.

I spread my saddle blanket for a bed (the saddle supplied an excellent pillow), made the dog lie down, and I lay between him and the fire, as close as possible to both. Only once did I wake up, when the fire burned low, and all was quiet but the rushing water and the horses as they broke off small branches and ground them up.

We had used all the available wood at hand, so I had to go some distance to find any. As I was stepping along carefully on account of snakes just in front of me I spied a bear. His back was turned and he stood up pawing a tree as I have seen them do in Colorado.

In an instant I jerked out my Colt's and was selecting a place to fire at, just behind the fore shoulder. The rushing water made such a noise that he had not heard me and the wind blew from him to me. I calculated to give him three cartridges as quickly as I could pull the trigger and have three to stop him if he came or ran.

As I finished this plan in my head the bear turned and saw me and said, "We must be on an island."

It was the engineer. He had been gathering twigs for his horse, and making the finest image of a bear I ever saw, with his long overcoat and little wet black hat pulled over his ears. When I told him that in three seconds he might have been "too dead to skin" he became quite angry.

Do you suppose he was provoked because I had not fired? I don't know.

We carried some wood back and revived the fire. The hound had taken my place on the saddle blanket and was shivering and sad, probably the result of the spoiled corned beef. The rodmán and Church slept without a turn until it was daylight. Our breakfast consisted of two red raw onions each. The derelict dog seemed to have no appetite, though he was convalescent.

We held a pow-wow and decided to follow up the bayou we had crossed the night before until we came to some known spot. All that day we floundered around in the swamp, not seeing the sun once. Every now and then the bayou widened out into a lake, which we had to skirt for fear of bog holes.

As dusk settled down again we were a sorry crowd; the clouds had vanished and it was much colder. We had no matches nor means of making a fire; our provisions consisted of about six small onions and one sick dog; our horses were worn out and we were not very fresh.

"I wish I was in my own dear back yard," said the rodmán, "how quick I would go into the house."

"Shut your fool face and try and make a little fire with your gun," was all Church could say.

We tried dissecting a cartridge and strewing the powder along a log and then exploding a cap, but we had nothing to catch; every shred of clothes we wore was wet and it was of no avail to flash the powder.

The others sat down with their backs to a fallen gypress and proposed to wait for day.

I did not see the fun in this; so I skirmished about, and found a large tree long dead; and with my big jack-knife I whittled into it until I found some soft dry punk in the interior. Then I cut up four or five cartridges and moistened the powder, made a pile of punk and powder in layers and suitable proportions and snapped a cap at the mass. After several attempts I had a red coal about as large as one's fist.

After blowing until my face ached and my eyes ran on account of the smoke; it was disheartening to see the red grow smaller and smaller and the ash grow larger, until there was nothing left but a little spark which soon vanished.

At any rate my efforts had warned me a little. As I called the dog and made him lie on one side with the log on the other, I could hear a rooster crow away off to the right. The others were all asleep and strange to say I soon was in the same fix.

At day we all woke in ample time, our horses apparently had not moved during the night, but stood with heads hanging down and eyes shut.

I told of the rooster I had heard crow during the night. We saddled our disconsolate stock and stiffly moved off in the direction from which the sound seemed to have come.

In about five hundred yards we left the forest and entered a cotton field. We could see a little bunch of cabins away over across the dried stalks.

"That's Israel's store," said Church. Israel had corn for our horses and crackers for us, also some vitrified, dark-colored bread which he called "ginger cakes," out of respect for honorable age. He also sent a woman to make us some coffee.

After eating for an hour or more our stock had ad-

vanced almost to par; we were full, warm and contented. Church and I went again to Soda, when we brought back 208 ducks.

P. B.

## CHICAGO AND THE WEST.

[From a Staff Correspondent.]

### Phenomenally Good.

CHICAGO, Ill., Nov. 11.—The season just closing has been a phenomenally good one for wildfowl in all this section of the West. The shooters who struck Minnesota just before the freeze up had great shooting. E. T. Martin, a market-shooter operating in that State, sent in to Van Uxem last week for 3,000 more shells, and reported very heavy mallard shooting.

Mr. Abner Price, of this city, with a friend, are lately back from Duck Island Club, below Peoria. Mr. Price is an old time duck shooter, but says he never had a better shoot. The two guns killed over 800 mallards in two weeks.

At Hennepin and Swan Lake clubs, Senachwine Lake, and the Illinois River country thereabouts, some very heavy shooting, largely on mallards, was had for over a week. Last week the weather warmed up, and the flight worked back north above Koshkenong and all over the Horicon Marsh.

Mr. L. M. Hamline, of the Diana Club, returned from Horicon Marsh Monday last. He says that he has hunted ducks all his life, and all over the country, but never in his life did he see in one flight as many ducks of all kinds put together as he did of mallards on the day before he left.

### In the South Also.

Clear in the South, also, the flight has reached, as witness the following from the valued FOREST AND STREAM correspondent, "Arodnac," in Louisiana, who writes from New Iberia, Nov. 4:

During this past week I visited the towns Jeanerette, New Iberia and Abbeville. Never in my life have I seen as many snipe and ducks. I learned at Jeanerette that Mr. Henry Hebert, the well-known sportsman, and the best shot of the parish, has been killing from seventy to ninety snipe a day. My friend, Mr. L. Lyons, told me that boys of 13 to 15 are bagging from twenty-five to forty ducks of a morning.

At Abbeville a number of pot and professional hunters were in town Thursday while I was there, selling teal duck at 10 cents and mallards at 25 cents per pair, snipe 70 cents per dozen. The merchants of Abbeville state that such a quantity of game was never seen before, and complain that it has cut down their sales of meat and other provisions. Mr. Ed Smiley, a thoroughly reliable gentleman, told me that a boy killed and picked up fifty-four greenwing teal with two shots.

At New Iberia the snipe are more numerous than duck. We have had very dry weather for two months, and this accompanied by the late low tides on the Gulf, has dried up all the sea marshes, and the game has been compelled to seek the small lakes and rice ponds near the towns, which causes such a slaughter. Every man and boy who owns a gun can be seen going to or coming from a hunt.

The outlook for quail shooting is splendid, and as soon as the frost lays down the high brush it will give them a trial.

### Slaughter the Right Name.

Slaughter is the right name for the way ducks have been killed along this line of migration this fall. No one can tell what made the flight so heavy here, especially as regards the unusual numbers of mallards. So far as I know, the best shooting had anywhere in the United States this fall was on the Horicon Marsh. I have just taken from Mr. Percy Stone's note book a few of the scores of the Diana Club, which I append. Mr. Chas. Wilson shot at the club nineteen days and he bagged 544 ducks. Dr. H. C. Buechner killed on one trip of four days 127 ducks, and on another trip of three days 141. One day he brought in 36 mallards. Mr. C. B. Dicks in three days bagged 131 ducks. Mr. Hamline's big day was 58 ducks, of which 54 were mallards. John Yorgey, the Diana keeper, and a member of the club, on one day killed 110 ducks, and 104 of these were mallards. Query: Is that a thing to be proud of? And query again: What did he do with them? Mr. Melchior in one day killed 127 ducks, many of them mallards. Mr. Barrell in six days killed 192 ducks, and 150 of them were mallards. Query: Is that anything to be proud of? Mr. Shailer succeeded in killing 41 mallards in one day. Mr. P. F. Stone in ten days, or parts of days (he does not shoot afternoons), killed 318 ducks, and he told me once that he got over 40 mallards one day. Walter Dupee shot ten days. His smallest bag was 23, and he ran up to 48. Others shot in about the same ratio.

The average at the Diana club house for the past thirty days, big bags and little, good shooters and poor, has been over thirty ducks to the gun, each day, and of these by far the greater number were mallards. About half the club members shoot all day, early and late. The other half shoot about half the day, usually stopping after the morning flight. At the Upper Club such bags have not been frequent, but were possible, as those who pushed down to the lower end of the upper marsh discovered lately. I have not the scores of the Upper Club.

### Slaughter the Right Name.

I have always been friendly and always expect to be to the Horicon clubs, and I know personally almost every man mentioned above, and I belong to the Upper Club myself; yet, I repeat, slaughter is the right name for such shooting as that, and I know of no market shooting this year, anywhere, so murderous as that. I shot with market-hunters last winter, and I am invited to come there and shoot again, but I will say that I saw no such murdering as this, nor do I want to. Readers can frame their own opinions and their own criticisms, but these certainly are the facts. Probably the Horicon marsh bred 50,000 ducks this year, if any estimate can be made on such matters, and the members who preserve this last of the great Wisconsin duck marshes certainly are entitled to the sport for which they fight the law breakers, but if the marsh raised 5,000,000 ducks, I can conceive no sportsmanlike title conveyed through a club membership to kill every one of those birds possible. Let a few of them go. Give the poor birds a chance. It is just as much fun to kill 25 mallards in one day as it is to kill 50, and the man who has 25 of these great birds in his boat ought to start home and throw his shells in the water if he can't resist the temptation. That's enough, especially in these days. This big flight doesn't mean that the ducks have bred in unusual numbers this year. It means that they are passing south over this section this fall, for reasons known to no one.

I think the boys will be staggered a little when they see the above figures in print. It seems natural to go on shooting while one can, but it won't hurt to think this thing over. Mr. Stone, the club manager, grew serious

as we looked over these figures. He says he thinks a movement will be made to establish a daily limit to the bag for each gun. He thought 50 mallards would do. Half that is plenty for mallards, though a bag of 50 mixed birds would not be so bad. Mr. Stone deprecates the habit of pounding the birds all day, and rarely ever stays out after 10 o'clock in the morning.

Of course when one shoots he wants to get a bag, but there is reason in all things. Is not the matter herein worth thinking over? And is not slaughter the right name for shooting such as the above, no matter who on earth did it?

### The Story Continued.

Let us continue logically the story of destruction and depletion, not croaking, but just giving facts. It's a long way to Washington, away out on the Pacific coast, isn't it? Certainly away out in Washington the game and fish never will nor could be exterminated, could they? Well, here is what comes to me in a letter from Snohomish, Wash., under date of Nov. 1:

It may interest you somewhat to hear of the shooting and fishing in this locality, though I cannot say much in favor of it. Owing to the denseness of the forest it is almost impenetrable, and it seems to be the invariable opinion of those who have hunted elsewhere that it is the worst—the "meaneest" country to hunt in that ever was. Difficult as it is one might have some sport by simply following the cut trails, were it not that they are incessantly hunted in season and out by as lawless class of shooters as ever shouldered a gun. Three or four years ago both ruffed and blue grouse were abundant along all the trails and roads in this vicinity, but now you might go a dozen miles without seeing one. There are still a few deer not far away, but the prospect of seeing one unless driven by dogs would be dim indeed. Bears of the black variety seem to be more plentiful than any other large game, and with two or three good dogs there would be no great difficulty in getting a shot at one, especially to a person with plenty of wind and a pair of strong legs. Cougars are also occasionally met with and they seem to be of a more courageous and dangerous type than their cowardly relations of California and the Eastern States. Duck shooting is probably the finest sport to be had on this coast, at least this immediate portion of the coast. It would, however, be difficult for a duck to rest upon any of the beautiful waters of this immediate vicinity for half an hour without being shot at. Three or four years ago these same waters were full of ducks, but now they know enough to stay away. But at various points along the Sound within twenty or thirty miles of here the ducks are said to be in millions and the shooting fine.

The trout fishing is a prominent feature of this country. The streams are magnificent and have before now swarmed with trout of several varieties. But the fishers are proportionately more numerous and are fully equal to the occasion of depleting the waters. Already it is necessary to go from twenty to thirty miles away to get first-class fishing. But when one does go so far it is a comfort to say that he gets it, certainly all that any one could ask. Talking about the number of people that fish here, I must say that it is something astonishing. All ages and all sexes fish not only for sport but for the pot—mostly for the pot. The State has good game and fish laws, but very few persons pay any attention to them. Yesterday was the day of the trout season, but I think that I could safely undertake to find fifty violators of the law within two miles of this place to-day. The methods employed by the people are those which procure for them the greater amount of fish in the shortest space of time. This includes the use of dynamite, nets, spears and various other contrivances which I could not describe but do not know the names of, as I never saw them until I came here. It is the finest field for a game warden imaginable, but where they keep themselves is more than I know.

I could tell you some things about the trout, the flies which I have found to be best, etc., but I have now to limit myself in the amount of writing that I do, and consequently must refrain. Should it be desirable, however, I should be pleased at some other time to do so.

JEP:HA G. DUNLAP.

Mr. Dunlap could please the FOREST AND STREAM's large family no better than by writing more of his part of the country. Meantime, how about the continued story? If FOREST AND STREAM did not raise its voice for the sake of a different story, what would be the conclusion of this story, and how long before the conclusion came?

### The South.

Mr. Wilbur Dubois of Cincinnati writes Mr. Waters of this office as follows:

A friend and I went to go quail shooting in January somewhere in the South for a couple of weeks. Can you recommend some really good point where we could find plenty of birds, with possibly a sprinkling of woodcock and mallards? (I don't know whether Mr. Hough would say this is a hard bill to fill or not.) My friend is Mr. W. H. Peabody, Jr., secretary of the B. & O. S. W. R. R., and he will have a private car and can go to any locality, and we should be happy to have you and Mr. Hough go along if we can contrive to get away. We expect to have a lady with us and I am afraid this will spoil the affair for Mr. Hough. Perhaps he could reconcile himself to his fate, however, if informed that she is an old acquaintance of his, Dame Bang by name. In the way of femininity this will be the only local demon in the car.

We hope to get off some time in the month I have named. From your wise experience in the South I thought you might perhaps know of some particularly good locality.

Mr. Dubois was advised by Mr. Waters to go to southern Louisiana. If it should come to pass that the Western force of FOREST AND STREAM could join the party, there would be a heavy jar as we all struck the sea coast country. Of that, more, or maybe less, anon, as they say in some newspapers.

This morning Mr. John E. Ennis, district passenger agent of the Missouri Pacific Railway, invited me to his office, and asked if I did not want to join a private party in a special car, to go to Rockport, Tex., where they were invited to enjoy the hospitality of a Texas baron, a friend of Mr. Ennis's. Tarpon fishing, canvasback shooting, and later quail shooting, are among the attractions and certainties of the trip. Rockport shipped 55,000 canvasbacks in ninety days last winter, and the tarpon fishing there is better than it is in Florida, so they tell me. The quail shooting along the Aransas Pass Railroad, north of Rockport, is notably good. Invitations are coming in pretty well to-day, and I don't know where one could get more inviting ones than the two above. I handed Mr. Ennis the invitation from Mr. Dubois, and the former at once formulated a scheme to merge both these proposed trips into one, and will write Mr. Peabody to that effect. Should this be the event, and should the Western staff be able to join the car, there would be a still greater crash as we brought up against the deep-water improvements at Rockport. That would be, to use the vernacular, a trip for your life. Of this also some more after a while, and may Fortune throw 7-11 out of her checkered box, for I know of no man more deserving than myself, nor any man who would like a trip better than Mr. Waters.

### Wants to Know.

A gentleman to be known as "H." of Cleveland, O., writes as below:

I notice a letter from "F. O. S." on page 384 of FOREST AND STREAM for Nov. 4, speaking of Spring Lake. What county is this in and what is nearest railroad station? Do you know what accommodations can be had near the lake?

Also can you inform me where fair duck shooting in latter half of November, also in first half of December is likely to be found, without trespassing on preserves, where a helper can be engaged, distance not over 600 miles from Cleveland?

Spring Lake is an old channel of the Illinois River, not far below Peoria and only a few miles from the Duck

Island Club preserve, where Mr. Abner Price had the fine shooting mentioned above. Manito, on the branch from Peoria, is the nearest railway station. When I was last there Lawrence Haggerty was running a very comfortable hotel for shooters on a cabin boat. Quarters of some sort could probably be obtained if he has left. I found everything very comfortable and had good shooting on my trip. It is still open country, I believe.

As to the late duck shooting, one could not do better than to go to lower Louisiana, or to Texas. "H." would very likely find just what he wanted at Rockport, where I am told there is open shooting. The country back inland from the sea coast is also good. Reelfoot Lake, Tenn., would once have filled this bill more nearly. You have to stretch your 600 miles these days if you want a certainty of shooting.

#### Good Deer and Duck Shooting.

I am told by one of the conductors on the Wisconsin Central line that deer are very abundant along that road this fall. He particularly recommended Gills' Landing, where the Fox and Wolf rivers unite, about 210 miles above Chicago. At almost any point north of that distance, clear up to Ashland, one is in good deer country. The crop is unusually abundant this fall, but probably more illegal deer were killed this season than ever before. This is owing to the closing down of the mines in the iron country. The miners all went out hunting, and they killed thousands of deer before the law opened, though they left thousands more—because they couldn't get them.

My same informant seemed well posted on the Minnesota country through which he ran, and named points where friends of his had had good wildfowl shooting this fall. The duck shooting was excellent at Heron Lake, Cottonwood county, also at Big Stone Lake, and at Lake Traverse. It was very good at Morris and Ashby, and near Fergus Falls. This is Charlie Burton's old country. He and his friends shot for years each fall at Seven Mile Lake, not far from Ashby.

The chicken crop in Minnesota was good this year.

909 SECURITY BUILDING, Chicago.

E. HOUGH.

#### BOSTON AND MAINE.

BOSTON, Nov. 18.—Boston gunners are waiting for the flights of coot and other ducks at the best gunning resorts along shore. At Annisquam but few birds have yet been taken. A big storm is wanted to start them. Some of the gunners have been down there, but with indifferent success reported. At Essex River the shooting has yet been poor, though some black ducks have been taken. Many of the gunners the best posted, do not wait for storms for good black duck shooting. On the contrary, they watch at the fresh-water creeks and rivers, nights and mornings, and take the ducks as they come in to their favorite drinking resorts. They claim that black ducks require fresh water for drinking, and that they will leave the salt water twice a day and fly inland for it. This they do in fair weather, but in rainy weather they can get fresh water enough in the little pools up among the rocks, just above the high tides. Mr. Fred E. Whiting, assistant business manager of the Boston Herald, is anticipating a duck shoot of this sort with some friends. A number of Boston gunners have been off Dennis and in other parts of Barnstable Bay after coot the past week. They report that the black duck keeps well off shore and are very hard to get. The same is true of Chatham Bay, though some good bags of coot have lately been made there. At Brant Rock there has been but little good shooting yet. No geese have flown yet, and ducks have not yet been plenty.

Gov. William E. Russell is back from his fall shoot in Maine. This year he has spent considerable time in the vicinity of Poland Springs, making that celebrated resort his headquarters. It is reported that he has not succeeded in getting a deer, though several have been seen in that neighborhood. One was killed in the town of Hebron, only a few miles away from the Governor's hunting ground, last week. A couple of noted sportsmen of the Androscoggin Gun Club, of Lewiston, Me., Mr. G. R. Hunnewell and Mr. E. L. Post, gave the Governor and his distinguished party a beautiful day's sport with their excellent bird dogs. The Governor is said to have made some excellent shots, bringing his bird down with the left barrel on a long distance. The Governor is much pleased with partridge shooting in the vicinity of Poland Springs. Messrs. Hunnewell and Post were congratulated by the Governor and is party on the fine training and beautiful work of their dogs, and the party will doubtless try the early woodcock and partridge shooting another season there, and with the same gentlemen and their dogs.

A movement is on foot in Lewiston, Me., for the formation of an association of Maine sportsmen and gunners, for the purpose of liberating different species of game birds. The association is proposed to be something like the Massachusetts Fish and Game Protective Association, in its work toward the acclimatization of game birds at least. This movement originated with Mr. G. Gay, of the John P. Lovell Arms Co., of Boston. Mr. Gay is soon to issue a circular letter to the sportsmen and hunters of that State, calling a meeting at Lewiston, Dec. 7. In the circular Mr. Gay will call attention to the success the Massachusetts Association has had in liberation of sharp-tailed grouse from North Dakota, pinnated grouse from Illinois and Iowa, and quail from the South. He will call attention to the fact that Maine is believed to be admirably suited to the propagation and growth of such birds as the black game of Norway and Sweden. But in this movement Mr. Gay, or any other enthusiast in the propagation of game birds, will find that it will require special acts of the Maine Legislature to make it legal to let loose any sort of game or fish in the woods or waters of that State. The Fish and Game Commission of Maine will be likely to look upon any such proposition as one requiring supervision, lest some sort of game be introduced that shall prove inimical to the noble game and fish already there. It was proposed in the Maine Legislature, at its last session, to take some steps toward the introduction of black game from Norway and Sweden, but the measure was killed, partly because there was a fear that the game already indigenous to the Maine woods might be injured thereby.

Still the "tracking snow" is very slow about coming, and the deer hunters, all ready to go to Maine, are waiting. Up to Nov. 19 there had been no tracking snows in the lower part of Maine, though a couple of inches had fallen in the northern sections, only to go off about as soon as it

came. The body of leaves is so great on the surface that deer hunting is next to impossible. The deer mentioned in the papers as captured of late, are doubtless stumbled upon, or possibly—though I dislike to say it—taken with the aid of dogs. On the first snows deer hunting must be excellent in many sections of that State. I have a number of reports from different sections in Maine, which mention a good deal of hunting that will be done as soon as the snow comes, by resident gunners. If city sportsmen wish to accompany them, they will doubtless be welcome, providing they are willing to pay the resident hunters well for guiding and toting the game, if any is taken. The same reports say that the amount of lumbering to be done in Maine this winter is unusually small, and thus a great many men, who would otherwise have been employed in the woods, either chopping or teaming, will have the time on their hands, and much of it is likely to be used in hunting. It looks like a hard season for the game.

Indeed, Maine grows more and more in danger of being "hunted to death." Her own people are very enthusiastic over the abundance of big game reported this year, and the way that it is believed to be increasing, and every man and boy is either the owner of a rifle, or soon will be. From its own people there will be gunners enough to destroy all the game in the State, if the increase in sporting enthusiasm is continued. Then the fame of the State is reaching across the water. A London hunter, with "a plenty of money," has lately been in Bangor, and he has had great luck—so the papers say—and has killed an albino deer in the woods somewhere above that city. He is reported to be greatly pleased with his success, and to declare that he will be back another season with a big party of his friends to hunt big game. Then, the amount of reporting that the daily and Sunday papers are giving game matters in Maine is sufficient to send an army of deer hunters into that State. These reports only "score the hits;" the misses are never mentioned. Such is scarcely fair shooting, but it has its purpose just the same; a false notion of Maine hunting is put into the heads of even those who ought to have sense enough to know better. But nevertheless the tendency is greatly against the retention of a supply of game in the wilds of Maine.

SPECIAL.

#### MORE ABOUT THE .22.

HORNELLVILLE, N. Y., Nov. 4.—*Editor Forest and Stream:* In all probability the air must be awful thin in Exeter, Neb., where "Diamond Walt" can do such great work with a .22 short rim-fire cartridge. It may be that the yards are shorter out there, and the wood soft, because the .22 short R. F. here will not penetrate 5 in. of pine nor 3 in. at 200 yds.

We have some good shots here, but they can't kill a woodchuck that is twice the size of a prairie dog at 303 yds. with a .32-40. I do not believe that any one can see a prairie dog at 303 yds., let alone shooting it.

I am a gunsmith and sell the best of all kinds of rifles. I belong to the rifle club, was champion of the county for seven years and won the medal this year, so I know a little about rifles. I have a new plug hat, if "Walt" can hit it at 325 yds. off-hand with his .22 short Winchester I'll give him the hat and \$10. If he does not hit it in five shots it will cost him \$5 to treat; or I'll let him shoot at the hat all day and give him a dollar every time he hits it, if he will give me twenty-five cents when he misses. The .22 long rifle is the proper cartridge to use at any range over 100 yds.

J. OTIS FELLOWS.

TOLEDO, O.—*Editor Forest and Stream:* Having read in recent articles of FOREST AND STREAM the experience of various brethren with the .22cal. short cartridge, I was tempted to experiment a little on my own account, which I did with the following result:

I took the side of my barn as a starting point and measured off with a line 330 yds., or 60 rods, and then elevating the sights I fired several shots. Upon going to the barn I found that the bullets had gone entirely through the lin. pine boards which compose the side of the barn; how much further they went I am unable to state. Every one of the bullets struck fairly and made a neat, round hole. The cartridges used were Winchester .22 short; the gun a Winchester single shot .22 short, having a 24 in. barrel, which I have used for five and one-half years and which in that time has been fired many thousand times without having cost one cent for repairs. Thus much for the penetrating power of the .22cal. short.

AUTOKEE.

NEW HAVEN, Conn. Nov. 4.—*Editor Forest and Stream:* I have used a .22cal. in outdoor shooting, more or less, for the past five or six years. My present .22 is a Marlin repeater model of 1891, with a twist in the rifling of one turn in 18 in. It is fitted with Lyman front and rear sights (no middle sight), and will take short, long and long rifle cartridges indiscriminately in the magazine. I give it the best of care, particularly the inside of the barrel.

I have never made any long shots such as "Diamond Walt" speaks of; but I once shot a woodchuck sitting in the mouth of his burrow, so that I could see nothing but his head, which disappeared at the report. Walking up to the burrow I was surprised to find the woodchuck stone dead. He had been killed instantly, and had not had time even to slide down his burrow, which they nearly always manage to do, if within a foot or so of it. The distance actually measured 97 yds. I have often killed muskrats, ducks and grebes at from 150 to 200 yds., and am perfectly satisfied in my own mind that the .22cal. is good up to 300 yds., if, as "Diamond Walt" says, "one knows how to use it."

The other morning a friend, also a lover of the .22cal., and myself went out to a small pond near here in the hopes of seeing some ducks. We arrived at the pond just before daylight and found a man with a shotgun already there, apparently also looking for ducks. When light enough to see we saw four ducks in the center of the pond. The pond is somewhat circular in shape and about 300 yds. in diameter. My friend and I opened on the ducks and all four of them were being blown ashore dead before the man with the shotgun had a chance to fire once, they being out of range for him. They proved to be ruddy ducks, and a more disgusted man than he of the shotgun I have seldom seen. They now adorn our collection. Of course I do not mean to say that we only used four cartridges that morning, but our record was not a bad one considering.

The .22 long rifle is a cartridge far superior to the .22-short for range, accuracy and penetration; as I and my friends have often proved by firing at stationary objects on the water. There is not so much variation and a considerably flatter trajectory. I sincerely hope that the devotees of the .22cal. will increase as its virtues become better known.

TELILLA.

#### Editor Forest and Stream:

I think I have used nearly every make of .22 rifle, and while I strongly recommend them for small game, they are far too small for deer and other large game. As regards their range, it is far greater than usually supposed. With a .22 short cartridge from a Merwin & Hulbert rifle I shot a large osprey 5 ft. 8 in. from tip to tip at 120 yds. distance, the bullet going fairly through the neck. A friend of mine who was standing fully 200 yds. further off than the bird said that the little bullet sang past him high in the air, and was traveling very fast. With a .22 Winchester I made some good shooting from a small bluff at a log in the river, some 600 or 700 yds. away. The cartridge in this case was the .22 long rifle. The first deer I ever shot fell to this gun, with a long rifle bullet in the heart. On another occasion I fired four shots at a deer quite close to me without any result. Now I use the .45-90. The .22 short will penetrate about 3 in. of well seasoned pine, but wood is a poor thing to test penetration with, unless the very greatest care is used in getting timber, sound, of the same age and degree of solidity. There is too much variation in "pine," as many call spruce, hemlock, Norway pine and even basswood. What we need is some invariable material. A self-registering, pneumatic target answers very well for tests of impact, and the ranges tell the trajectory and range of a rifle. I shall try sheets of felt in my next test and will write you my experience. Many of my friends say that wood seldom tells the truth. I have shot a .23 short through 4 in. of clear, sound pine, and on trying it again on similar wood (to all appearance) I have found the bullets only penetrated from 2 to 3 in. A long rifle will go through a 5 in. pine slab (white pine, I mean). All these penetration tests were made at 20 and 30 ft. I very much doubt a .22 short going through 4 or even 3 in. of very soft pine at 200 yds. At least, I have never seen any one do it and never did it myself. Eastern and Western yards are so extremely alike that the error between the measurements may be disregarded, unless indeed the distance is measured by a human "pedometer." I hope to hear some more of this. L. D. VON IFFLAND.

#### The Ontario Moose Season.

BELLEVEILLE, Ont., Nov. 10.—Deer have not been killed in such large numbers as usual in this county since the season opened, and partridges and ducks have also been scarce. Writing from Bobcaygeon, however, Mr. Robt. Foy states that one day last week eight deer took the water in Concession Lake at once before the dogs, and four of them succeeded in escaping.

Incited probably by the example of other law-breakers from your side of the line whose exploits in violation of our game law have been published to the world in full detail, two New Yorkers have invaded our territory and have gone to the Mattawa country in pursuit of moose, which are protected under the laws of this country until Oct. 20, 1895. The game warden has been informed of the facts and the apprehension and punishment of these outlaws and the ruffians whom they bribe to guide them are among the probabilities of the near future. R. S. B.

#### Deer in the Cabbage Patch.

MT. PLEASANT, L. I., Nov. 16.—Some weeks past we noticed in our garden, which is some 50 yds. from the house, quite a well-worn deer trail. Surprised that deer should come so near the house, we investigated the matter carefully, and learned that a fine buck and a doe made regular trips to our cabbage patch at an early hour in the morning. Figuring that the loss of some fine cabbages was well worth a shot at the buck, we waited until the morning of the 10th and had no trouble in securing the buck by a well-calculated shot.

This buck, so far as we can learn, is the heaviest deer taken this year on the island. Weight dressed, 275 lbs.; age, 4 years; with an unusually perfect head and antlers.

F. L. SCHENCK.

#### To Refrain from Quail Shooting.

PITTSBURGH, Pa., Nov. 16.—*Editor Forest and Stream:* At a special meeting of the Pittsburgh Gun Club, held Nov. 10, at W. S. Brown's gun store, 520 and 522 Wood street, the following resolution was unanimously adopted, viz.: Owing to the scarcity of quail in Pennsylvania at present time the members of the Pittsburgh Gun Club are respectfully requested to refrain from shooting same within the State of Pennsylvania during the season of 1893. By taking this action and securing the co-operation of other sportsmen's clubs, there is every reason to believe the quantity of quail will be very materially increased during the season of 1894.

ELMER E. SHANER, Sec'y.

#### Long Island Deer and Ducks.

SAYVILLE, L. I., Nov. 20.—From the best obtainable information it is estimated that sixty deer were killed on Long Island in the season which closed last Thursday. Of these twelve were killed by local parties, including one nine-year-old buck. A pet doe owned in Sayville came to a tragic end at the hands of a so-called sportsman from New York, who bought her for a consideration of \$25 and then foully murdered her. As might have been expected, his work was clumsily executed, for though shooting buckshot in a barn he missed his first shot.

Ducks are very scarce at present, owing it is said to the continued mild weather. They will probably be back again in numbers later.

#### Pennsylvania Game.

SUSQUEHANNA, Pa., Nov. 13.—Our gunning season promises well here. Birds and rabbits are plentiful, with a few wildcats thrown in. I drew a bead last week on one in Wolf Swamp, about fifteen rods off, with No. 6 shot. It did not stop him. Night coming on I called the dog off, promising to follow him up another time. O. H. S.

#### "Chained to Business."

GRIFFIN, Ga.—Your paper is all that a sportsman could wish. It is to those who are bound by business ties a source of pleasure, and they can, after reading it, "clank their chains" and think of pleasant things that "used to be."

P. I.

### Monroe Marsh Ducks.

DETROIT, Mich., Nov. 18.—The Monroe Marsh Club at the head of Lake Erie is probably one of the finest duck preserves in the West, as it comprises a very large amount of wild rice land, and also has a splendid bay filled with wild celery, and is the first place that the canvasbacks stop to feed coming from the north. A great many canvasbacks are killed there every year. The highest bag this season was made by Deeming Jarves, on Nov. 17, being 48 canvasbacks. The same gentleman killed on Nov. 15, 58 mallards, and on Nov. 16, 30, making 136 ducks for the three days' shoot.

### Indians and Game.

MITCHELL, S. D., Nov. 14.—Word was received here from Fall River county that about 200 Indians passed through Edgemont on their return from a hunt in the mountains. The Indians say they secured over 700 deer and antelope besides other game. The people of Fall River county are protesting that the Indian agents are doing absolutely nothing to stop this fearful slaughter of game, and while the white settlers are prohibited from killing deer and antelope even for their own use, the beefed redmen are permitted to kill all they want and more too.

H. G. NICHOLS.

### Michigan Quail and Grouse.

SAGINAW, Mich.—I have been out after birds near home two days since the season opened, but find that where quail were very plentiful last year, they are very few now. No doubt they are winter killed, but am glad to say there are enough left over for seed, so that with an open winter they will be thick again another year. Ruffed grouse are more plentiful than for the last two or three years. Some very large bags have been made, I hear, though so far I have not been fortunate enough to get over half a dozen birds in a day's tramp.

W. B. M.

### The Gatteau Country.

ATHENS, Ont., Nov. 15.—We have just returned from our annual deer hunt up the Gatteau in Quebec; secured fourteen fine deer and over 700 lbs. of salmon, besides bags of ducks, partridges, etc. Took a lot of kodak views of scenes on the trip, but the box containing plates got broken and plates were spoiled.

B. L.

### "Piseco" at Port Royal.

COMMANDANT'S OFFICE, U. S. Naval Station, Port Royal, S. C., Nov. 10.—*Editor Forest and Stream:* I wish you could be made to realize how much your complimentary editorial, in issue of the 11th inst., just received, is appreciated, not only by me, who gets the lion's share of the praise, but by the little band of whites around me who are in daily contact with poverty and distress, beyond my wish or power to describe, and who welcome every dollar or other articles sent to help us help the starving.

It is now over two months since the deluge. The little corn, peas and potatoes that, ruined for all other purposes, could be and was used as food by the hungry, is gone. Through some unknown cause the fall stock of bass and "winter trout" (squeteague) has not put in its usual appearance. I fished four hours a week ago. Where last year at this time I would have been as sure as a fisherman can be of a goodly catch of sheephead and whiting, a few fin, yellow-tails was my only reward—no end of fotheadish my punishment. I fished for recreation. Others go daily in the boats Gov. Tillman so kindly gave me, to get food for their families, and never now with anything like success, and in another month the small remainder will be gone, following the prawn and shrimp to Florida; and all will stay gone until that happy day late in March comes that brings the drumfish.

Houses, furniture, bedding, stock and crops are gone, and nearly 400 people on this island alone are living now on the food doled to them weekly by the Red Cross Association, and what do you think this ration is? Let me tell you, and you try to see how far it would go with you. For a family of 7 persons, for one week, 1 peck of grits, 1 lb. of pork. Reduce that to the share of one crippled person, but still with an appetite: grits,  $\frac{1}{4}$  qt. per day, pork  $\frac{1}{4}$  lb. per day.

Of course there are lazy people among them who wouldn't work a stroke if they could get enough of anything eatable to keep hunger away, but the above-described ration don't fill the bill or even a small part of their stomachs. But there is not work of any kind for the large majority. The phosphate works are all stopped, dredges and flats sunk and wrecked. They would rebuild their homes, and such as have been able to save of their own wrecked cabins—"rectified" they call it—or of their neighbors' that have floated on to their land, enough lumber for a start, are without hardware and tools. The Red Cross is now issuing nails, and a worthy lumberman, Mr. Amos Cummings, has offered at cost to Miss Barton as much rough lumber as she wants, and I am in hopes of getting a share for our poor.

Of course we personally do what we can, and many a boiler full of grits and pork has gone from our kitchen; but it is a task beyond our means to begin to do what we would like to do—and feel ought to be done. So we all call on our friends to help us, and I flatter myself that among the FOREST AND STREAM clientele there are still a goodly number of friends of

PISECO.

### A Sick-Bed Vow.

BETHANY, W. Va.—I find myself this fall living in a beautiful wooded hill country in West Virginia, a country whose scenery is as beautiful as any I have ever seen, but which contains but little game. Three or four weeks ago I snatched a few hours from my very confining duties and tramped with dog and gun over these grand hills to see if they would yield any feathered game. I succeeded in bagging a few quail, doves and one ruffed grouse. Since then I have been suffering from a severe attack of sickness. No one but an ardent lover of sports afield can realize with what intense longing my thoughts have dwelt, as I lay in bed, on the pleasures of bird shooting. I made a vow that I would spend my two weeks' vacation at Christmas in quail shooting. Now I write to beg some fellow sportsman to tell me, either through the columns of this paper, or, better, by a letter directed to the undersigned at the FOREST AND STREAM office, where I can find good quail shooting not more than 300 miles from Wheeling, W. Va. Fresh chicken shooting would be preferred, but I suppose that is out of the question. I do not inquire about accommodations. All I wish to learn is where quail are plentiful.

SHEPARD.

### "American Big-Game Hunting" Abroad.

THE hunter and naturalist will find a never-failing charm in these papers and in the beautiful illustrations. \* \* \* There is variety of sport as well as variety of style, and bison and elk, blacktail and wapiti, prong buck and bighorn are among the wild animals whose trail is followed by the club. The scene changes with the nature of the sport and each writer gives himself something of the character of a student of nature as well as a lover of manly exercise, while there are few who do not give evidence of a dash of the vigorous and characteristic humor of the West. *The (Edinburgh) Scotsman, Oct. 28.*

### Pennsylvania Railroad Tours to Washington.

Pursuing the policy which has been so successfully maintained during the past few winters, the Pennsylvania Railroad Company announces a series of pleasure tours to Washington for the fall, winter, and spring of 1893-4. These tours have won great popularity on account of the universal interest which attaches to the National Capital, the low rates, convenient limits, and liberal conditions which the tickets bear.

The dates of leaving New York are November 30th, December 14th, December 28th, January 18th, February 8th, March 1st, March 22d, April 12th, May 3d and May 24th.

The rate for these tours will be \$13 from New York, Brooklyn and Jersey City, covering all necessary expenses excepting meals en route. The special train will leave New York at 11:00, Brooklyn 10:40, and Jersey City 11:14 A. M., and arrive in Washington at 5:30 P. M. A tourist agent and the character of the writer proxy each tour and render valuable service in the welfare of the participants.

On the third day the parties will leave Washington at 3:15 P. M., thus affording considerable time in the most beautiful and interesting of American cities. Tourist agents at 1106 Broadway, N. Y., and 860 Fulton st., Brooklyn will book parties in advance for hotel accommodations at Washington.—*Adv.*

## Sea and River Fishing.

### THE TRIGGER FISH.

MR. P. G. SANFORD, of the Winchester Arms Co., has added to the articles of *virtu* in his cosy office, in the same block with FOREST AND STREAM, a handsome mounted specimen of the trigger fish. The curious creature rewarded and astonished that gentleman one day last October, when he drew up his line from Long Island waters, at the old wreck, about half a mile off Westport, Conn. Mr. Sanford was fishing with fiddler bait and was intent on the capture of blackfish, the wonted and prosaic fish of the neighborhood, and when this curiosity stuck its head above the surface, the fisherman did not know what to make of it, until he found that it had a trigger, and then, being a gun man, Mr. Sanford recognized it as a specimen of the trigger fish, common enough in some waters, but a rarity in the Sound. He brought the specimen to New York and put it into the hands of a taxidermist for preservation. His pride in the handsome trophy would be complete if it were not that the fish is a muzzle-loader.

Our illustration, taken from the "Fishery Industries," shows the peculiar first dorsal fin from which the fish takes its name. There are three spines which, when erect, can be lowered only by pressing back the last one behind. Pressure against the large spine in front has no effect, nor against the second one, but when the third is pulled back as one would a trigger, all will fall, with a sharp click, and lie flat, sinking into a recess in the back like the trunk of a centerboard. Mr. Sanford has been studying this natural trigger device, and one of these days probably we shall see it applied to the Winchester arms. These particulars of the species are found in the "Fishery Industries."

"The leather-jacket of Pensacola (*Balistes caprisicus*), called 'trigger fish' in the Carolinas, and at Key West and the Bermudas known as the 'turbot,' occasionally finds its way as far north as Massachusetts. It is, however, of no importance north of Florida. In the Bermudas it is considered a valuable food fish. According to Mr. Stearns, 'it is very common in the Gulf of Mexico from Key West to the Mississippi River, and lies in deep water near the coast on the ground where red snappers and groupers are caught. It is one of the most abundant species. In regions where it is not eaten it is regarded as a pest by the fishermen from its habit of stealing bait from their hooks. Its manner of taking the bait is rather peculiar, I think, for instead of pulling the line backward or to one side it raises it up so quietly that the fisherman does not perceive the motion, and then, by careful nibbling cleans the hook without injury to itself. Expert fishermen, however, can tell by the 'lifting of the lead,' as it

TRIGGER FISH.

is called, what is going on below, and know what they have to contend against. The usual remedy is to seek other fishing grounds where leather-jackets are not so troublesome. When one of these crafty fish has been hooked there is not much probability that it can be landed, for its sharp, powerful teeth are almost sure to cut some part of the gear, enabling it to escape. I have several times known of their biting in two the large red-snapper hooks on which they were caught. They remain throughout the year on the fishing grounds, where the water varies from ten to forty fathoms. On these same grounds it is probable that they spawn.

"Only adult species have been seen in West Florida. More could probably be learned of its spawning habits in the vicinity of Key West, where it occurs in shallow water and quite near to the shore. At Key West it is known as the turbot, and is a favorite article of food. It is to be seen almost daily in the market.

"The skin of this species is used for scouring and polishing purposes at Key West and the Bahama Islands. In the Bermudas also the skin of the turbot is used by carpenters almost to the exclusion of sand-paper, the former being better adapted for fine work in polishing wood."

### ANGLING NOTES.

#### Spawning of American Saibling.

THERE are but three bodies of water in the United States where the American saibling are known to exist. In one of these three lakes, Sunapee Lake, in New Hampshire, the saibling affords excellent fishing, as the fish are abundant and of good size. On the shore of this lake is the only hatchery in the United States devoted in great part to hatching the saibling artificially, and therefore it is of especial interest. A magnificently located and thoroughly equipped private summer hotel and sanitarium is in process of erection at Soo-Nipi Park, the property of Dr. John D. Quackenbos, at Sunapee Lake. The Doctor spent last week on the ground superintending important modifications in the plan. He writes me under date of Nov. 4:

#### Poem in Prose.

"I have just returned to New York from the dreamy haze of a New Hampshire Indian summer, leaving behind me on the Lighthouse Shoals at Sunapee the grandest sight ever looked upon by angler—the American saibling spawning on their self-selected mid-lake beds. There, in water from one to two feet deep, in all the glory of their nuptial tints, flash schools of these dazzling beauties, now circling in proud sweeps about the rocks they would

select as the scenes of their loves, the poetry of an epithalamion in every motion; now offering to the sunlight in graceful leaps those gleaming sides of gold dashed with vermilion; anon, suddenly darting in little companies, the broad margin of their fins seeming to trail behind them like white ribbons under the ripples. Oh, what a wedding garment. Nature has given such to no other salmonoid; even death does not rob our saibling of it. In three hours, on Wednesday, Nov. 1, I helped to take eighty-one specimens, ranging from 1 to 5 lbs. each, and on Thursday, in three and a half hours, we captured sixty-one. It is not considered advisable to keep the nets on the beds for more than three or four hours a day, lest the fish should become alarmed and desert the shallows for deeper and less accessible grounds. There seems to be no limit to the hordes that are coming up from the depths on to that three-acre reef, and if the weather prove favorable the screens in the new and elaborately fitted hatchery bid fair to be crowded with eggs to the possible capacity of one and one-quarter millions."

#### Cold-Featured Business.

"Already there are 300,000 brook trout eggs in situ, double the largest number ever taken before, and forty huge landlocked salmon (from 6 to 15 lbs. each) await the accomplished hand of human accoucheur. Too great praise cannot be lavished upon the faithful attendants at the Sunapee hatchery—Mr. Alonzo J. Cheney, Mr. Wm. W. Hubbell and Mr. Henry C. Brown, of Hudson Center, the last-named gentleman, a member of the town board of education, who has consented to give his time as long as necessary to the prosecution of the good work. No weather deters these men, no hardship. With icy hands they tenderly loose spawner and milter from the net's clutch at dead of night, up to their breasts in freezing water when the necessities of the case demand it, beaten and drenched with tempest, but even with sprightliness unchilled, always cheerful, never complaining, no half-hearted service, no profanity if things do not go exactly right. I have nowhere seen such disinterested devotion. And then the courtesy shown to visitors, who must at times be very trying. Some afternoons there are regular receptions, and over and over again inquiring lady and wondering farmer must be told the old story—and it is always fully-told without a sign of impatience. Verily one may sit on the porch of the camp nowadays and take lessons in genuine politeness—by which I mean kindness kindly expressed.

#### Then and Now.

"Nor can one help contrasting the success which has providentially crowned the efforts of our new Commissioners with the comparatively scanty 'take' of previous seasons. The lie has been most effectively given to malediction. The reported allegation that no new hatchery was needed at Sunapee because 'the ignoramus appointed by the Governor could not half fill the old' (\$375 woodshed), has been demonstrated to be as preposterous as it was malicious; and above all, the gentleman angler and sportsman finds, in the way business is conducted at the station of the N. H. Fish Commission, abundant confirmation of his opinion that fish catching and fish hatching may be successfully carried on in an atmosphere of refinement and morality."

#### Postscriptum.

Since receiving the letter above quoted from Dr. Quackenbos I have heard direct from the Sunapee hatchery in a letter from Mr. Brown, that on Nov. 3, 148 saibling were taken in the nets; on the 4th 26, and in the forenoon of the 5th 16, making a total of 332 in five days. This catch of spawning saibling has not been equaled in any previous year. The saibling yields about 1,200 eggs to the pound of fish, and 200 at least of those already captured are females averaging 3 lbs. in weight. Say that they will give 3,000 eggs each, the fish now in hand will furnish 600,000 eggs and the season is not yet over. But 600,000 is a remarkable result and one not before dreamed of at the Sunapee hatching station. Looking over my memoranda of odds and ends pertaining to fishculture I find that in 1891 the catch of spawning saibling at the Sunapee hatchery between Sept. 2 and Nov. 2 amounted to a total of 128 fish. The saibling taken in September and early October of that year must have been taken in the nets at the mouth of the brook, on which the hatchery and camp are situated, and not on the Mud Lake shoal to which they usually resort for spawning purposes. The largest catch in one day in 1891 was 61 on Oct. 31. The unusual catch of spawning saibling this year is particularly gratifying for other reasons than those already stated, as this lake must be the one to furnish saibling eggs and fry for other waters, if other waters are to be stocked with this beautiful game fish; and it is not at all probable that the N. H. Fish Commissioners will consent to sending eggs to other waters before Sunapee Lake itself is "made stiff" with the fish which is often called by the name of the lake. As I am closing these notes another letter comes to me stating the eggs already assured at Sunapee amount to over a million, and the maximum number any previous year was 300,00.

A. N. CHENEY.

### The Seductive Smelt.

QUEBEC, Nov. 4.—In your issue of 21st ult. that grand fisherman, sportsman and fluent raconteur Chas. Hallock relates of the "seductive smelt," and it would seem the sport is rather costly in the localities he mentions.

Here in Quebec it is now at its zenith, and all the expense attached is time, a bamboo rod, piece of cord and half a dozen small hooks, some folks put the whole half dozen on their line at once in the same manner as flies, but with a few shot for sinker, and three fish at a time is a common occurrence. Some connoisseurs use worms for bait, but the majority a bit of red meat and then a smelt cut up, which these small cannibals seem to prefer. The best time is when the tide begins to flow to about three-quarters full, and then at the finish of the ebb. The wnarves are lined with fishermen of all sizes, ages and tackles. Forty rods on one barge, all catching, is not an unusual sight. Even the ladies enjoy the sport from the decks of the Quebec Yacht Squadron.

Good smelt fishing is to be had in August at all the watering places on the lower St. Lawrence, Muncy Bay, Caconne Riviere Ouelle, Kamoureska, Riviere du Loup, etc., etc., and at Quebec from the beginning of October to late in November. Fresh smelts sell at from eight to ten cents per pound, and at one time I have known the seiners to sell their prospective draw for 75 cents to \$1,

the purchaser getting whatever that draw of the net might contain, the uncertainty making it interesting. Whatever may be the cause, it is a fact that within the last ten years smelts have been exceedingly more plentiful than formerly, and the quantities taken make it a boon to the citizens.

The tommy cod, although taken in quantities in the lower St. Lawrence all summer, only arrives here about Christmas, when they are taken through the ice; Cabanes built on the ice of the bay of St. Charles River, are often leased to parties for the tide, but it is tame fishing and the fish not for a moment to be compared to the lively smelt, which is a real delicacy. Both smelts and tomcods are only caught in tide waters, Three Rivers being their limit on the St. Lawrence. X 95.

**"Frozen Fish Thawed Out."**

MONTREAL, Can.—Previous to my last visit to the north of France the downpour of rain had been very great. The canals had overflowed into the fields. Winter setting in with unusual severity gave us a solid sheet of ice on the ground both sides of the canal banks. Until the snow came we enjoyed the best of skating, and while skimming along we frequently noticed large fish imbedded in the ice, and several of these frozen fish we cut out and carried home quite stiff. I saw them thawed out before the fire. They became quite lively and would doubtless have remained so had they been restored to their element.

DAVID DENNE.

**In Washington Waters.**

SPOKANE, Wash., Nov. 8.—The first of the present month was a sad one for all fishermen. On that day the law regarding trout went into effect. It did not, however, affect those who are fond of catching salmon, which come up above the mouth of the Little Spokane, about twelve miles below the city. Some friends went out last week and returned with three salmon weighing 9, 11 and 12lbs. respectively, all caught with a 7-ounce rod and spoon hook. A. B. K.

**Lake Minnebella Black Bass.**

MR. GEO. ELMER, of Minneapolis, sends us a photograph showing a catch of 143 black bass made on June 27 and 28 on Lake Minnebella, seven miles south of Litchfield, Meeker county, Minn. The top string of 20 fish weighed 70lbs., and there are 62 fish which weighed 2½lbs. on the average. The fish were taken with live frogs for bait and used 7-0 Kirby Carlyle hooks.

**The 999th Time.**

AND the next time will round out the 1,000th repetition of this injunction to no-name correspondents who send notes for publication, requests for information, money for papers or books. Sign your name. Anonymous communications will not be published. Anonymous inquiries will not be answered. Anonymous senders of money will not have their orders filled.

## Fishculture.

**Pennsylvania Fish Protective Association.**

THE eleventh annual meeting and dinner of the Pennsylvania Fish Protective Association was held in the rooms at No. 1020 Arch street, Philadelphia, Tuesday evening, Nov. 14, and was a most enjoyable gathering of members and their friends. President Henry C. Ford, of the Pennsylvania Fish Commission, read a valuable paper, which is here printed in full, reviewing the work of the Commission; and a most gratifying and encouraging review it is. Mr. A. M. Spangler, who has the credit of being the father of the Association, and who during the eleven years of its existence has been untiring in promoting the interests with which it is concerned, read an address full of good counsel, and worthy the careful reading and reflection of even a wider circle than that to which it was immediately addressed.

The Pennsylvania Association is an organization of growing strength. It is engaged in an unselfish and wholly public-spirited work. It should have the active, hearty, co-operation of thousands where it now has the support of tens. As it shall become better known, as the people of Pennsylvania shall come to understand what it means for them and for their children, they will give it increased recognition. In these days, when for the most part every man is for himself, and when most of us appear to believe that after us is the deluge, and act on that principle, it is a duty to support and uphold such an organization as this Pennsylvania Association, a duty which belongs to every citizen of the State who is intelligent enough to appreciate the importance and necessity of putting an end to fish-basket greed and imposition.

**Work of the Pennsylvania Commission.**

Gentlemen of the Pennsylvania Fish Protective Association:

Six years ago, when the members of the present State Fish Commission succeeded the former board, the retiring president of that board extended his welcome in these discouraging words: "You will find that your task is a thankless one. No matter how earnestly he may labor for the good of the State, a Fish Commissioner will receive more kicks than blessings." Yet after six years' incumbency as Commissioners, although we have been assailed at times, it has only been after energetically enforcing and upholding the laws; and the abuse has come almost solely from that class whose interest has been to profit by their violation.

We would briefly call your attention to some of the good work accomplished by the State Fish Commission. It has fitted our rivers and streams for the increase of fish by tearing out the illegal devices created for their wholesale destruction. It has established a cordon of wardens, who patrol the rivers and streams of our Commonwealth as policemen watch the streets of a great city, who are alike the terror of poachers and illegal fishermen. Laws are respected only when they are enforced. As a result of the Commission's work in this respect, the fishery laws are no longer the dead letter they were only a few years since. There is a universal sentiment throughout the State that renders their violators more and more the object of public obloquy. The man who takes a trout out of season or under size, is to-day noted and marked as guilty of an unmanly act, and as one capable of meaner deeds.

Your rivers have not only been cleared of destructive devices, but by artificial stocking their capabilities have been increased. We scarcely need remind you of the good work of shad restoration in the Delaware, where the production has increased sixfold in six years; or to the great increase in the yield of whitefish and pike-perch in Lake Erie through the millions of these fish planted from our Erie hatchery. The Commission has restored and kept in condition hundred

As WITH fishing tackle, so with all appliances and equipments, standard articles, novelties—everything and anything for the angler, the shooter, the camper, the amateur sailorman—the sportsman. The FOREST AND STREAM pays its advertisers and pays them not doubtfully nor sparingly, but beyond all question, and in rich measure. This is not theory, nor unestablished assertion, nor unwarranted "talk" for the purpose of getting advertisements. It is a plain statement of accomplished fact. Witness the experience of FOREST AND STREAM advertisers. We are proud of the fact—proud of the paper and its "earning capacity" for its advertising patrons.

of trout streams in spite of incessant fishing, and in scores of our mountain lakes new and better varieties of fish are now caught in addition to their former indigenous inhabitants. The Commission is daily receiving information of present success and future possibilities.

The pike-perch deposited in the upper Delaware have so increased that they are taken in large numbers from Lackawaxen to Hancock and are gradually increasing in the lower reaches of the river.

Large numbers of smolts, the young of the Atlantic salmon, are present in the mountain tributaries of the upper Delaware where they were planted two years ago and give promise that the day may come when the salmon angler will cast his silver-doctor and Jock-Scott in the splendid pools of our noble river.

During the past year the Commissioners have deposited in Pennsylvania waters of brook trout and other species of trout, about 4,000,000; of whitefish in Lake Erie, 25,000,000; of lake herring in Lake Erie, 1,540,000; of pike-perch, 30,000,000; a total of over 60,000,000 of these varieties of fish alone.

We hope next year to make a large addition to these figures from the output of the new shad hatchery which the Commission will have in operation next spring—an appropriation having been made for its erection by the last Legislature. And yet this same Legislature was either so indifferent to the future fishing interests of the State or so ignorant of what they were doing that they passed an act legalizing the re-erection of fish baskets in our rivers, although these had been destroyed by the Commission at great expense to the State. This, too, in spite of the special recommendation by the Governor that severe laws should be passed for their complete abolition. This act meant the obstruction of every river and stream in the Commonwealth by illegal devices, it meant the annulment of the usefulness of the Fish Commission in stocking the Commonwealth's waters; it meant the destruction of the restored industry of shad production in the Delaware. It assured the depletion of the mountain trout streams as well as the lowland tributaries of our great rivers. It meant the retrogression of fishculture and the triumph of barbaric methods. In short, it meant fish temporarily plentiful for individual profit and the lasting poverty of our waters for the people. But this iniquitous act was not permitted to become a law. Pennsylvania fortunately possessed a chief executive who had the courage to stand up for the rights of her people against the greed of a few. The hands of progress were not turned back on the dial and the friends of fish protection and of fishculture are indebted to Governor Pattison for the veto that saved Pennsylvania's good name.

This year has been a busy one in the annals of the State Fish Commission. Its splendidly illustrated report with its elaborate history of the fish of Pennsylvania, stands at the head of similar State publications, and has secured it the approval of the scientific world. The other publication of the Fish, Fishing and Fisheries of Pennsylvania, intended for the Columbian Exposition, has besides had wide circulation throughout the State. The State Fish Exhibit at Chicago was another work requiring close study and attention to perfect. Under the able management of Colonel Gay it proved one of the greatest attractions of the Exposition, and has done much to popularize fishculture.

Before closing, we would thank your Association for the assistance given the State Fish Commission. With the constant support of an association like this, and its kindred societies throughout the State, the enforcement of the laws and the protection of the spawning fish is assured. More than this, the assaults of ignorance, and the hindrances of the lawless will always yield before the might of intelligent and concerted action.

H. C. FORD, Pres. Pa. Com. of Fisheries.

**A Word of Counsel.**

IN an age like the present, in which progress is the order of the day, it would be an anomaly if an organization such as the Fish Protective Association of Pennsylvania should fail to keep pace with the stirring spirit of the times. It has, if not a remarkably notable, at least an honorable record and clearly merits a place in the front rank of associations of kindred character. When I retrospect its history, its quiet, unpretentious origin, its earnest doings, and what was expected of it by its founders, and how more than fully those expectations have been realized, I cannot repress a feeling of honest pride at the thought that during the eleven years of its existence it has been my privilege to have held close connection with it, shared the toils and its sometimes perplexities and harassings, as well as the enjoyment of its triumphs, so many of which it has achieved, and of which, whether because of the inherent modesty of its members or for some other reason, the general public has not the full knowledge it should have. This biding of our light under a bushel is, I think, a wrong to ourselves and at the same time a wrong to the public.

If there has been merit in our transactions, if in any marked sense we have promoted the public welfare or even honestly endeavored to do so, it is due to us that the facts shall be made known. I do not believe there is a single member present or connected with us who will not agree with me that the widest possible dissemination of the principles upon which this association rests is a consummation much to be desired and worthy of special effort. Therefore, while there is nothing criminal or even intentional in the withholding referred to, it must be conceded that if men are entitled to approval for commendable doings, and if such commendation is comforting and calculated to encourage renewed and more earnest endeavors, as it undoubtedly is, then this Association is fairly entitled to such recognition. There is nothing egotistical in this remark. It is a simple declaration, the truthfulness of which cannot fail to commend itself to every one who gives it a moment's thoughtful consideration. It is not a trumpeting of our operations, but a plain, fair and square presentation of important facts for general information.

I fail to recall any association of equal membership, respectability and usefulness in its special line of work, that does not annually publish a full report of its operations and their results. We have done nothing of the kind, at least not in sufficient detail, but have contented ourselves with laboring for the promotion of the public good, accepting as compensation the pleasant consciousness of having, during these eleven years, been faithfully discharging an important public duty. In one sense, such compensation is ample, but would not our sphere of usefulness have been greatly enlarged, if, instead of having the impression go abroad that we were merely a company of anglers, and our organization a mere sporting club, the community at large was made familiar with the true character of the Association and naturally, would not its membership have been materially increased?

I have said that this covering up of our doings has been clearly unintentional, though none the less a wrong to ourselves and a wrong to the public—a wrong to the public for the reason that the object specially aimed at is the promotion of an interest in which all citizens are concerned. We, having given thoughtful consideration to the subjects of food fish propagation, distribution and protection, are presumed to be at least somewhat familiar with them, and to comprehend them more fully than those who have not devoted time and attention to them. Such knowledge comes not by intuition. It can be gained only by careful observation and investigation, and should therefore be as widely disseminated as possible by those who have acquired it, for it must be admitted that there are comparatively few persons in this great commonwealth who have comprehensive knowledge of the subjects named or of our restrictive fishery laws, and there are many who are not only ignorant on those points, but of the existence also of laws that relate to the fishery interests of the State.

Again, how comparatively few have anything like an adequate conception of what would be the dollar and cent value of our entire fishery resources were they properly protected? And how fewer still there are sufficiently interested to make the subject a study? How small the number of those who, if questioned, could tell whether the annual shad products of the Delaware River—the now finest shad stream on the continent—could tell even approximately, whether they amount to an hundred thousand or a million of dollars! Right here in the city of Philadelphia, the intelligence of whose citizens is proverbial, how many could tell with any degree of accuracy whether these products have increased or diminished, and the probable causes for such fluctuations, and how much more productive that river would become if all citizens would agree to abide by the law's simple behests in regard to fish protection?

If such ignorance, indifference, or whatever you may please to term it, exists in the city, what probability is there that the same condition of things, or worse, does not prevail in the rural districts?

The more the subject is considered, the more apparent it becomes that lack of information and appreciation of food fish value, coupled with ignorance, willful or otherwise, of our restrictive laws, lie at the foundation of the evils we are considering, though there have been instances in which corrupt legislation was a potent factor. Take as a case in point the action of the last Legislature of this State in regard to the repeal of the law forbidding fish baskets in public streams. By a system of log rolling, in the highest degree discreditable to a number of the people's representatives from this city, the pernicious bill passed both houses, and but for the brave and commendable exercise of the veto power by Governor Pattison the profitable shad fisheries would have again been ruined, and the notably good work of the State Fishery Commissioners during the past six or eight years—not only in that stream, but in all the principal streams of the State—would have been rendered abortive.

If, then, ignorance or disregard of the fishery laws lies at the foundation of the evils we have been considering, enlightenment would seem to be the legitimate remedy. But if enlightenment were general, would the illegal killing of fish be entirely abolished? I fear not. Every man, woman and child in the community is aware that it is a violation of law to steal, and yet thefts ranging from a penny to a million are every-day occurrences. But if there were universal knowledge of the restrictive laws, naturally greater respect would be paid to them, for the majority of men are honest, if not for honesty's sake, for the fear of incurring the penalties that attach to dishonesty.

The Forest & Stream Publishing Co.

We can truthfully say that we received more inquiries and realized more value from our advertisement in the "Forest & Stream", than from any other, or all papers in which we have advertised. We are surprised at the wide scope of country from which the paper brought us business— it came from Canada to the Gulf, and from the Atlantic to the Pacific, and we have sold a quantity of fishing lines in Europe through your medium.

Very Respectfully,

THE NATCHAUG SILK CO.

While, therefore, it would not be reasonable to expect that the campaign of enlightenment, though carried to almost perfect success, would result in universal obedience, it would no doubt be followed by reforms that would greatly improve the present lamentable condition of affairs and afford reasonable ground for the hope that there would be wrought through the powerful agency of public opinion such salutary changes as would in a large degree make amends for past improvidence.

It only requires a little thoughtful consideration of the subject to satisfy every one that the task of restoring fruitfulness to our food fish producing waters and thereafter maintaining them in that condition is herculean in character, if not, in view of the mischief that has already been wrought, impossible of performance. It means the disabusing of the general public mind of many misconceptions which now so largely pervade it. Among those misconceptions a leading one is the belief that a fish in public waters is the rightful property of the individual who can capture it, at whatever time and by whatever means, restrictive legislation to the contrary notwithstanding. It means the inculcation of the important truth that the repopulating of food fish waters and the thereafter protection of them would be millions of value to the country, and therefore a matter of direct interest to every citizen. It means the legitimate instead of the unlawful and wicked abuse of one of the Almighty's richest bounties.

It may be asked, and the question would be a pertinent one, What has the Pennsylvania Fish Protective Association to do with all this? Much, gentlemen, very much. I am led to hope that these hastily penned thoughts will have a stimulating effect upon all present. Testimony has already been borne to the faithfulness that has characterized the work of this Association, and in doing so have spoken whereof I knew. But more than that is needed. We have been laboring with a view to the accomplishment of a great end. The harvest we hope to gather is plentiful but the laborers are few. Many more are needed, and with a view to the securing of them it becomes vitally important that the work we have been doing, and the object of it, shall be more generally understood. It should not dishearten because our numbers are few compared with the many whose hearty co-operation is essential to success. We must encourage others by the widest possible dissemination of the principles that control our actions, and for that reason I would have the community at large made more familiar with them. It is enjoined that the left hand shall be kept in ignorance of what the right hand doeth. The injunction applies to works of charity, but ours is not a work of charity, though one of beneficence. I would have the community at large more fully acquainted with our transactions, not for the sake of securing flattering commendation, but with the hope of awakening a more general interest in fish propagation, distribution and protection.

Who shall say what may be the result of our example? I feel satisfied that if the unselfish work of this Association and the beneficial results that have followed were generally understood, there would be a notable increase in our membership and a consequent enlargement of our sphere of usefulness. Necessarily we have been restricted in our operations, but we have done what we could and can only hope that our efforts will stimulate others, until the reforms which we have endeavored to inaugurate will be emulated by many and the contagion spread, until our food fish producing lakes, rivers, sea, gulf and bay coasts will have the protection needed to restore their famed fruitfulness, now so nearly exhausted. If we can by united and judiciously directed endeavors convince others that what to-day seems almost impracticable may eventually be accomplished, a great step in advance will have been taken. If it is shown that we have zealously co-operated with the State Fishery Commissioners in their successful attempts to rid the streams of Pennsylvania of devices inimical to fish life, have more than quintupled the shad products of the Delaware, making it in that respect the leading stream of the country—and are still earnestly engaged in efforts to bring about like beneficial results in all the principal waters of the Commonwealth, our example will prove a stimulus to many and lead to the organization of like associations in every section of the State. Let the world know that our labors have had but a single object—the promotion of the general welfare. Such knowledge will enlighten the ignorant and dissipate unfounded prejudices so widely prevalent against nearly all associations of a kindred character. One of the most formidable obstacles in the way is the immense water area to be cultivated and the almost absolute requirement that each water shall have special guardianship. In a word, the interests to be protected are so many and so varied, so widely separated, and each requiring the same vigilant care that has been bestowed upon those within our State, that complete success might almost be despaired of. But "what man has done, man can do." What was once decreed impossible in Pennsylvania has already been achieved in part with the almost positive assurance that eventually complete success will be attained. Why may not like results be hoped for in other States, in all the States?

If the work of repopulating American waters was not so general in its character—and if, instead of participation being a duty devolving upon every citizen, thus practically making it everybody's business, which is generally understood to be nobody's business—the ownership was vested in individual or corporation proprietorship, there would be much less indifference. Note, if you please, as an apt illustration of this, the vigor and earnestness with which the menhaden fishermen assert and defend their claimed to be rights. When legislation hostile to their piratical work is sought, they do not fold their hands and submissively await results. Having come off victors in their hitherto contests with States, they turn their attention to Congress. Their agents, well supplied with the sinews of war, visit Washington, and it needs not the saying, those sinews, on more than one occasion, have been used with telling effect. The menhadenites have millions invested, and they protect those investments with the most sturdy pertinacity, which is not surprising, when the amount of the capital is considered. Their unity of action and untiring perseverance, if displayed in a righteous cause, would be worthy of the highest commendation, and even when exerted in behalf of the interests of a vocation which, to my mind, is in deadly opposition to the food fish interests of the almost entire seacoast, it is worthy of imitation, not in the direction in which they have been exercising it, but in behalf of the more laudable work in which we are engaged.

It has been the lack of such concentration of effort that has given menhaden fishing so long a lease of life. Have you ever met an individual not directly financially interested in menhaden fisheries, or not in the employ of those corporations as lobbyists or special agents of some kind, who has not unequivocally and unsparingly denounced them? And yet with this almost universal public sentiment in open opposition, how difficult a matter it is to secure signatures to petitions and remonstrances intended to implant in the minds of honestly-disposed but over-persuaded Congressmen the conviction that there exists a vital necessity for the correction of this overshadowing abuse of public rights.

Is it surprising, in view of this most indefensible apathy, that each succeeding year these menhadenites become more aggressive and arbitrary, demanding as an inherent right, as a natural prerogative, the privilege of pursuing a vocation which all experience has demonstrated to be inimical, in the most extended sense, to the food fish interests of the almost entire seacoast. Did time permit I could satisfy even the most incredulous that this is not an empty assertion, but the declaration of an incontrovertible truth.

Instead of stalwart and steady opposition to this gigantic wrong by the aggrieved public on the entire coast from Maine

to Florida, the menhadenites doubtless note with great satisfaction the feeble and scattered protests, which, so far as influence upon Congress is concerned, might as well have been presented to the waves that break upon the beaches.

It affords me much pleasure to bear testimony to the efforts of the Pennsylvania Fish Protective Association for the suppression of this enormous evil, and at the same time am compelled to state the fact that, instead of united and hearty support from the seashore people, the cold shoulder was given them, and, as a matter of course, the result was failure. But a single failure should not dishearten. Another effort should be made, and it would greatly redound to the credit of this organization if it would again take the initiative and once more endeavor to work out a great and sorely needed reform.

During the recent sittings of the World's Auxiliary Fishery Congress a resolution was offered and, I believe, adopted, authorizing the appointment of a committee of three, whose duty it shall be to report on the subject of menhaden fisheries; and it was a feature of the resolution that—although not expressed in so many words—the committee was to be composed of individuals known to be favorable to the claims of the menhaden corporations. I have not learned the names of the gentlemen composing the committee.

As must be apparent to those who have followed me in these hastily penned remarks, my object has been not to pay compliments to the Pennsylvania Fish Protective Association, but to state some simple truths and to awaken, if possible, a feeling of more general interest in our work. If our doings have been meritorious, the community should know it, if our labors do not merit such designation, the sooner we disband the better. If we have influence let it be shown. If, instead of being a mere fishing club, as many believe, we have, to the full extent of our abilities been exerting ourselves for the general good, not only in our own bailiwick but in supplementing the praiseworthy endeavors of the State Fishery Commissioners; it is our right that we shall be placed before the community in our true character. It is not risking much to assert that a concise, detailed report of our proceedings would be read with interest by the advocates of fishery reforms, and that such published reports would have the good effect of stimulating other organizations to like endeavors, and would, moreover, prove valuable vehicles of information to the many who need to be educated upon the subject.

It would cost something to publish such reports, but the expense would be more than met by the increase of membership. On that point there can hardly be any difference of opinion. I have too much faith in the public spirit of Philadelphia to doubt for a moment that when the real objects of the Pennsylvania Fish Protective Association are fully understood, our means for an increase of past and present usefulness will be largely augmented.

In conclusion, Mr. President, my remarks this evening have been largely of an advisory character. Presuming upon my long affiliation with the Association, I have offered a word of counsel which may or may not be acceptable. However that may be, I trust the sincerity of my motives will not be questioned. I am firmly convinced that if the largely depleted American waters are to be repopulated, now, if ever, is the time when that important work, already begged shall be pressed with quadrupled energy by every available agency. There has already been too much halting and hesitation. Prompt, determined and persistent action is demanded. Further delay means the lengthening of the cords and the strengthening of the stakes of the despoilers of our fishery resources. The greater the procrastination the more formidable the task will become. Increased effort here and elsewhere, and those efforts combined and concentrated, is the need of the hour.

#### A Sea Fishery Conference.

PRESIDENT L. D. HUNTINGTON, of the New York Fish Commission, has issued the following call for a conference which gives promise of marking the beginning of a movement for the protection of the food fishes of the Atlantic Coast:

NEW YORK, Nov. 15.—*Dear Sir:* The growing scarcity of edible fishes along our coast line, from Maine to Virginia, is a matter of importance that should not be overlooked by the States interested. The cause, or causes, of this diminution should be ascertained and some remedy, if possible, should be applied at once by the enactment of simple and uniform legislation in all of the seaboard States before the now reduced supply becomes further exhausted. With this object in view, and with a desire for a full, impartial and thorough examination of the whole subject, we, the undersigned citizens of the State of New York, have determined that some effort should be made to obtain a conference of the Commissioners of Fisheries, as well as other citizens of the seaboard States interested, who have made the matter a study, in order that some plan of action be adopted to secure the protection and preservation of food fishes. We, therefore, invite you cordially and request that you will personally invite such citizens of your State as may feel sufficient interest in this matter, to attend a conference to be held at the office of the Commissioners of Fisheries of the State of New York, at No. 53 Broadway, New York city, Wednesday, Dec. 13, 1893, at 10 o'clock A. M. This invitation or request will be extended to all members of the Commissioners of Fisheries of the States of Maine, Massachusetts, Rhode Island, Connecticut, New Jersey, Pennsylvania, Delaware and Maryland, and the Commissioners in addition will be requested to invite such citizens of their States as would be likely to take sufficient interest in the matter to attend such conference.

We sincerely hope that your State may be represented by you, as well as by other citizens, at this conference, and that the results may prove of benefit to all the seaboard States. Please acknowledge the receipt of this communication as promptly as possible, and give such expression of your sentiments on the subject as you may entertain, and advise us whether you will be present at the conference. We remain yours very respectfully, Austin Corbin, Henry W. Bookstaver, Henry P. McGown, Robert B. Roosevelt, H. C. Fahnestock, John L. Hill, W. C. Harris, Charles E. Whitehead, Henry S. Wilson, W. B. Williams, Albert E. Cochran, Jas. E. Hulshizer, Edwin M. Felt, Thos. W. Cuthbert, I. B. Williams, James W. Beers, Silas C. Force, I. F. Parker, George H. Peniman, Arthur M. Hunter, Jenkins Van Schaick, Watts T. Miller, P. Howard North, William K. Vanderbilt, Calvin E. Pratt, Phineas C. Lounsbury, Wm. P. Clyde, W. Bayard Cutting, Richard V. Harnett, Charles B. Reynolds, George G. DeWitt, Alex. Taylor, Jr., Wm. M. Fleiss, Samuel F. Prentiss, John S. W. Thompson, Timothy L. Woodruff, Paul Worth, H. A. Craft, S. W. Doubleday, Fred Mather, Ezra S. Connor.

L. D. HUNTINGTON,  
W. H. BOWMAN,  
DAVID G. HACKNEY,  
ROBERT HAMILTON,  
A. SYLVESTER JOLINE,

Commissioners  
of Fisheries  
State of New York.

#### Salmon in Delaware River.

CONCERNING the interesting experiment of introducing salmon into the Delaware, we have the following information from Fish Commissioner H. C. Ford:

"I have received word from various points on the upper Delaware above Lackawaxen, in reference to the large plant of 3,000,000 salmon fry made nearly two years ago. The smolts, measuring from 6 to 8 in., swarmed in the river and its tributaries in which they had been placed, and so far the

stocking has been eminently successful. \* \* \* I inclose you a letter from Dr. Bradley, of New York, in reference to the salmon fry placed in Blooming Grove Creek, a tributary of the Lackawaxen."

From Dr. Bradley's letter we extract the following: "I am happy to inform you that the salmon fry have 'panned out' fine, and last August the smolts in Blooming Grove Creek were very numerous and could hardly be kept off our hooks while fishing for trout. They were from 6 to 8 in. long and in fine condition. Is there anything new about salmon? Were any taken this season in the Delaware? We have now about fifteen large pools in the Blooming Grove stream, and our fishways are in fine condition. Do you see any reason why Blooming Grove Creek should not make a good salmon stream? or any reason why the salmon should not come back to the stream?"

Mr. Ford of course has told Dr. Bradley about the captures of salmon in the Delaware, as he informed a representative of FOREST AND STREAM at the meeting of the American Fisheries Society last June. Prospects certainly appear bright now for the success of salmon planting in that river, and it would be too bad to disappoint the hopes of the anglers by lack of vigilance in the protection and increase of that splendid fish. Mr. Ford is desirous of continuing the planting and it is to be hoped he will be able to go on with the good work.

## The Kennel.

### FIXTURES.

#### DOG SHOWS.

Nov. 28 to Dec. 1.—New Jersey K. L., at Newark, N. J. Dr. W. F. Seidler, Sec'y.  
Dec. 12 to 15.—R. I. Poultry and Pet Stock Ass'n, at Providence.  
Dec. 20 to 23.—Northern Ohio Pet Stock Association, at Akron, O. H. F. Peck, Sec'y.

#### FIELD TRIALS.

Nov. 27.—Irish Setter Club's Field Trials, at Thomasville, N. C. G. G. Davis, Sec'y.  
Dec. 13 to 16.—Chicago K. C., at Chicago. G. H. Goodrich, Sec'y.

1894.

Jan. 1.—Southern California Field Trials, at Ontario, Cal. H. C. Hinman, Los Angeles, Cal. Sec'y.  
Jan. 22.—Southern Field Trial Club's Trials, New Albany, Miss. T. M. Brumby, Sec'y, Marietta, Ga.  
Feb. 19.—United States Field Trials Club's Spring Trials, Grand Junction, Tenn. P. T. Madison, Sec'y, Indianapolis, Ind.

### A PLAIN BUSINESS TALK.

THOSE who have dogs for sale and others who own stud dogs which they keep more or less for public service are becoming convinced that FOREST AND STREAM is excellent all other mediums for reaching the public. This fact is being continually brought to our notice. Only last Tuesday a prominent collie breeder in this country, in fact about the most prominent one, an advertiser in all kennel journals, remarked to us: "I tell you what it is though, without fooling, FOREST AND STREAM is the only paper I get business from."

And why is this true? The answer is very easy. FOREST AND STREAM is a clean paper; its kennel columns are free from the acrid, calumnious controversies and sensationalism that have done so much to hurt kennel interests recently in the minds of the better element of sportsmen and dog owners, consequently FOREST AND STREAM appeals—and it is the only kennel journal that does appeal—to that better element. Further, the high standard which its other departments have attained, their literary merit and accuracy, combine to make this a true sportsman's paper. This is the reason why you find FOREST AND STREAM on every club table, whether literary, social, hunt, fishing, gun, yacht or kennel club. This necessarily opens up a field of readers which no other similar publication can cover. The result is obvious. When you get an answer to an advertisement in FOREST AND STREAM it generally means business. These answers come from men well able to pay for their hobbies; men who do not merely write for the sake of writing, and who when answered are never heard from again. Dogmen want the best prices for their stock, and if they are wise they will place their advertisements, as will any other merchant, in the paper that will bring them closest to the wealthiest class of readers. Dog breeders should know that a class paper devoted entirely to dogs, or chickens, or horses, is not the journal that brings the best results to its advertisers. How can it be so? Such journals circulate merely among their own class, most of whom are in the same business. The cheap rate they may give may become a very dear one if persisted in when no returns are received. It is cheaper to pay a fair price in a journal that your own common sense tells you must necessarily circulate among a more varied and larger class of readers, and where you stand twenty chances to the other one of a return for your money. This the wise advertisers in the kennel department have long known, and they show it by extending their "advts." from year to year.

### The Chicago K. C. Premium List.

Editor Forest and Stream:

One is accustomed to regard anything hailing from Chicago in a progressive light; so that it is somewhat of a surprise when the schedule of the Chicago Kennel Club for 1893 is received to find among the many inconsistencies no classes provided for wire-haired fox-terriers, Irish, Scottish, Dandies or Skyes. Some of the largest kennels in the States are owned by lovers of the above breeds, and how very flattering this must be to the efforts of such fanciers as Messrs. H. W. Smith, Comstock, Edward and Henry Brooks, all of whom have spent large sums of money importing the best which England could produce. But the Chicago Kennel Club has done itself well in providing a class for that nondescript animal called the "rough and wire terrier" offering the large prizes of \$10 to first (what a nice task for the judges to decide?) and \$5 for second of this breed, against \$200 for either mastiffs, great Danes or rough St. Bernards. Well, well, for "rough and wire terriers," and the date is Chicago, December, A. D. 1893. W. P. FRASER.

Toronto, Can., Nov. 18.

Mr. C. E. Buun, the noted mastiff breeder of Peoria, Ill., sends us a handsome catalogue describing his well known dogs. It is quite daintily arranged, printed on heavy board and tied with blue silk cord. Capital half-tones of Ormonde, Leamington, Rossington, Sinaloa, Caution's Own Daughter and champion Lady Coleus adorn its pages. The picture of Sinaloa's head is especially a very pleasing one, framed as it is by a horseshoe, which is supposed to bring the good luck that we trust this young fancier will experience.

## POINTS AND FLUSHES.

[By a Staff Correspondent.]

## The Eastern Field Trials.

NEWTON, N. C., Nov. 18.—The Members' Stake of the Eastern Field Trials Club will not be run this year, the necessary support not being forthcoming. Mr. Pierre Lorillard, Jr., was the only member present who had any entries for that stake, and he preferred to refrain from entering, rather than to win it without any competition. This is a lamentable falling off in interest and support as compared with the time when the Members' Stake compared favorably in every particular with any stake of the trials, considering that the handlers were members and therefore did not have so much finesse in handling as some of the professionals. Nevertheless, there were some very good handlers among the members in the competitions mentioned. The other stakes, so far as can be judged from present indications, will not have a large number of starters.

Newton, the place at which the trials will be held this year, is forty-eight miles west of Salisbury, on a branch road of the Richmond and Danville Railroad. It contains about 2,000 inhabitants, and has a much greater air of prosperity than most North Carolina towns. The dwellings are homelike, with a profusion of flowers about them which make a most pleasing and gratifying effect to the eye. Birds are reported to be moderately plentiful, and the grounds most satisfactory; but this will be more fully touched on in the report of these trials. The Secretary, Mr. Washington A. Coster, has been here several days attending to the preliminary arrangements. Mr. Edw. Dexter, of Boston, and Capt. C. E. McMurdo, arrived to-day. Others already present are Major J. M. Taylor, Messrs. Pierre Lorillard, Jr., A. T. Latta, Denver, Col., J. M. Avenet, C. Tucker, Mr. S. C. Bradley, one of the judges, is here, Mr. J. B. Stoddard is at Thomasville, and is expected to arrive to-morrow, while the other judge, Mr. W. W. Titus, is expected to arrive before the trials begin, though no word has been received from him in some time.

## Field Trials in General.

From a gentleman who is a known observer of field trial matters, whose judgment is sound and whose sportsmanlike interest is surpassed by none, I received a letter recently from which I take the following excerpt: "Has it ever occurred to you that field trials are losing prestige? The bitter bickering and personal paper controversies from those who ought to keep quiet, are the cause of it. \* \* \* I am cosmopolitan not to get or rather take a prejudiced view, but I think I prefer the English idea of field trials, viz., to be managed and run without the professional element."

It is too true that certain papers, which ostensibly pose as supporters of field trials and dog shows, furnish every facility for the publication of private brawls, malice or venom. Instead of drawing on the great fund of literary abundance with which field sports are so richly endowed, their columns teem with malignant personalities or discordant themes, or with columns of the excellence of certain kennels, written by the owners of them, the advertisement sometimes cloaked under a challenge or a description of a novelty or to illustrate an immaterial point, yet all served up to the reader as good modern reading at a high figure.

To FOREST AND STREAM the sportsmen should bestow unlimited appreciation and esteem for a new and better era in sporting journalism. Its pages are clean, wholesome and instructive. Its writers are the best in the land. There is no place in its columns for the brawler, the shark and the malcontent. Not that these sorts of people do not attempt to come in, but that they can not. That FOREST AND STREAM's good work is appreciated, no one could learn better than we did at the World's Fair, where each day brought its large number of visitors to FOREST AND STREAM's exhibit, who expressed their preference in terms of affection for a journal which gave them such healthful knowledge, fresh from the forests and streams. And there are genuine sportsmen enough in the land, men who love the sport truly for its own sake, to carry on the good work, let others pander to the disturbing element as they may.

B. WATERS.

## Chicago K. C. Show.

THE premium list of the Chicago Kennel Club show seems quite a businesslike programme at first glance, and shows that the club has catered for the most popular breeds almost entirely. The show will be held Dec. 13 to 16, at the Second Regiment Armory, corner of Washington Boulevard and Curtis street, a new venue for a Chicago show, but one that is said to be well adapted. The show opens on a Wednesday and closes on the Saturday night following, but is not under A. K. C. rules. This should not be in any way a detriment, as many exhibitors will no doubt welcome shows of this sort where they win money with their dogs without the fear of counting for the challenge class. The prizes offered are extremely liberal in some respects. For mastiffs, great Danes and St. Bernards (rough) the challenge prizes are \$15, open class \$40, \$20 and \$10 and puppy classes with \$10 and \$5. Smooth St. Bernards get \$10 challenge prizes and \$35, \$15 and \$5 in open classes and puppy prizes the same as the above. Russian wolfhounds and deerhounds get \$15, \$10 and \$5 for each sex, greyhounds and American foxhounds have the same, with a third prize of \$5, no challenge classes. Pointers and setters have \$10 in challenge and \$30, \$15 and \$10 in open and \$10 and \$5 in puppy classes. The pointers, as before are not divided by weight. Irish water and field spaniels fare alike with open classes of \$10 and \$5. Cockers get challenge classes with \$10, and in the open \$15, \$10 and \$5. Collies are well treated, with challenge classes \$10 and open \$30, \$15 and \$10. Bulldogs get \$10 and \$5, bull-terriers have a challenge class with \$10, open \$15, \$10 and \$5. Dachshunds, toy terriers, Italian greyhounds and miscellaneous and toy spaniels have one challenge class with \$10 and \$5. Beagles have one challenge class with \$10, open classes \$15 and \$10.

Fox-terriers get challenge \$10, open \$20, \$10 and \$5, puppies \$10 and \$5, and a novice class with \$15, \$10 and \$5. Pugs get the same except puppies have but \$5 for each sex. Yorkshire, black and tan and rough and wire terriers, any variety, \$10 and \$5 for each class. This latter arrangement is scarcely wise, although it is stated that if four dogs of one variety are entered, special classes will be made.

The entry fee is \$4 for the first three breeds mentioned and \$8 for the others and must be sent off by Dec. 4 to G. H. Goodrich, room 725, Unity Building, Dearborn street, Chicago. A selling class at auction has also been instituted, the sale to be on Saturday, and an entry fee of \$1.50 is charged for each dog not entered in regular classes, and 5 per cent. off amount of sale as auctioneer's fee in every case. Entries for this class will be received up to Dec. 13. The usual arrangements have been made for expressage, etc. Jas. A. Locke will be superintendent and L. E. Whitman the "vet." Spratts Patent will bench and feed. Specials will be reported later.

The show is not burdened by rules to any great extent, and we are sorry to see that the good which the A. K. C. has sought to do by curtailing the puppy classes will not prevail here. It is a great error and may prevent many from exhibiting. Litters of puppies are provided for, and puppies under six months of age may enter for exhibition only by paying the fee of \$5. In fact, the club has catered to the "pup purveyor" at the expense of considering the general health of the show. The judges are drawn entirely from the West, and whether they have been chosen wisely will be shown when the entries are in. Their names were published last week.

The fact that the Chicago K. C. offer challenge classes at their coming show without providing rules that will explain the eligibility of such entries, and the compulsory entry in the same, is rather an anomaly. Challenge classes are only known under A. K. C. rules, and we do not think a show held outside of these rules could compel any one to show an A. K. C. challenge dog in their challenge classes unless they make rules that cover the point. Not owing allegiance to the A. K. C., they have no rights in the challenge ruling. Nothing is mentioned in the rules of the Chicago K. C. as to what qualifies a challenge dog.

Since the premium list was issued the club has offered the following additional prizes for their coming show: Greyhounds, challenge, bitches, prize \$10; bull-terrier puppy class dogs, prize \$5 and \$3; bitches \$5 and \$3; black and tan terrier challenge dogs and bitches \$10. There was a mistake in the premium list, for we are now informed that Mr. E. Barde Elliott will judge the spaniels and not Mr. Donoghue.

THE UNITED STATES F. T. C. TRIALS.  
SATURDAY.

THE weather was much cooler than that of yesterday, though mild; clear and comfortable. Birds were hard to find until toward the latter part of the afternoon. The grade of the work was ordinary in respect to finding and pointing and excellent in respect to ranging. There was a large attendance of spectators.

CHEVALIER AND DASHAWAY began at 7:44. Chevalier was far superior to Dashaway in range and speed, the latter being slow and narrow in his casts. Chevalier made a point on a bevy and was ordered up, he having run six minutes. Dashaway ran alone for nine minutes—more without finding.

DAN BURGESS AND SPOT CASH were down seven minutes, beginning at 8:02. Dan pointed a bevy in woods. Both displayed good range and speed.

GLEAM'S SPORT ran a bye heat and showed excellent capabilities in the nine minutes in which he ran. On some marked birds he roared and pointed, winding up the work with an excusable flush. He made a good point on a single bird. His speed and ranging were excellent. He carried his nose well.

GLEAM'S PINK AND LOCHINVAR were started at 8:27, and were ordered up at 8:43. Pink found and pointed a bevy nicely in the open and was backed by Lochinvar.

DAVE W. AND DAN'S LADY at 8:51 commenced and ran till 9:05. They ranged wide and fast on ground unfavorable for a trial, it being mostly bare open ground. Dave pointed a bevy in corn.

COUNT GLADSTONE AND FLEETY NOBLE began at 9:15. There were many opportunities for points during the heat, very few of which were taken advantage of. Fleety ought to have pointed a bevy which the handlers flushed. She next made a false point and a point on a single, which Count refused to back. Up at 9:35.

CHEVALIER AND GLEAM'S SPORT, at 10:10, showed some wide, fast ranging in the open field. Sport the faster and better ranger, and far more sensible in beating out his ground. The judges called Mr. Avenet to order for whistling and shouting too much at his dog. Up at 10:40.

DAN'S LADY AND SPOT CASH showed some excellent ranging in the seven minutes in which they ran, beginning at 10:50.

PINK AND DAN BURGESS ranged eleven minutes. They ranged fast, wide and well. No birds found.

DAN'S LADY AND CHEVALIER were cast off at 1:32. By mistake Chevalier was cast off with her. Both ranged wide. They were ordered to go on a certain course. Sport cast back and pointed a bevy well. On the scattered birds which were running in corn Lady pointed and was backed. Both moved on, roading, Sport the better. They roaded and pointed, the birds at last flushing wild ahead.

The judges evidently disagreed in their opinions.

The prizes were awarded as follows: First, Chevalier; second, Dan's Lady; third, Gleam's Sport.

In my opinion Sport was the best dog in the stake. He ranged fast and wide, and had the faculty called bird sense in a high degree. Gleam's Sport for first, Gleam's Pink for second, and Chevalier and Dan's Lady for third, would have been much a better placing of the dogs.

## The All-Age Absolute.

FRANKLIN AND CHEVALIER were started at 3:13 and ran till 3:44. Franklin was ill and ran in poor form compared to the great showing which he made in the All-Age Stake. He appeared to be completely off his nose, and he was lacking in enthusiasm in his work. One of the judges saw him flush a bevy willfully. Chevalier made three points, two on beves and one on scattered birds. Franklin sought well. Chevalier ranged with energy. Chevalier won. B. WATERS.

## Eastern Field Trials Derby.

[Special to Forest and Stream.]

NEWTON, N. C., Nov. 20.—The Derby had nineteen starters: Lad's Rush with Solitaire, Beryl with Topaz, Thalia with Miss Hattie, Selah with Lady Araminta, Leona with Maid Marion, Cactus with Pauline, Blue Ridge Mark with Rod's Mark, Alene with Topsy's Rod, Bessie Shoupe with Tate, Antoinette a bye. Mr. Coster acted to-day as judge in place of Mr. Titus, who arrived at noon. Messrs. Bradley and Stoddard are the other judges. Birds are abundant, twenty-two beves were found to-day. The work to-day was very inferior save that of Selah, Alene, Topsy's Rod, Bessie Shoupe and one or two more. There is a large attendance of spectators. The grounds are excellent. B. WATERS.

## DOG CHAT.

## Philadelphia K. C. Trials.

From reports it looks very much as if the Philadelphia Kennel Club will once more hold a show. Several of the moneyed men of the club are willing to help to this end. With proper social backing and the right sort of management, Philadelphia should become a good show town yet. The Keystone Club did fairly well with wretched weather to contend with and no particular social element to lend a hand. At a recent dinner and meeting of the P. K. Club the field trials arrangements were made. The party will leave Philadelphia on Saturday evening, Nov. 25, and arrangements have been made to stop at Thomasville, N. C., where the trials will be held.

Those who are intending to go are Messrs. Alexander, Mitchell, Phelps, Finletter, Schreiber, F. S. Brown, Dr. Davis, Dr. Darby, Dr. Littleton, Col. Ridgway, T. F. Sturgis, J. B. Baker and F. G. Taylor.

The entries for the All-Age Stake are J. H. Winslow's Breeze Belton (Breeze Gladstone—Nellie Belton), Francis G. Taylor's Sandy Gladstone (Breeze Gladstone—Belle of Delaware) and Katie Noble II. (Breeze Gladstone—Katie Noble), Dr. G. G. Davis's Courier Belle IV. (Tim—Courier Belle III.), C. H. Phelps, Jr.'s Carmen (Paul G.—Belle Ray), Pierre Lorillard, Jr.'s Miss Ruby (Gladstone's Boy—Ruby D.), Antevolo (Count Noble—Trinket II.), Dr. Rodgers's (Roderigo—Gladstone's Girl), and Eugene T. (Count Noble—Ruby's Girl), F. R. Hitchcock's Roi d'Or (Roderigo—Bo Peep), Bess (Clarence—Bessie Avenet), and Annie T. (Roderigo—Juno A.)

—Mr. W. C. Reick sailed for Europe last Wednesday. With the recent sale of Sir Bedivere and Rustic Beauty in our mind it is not unlikely we shall hear something more soon.

## Newark Dog Show.

The American Spaniel Club offers the following specials, open for competition to members of the club only: \$5 for best brace of field spaniels, \$5 for best brace of cocker spaniels, \$5 for best brace of Clumber spaniels, \$5 for best brace of Irish water spaniels. An open bitch class is made for French poodles, with \$7 for first, \$3 second, and diploma third; also puppy dog class with two cash prizes and diploma. Ruby, Blenheim and Prince Charles spaniels will be divided by sex in the event of five entries. A puppy class with two cash prizes and diploma will be made for bulldogs. The entries are: Mastiffs 19, rough St. Bernards 70, smooth St. Bernards 24, bloodhounds 4, Newfoundlands 2, great Danes 16, Russian wolfhounds 13, deerhounds 3, greyhounds 22, whippets 7, pointers 44, English setters 26, Irish setters 19, Gordon setters 17, beagles 13, foxhounds 3, dachshunds 12, Clumber spaniels 1, field spaniels 9, cocker spaniels 13, collies 13, bulldogs 9, bull-terriers 13, Boston terriers —, smooth fox-terriers 28, rough fox-terriers 4, Irish terriers 18, Dandie Dinmont terriers —, Bedlington terrier 1, Scotch terriers 4, Skye terriers 5, black and tan terriers (over 7lbs.) 7, Clydesdale terriers 3, poodles 38, Yorkshire terriers 7, toy terriers 5, King Charles spaniels 5, ruby, Blenheim and Prince Charles spaniels 2, Japanese spaniels 1, Italian greyhounds 4, Schipperkes 1, pugs 6, Mexican hairless 4, miscellaneous 9, selling class 4. Total, 533.

## Strideaway Changes Hands.

In a recent issue we spoke of Mr. E. O. Damon, owner of the Meadow City Kennels, of Northampton, Mass., devoting his attention to pointers. Mr. Damon did not hesitate long, and the wires have been hot between Northampton and Bicknell, Ind., lately, with the result that Strideaway (King of Kent—Pearl's Dot), which made such a grand record at the U. S. trials two weeks since, becomes his property. To win the Derby was honor enough, but to beat Avenet & Thayer's Topsy's Rod and all that that means, stamps him as a crack young dog with a brilliant future if lucky, and Lad of Rush must look well to his laurels. Strideaway's work was fully commented upon in our report of the U. S. trials. He will remain in the hands of his late owner and will endeavor to repeat his successes at the U. S. trials B in February next. Mr. Damon has received Soult II. from Mr. Wise and is well pleased with him. If the Meadow City Kennels continue on the line they have started they will soon have a formidable kennel. Pearl's Dot, it will be remembered, won first in Derby of 1889, at the Indiana trials, and is by Trinket's Bang, who is also the sire of Spotted Boy and Cherrystone, both field trial winners. We understand that Mr. Damon paid \$1,000 for his new acquisition.

## New York Horse Show.

Several of our best known dog breeders and exhibitors are also interested in horses, and we were pleased to see that in the keen competition during the horse show held in Madison Square Garden last week they fairly held their own. Mr. H. W. Smith, the wire-hair fox-terrier exhibitor, took several prizes for best turnouts; his noted horse Skyhigh won against 33 competitors in the class for single harness high steppers. He won other prizes during the week in tandem competitions with Skyhigh and Sky Rocket, tooling his own team in a workmanlike manner. Then the Chestnut Hill Stock Farm, owned by Mr. Mitchell Harrison, entered horses in 33 classes; but his hobby chiefly runs to hunters, and his horses Seabreeze, Acrobat, Shyluck, Escape and Gamecock showed the way over the fences, ridden by Caffrey, and winning several competitions. Mr. A. H. Moore's Granite, a lady's hack, also caught the judge's eye on two occasions, winning a first and a second. The show was a great success, realizing something like \$100,000, with a prize list of \$33,000.

## Saratoga P. and K. Club Show.

Mr. Lyman Clute, secretary of the Saratoga Poultry and Kennel Club, writes us that the club promises to hold one of the best shows in the State at Saratoga Springs, N. Y., Jan. 16 to 19, 1894. The premium list is very liberal, there being 201 classes. All challenge classes have \$5 for first; open classes \$10 for first and \$5 for second in the larger breeds, with \$7 and \$4 for the smaller breeds. Many valuable specials are offered. Classification No. 1 of the American Spaniel Club has been adopted and many leading kennels have promised their entries. Their guarantee fund is nearly \$2,000 and they are bound to make the show a success. Conventional Hall, second only to Madison Square Garden, will hold the exhibit. Spratts Patent will bench and feed the show.

Jos. Lewis, the well known manager of the Oak Grove Kennels, has received a new English setter from Mr. R. W. P. Lewellyn. It arrived Tuesday last. Further particulars are not yet to hand.

One of the Yale men in a recent football match with the Pennsylvania team is said to have been bitten in the back by one of the "Pennsy" boys. They now think of matching Handsome Dan, their mascot bulldog, against the human biter.

All signs point toward Newark next week, and it is rumored that there will be quite a gathering of the clans. Several new dogs are to come out and the pointer classes are sure to be strong in this respect. Rinada Pointer Kennels have Chancellor and one or two others ready, and Charles Heath will uphold the honor of his town and kennel with a young liver and white dog by Pontiac—Bloom among others, and old Graphier may also be on exhibition. A new ruby spaniel is another surprise, Golden Taft by name, by Golden Ibiz—Beauty and bred by Mrs. Jenkins, Teddingford, England. Ben Lewis will have a strong team, one of which will be the pointer Tempest.

If the Chicago Kennel Club will listen to the voice of reason they will at once make some further provision in their premium list for the rough terrier contingent. We have heard a number of complaints since the list was received. Dog show committees should realize the fact that the wire-hair fox-terrier, Scottish terrier and Irish terrier elements are becoming very strong and quite as important in their way as the mastiff, St. Bernard, collie, and more so than the great Dane.

At the last meeting of the Pacific Kennel Club a discussion arose upon a rather novel petition from dealers in dog foods and furnishings. This asks the kennel clubs to sign an agreement binding themselves not to make contracts with any benching firm that requires the club using their benching, etc., to enter into a contract which forbids other companies from making exhibits in the show. The P. K. C. finally agreed to sign the petition.

A special to FOREST AND STREAM from our staff correspondent, Mr. Hough, dated Vincennes, Ind., Nov. 21, reports: "The case of McLin, the fiend dog burner, comes up for trial here Tuesday morning. Much interest. Many witnesses on both sides. Prosecution's best hope is conviction for perjury."

The sale of Messrs. L. & W. Rutherford's fox-terriers at the American Horse Exchange last Friday afternoon was a fairly good one. A number of terriers changed owners at from \$20 to \$45 each. Among those we saw at the sale were Winthrop Rutherford, James Mortimer, Dr. Glover, R. Lyons, Fred Lewis, German Hopkins, C. F. R. Drake, C. D. Purroy and others.

## KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

## BRED.

Prepared Blanks sent free on application.

*Grove Duchess—Streatham Monarch.* Chatham Kennels' (Boston, Mass.) bull-terrier bitch Grove Duchess (champion Baron—Dutch Rose II.) to John Moorhead, Jr.'s champion Streatham Monarch (Streatham Flyer—Trentham Baroness), Oct. 28.

## WHELPED.

Prepared Blanks sent free on application.

*Lady Venus.* Eberhart Pug Kennels' (Cincinnati, O.) pug bitch Lady Venus (Spokane—Lalla Rookh), Oct. 26, eight (four dogs), by their Sir Douglas (Douglas II.—Lady Verne).

*Chloe.* F. K. Pidgeon's (Saugerties, N. Y.) pointer bitch Chloe (champion Tammany—Bertie), Nov. 7, four (three dogs), by his Graphic VI. (champion Graphic—Daisy II.).

## SALES.

Prepared Blanks sent free on application.

*Gem—Florence whelps.* Black and white ticked English setters, whelped Oct. 1, 1893, by Martin J. Flaherty, Providence, R. I., a dog to Stephen H. Briggs and a bitch to Richard Randall, both of same place.

*Trinkle.* Silver fawn pug dog, whelped July 8, 1893 by Happy Toby out of La Belle Senora, by Eberhart Pug Kennels, Cincinnati, O., to Miss C. R. Hall, Hartwell, O.

*Tremont, Jr.* Black and white English setter dog, whelped April —, by Tremont out of Jennie F., by E. O. Damon, Northampton, Mass., to W. M. Wood, Pittsfield, Mass.

## ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.

[J. J. C., Detroit, Mich.—Dash D. is not registered.

A. I., Tampa, Fla.—Write to Spratts Patent, 250 East Fifty-sixth street, New York, or Dr. H. C. Glover, 1293 Broadway, New York, for their vermifuge. Full directions will accompany the packet so that you will have no trouble in administering the medicine.

W. C. W., Port Henry, N. Y.—Prince Robert (A.K.C.S.B. 15,091, Vol. VI.) is by Robert le Diable (5,556, Vol. IV.) out of Ferry, by Tammany (4,714, Vol. III.) out of Erie, by Rake II. out of Browney. Robert le Diable is by cham. Croxteth out of Spinaway; Tammany by Pilkington's Tory out of Moonstone.

J. C. W., New York.—I have a ten-weeks' old fox-terrier puppy which seems to have caught cold; is troubled by a bad cough followed by gagging, and also has poor appetite. Ans. Probably distemper coming on. Give the following mixture:

Pot. bi. carb. . . . . 3 ii  
Morph. sulph. . . . . gr. 1½  
Tr. gent. co. . . . . 3 i  
Aq. ad. . . . . 3 ii  
Mix. Give one teaspoonful three times a day.

B. A. D., Cambridge, Mass.—I have a pointer bitch, she is a good hunter and a good retriever, but flushes the birds and runs after them when they rise. Will you inform me how I can break her of this? Ans. The trait to which you refer is very easy to correct. There is no part of training which requires so short a time and so little exertion. Put a checkcord on your dog and when in the presence of birds, you can control him easily with it. When he flushes prevent from him chasing and if he is persistent and hardheaded, punish him with the whip. If extremely hardheaded, use also a spike-collar. By punishing him for his errors or disobedience, you will in time reduce him to subjection. "Training versus Breaking" or "Modern Training" will give you more elaborate information if you require it. We can furnish them.

## Hunting and Coursing.

## WESTERN MASSACHUSETTS FOX CLUB.

"I HAVEN'T shot a fox, but I've had an experience," remarked Jerome Marble, the well known sportsman, when I met him on Montgomery Mountain last Wednesday afternoon. I also have had an "experience," and but for the warm welcome I received as FOREST AND STREAM's representative, it would have been a very cold one. This was at the sixth annual gathering of the Western Massachusetts Fox Club at Westfield, Mass., Nov. 15 and 16. On Tuesday evening the bustling little town was invaded by many men from outlying towns as far away as Worcester, who, with guns, corduroys and leggings besieged the Central House until there wasn't a bed left, and the rest went to the Foster House, kept by a brother fox hunter, Mr. Hatfield. The reception and lodging committees, composed of Messrs. J. D. Cadle, G. E. Whipple and N. A. Harwood, and R. D. Gillet, Dr. J. A. Shepard and J. T. Way, soon had every one comfortably settled, and the Business Club threw open its doors to the visitors, who spent a pleasant evening with stories of former hunts and anticipations of the deeds to be done on the morrow, while Charles F. Rice, a visitor from Worcester, kept the fun going by singing several comic songs.

"Early to bed and early to rise" is the New England fox hunter's motto, and daybreak on Wednesday found a number of sportsmen ready for the drive to the hills in the vicinity of the Montgomery Reservoir, about four miles from town. Each conveyance held a hound or two, all eager for the fun they knew instinctively was coming. The weather did not look propitious nor did it turn out at all favorable for the hunters. It rained a little and snowed a little—in fact, it was "foul weather" for the sport. Nothing daunted, the following hunters were on hand when the hounds were cast off and afterward during the course of the day: Senator John R. Thayer, Charles J. Rice, J. M. Marble, B. F. Kinney, J. M. White, Capt. D. M. Earle, E. S. Knowles; C. B. Holden, R. D. Perry, W. R. Deane, President Kennedy of the Worcester Fur Club, all of Worcester, Mass.; O. F. Joslin and F. J. Stewart, of Oxford, Mass.; Albert Hobbs, of Brookfield, Mass.; M. T. Mason, of Northampton, Mass., owner of the Connecticut Valley Kennels; G. H. Hibbard and W. C. Doane, of Chicopee, Mass.; Mr. Perkins, of Ware, Mass.; J. W. Clarke, of Montgomery, Mass.; Mr. Gibbs, C. R. Austin, O. M. Ball, P. R. Otis, J. B. Hazelton, J. R. Jeffers, F. F. Shepard, B. R. Holcomb, L. P. Lane, H. N. Kingsbury, R. H. Kneil, J. F. Way, C. E. Hibbard, W. Warren, J. S. Gross, C. D. Allen, bugler, and G. W. Roraback, president of the club. The secretary, Mr. Goodnow, was prevented from taking part in the fun this year. A number of others took part during the two days' hunt whose names I could not secure. The weather cleared toward noon, but it did not become any warmer, and it required a good deal of hardiness and "anticipation" to hold a post with the damp, cold wind blowing through one's whiskers.

About thirty hounds were cast off soon after daybreak in the vicinity of the lower Montgomery reservoir on the east side of the Montgomery range. Led by B. R. Holcombe's Prince, they were soon in full cry on the trail of reynard, even before the hunters could distribute themselves on the most advantageous points. During the day the hounds worked away from the east side of the range into the reservoir valley, and finally the fox took most of them toward the summit of the mountain. Mr. L. P. Lane, the treasurer of the club and a cashier in the First National Bank of Westfield, was stationed near the storage reservoir, and to him fell the first brush, and three sharp reports rang out, which was a signal to the other shivering hunters that a fox had bitten the dust. Mr. Lane thought sufficient for the day is the pelt thereof and returned to town early with his prize. On the level ground between the reservoirs Mr. Hatfield had stationed himself, and he was the next to stop the earthly

career of another fox. Then fortune favored E. Williams, of Westfield, on the opposite side of the ridge, and soon the third brush was laid low, and J. W. Clarke bagged the last one near where Mr. Lane had potted his. This completed the score of the day, and though the hunters held on to their posts wishing and waiting for a chance to burn powder, the day was drawing to a close when the retreat was sounded, and the stragglers came in one by one to the farmhouse, where the carryalls and barges, etc., were waiting to take the cold and hungry crowd back to town.

A gathering of New England sportsmen is not complete without a feast, and the W. M. F. C. is no exception. The tired hunters quickly donned their go-to-meeting clothes and prepared for the banquet to commence at 6:30 P. M. Forming in twos at the Central House, the company, about 150 strong, marched to the Town Hall, where three long tables loaded with good things awaited them. When every one, after an hour's activity, had heaved the sigh of satisfaction, President Roraback introduced the Sumner Male Quartette, who rendered some glees in a pleasing manner. After an encore the president introduced the toastmaster, H. W. Eley,

DR. VAN HUMMELL WITH VAN'S PETER AND NANCY, AND JUDGE WILLIAMS.  
International Coursing Meet, Huron, S. D., 1893.

a prominent lawyer of Westfield, who forthwith gave utterance to some very practical ideas in a very earnest manner. Among other things he illustrated a true hunter as a type of individuality and that we were in need of this individuality in every sphere of life as a check to communism, socialism and anarchism. His smiles were well drawn and the speech was a blending of hunt and patriotism. He then introduced Hon. L. F. Thayer, chairman of Selectmen of Westfield, who amused the company with some witty stories about foxes and lawyers. Senator-elect Ledyard Bill, of Paxton, Mass., of whom much was expected, after expressing his pleasure in being present, excused himself from making a speech on account of a cold. Then the quartette warbled again and President Kinney, of the Worcester Fur Club, congratulated the club on the excellence of its hounds, their owners and the character of its gatherings. The Hon. Arthur S. Knell, of Westfield, made an amusing speech; he pleaded guilty to being an original sinner and his witty stories put every one in a good humor, especially when he told the good old story of the stranger who, when asked by a fox hunter, when the hounds were in full cry, "Do you hear that heavenly music?" remarked that

"PUTTING LORD NEVERSTILL INTO SLIPS."  
International Coursing Meet, Huron, S. D., 1893.

he "couldn't hear it because those d— dogs made such a noise." Hon. H. C. Bliss, representative-elect for West Springfield, Mass., then followed with some bright remarks after being introduced as another original sinner. Representative O. F. Joslin, of Oxford, also made an appropriate speech. After this Mr. Ely presented a handsome hammerless, in the name of the club, to President Roraback, who, big, bluff, hearty sportsman though he is, was visibly affected and unable to more than thank his fellow clubmen for their kindness, which was as much a surprise to him as it was appreciated. A few words from W. R. Dean, of Worcester, and then Senator John R. Thayer, of the same town, made a very sensible speech, in which he dwelt upon the advisability of New England business men devoting more time to relaxation and pleasure in their daily life, so as to better recuperate them for their work. The quartette warbled again and was encored, of course. E. Sprague Knowles spoke briefly and then as the company was dispersing Mr. Chas. F. Rice, of Worcester, favored us with a couple of good songs, accompanying himself on the piano.

The annual business meeting of the club was then called to order by the president, and the members, without any red tape or oratorical frills, proceeded to elect officers for the ensuing year, as follows: President, Geo. W. Roraback; First Vice-President, F. S. Gross; Second Vice-President, Wm. Warren; Treasurer, L. P. Lane; Secretary, C. M. Good-

now; Executive Committee, in addition to the above officers, John T. Way, G. A. Lakin and Robert H. Knell. The president, at the meeting adjourned, invited every one to participate in the hunt next day. The visitors were escorted to the Business Men's Club and an hour was passed in pleasant conversation, etc.

## THURSDAY.

The weather had become much colder during the night and a heavy frost had brought ice to the ponds. Bugler Allen sounded the reveille at 5 A. M., and though it was a good two hours before Old Sol could be counted on to disperse the gloom, the hunters hurried to the hotel for breakfast, and a start was made about 6:30 for the East Mountain, several miles from town.

Before going any further we might as well relate a little joke in which a Westfield man, Mr. A. R. Brown, was the victim. This member of the reception committee, pro tem, had been indefatigable in attending to the comfort and wants of the visiting sportsmen, and it was midnight ere he sought his own room after giving the club bugler strict injunctions not to pass him by when he made his maternal roundup. It was still dark when tara-tara-ta-ta sounded the clear notes of the bugle under his window. Scarcely realizing that he could have been asleep five hours, he nevertheless hastily dressed himself and with the ardor of a fox hunter hurried along the deserted streets to the hotel for breakfast. Not a soul was stirring, and congratulating himself on his activity, he reached the hotel only to find it clothed in darkness. Then he bethought himself to strike a match and look at his watch when he found it was just 2 o'clock. Realizing that it was all a joke, he stole back to bed and slept so soundly that the genuine reveille failed to wake him, and it was 8 o'clock and the hunters had "gone away" two hours when he opened his eyes, and there was one hunter less that day.

But to continue our story. I luckily had no such experience, thanks to Mr. Conners, who rattled me out of the warm sheets in short order, and providing me with a "pocket pistol" of large caliber loaded to the muzzle, to be used only in case an Arctic fox came along, I was soon seated alongside Mr. C. R. Austin, who had kindly constituted himself my chaperon.

No time was lost after the company arrived at the foot of the mountain in casting off the hounds, about fifteen couple, and every man with gun in hand made his way to a point of vantage where a fox might be likely to pass. Among the hounds were Messrs. Kinney & White's Logan, the noted performer at the B. F. C. trials, and Aggie and Major, W. R. Dean's Diamond, John R. Thayer's Grover, O. F. Joslin's Rock and Juliet in charge of F. G. Stewart, G. E. Perkins's Tower, from Ware; C. E. Brace of Lee had two, Mr. Mason three. A number of others came from the Chicopee Hunting Club, Messrs. Owen Bros. of Granby had three hounds and Charles Clark of Chester two. From Westfield there were B. R. Holcomb's entire kennel of sixteen, with Dot, Dash, Prince and Drive as leaders, J. Jeffers's two Illinois and three Southern dogs, C. D. Allen's Jeff, Jo and Dan, J. T. Way's Jake, C. E. Austin's Babe, Williams Bros.' three dogs, Mr. Tice and R. H. Parks one each.

Some of the hunters placed themselves along the sides of the steep hill, while others climbed to the very top—no easy matter—as it was almost like going up the side of a house, and the loose stones made anything but secure footing. Once on the summit, however, the glorious view amply repaid one for the loss of breath. On the west side lay a stretch of country bounded by the continuation of the Mt. Calm range, and at the foot of the hill lay the Hampton Ponds, noted bass waters; on the east side a grand panorama lay before us. About five miles away, but seemingly almost at one's feet, wound the famed Connecticut River, with the towns of Holyoke, Chicopee and Springfield nestling on its banks at the foot of another range of mountains.

There is little to be said of the hunting, or whatever one may choose to call it. Ambushing would be a more correct term. Once the hounds strike the trail they are scarcely seen by the majority of the hunters. The "heavenly music" alone is what may be termed the hunter's barometer, that warns him by its gradually increasing sound to be on the alert for the passing fox, and then all is tension and excitement, or, as proved to be our experience, the music gradually fades away in the distance and the tension is relaxed and there is nothing to do but loaf and wait and try to keep warm. We waited a good deal that day for the fox that never came. As the hours passed away we thought what a good opportunity this must be for a man to review his past and make good resolutions for his better guidance in the future, resolutions which, I fear, would be forgotten if the fox came along and he missed it. The hounds drove toward the south continually the first hour, and to a newspaper man fell the first brush, E. G. Clark of the *Times and News Letter* bowling over a handsome fellow at the southern extremity of the Mt. Tom range. Another fell to the aim of Gurdon Bill, of Springfield, and Owen Upton, of Westfield, secured the third and last one.

As might have been expected as soon as the sun had dried the frost out of the leaves and grass, scent lay very badly and the strong cold wind did not improve matters. With no music in the air to keep us up to fighting pitch, and a sense of our duty, discipline relaxed about 10 o'clock and several of us getting together at the north end of the range, a bonfire was built on the lee side of a large rock and here we sat till nearly noon, toasting our shins and swapping stories till the wee sma' voice inside admonished us that it was a long time between meals. We then broke camp and made for the wagons at the foot of the hill where we found the rest of the company assembled. Luncheon over and "pistols" exchanged, the hunters and what dogs had been secured jumped into the wagons and we drove down into the valley searching for a note to guide us to the other hounds. Nothing was heard, however, and after driving round for an hour a few of the more patient hunters scattered into the woods again to seek their dogs or wait for them to turn up. The rest drove back to town thoroughly chilled through.

There was little hunt, owing to the adverse weather conditions; but the opportunity to meet such a jolly, whole-souled lot of sportsmen amply repaid one for any physical discomfort. These Massachusetts fox hunters are jolly fellows, and I can assure "F. G. H." that far from their lonely vigils being productive of misanthropy and other brooding ills, our experience leads us to believe that in a true appreciation of the joys of this life not even a rollicking, hard-riding Kentuckian could excel them.

I cannot conclude this "tale of a brush," as one might term it, without thanking the members of the W. M. F. C. for the many courtesies extended to me during my visit. Although a stranger to all, FOREST AND STREAM was an easy passport to their good graces. Especially am I indebted to Mr. and Mrs. S. S. Conners. "Woronoca" met me at the station and insisted that I should make his house my home during my stay, and besides introducing me to the comforts of his well-appointed house, Mr. Conners did all in his power to aid me in forming the pleasant acquaintances which I hope to renew at the next meet.

The Worcester Fur Club's score of foxes "assassinated" so far this season is as follows: Lyman A. Baker 8, Frank Hartwell 5, Charles H. Howe 4, E. T. Whittaker 4, Henry Newell 4, N. S. Harrington 3, A. C. White 3, John M. White 3, John R. Thayer 2, W. R. Dean 2, A. B. F. Kinney 2, J. E. Fuller 2, S. A. Smith 2, A. C. Moore 2, James Adams 2, L. E. Bliss 2, George H. Waite 2, E. J. Bates 1, E. W. Gill 1, George Bates 1, Charles E. Steele 1, Henry L. Kinsley 1, L. E. Divoll 1, Albert Hobbs 1, E. H. Cate 1, D. C. Luther 1, R. D. Perry 1, Milton Rand 1, Charles Pierce 1. Total, 64.

Californian Coursing Notes.

SAN FRANCISCO, Nov. 6.—Things in the coursing line are pretty busy now in and about this city. Most of the leashesmen can be seen at early dawn exercising their dogs in anticipation of the big meeting that is to come off on the Newark grounds on Thanksgiving Day, under the auspices of the new San Francisco Coursing Club. It is pretty certain that at least from 50 to 64 dogs will enter for this stake, and as the major portion of the proceeds will be handed over as a donation to our Midwinter Fair (which, I may say, is spreading out into vast proportions and bids well to rival in many of its exhibits the great one of Chicago), the managers of the coursing meeting are expecting to see the largest crowd at Newark that was ever seen on these grounds before. All the crack dogs of the Pacific coast are sure to be nominated, and if weather suits, and of that there is but little fear, the lovers of the leash hereabouts will witness two such days' sport as has not been seen here for some time. Of course, Mr. Grace will be in the saddle and the greatest slipper in America, James Wren, will handle the leash, so there cannot be any danger of mistakes.

On this occasion there will be two stakes, an All-Aged one at \$5 each for all comers and a Puppy Stake at \$2.50 each for members' dogs only. The new club has now 46 members on its books and they control about 140 dogs.

There were two very fine specimens of the greyhound added to our stock of longtails last week. Mr. R. E. de B. Lopez, who has brought from Australia during the past year many fine thoroughbred horses, arrived here last week again from the southern hemisphere, bringing another consignment of thoroughbreds and the two dogs referred to above. The breeding of these dogs is of the bluest blood and if their performance in the field will be anything in proportion to their appearance they should be dangerous opponents. They will be run at Newark on Thanksgiving Day, so we will soon see what they are likely to do when pitted against some of our California cracks.

The interstate meeting, which was postponed until spring in consequence of the international event, bids fair to equal

would have a nut to crack that would throw the Chicopee Lass—Pearl of Pekin case completely in the shade, and may cause a rehearsal if not a reversal of the whole proceedings.

Of course I take it for granted that the card was run as printed in the papers above mentioned. GAZEHOUD.

**Condition of Greyhounds.**

*Editor Forest and Stream:*

In your paper of Nov. 4, Dr. G. Irwin Royce in his remarks on the winners at Goodland, speaks of my greyhounds being in better condition this year than ever before, hence they have gone to the front. Now I am not finding fault with the Doctor having his opinion, every man has a right to that, but any one reading his remarks might suppose that this was the first year my kennel had taken honors on the coursing field.

I think the record of my kennel during the five years that I have been coursing in this country, will bear comparison with any greyhound kennel in America, as the following results show. It may be as well to mention that for seven years the only coursing meeting held in America, except in California, has been the American Coursing Club meeting, held annually in October at Great Bend, Kansas. I have had the pleasure of running greyhounds at that meeting for five years out of the seven, with the following record. In 1883, I was the runner-up in the American Field Cup, a thirty-two dog entry, with White Lips; in 1889 I was again the runner-up for the same cup, with White Lips. In 1890, I ran with the last four in the same stake, with Lancashire Lass. In 1891, I ran into the last four for the same stake, with Master Peter, and in 1892 I was the runner-up for the same stake, with Master Peter, and I think every man who was present on those occasions will admit that it was only a bit of bad luck and not the want of condition in the greyhounds that prevented my taking first honors on some of those occasions.

A greyhound must be fit to run to enable him to be a runner-up in a thirty-two dog stake, especially when coursing a Great Bend jack. The only other public coursing

fancy runs to English setters, of which he has had a large number. He just lost a Rockingham—Donna bitch, Donna Innees, that he thought a great deal of. She was afflicted with paralysis in the hind parts, and her owner, felt compelled to put her out of her misery very recently. He owns a good-looking dog, Buck II., by Buckellew out of Lady Mary.

• • • • •

Mr. Dell A. Hamilton, of Worcester, Mass., has bought the foxhound Hector from John G. Sibley, of Gilbertville, Mass., and on Thursday last shot two foxes ahead of him in the Gilbertville country.

• • • • •

The Worcester Coon Club is composed of Chas. S. Barton, L. N. Kinnicut, Charles Bowker, Waldo Lincoln and George Richardson, and they have a good many skins to show. With their coon dog Ned they grassed three big "ringtails" last week.

• • • • •

Uncle Nathan Harrington, of Worcester, Mass., who is said to be 76 years old, has a great reputation as a fox hunter and original character. He was expected to be present at the Westfield hunt, but did not turn up. He shot his third fox this season near Dority Hill with the first barrel. The day after this hunt a party of hunters including the veteran sportsman, were discussing the merits of black and smokeless powders in fox hunting. One hunter remarked: "I don't want any black powder in mine when I am fox hunting, any more than when I am in the brush; there is so much smoke that you can't see to put the second barrel on. What do you think about it, Uncle Nathan?" "Black's good enough for me. You don't need to see to shoot the second barrel if you can kill 'em with the first." And that's true enough.

• • • • •

The Radnor Hunt has elected the following officers: Pres., A. J. Cassatt; Vice-Pres., Rudolph Ellis; Treas., George Philler; Sec'y, W. S. Ellis; M. F. H., Charles E. Mather. Governors—Clement A. Griscorn, Henry L. Geyelin and Lincoln Godfrey. Charles E. Mather, M. F. H., gave a breakfast at the club house on Saturday morning last. After breakfast the members and guests had one of the finest hunts of the season. Starting a fox about 8:45 they ran him to earth after an hour and a quarter's run. Another good run followed with a fox that was lost near Haverford College. This hunt is one of the few in the country which has not to draw on the wily aniseed bag for its fun. They follow the real Simon pure with a brush on it. Frank Gildard is the huntsman, son of the noted huntsman of the Duke of Rutland's Belvoir Hunt, in England.

• • • • •

President Roraback of the Western Massachusetts Fox Club, tells us that hereafter the dogs that take part in the annual hunts will be registered with the club before they run. This is a good move. It leads to greater accuracy in pedigrees and lends more interest to the competition.

• • • • •

Word comes from Denver, Col., that "a nice little coursing party" will charter a special car and go to Goodland, Kas., for a quiet bit of coursing. The members of the party will put in \$5 each for an eight-dog stake and run it off in a day. Mr. Ralph Taylor will go along and has kindly consented to slip. Should the weather be unfavorable the affair will be put off till Dec. 30. Coursing interests are simply on the hum out in Denver; every Sunday parties can be seen driving out in nearly every direction with from two to six hounds, going out for a course.

• • • • •

The St. Patrick Kennels have matched Buenarita (Norwegian—Buenaritero) against A. C. Lighthall's Buster (Goldust—Lady) for \$100 a side. The race will be run off near Denver on Nov. 26.

KENMORE COURSING CLUB AT GOODLAND, KAN.

any of the meetings held hitherto on the celebrated Merced plains. The lovers of the leash in that district are already making arrangements and the purses will, as usual, be worth competing for. The meet will be held, I think, on Washington's Birthday. Indeed, this is a much better season of the year to hold a meeting on the plains than in November, as the hares will not then be such flyers and much more satisfactory coursing may be looked for. Due notice, of course, will be given before the end of the year of this great event.

A coursing club was started in the southern portion of the State last month, with its headquarters at Los Angeles, and I have it on the best authority that some young gentlemen of the millionaire class who reside about Bakersfield, also in the southern portion of the State, intend forming a club among themselves during the coming winter months, and will give good purses to be competed for. This is what is wanted, not only in California but all over the country; and if these young gentlemen with long purses and high social positions will only take to the grand old sport, it is safe to say that in a very few years the game of the leash would become the most popular, as it is the most enjoyable, of all our field sports.

The Chicopee Lass—Pearl of Pekin case evidently promises to be one of the celebrated cases of the leash in this country. I see that at the last meeting of the American Coursing Club held at Goodland, Kas., on Oct. 18 last, it was agreed to accept the decision of the National Greyhound Club in this case. This surely is somewhat singular to say the least of it, as I read in the very same issue that the N. G. Club had been most unceremoniously washed out of existence by almost the same individuals a few days before, presumably, I suppose, in consequence of their incompetency. It does not appear that even the usual cheap compliment of a vote of thanks for past services was accorded the kicked out body, yet these very men of the American Coursing Club, or at all events the greater portion of them, accept the decision of the club in the Chicopee Lass case, that upsets their own ruling of a year ago. This surely is an admitted proof that the N. G. Club knows more of coursing rules and ethics than do the gentlemen of the American Coursing Club. Why then, may I ask, are they so unceremoniously hurled from their exalted pedestal and replaced by the very men who by their own action admit that they are their inferiors in coursing knowledge? Strange work this, is it not? Judging the new organization by such methods as this it is difficult to see how they can gain confidence from outside clubs.

I see that the International meeting as reported in FOREST AND STREAM was, on the whole, a success, and that with the exception of the course between Ban Boy and Laplander, which evidently was misjudged, Mr. Williams did very well, and possibly with more experience will be all that could be wished for as a judge. But what seems a puzzle beyond all comprehension is the working of the card as published, for surely never since the first coursing match was run in the world were dogs so outrageously mixed up and made to run altogether out of their proper places. For instance, why did Voltaire in the second round of the Cup get a bye, as it clearly belonged to Delsarte. Why the former was brought up to the top of the card from the bottom beats comprehension; consequently nearly all the dogs ran in the wrong place before the card was finished for the Columbus Cup.

The same thing occurred at Goodland last week. I trust that some of the gentlemen who had charge of this department will explain how they managed or what guided them in their actions. If any of the losers in the cup had made protest I am inclined to think that the N. G. Club, or the more recent formation, the "American Coursing Board,"

meeting ever held this side of California, to my knowledge, until this year, was at Hutchinson, Kansas, in 1890, when I won the National Derby with Liberty, by Lord Neversettle out of Partera, and my two greyhounds Little Climber and Line of Luck, both by Lord Neversettle out of Partera, divided the Hutchinson Stakes with Babazoun.

H. C. LOWE.

LAWRENCE, KANSAS.

**Forest and Stream Fur Club's Meet.**

THE annual outing of the Forest and Stream Fur Club took place at Wakefield, N. H., Oct. 16 to 26. The weather was hot and ground dry, making it hard following for the hounds, whose occasional loss of the trail was in marked contrast to the steady driving of previous years.

An early start was made Monday morning. The hounds soon hit a hot track and trailed rapidly away, and soon had reynard on his feet. Each "assassin" grasped firmly his murderous 10-gauge and eagerly scanned the surrounding hills for a sight of the fox, but all were disappointed. The hounds drove steadily westward and soon were out of hearing. No more was heard from them for the day, in fact, one of the dogs was not found until Wednesday, and another not until after the meet was over. Ill luck seemed to follow us the whole week, for after the hardest kind of work on our part and hours of unsatisfactory trailing by the hounds we succeeded in killing 4 foxes against 9 the previous year.

Some of the boys not so enthusiastic over fox hunting as the others, gave it up and turned their attention to other game, and such a bombardment you never heard, the result of which was 12 rabbits, 10 partridges and 41 gray squirrels.

**HUNTING AND COURSING NOTES.**

The Los Angeles Coursing Club held its first meeting Oct. 29, and is said to have been a success. Tom Rice's Tom won first prize, and C. J. Nestor's Queen was the runner-up. The club will hold another meeting shortly.

• • • • •

A meeting of the executive and field trial committee of the National Beagle Club of America will be held at the A. K. C. rooms, 44 Broadway, New York, on Monday, Nov. 27, at 4 P. M.

• • • • •

We have received a picture of the "Buckstaff medal," awarded at the N. W. Beagle Club trials, to Messrs. Dillingham & Remmele's beagle Mayfly. A beagle's head is represented on the medal, which hangs from a bar under which is a rabbit "on the run." It seems a handsome piece of work and we congratulate Mayfly's owners upon their good fortune.

• • • • •

Westfield, Mass., is a pretty town, through which the Westfield River runs. The town is surrounded by hills covered with woods and brush, affording a capital hunting country. Grouse are plentiful and there are lots of foxes. The town seems to be devoted to the manufacture of whips and nagars. Mr. Jeffers, who showed the foxhounds Nora and Nancy at Providence and Danbury, winning firsts and seconds, kindly piloted us through the American Whip Co.'s large factory, affording us a novel and entertaining experience. Another whip and dog man is Mr. Whipple, whose

**Hachting.**

The popular interest in a contest for the America's Cup is a fairly constant quantity, varying a little according to chance circumstances, such as the personality of the challenger or defender, or the record of either boat; but it is at all times sufficient to create a stir, throughout all parts of America at least. The technical interest, on the part of experienced yachtsmen of both nations, is a far more variable quantity, disappearing almost entirely in some contests, such as those between Madeline and the Countess of Dufferin, and Mischief and Atlanta, in which both defender and challenger were of the same type; and rising to the highest pitch in such races as that of 1885, in which the wide compromise centerboard was pitted against the narrow keel.

Although the old issue of sloop and cutter, with its clearly marked line of separation over vital points of design, has entirely disappeared, and the two contestants of 1893 have very many points of design in common, the technical interest this year is quite as great and even more important than the popular, as is shown by the numerous comments and criticisms which have appeared since the last race, some of which we reprint this week. Of the British criticisms, it must be said that in the main they are remarkably fair and impartial in the statement of facts, and correct in their deductions.

IMMEDIATELY after the races there was a revival of the old clamor over the centerboard on the part of some British critics, but on summing up the races finally most of them now concede that Vigilant's superior speed lies in her power, and not in the mere possession of a centerboard. The *Field* devotes some space to an interesting discussion of both the centerboard and the extra live ballast of Vigilant, but in our opinion it undervalues the importance of the latter. Vigilant's gain in carrying a very large crew is a double one. In the first place, apart from all mathematical considerations, it has been repeatedly demonstrated in practice in this country that under the proper conditions live ballast is the best by far that can be carried, and will almost invariably defeat fixed ballast, even in the form of low lead. While it is a long step from Mary Emma, Mr. Iselin's racing sandbagger of 1875, with her draft of 30in., to Vigilant with her draft of 14ft., it is quite certain that both Mr. Iselin and Mr. Herreshoff had the old boat in mind when the new Cup defender was planned, and that in the absence of any specific limitation to the crew, such dimensions and form were chosen as would give the greatest possible effect to live ballast.

That there was a material gain in this way can hardly be disputed in the light of past experience in the same direction; but the advantage did not stop with the mere carrying of the weight at the end of a long horizontal lever, the half beam of the yacht, and the facility for trimming fore and aft by this extra weight. Under the interpretation of the measurement rule which has been followed this year, each yacht is allowed the privilege of being measured with no crew on board. What this means to Vigilant is easily seen when we consider that after measurement she takes aboard no less than 4½ tons of unmeasured ballast, while Valkyrie, with less than forty men to Vigilant's seventy, has but 2½ tons of unmeasured ballast. This means that the excess of sailing waterline over measured waterline is upward of one foot more in Vigilant than in Valkyrie, a clear gain of that much length.

Assuming the right of Vigilant, in default of any express prohibition, to avail herself of this kind and amount of ballast, there still

is a nice question of ethics whether such a course is to be considered fair and sportsmanlike. This much may safely be said, that had it been Valkyrie instead of Vigilant that thus took advantage of a plain defect in the rules, there would have been a greater clamor than was raised over the alleged over-length of Thistle in 1887; and further, that it is one of those tricks which can be played just once. It is quite probable that before next season a fixed limit of crew will be incorporated in the rules; or if this should not be done, every designer will be awake to the privileges accorded him in the tacit indorsement by the club of Vigilant's action; and she will no longer have a monopoly of this "unmeasured increment" of power.

Those yachtsmen who first took an interest in the keel yacht through the lively controversies of 1879-80 will remember well a peculiar type of English yacht which attracted much attention on this side from the fact that it possessed quite a large amount of beam; the "Itchen boat," commonly called, or "lengther," at that time racing very actively about Southampton water. These yachts were unique among British craft in being one of the two exceptions to the then universal tonnage rule, the other being the racing yachts of Lake Windermere, and both were raced under a waterline length rule. Another peculiar feature of the Itchen boat was its rig, many being semi-sloop rigged, with mast very far forward and a single jib.

These yachts, to which the *Yachtsman* alludes in an article quoted elsewhere, were most excellent examples of the evil of great power on a limited length, being of great beam and draft, with a large area of midship section, excessive sail area, fast in smooth water, bad in a sea, and at all times hard to steer. Their beam, however, commended them to Americans, and several were built in Boston about 1880, others were imported, and the type has played an important part in the evolution of the present American keel cutter; Pappoose is directly related to the Itchen family, though of later and better design, and both Liris and Kathleen are closely related to Curtsey, Lil and Eclipse. The earliest of the Boston keel yachts, ante-dating even the Itchen boats, though different and more crude in model, had much in common with them, a great beam, a hollow midship section, the hull being that of a wide centerboard boat, and an excessive draft, made up by a deep oak keel with an iron keel below.

Whether in its crudest form, of the primitive Boston keel, built from centerboard moulds, and with a midship section resembling a draftsman's T square, or in the more elaborate work of skilled designers, with a beautifully curved section of the "wineglass" form; the type was marked by certain strong characteristics. The beam and draft were great in proportion to length, the section was very hollow, giving a minimum of accommodation below, the weight was hung very low, the sail area was excessive, requiring a large crew, the boat was very fast under normal racing conditions—smooth water and moderate breezes—but expensive to build and run, hard to steer, and a poor seaboot.

In the general features of her design Vigilant is closely allied to the Itchen boat, and the experience with this type on both sides of the Atlantic, shows pretty clearly what may be expected from her and others like her. While various circumstances, such as the defects of Liris's rig and the perfection of Minerva's design have operated at times to restrict the development of this type, there is no question that it is directly favored by local conditions in America and existing American rules, and we do not for a moment question the right or the wisdom of a designer, who, after studying these conditions and rules produces an extreme example of the type to race under them. One question we would raise, however, at this time, and that is whether it is best for the clubs either actively or passively to continue to encourage through the rules a type which is so expensive, unhandy, and, we believe, detrimental to the best interests of yachting. No doubt the experiment has paid, and paid well, this year in the defeat of the fastest yacht which has ever challenged for the Cup, but now that the whole yachting world is awake to what was but six months since the exclusive secret of Mr. Herreshoff, this great advantage of the defender has largely disappeared. This being the case, would it not be to the advantage of all parties, in view of the prohibitive expense to which racing has been raised this year, to impose certain reasonable limits on crew and sail area, if not to make an effort to transfer the principal racing to a smaller class than 87 or a possible 90ft.

In mentioning the Itchen boats, the *Yachtsman* endeavors to prove that the value of beam was fully realized in England before the success of Puritan and Mayflower. This, however, was very far from being the case, even the victories of the Itchen boats over some of the fast tonnage cutters of the day failed to make any serious impression in England, and it is quite probable that but for the visit of Genesta and Galatea to America, and the success of the yachts built to meet them, the narrow cutter and the lengther would still be racing in British waters. It was the defeat of Genesta by Puritan which gave a fulcrum to the lever which a few yachtsmen had been using ineffectually for some time to overturn the old tonnage rule.

As the various quotations show, the lessons of the races have been studied with considerable care on both sides, and the erroneous impressions published just after the last race are likely to have little effect. It may do no harm, however, to recapitulate the more salient points developed by the races, some of which were only visible when the excitement was over, and there was time for a cooler and clearer view.

In the first place, the radical and deciding difference between the two yachts laid neither in the size nor in the centerboard, but in the type, as indicated in the midship section. That of Vigilant approached the T square or the "wineglass" form of the old yachts already discussed, and of the still greater extreme of the modern fin-keel; while Valkyrie showed in her section the greater area and the fair and easy S curve of the modern cutter as found on both sides of the Atlantic. The inequality in this respect was most marked, far greater than in any other.

As regards actual size or power, let us assume that Vigilant could be reduced in dimensions and sail area, of course preserving all proportions, until her sailing length and rating exactly coincided with those of Valkyrie, and what would be the result. On the basis of Valkyrie's actual measurement, apart from the excess of spinnaker boom, the reduced Vigilant would be about 83ft. l.w.l., 10,600sq. ft. of sail. All time allowance being thus eliminated, we believe that Vigilant would still win under any conditions that are favorable to her in her present size. The best and fairest conditions in all of the races were those of the triangular course, and the very large margin which cannot be explained away out of the lead of 12m., would more than cover the reduction of Vigilant's size to Valkyrie's rating.

As regards the centerboard, if we assume that, while still of the same rating, Vigilant is robbed of her board and deepened in proportion to Valkyrie's draft; or, on the other hand, that Valkyrie has her lead raised to Vigilant's draft and a centerboard inserted, there still exists a difference in beam, form of section and ratio of sail to length, which experience tells us must make Vigilant the faster boat.

Several minor points present themselves before we leave the hull; the all-metal construction of Vigilant and the elaborate composite build of Valkyrie are nearly equal in the matter of weight, while the copper-sheathed bottom of the latter was probably as good or nearly so for the ten days following the last docking as the bronze bottom of

her rival. The triangular form of Valkyrie's lateral plane aided her greatly in all the maneuvering as opposed to the long, straight keel and sluggish movements of Vigilant. The question of wheel vs. tiller is a hard one to decide, but even many American yachtsmen concede a certain superiority for the tiller in racing.

Going now to that portion of the yacht above the deck, many interesting points present themselves. In the novel and original disposition of her rigging Vigilant was unquestionably superior to Valkyrie, the latter having the old mechanical details of the conventional cutter rig, such as all shrouds to the hounds, while three of Vigilant's ran to the upper cap and but two to the hounds, Vigilant's mast was also stayed fore and aft by two wire rope stays, from upper cap to a point just above the deck, set up with turnbuckles, and strained over an A. shaped brace, acting like the bridge of a fiddle, just where the thrust of the gaff came. The rigging throughout was more complicated, and made up of more parts, each demanding an exact amount of careful adjustment, but it was at the same time lighter and gave better support to the spars, than the conventional shrouds and runners of Valkyrie.

No doubt there was a certain element of weakness in the experimental nature of the rig, and also in the fact that a failure of one of the many members would be likely to result in a general wreck, but the fact is that Vigilant's rig kept her spars in her under the tremendous strain of the last bad quarter of an hour. The comparison of the two rigs, as seen through the series of races, is likely to lead to the general adoption of the Herreshoff rig, and it is more than likely that Valkyrie will profit by a similar arrangement of shrouds and iron work next season.

In sail, so far as material and making goes, the advantage was manifestly with the English boat, the cotton of course is no better than that used here, but the duck is more carefully made, and driven up harder in the making than in American mills. So much lies in the bending and using of the sails that it is a hard matter to say whether the blame for a poor sail lies with the maker or user; in this case it is only necessary to say that Mr. Ratsey's work was as perfect as one would wish to see, while every sail bore the evidence of tender and careful manipulation in bending and working out to its best form. Vigilant's sails were well made, and of a special grade of very fine duck, but they by no means set as well in use as those of Valkyrie.

In the matter of sail area, Vigilant had some advantage in the prevailing light weather, in being over-canvassed; while Valkyrie would probably be materially improved for American racing by more canvas, with possibly a little more.

In the sail plans, however, as worked out by the designer, there was a marked difference, and all in favor of American practice. This difference was in the jibtopsails; in the first place, as in all American cutters, the bowsprit extends beyond the crane iron, in the case of Vigilant, just over 2ft., thus throwing the topmast stay well forward and keeping the jibtopsail well clear of the jib and mainsail, while on Valkyrie the topmast stay comes down to the crane iron. With no pole outside the sails carried on this stay are different, the British fashion being to carry ordinarily a "No. 1 jibtopsail" extending the whole length of the stay, but cut high in the clew, like the American "large jibtopsail." This sail was set on Valkyrie whenever the spinnaker was used, as in the final race. The same sail was used on Vigilant, but only in reaching or on the wind; in a strong breeze with spinnaker set and also in reaching in moderate breezes, she relied on a "balloon jibtopsail," improperly called by most yacht skippers a "balloonjib," a very large sail of Irish linen, extending the whole length of the topmast stay and sheeting aft well beyond the mast.

This very useful sail was carried by Vigilant at all times save when on the wind, and for windward work in very light airs she had a special "balloon jibtopsail," considerably smaller, a sail not commonly used. Valkyrie had indeed a sort of "balloon jibtopsail," her "spinnaker jib" or "bowsprit spinnaker," as the English terms go, but she used it very little, and never as Vigilant used one or the other of her "balloon jibtopsails."

When dead before the wind Vigilant had her main boom well off, her spinnaker with the sheet carried around the forestay, her jib and staysail lowered, and her balloon jibtopsail set, the wind from the spinnaker being spilled into the latter sail. Valkyrie, on the contrary, had her boom further in, the spinnaker was carried square across the deck, the balloon foresail was set, also the jib, and only the No. 1 jib topsail.

In connection with the spinnaker two other points remain to be noticed, while Vigilant's spinnaker boom was just off the length allowed by the rule, Valkyrie paid for an excess of no less than 6ft. of spinnaker boom, a penalty of nearly half a minute in 30 miles; a most extraordinary and unusual handicap for a designer to assume voluntarily for the sake of a little more speed down wind.

The difference in setting light sails, spinnakers and jibtopsails, was also very great; on the British boat they were set flying, no matter how hard the wind, while on the American they were as invariably set in stops and broken out. No doubt on short courses there is a certain advantage in being trained to set these sails without the delay and trouble of stopping them up, but in anything more than a very light breeze the advantage is entirely on the side of the American plan; and in fact, in any weather it is the better. The actual handling on Valkyrie was far better than on Vigilant, but there were times in the races when it would have been an advantage in coming around a mark to have the spinnaker mastheaded and hauled out before the turn was made, leaving only the breaking of the stops when once on the new course. The disadvantage of the English plan was plainly shown on the last day, the spinnaker being first torn on the foot in setting it flying in the strong wind.

Appropos of this setting in stops, the *Yachtsman* remarks: "British skippers do not care to risk their spars by such a sudden and tremendous jerk as the breaking out of a stopped spinnaker is bound to cause." This, however, does not explain the fact that the spars never break under the same conditions on an American yacht, and that spinnakers and balloon jibtopsails are invariably set in this manner without damage to the sails or spars.

In this point of setting light sails in stops Valkyrie's crew was at a serious disadvantage, enough often to offset their unquestioned superiority in drill and quick working.

This drill and discipline of the English crew was shown in many ways, the quick handling of the spinnakers, and the machine-like regularity and quickness with which the head sheets were handled in tacking, but it was by no means the case that the handling on Valkyrie was uniformly better than on Vigilant. As long as everything ran properly in the accustomed routine, the English crew was the better, but under adverse conditions and in emergencies it did not show up as well as the crew of Vigilant. The finest work done in the whole series of the races was that on board Vigilant in the run of the final race; her mixed crew of Norwegians and "Sou'wégians" turned to with a will and shook out a reef and packed on sail in a way that made one forget all about their slow and clumsy work a little before in setting the spinnaker.

It may be assumed that after weeks of trial and careful working up, Vigilant was in very perfect form, and sailed as near to her best as any yacht does in her first season. So far as stability goes, Valkyrie probably lost nothing by the reduction of weight and ballast on this side, she was at all times a stiff boat, and even in the last race would have carried her whole mainsail easily to windward, and at no time did she show the need of the ton of lead put aboard before that race,

it is most likely, however, that the experiment of putting her in a new and very different trim at the last moment, and sailing her in the Cup races without a trial, resulted as such a venture usually does, to the yacht's disadvantage, and that, while stiff enough, she was off her fore and aft trim, and acted differently. Whatever the loss in this way may have been, it was not enough to influence appreciably the final result.

Looking now at the performance of the two yachts, that of Valkyrie in the windward work of the last race has been generally over-rated by British yachtsmen. In the first place, neither yacht was canvassed according to the weather conditions existing at the time of the start, but on the basis of telegraphic reports of a heavy gale coming up the beach and timed to reach Sandy Hook at noon. It may be said now that this "gale" proved far lighter off New York than was anticipated, and moreover it did not begin until the race was over, reaching its height about 10 P. M. instead of at noon. With a falling barometer and the telegraphic reports, both yachts shortened sail more than was necessary, but with different results.

Valkyrie turned in a small reef, setting her No. 2 jib, forestaysail and jibheader. This disposition of canvas was one she was accustomed to, and she balanced and handled perfectly under it; she could have carried the whole mainsail and jibheader easily, though it is possible that she might have gone no faster to windward. Vigilant, contrary to all American usage, followed Valkyrie's example in a certain way. She, too, turned a reef into her mainsail, but her first reef is nearly twice as deep as Valkyrie's. With this serious crippling of her driving power she still carried her No. 1 jib, it being banked to the stay and difficult to shift. Her foresail was set and a jibheader over the reefed mainsail. The result of this moribund reefing, which was strongly opposed by some of those in charge was that the yacht was robbed of the driving power of the big mainsail, so essential to the speed of a wide craft, and at the same time the big jib paid her head off continually, causing her to work in a manner never seen before.

Had she followed the usual American practice of carrying whole mainsail and headsails, without a topsail, she would have gone faster and easier, and would have been at the outer mark from three to five minutes sooner. Much has been said about the poor working of her centerboard, but the loss from this item was probably very little, on and off the wind, the reduced mainsail and the very bad balance, however, was a far more serious matter.

Added to this error in canvassing came other evils as usual in its train, and Vigilant was never worse handled than in the first half of this race; she made a miserable start, and when she had made up a part of this loss by hard footing she was robbed of it all by the serious blunder of the first off shore tack, which placed her back again right under Valkyrie's blanketing.

The handling of Valkyrie in this part of the race has been justly praised, she won the start by sheer skill at the stick and quickness of turning in the boat herself, and she was sailed beautifully, keeping her rival under her lee.

In strong contrast to this, however, is the work of the two boats on the run in; the good work on Valkyrie ended when she set her spinnaker, and the bungling stopped on Vigilant with the tardy breaking out of the same sail. With her spinnaker once drawing, though with two bad tears in the foot, Valkyrie set her large jibtopsail and balloonforesail, still carrying the reefed mainsail and jibheader, and apparently settled down to a quiet afternoon sail home. Her crew worked briskly and skillfully in shifting spinnakers later on, after the first one tore, but apart from this incident she sailed along in a leisurely, go-as-you-please fashion, making no effort to set more sail.

Vigilant, on the other hand, although the wind was steadily freshening, no sooner had her spinnaker drawing than all hands were at work on the balloon jibtopsail, the larger one of the two, and this sail was set, after some trouble with a fouled hook, which made it necessary to send a man down the topmast stay. While this was doing, men were at work along the boom casting off the reef, and at the mast-head and gaff end lashing up the jibheader and sending down the halliard and sheet for the second clutopsail, which was set over the smaller sail. All of this work was difficult and dangerous, and in the rising breeze carried with it a serious risk of losing everything; but to all appearances the only thought on Vigilant was to win. On board Valkyrie no effort was made to prevent Vigilant from passing to windward, but she steered a straight course in, regardless of her dangerous opponent, the latter passing her easily at the last.

By way of excuse for the apparently slack work on Valkyrie, it is said that her mast was sprung on the last of the windward work, and that no more sail was set because it might carry away and kill somebody. There is every reason to doubt that the mast was damaged at all, but if it were an occasion like this, the last possible chance after the work and outlay of a whole season, is one that justified almost any risk, and to racing men, in default of conclusive proof of the weakness of the mast, the excuse will seem a poor one. From what we know personally of the men on Vigilant, we feel safe in saying that had they been in charge of Valkyrie, with but 40s. to save, as events proved, and in the leading berth, they would either have saved the time or have been towed in dismasted. As the wind blew toward the close of the race, the risk on Vigilant was no small one; but with larger spars and sails than Valkyrie, a mast smaller in diameter, and lighter rigging, and with whole mainsail, clutopsail and balloon jibtopsail set, besides the big spinnaker, she was simply sailed to win—or to break down—regardless of all ordinary considerations of safe sailing.

To us Valkyrie's work to windward was disappointing, from the models and rigs of the two boats, we had looked to see Vigilant's superiority lessen materially or disappear entirely under such conditions of sea and wind as prevailed in this race, and to see Valkyrie beat her decisively to windward. So far as we can see, Valkyrie was canvassed and sailed perfectly, from the start to the weather mark, while Vigilant was very badly canvassed, poorly sailed, and possibly hindered somewhat by the derangement of her centerboard. Under these conditions Valkyrie's gain is very much less than we looked for.

Appropos of the final race and that "sprung" mast, the *Field* of Nov. 4 speaks as follows: "With regard to the Valkyrie not having set her clutopsail on the run home, Lord Dunraven informs us that it was not done because so much time would have been lost in hauling down the jibheader and setting the 1,700sq. ft. topsail, and Valkyrie was rolling so much more than Vigilant that he did not like to risk sending a man out to the gaff end to lash the clew of the jibheader, and so be able to use the sheet without hauling the sail down. The masthead had shown some signs of weakness, but that had nothing to do with the non-shifting of topsails." This is a rather humiliating confession, as in effect it admits that the British tar, with his heart of oak, stopped short at a job that was done, and done well, by good Yankee sailors born in Norway and naturalized on Gowan mud and Krombach's beer. Working at the ends of these long spars is neither safe, easy nor pleasant, but if it is done on one boat it must be done on the other, and the failure to do it is a strong admission of the superiority of the opposing crew. While Valkyrie rolled more than Vigilant, the work on the latter was dangerous enough to involve serious risk to the men in the very probable event of the topmast going; but there are times in a great race where a heavier risk is justified by the circumstances, and this was apparently one of them. The setting of corresponding sails on Valkyrie, even after Vigilant had shown the way, would have changed the result of the race.

CURRENT COMMENTS ON THE RACES.

The opinions and criticisms evoked from both sides of the Atlantic by the recent international races would make in themselves a very respectable volume of current yachting history, but the bulk of them, both American and British, are not worth preserving, their chief interest being their strong national prejudice mingled with an extensive ignorance of everything pertaining to the origin of the America's Cup, the early races and the details of the arrangement and actual sailing of the present contest. As typical of this class we may mention a correspondent of *The Yachtsman*, who asks a number of questions concerning the origin of the Cup; and on this side a correspondent of the *Marine Journal*, who, ignoring the fact that it is all but a physical impossibility for a challenger from the ocean to win from the picked one of four defending yachts, demands a return to the conditions of the first race, compelling the challenger to sail against an unlimited fleet. It is probable that very few of these comments come under the eyes of our readers, and we herewith present some of the more important ones. *The Yachtsman* sums up the whole matter as follows:

"We still adhere to our belief that an extra spread of 1,000sq. ft. of sail without any alteration in hull dimensions, would not have sufficed to put Valkyrie on an equality with Vigilant, but this is a mere matter of opinion, and the main point is, as has been pointed out, that our champion yacht, although the best that could be chosen from the fleet of our large class racers, was outclassed because she was outbuilt."

"Now, we fancy that even patriotic experts on the other side of the Atlantic, will hardly interpret this phrase as an insinuation against Mr. Watson's exclusively his superior sailing over Mr. Watson in the art of yacht designing—this is not the sense in which we understand the verb 'to outbuild'; and it is an everyday phrase in British yachting circles."

"There have been innumerable instances in which inferior designers have turned out a craft which has beaten the efforts of the best yacht architects, simply by adopting the extreme dimensions at the keel, and the significant fact is that the American race was won by the defeat of such boats in a succeeding year by yachts of smaller dimensions, but designed with consummate skill. We could point to very many such instances under the 1730 rule, and this is the sense in which we understand the word 'outbuild.'"

"It must not be supposed, however, that we seek to disparage Mr. Herreshoff. None but a vessel of superlative quality could have sailed as Vigilant did during the last international race, and it is difficult to imagine a vessel so established to suffer from an ungenerous and untruthful attack as such an intention would cause the foregoing lines to become. We merely intend to emphasize 'Thalassa's' argument, that the extra beam and sail spread of Vigilant, went a very long way toward her victory over Valkyrie. Some journals are in the habit of calling Vigilant the 'more powerful' vessel, and by this, we presume, a reference is intended to the fact that she was able to sail so far to leeward, and to reverse of 'powerful,' and to our thinking, Mr. Watson would find it an easy task to beat Valkyrie thoroughly with a vessel of Vigilant's beam and sail spread."

"But the fact is simply this, that the ideas of our designers are more cramped than those of our enterprising cousins, and if we may ever hope to see the old Cup back in these waters, the challenger must be prepared to build a craft of proportion so extreme that no advance can be made on them during the period of Yankee incubation."

"We have referred in another place to *Satanita* as an illustration of a misdirected effort (from an International point of view) to out-Herod Herod. She has been a successful yacht this season in the waters for which she was built, but, as Mr. Leslie reminds us, the climatic conditions of Sandy Hook are widely different from those of the Solent and the Clyde, and such a boat as *Satanita* must be the very worst to choose as a challenger for the Cup."

"When we first published the news of Lord Dunraven's challenge and that of Mr. Carroll, we predicted both *Navahoe* and *Valkyrie's* failure in their respective enterprises, although we confess that the former made such a very much worse display than we had anticipated that our hopes were somewhat raised as regards *Valkyrie*. In both cases the primary odds were fearfully against the challenge, and it is all altered by the fact that the challenger sees his way to build for one object only, leaving all other considerations in the background or until some such International arrangement as *Thalassa* suggests becomes an accomplished fact. The latter alternative, although by far the more desirable, will, we fear, be difficult of realization, for the America Cup has become of transcendent importance among International trophies; and although our American cousins have now shown themselves willing to take up the glove on terms as fair as in any preceding cases, yet it is perhaps too much to expect of them to grant an abandonment of what may be called their historic advantages, for it must be remembered that these have been embodied in the conditions governing races for the Victoria Cup."

"It would go far to achieve a greater degree of equality between the two countries if a uniform rule of measurement could be arranged. This is an old idea, of course, but it may be none the worse for that. Although a challenger is would not, by any means obviate all the difficulties of a challenger on either side, it might prove to be a boon to both countries, for it is quite possible that under the existing régime, a challenger fit to cross the ocean may become an actual impossibility, and this would be avoided by a common rating rule of a more sensible nature than that now existing in either country, while at the same time it would certainly tend to put new life into the classes below and to the right of cup challengers and 'defenders.'"

"That our present rating rule is not the best that could be devised for cultivating the microbe of a successful challenger, must be patent to anyone who remembers the extinct length classes of Southampton Water. We are no great admirers of the type of boat evolved by that system of measurement, but we have not the slightest doubt that, had this primitive rule of mere lead-line length been adopted instead of the present standard, our 'foetors' of today would have been fit to cope with any sailing thing afloat. These same Southampton 'foetors' are now of historical interest. They were brought to great perfection long before the era of the *Genesta*—Puritan races, and, that being so, they form a conclusive argument in favor of the Britisher when the question is raised as to which of the two countries, England or America, has taught the other the more in the matter of yacht designing; this in itself of course, is a question that would have been settled by a skimming-dish, fitted with a centerboard, was the pride and joy of American yachtsmen. But it was not a skimming-dish that met *Genesta*, although one was fruitfully built for this purpose. Puritan was a combination of the keel boat and the beamy centerboard. The keel boat attributes were, however, lost sight of in the crowd of self-gratulation with which Uncle Sam announced his triumph. Then, when the *Galathea* mates were sent to the defense, the 'foetors' were reborn under the name of 'cup challengers' and 'defenders.' And Uncle Sam crowed louder than ever over the virtues of his (British invented) centerboard. But the climax was reached when Volunteer—a still further advance in the keel direction—defeated *Thistle*. This time there could be no question about it, the American type was invincible—at least that is what the American press would have us believe. But the new dead end to which the late French experts in yacht racing had led us, was not understood by the New York C."

"Now all this time we had a local class of some importance at Southampton. That it was of 'some importance' may be gathered from the fact that many owners were willing to support it at an expenditure of considerably over £600 for the mere building of a 30ft. boat. These yachts were generally (in the *Genesta* period) of about three beams to length—or fully as broad as they were deep. They were built with a very hollow midship section. How, then, did our cousins teach us the value of beam?"

"Does not the blame for such a boast being even possible, lie with the Yacht Racing Association in sticking to a rule which, as the Southampton classes proved under their very eyes, did not and could not, produce what they have lately stated to be the object of their doubtful 'fastest' 'Yachts'?" We have not yet learned the full value of the centerboard, although we have invented it, even in view of *Valkyrie's* defeat; but this is hardly to be wondered at when one calls to mind the experience gained in our waters through Queen Mab, not to speak of *Iverna* and many other British centerboard boats, and also through the record of *Navahoe*. But we had learned the value of beam long before the time when Uncle Sam 'lims' to have taught our cousins that the other hand, the Vigilant of to-day far more closely approximates to the Southampton 30 footer of '84 than to her boasted Yankee prototype of the same date. Her ancestry is not doubtful—it is British."

In the same number the *Yachtsman* suggests the desirability of square courses and no time limit, but offers no better reason for either than that it would remove all possible grounds for the criticism that Vigilant could not win at her own pace, but must win over British Regatta courses. What a foreign yacht can do over bad local courses is a matter of no importance whatever. No one thinks the worse of *Genesta* because she was beaten by Puritan over the inside course, and it will be a long day before the courses for a Cup contest will be arranged after those which, through local conditions, some of the British clubs are compelled to race over. Apart from the prevalent light winds on our coast, no better or fairer courses are to be found anywhere than off Marblehead or outside Sandy Hook, or even off Newport. This same cry for four-sided courses was heard from the Clyde after the defeat of *Thistle*, and was as absurd then as it is now. The day has fortunately gone by when important international matches are decided over local courses, and no time record over such courses can stand alongside of an actual trial on the open sea, as in the present races."

The *Yachtsman*, however, continues as follows: "Our opinion is that

Vigilant would have proved the crack of this season (notwithstanding the fleet she would have been required to meet) had she been built only for racing in these waters. She likes smooth water, and she would get it, in most instances, throughout a British season. The moral of her success seems to point to the fact that in the large class our designers have regarded excessive sail spread with too much dread, and that Mr. Soper, in designing another *Satanita*, should rely on enormous initial power and a corresponding area of sail, rather than upon, as in the smaller classes, great length of leadline and small sails."

In discussing the previous races *The Yachtsman* makes the statement that it was generally admitted in America that had *Irex* challenged in place of *Genesta*, she would certainly have taken the Cup home. This will be news to Americans, as it has never been considered at all possible here that *Irex* would have fared materially better than *Genesta*. Trusting only to memory, and without looking up the records, we are strongly of the impression that at the end of 1884 *Genesta* had won as much prize money and was considered quite as fast a boat as *Irex*, the latter only beginning her long and honorable reputation with her second season, in which she showed great improvement over her original form, as was the case later on with *Iverna*. It is quite possible that O'Neil might not have made the serious mistake that Carter did in the last great race, but we doubt very much whether he would on the whole have sailed his boat any better, as Captain Carter's handling was generally commended here.

We recently quoted some remarks from the *Field* on centerboards and ballast, the subject being continued in the following issue as follows:

"In reference to the remarks we made last week about the ballast crew carried by Vigilant in her trial races and races for the Cup, we find that the *Boston Herald* has directed attention to the matter in a very sensible manner. This paper says it is fortunate for Vigilant that there was no restriction as to number of crew as there is in *Irex*, the latter only beginning her long and honorable reputation with her second season, in which she showed great improvement over her original form, as was the case later on with *Iverna*. It is quite possible that O'Neil might not have made the serious mistake that Carter did in the last great race, but we doubt very much whether he would on the whole have sailed his boat any better, as Captain Carter's handling was generally commended here."

"The question of carrying big crews in beamy boats has been pretty well discussed both in this country and in America, and the sort of craft it engenders has been generally deprecated. In the result crews have been limited in the small classes in both countries. As a matter of fact however, a big crew (instead of dead weight in the form of ballast stowed under the platform) is more objectionable in a large vessel than in a small one; and it must be remembered, as we pointed out last week, that weight in the lead keel or inside ballast box would be generally more effective than the equivalent weight under the weather rail on deck. This matter is so little understood that it is deserving of illustration. The accompanying wood cut represents the midsection of a yacht with a beam of

The weekly gallery shoot brought together only ten members in the medal competition. The honors for the evening for the highest score fell to Geo. Schlicht, with 243 points; the old veteran D. Miller was a close second with 242, L. Schmidt was a good third with 241, the other scores are as follows: Meyers 236, Sohl 238, ex-Captain Dewy 201, Weaver 218, Vanderheyden 227, Rogers 214, Will 207.

### Zettler Rifle Club.

The weekly gallery shoot on Nov. 14 brought together seventeen members in competition for the club prizes and the champion medal. The champion match at Cypress Hills on Nov. 7 and the fact that the day was Election Day necessitated the postponement of the regular monthly meeting of the club from the 7th to the 14th.

The fact that the election of a new board of officers comes off next month and other matters pertaining to the interests of the organization would be called up, had the effect to bring together more than the usual number found at the Tuesday night shoots. Speaking of the election to come off next month, in canvassing the matter with some of the prominent and more active members the general drift seems to be toward a re-election of the present board. The present officers are prominent in the board of officers of the new Bund established in New York the past year and is thought to be desirable to let matters remain as they are. B. Walther, Geb Krauss, Gus Nowak, Fred Ross, C. G. Zettler and B. Zettler contain in their personality an encyclopedia upon the ways and means of perpetuating rifle shooting interests.

The club at the present time is in first-class condition and bids fair to hold its present position as the leader among the fraternity of riflemen for many years to come.

With the close of the business before the club an adjournment was followed by a lively competition among the members present for high scores.

The champion medal was captured by Fred C. Ross with the fine score of 247. The honors for highest score of the night was divided between B. Zettler and Ross, each with 248.

Champion medal, 10 shots, first entry: F. C. Ross 247, M. B. Engel 246, L. Flach 244, J. H. Brown 243, C. Percival 242, Plaisted 241, Hoopes 241, Walther 241, B. Zettler 240, F. Busse 239, P. Schmidt 238, C. G. Zettler 238, Gus. Nowak 235, George Krauss 234, R. Hamann 233, H. D. Muller 233, H. Strate 233, A. H. Kohlmetz 230, C. J. Watson 230.

Best 10-shot score, five entries: B. Zettler 248, F. C. Ross 248, H. Hoopes 247, M. B. Engel 246, R. Busse 245, L. Flach 245, P. F. Schmidt 245, B. Walther 245, J. H. Brown 243, C. Percival 242, C. G. Zettler 243, G. W. Plaisted 241, Geb Krauss 238, Gus Nowak 238, H. D. Muller 235, A. H. Kohlmetz 230, C. J. Watson 228.

### Our Own Club.

The weekly gallery shoots are being well patronized. Last week it was voted to present a medal to the member bringing in the most candidates for membership during the next year. This will no doubt stimulate the active workers of the club, and will result in a considerable increase in the membership. The competition for the medal is liable to be the means of bringing into the club an undesirable element, easy to acquire, but difficult to eradicate. Scores in the weekly competition, 10 shots, 25 ring target, gallery distance: J. H. Kruse 239, A. Matz 230, F. Sessmar 244, A. Struber 234, Capt. Heiken 225, W. Düren 227, M. Heldmann 233, H. Schultz 219, W. Böhmke 219, O. Keller 212, F. Offen 209, J. D. Sinclair 209, D. Page 206, F. Vonderhayden 205.

### Trap-Shooting.

All ties divided unless otherwise reported.

#### FIXTURES.

If you want your shoot to be announced here send in notice like the following:

Nov. 28-30.—Briggs' three days' tournament, at Toronto, Canada.  
Nov. 30.—Riverside (Cal.) Sportsmen's Club tournament.  
Nov. 30.—Bogardus—Hall match, at Springfield, Ill.  
Nov. 30.—Wentz—Bacon match, at Dayton, Ohio.  
Nov. 30.—Cedar Rapids (Ia.) Gun Club tournament.  
Nov. 30.—Janesville (Wis.) Gun Club tournament.  
Nov. 30.—All-day shoot at live birds, on John Erb's ground, Bloomfield avenue, Newark, N. J.  
Nov. 29-25.—Knoxville (Tenn.) Gun Club tournament.  
Nov. 30.—All-day shoot at Wiedenmeyer's Park, Newark, N. J.  
Nov. 30.—Riverside Gun Club tournament, at Red Bank, N. J. Live birds and targets.  
Nov. 30.—J. A. Hartner's tournament, Orangeville, Md.  
Dec. 10-12.—West End Gun Club tournament, at Davenport, Ia.

1894.

Jan. 9.—New Jersey vs. Kings county, team shoot, on Al. Heritage's grounds, Marion, N. J.  
April 4-6.—Interstate Manufacturers' and Dealers' Association's grand American handicap at Dexter Park, Long Island.  
May 1-6.—Arkansas State Sportsmen's Association's tournament, at Fort Smith, Arkansas.  
June 1-5.—Tenn. Gun Club thirteenth annual tournament: first days, target, \$1,000 added money, known traps, unknown angles; last day, live pigeons. Open to the world. No handicap. R. Van Gilder, Sec'y.  
June 5-7.—Kansas State Sportsmen's Association's fifth annual tournament, Topeka, Kansas. J. C. Clark, Sec'y.  
June (second week).—New York State Sportsmen's Association for the Protection of Fish and Game, thirty-sixth annual tournament, at Utica, N. Y., under auspices of Oneida County Sportsmen's Association.  
June 19-21.—Chamberlin Cartridge and Target Company's first annual tournament, at Cleveland, Ohio. \$1,000 added money.  
June (third week).—Atlantic City Rod and Gun Club, three days' tournament. Address R. C. Griscom, Sec'y, Atlantic City, N. J.

### DRIVERS AND TWISTERS.

Next week J. A. R. Elliott will attend the Toronto tournament and the week following he will devote to field shooting. Then he will return to this section, unless some unforeseen accident occurs, and will shoot a match against J. Frank Class, of Morrisstown, under the following conditions: Each man to shoot at 200 pigeons, for a stake of \$500 a side, Hurlingham rules to govern except as to boundary, which shall be 50 yds., match to be shot at Willard's Park, Paterson, N. J., beginning not later than 10:30 A. M. on a date to be fixed. The birds to be used in the above match will be brought from Missouri and all "hummers" are guaranteed. After his return Mr. Elliott will also shoot a 25-bird match at Pine Brook, N. J., against Samuel Castle, the Newark veteran, the stake to be \$100 a side. This will be 25 yds. rise, single barrel only allowed, gun to be held below the elbow until bird is on the wing. Although Mr. Castle is sixty-three years of age he is by no means an easy mark at any style of shooting and is particularly expert at the style mentioned for this match. The parties who arranged for this match were desirous of making it a find, trap and handle affair, but much to his credit it can be said that Mr. Elliott emphatically refused to shoot any such match, claiming, and justly, that such matches should not be sanctioned by any fair-minded sportsman, as the temptation to outbid an opponent in order to defeat him was an incentive to resort to brutal methods of handling. In this stand Mr. Elliott will be upheld by sportsmen at large. Find, trap and handle matches are out of place in this age of enlightenment, and if shooters do not have the interests of legitimate sport at heart and discontinue such contests, they should be stopped by the authorities.

Destruction is being wrought among the quail in the vicinity of Lynch's Station, Va., those who are doing the most of the work being Charles Heath, of Orange, J. J. and Wm. T. Mitchell, of the "Packed Army" where we spent our summer vacation. Both men are crack field shots, and having dogs second to none in the country, meet with success on all their forays. The birds are plentiful not only in that section, but all along the line of the well-equipped Richmond & Danville Railroad as far as Asheville, N. C. Northerners who are looking for good shooting and incidentally wish to meet a jolly lot of whole-souled sportsmen, cannot do better than to take this line and go "packed" as Charles, N. C. where we will guarantee that any of the members of the Charlotte Gun Club will be ready and willing to put them on the track of all the birds they care to bag. Landlord Quincy, of the Buford Hotel, will take good care of them while in town. We have put up at this house and will vouch for fair treatment for all who stop there. Another prime place for the feathered game is Mount Airy, N. C., seventy miles from Greensboro, via the Cape Fear & Rocked Ferry Railroad. Mount Airy is situated in a picturesque locality, with beautiful scenery, and is a beautiful place to spend an outing. Game is very abundant, and W. A. Bryan, of the Renfro Inn, is always ready to direct sportsmen to the best spots for sport, as well as to take good care of them during off hours. His place is equipped on modern lines and the terms are extremely reasonable.

Boston, Mass., Nov. 15.—The monthly meeting of the Massachusetts State Shooting Association, composed of the leading trap-shooting clubs throughout the State, was held yesterday on the grounds of the Massachusetts Rifle Association. All sections of the State were represented by teams and individual competitors, and the excellent weather conditions, together with the large attendance, made the occasion noteworthy from a sportsman's point of view. Match for team championship, M. S. S. A., teams of three, representing only clubs belonging to the association, 10 Boston targets each man: Boston Shooting Association, Climax 8, Choate 9, Warren 9, total 26. Marblehead Club, Curtis 7, Pray 6, Marvel 8, total 21. Lowell Gun Club, Rule 7, Little 6, Burton 7, total 20. Worcester Sportsmen's Club, team No. Masscroft 6, Gilman 8, Davis 5, total 19. Team No. 2, Harvey 6, Buck 7, Hoyle 6, total 19. Lynn Sportsmen's Club, Martin 4, Ullman 7, Forbes 6, total 17. Match for individual badge, M. S. S. A., 20 Boston targets, unknown traps and unknown angles, twenty-seven contestants: Climax 19, Choate 18, Buck 17, Francis 17, Davis 17, Ullman 16, Jones 15, Allison 15, Judkins 15, Burton 15, Masscroft 15, Nichols 14, Gilman 14, Rule 14, Harvey 13, Derby 13, Parker 13, White 12, Little 12, Vads-worth 11, Forbes 11, Warren 11, Hooper 10, Martin 10, Hoyle 9, Weatherly 9, Keating 6.

A letter from Roger Van Gilder, secretary of the Knoxville Gun Club, gives us the pleasing information that the tournament of the club to be held in May, 1894, will last four days instead of three as previously announced. May 22, 23 and 24 will be target days with \$1,000 added to the purses, and May 25 will be devoted to live bird shooting and a championship match at targets, \$10 to \$25 entry. The number of targets will be announced later. The prospects are that the 1894 shoot at Knoxville will be the greatest shoot ever held in the South, and that the entries will go far above one hundred. The addition of a live bird day will attract a good many Northerners who would not go so far to shoot at targets alone, but who will do so when they are assured of a chance to ruffle feathers. Now at this point we would suggest to the Knoxville clubmen that they make their entries not less than \$1 a bird, have no events with less than six or seven birds, and in no event have more than four money.

RED BANK, N. J., Nov. 15.—The club held a shoot yesterday afternoon on its Beach street grounds. The targets were bluecocks thrown from 5 traps at unknown angles. The summary follows: No. 1, 10 singles; James Cooper and John Cooper tied on 8 each; Mr. Gunsey and Timbrook Davis, 6 each; C. E. Throckmorton 4, R. L. Linderman 3. No. 2, 10 singles; Gunsey's 8, James Cooper and Davis, 6 each; Linderman 5, John Cooper and C. E. Throckmorton, 4 each. No. 3, team shoot at 25 singles per man: Team 1; Gunsey 17, Jas. Cooper 14, Davis 13, W. N. Little 17, total, 61. Team 2; E. Throckmorton 14, John Cooper 13, total, 27. Team 3; E. Throckmorton 12, total, 61. This event was decided by a shoot-off at 5 birds per man, and was won by Team 2, which scored 13 to their opponents' 9.

Much to the regret of the army of live bird shooters of New Jersey and New York, the long talked of question of supremacy between the representative shooters of Kings county, N. Y., and of New Jersey will not be settled until Jan. 9. Last week we announced that teams of 20 men each as above would meet on Dec. 9, but after we were informed to that effect it appears that the Kings county men decided that they could not shoot until after the holidays. Hence the shooters of the two States will be obliged to nurse their patience until that date. When the match comes off it will be on the grounds of the well-known Al. Heritage at Marion, N. J., where so many battle-royals have been fought to a finish. The Jersey men particularly regret the change of date, as they were all cocked and primed for the fray on Dec. 5.

The Merion Gun Club and West Manayunk Shooting Association met in a team contest at Lower Merion, near Philadelphia, on Nov. 14, the teams comprising ten men each and each man shooting at fifteen targets, under the rapid-firing system. John Heft of the Roxborough Gun Club was referee. The result: Merion—T. Barker 14, H. Kinsaid 14, S. Miller 13, C. Osborne 10, Cormann 10, J. Humphrey 10, Booth 9, Tyle 9, C. Freyer 8, W. Roberts 6; total, 106. Manayunk—H. Rudolph 14, White Plains 13, F. Ogle 12, T. Schofield 10, B. McMonable 9, W. Shields 9, S. Hoff 9, W. A. Wize 8, L. Bernard 6, F. Merkel 5; total, 95.

On the day announced for the Morley—Morford match at Martin's Pine Brook Hotel, those who had guns with them shot a few sweepstakes, the results being as follows: Event No. 1, 5 birds, \$5 entry, 2 money—Class 5, Wolf 4, Leonard 4, Morley 4, Martin 3. No. 2, same—Martin 5, Class 5, Morley 5, Wolf 4, Leonard 4. No. 3, same—Martin 4, Morley 4, Leonard 4. This was shot off, miss and out, Morley capturing the pot. The birds were a fairly good lot.

The Midway Gun Club held its monthly shoot at Mattawan, N. J., on Nov. 17, live birds being used. A good lot of flyers were supplied. In the first event at 6 birds James Van Brackle killed 6, John Terhune 4, E. Mulcahy 3, John Applegate 3, William Perrine 2, Charles Mulheard 1, Frank Worrell 1. At 5 birds Van Brackle took first on a straight score. F. Worrell and Mr. Gosner shot two matches at 3 birds each, Worrell winning both.

The return match between Messrs. Edgarton, Forbel, Selover and Young, which was to be shot off on Nov. 15, at Dexter Park, at 25 birds, \$25, highest score to take the pot, Young and Selover, the other three contestants made a three-cornered match of it and shot it out. Lee Helgans being present shot along to keep himself in practice. Geo. Forbel killed 20 out of his 25, Edgarton 19, and Selover 17. Helgans killed 20.

Dr. P. J. Zeglio reports that game is scarce in the vicinity of Warrenville, N. J., and that bringing in two or three birds as the result of a day's tramping is about the limit. This is about the consensus of all reports received from the northern portion of the State. In the southern counties fair bags are made, although nowhere is the supply anything to brag of.

M. F. Lindsley and T. W. Morley were billed to shoot a 50-bird match at Erb's on Nov. 17, but the match was postponed owing to the Class-Elliott match taking place at Paterson on that day. The Class-Elliott match, by the way, was to have been held on the Driving Park at Utica, N. Y., as the track was undergoing repairs the match was transferred to Paterson.

A big list of entries is expected at the three days' live bird tournament to be held at Toronto, Can., on Tuesday, Wednesday and Thursday of next week. Among the shooters will be a number of well-known Americans, including Rolla Heikes, J. A. R. Elliott, Harvey McMurchy, John Parker and M. F. Lindsley, all of whom will try to uphold the shooting honors of the Republic.

There will be open sweepstake pigeon shooting at Watson's Park on Thanksgiving Day (Nov. 30), commencing at 10 o'clock A. M., and on Friday and Saturday following, commencing at 1 o'clock P. M., with lunch at the park cottage.

W. S. French, secretary of the Oneida County Sportsmen's Association, informs us that his association claims the second week in June, 1894, for the thirty-sixth annual tournament of the New York State Sportsmen's Association for the Protection of Fish and Game, to be held at Utica.

At the last medal shoot of the Colt Hammerless Gun Club, of Hartford, each man shooting at 25 targets, Cook won with 24 breaks, J. Melrose got 23, Risley 23, Olmstead 23, S. Hills 20, Hotchkiss 19, Pitkin 17 and Stone 14.

John Erb will have his live bird traps in position from 10 A. M. until dark on Thanksgiving Day and will have enough good birds to supply all comers. There will be no regular programme, but impromptu events will be arranged to suit the shooters.

The Riverside Gun Club, of Red Bank, N. J., announces an open-to-all target and live bird shoot on its grounds on Thanksgiving Day. Shooting all day and everybody can be assured of a welcome.

The East Side-Mutual Gun Club will hold a live bird shoot at Wiedenmeyer's park, Newark, on Thanksgiving Day. The events will be open to all comers.

John A. Hartner informs us that he will hold an open to all shoot at targets at his home, Orangeville, Baltimore county, Md., on Thanksgiving Day.

Louis Miller will keep open house on Thursday, Nov. 30 (Thanksgiving Day). Bluecocks, live birds and roast turkey will be the order of the day.

J. A. R. Elliott is meeting with great success in the introduction of his new leading block among the sportsmen of the East.

The Hell Gate Gun Club will hold its monthly shoot at Dexter Park on Nov. 27.

C. H. TOWNSEND.

### Targets at Sardinia.

SARDINIA, N. Y., Nov. 15.—The following scores were made on the Union Gun Club's grounds at the two days' tournament given by the members on Thursday and Friday, Nov. 9 and 10:

No. 1, 10 singles:

Kelsey.....	1111111101	9	Hammond.....	1111111111	10
Olmsted.....	1111111011	9	House.....	1110111011	8
Andrews.....	1111111111	10			

No. 2, 10 singles:

Kelsey.....	1111111101	9	Rice.....	0111101111	8
Hammond.....	1011110111	8	Schwab.....	1111001101	7
Olmsted.....	1111111111	10	Colegrove.....	1111011110	8
Andrews.....	1111111111	10			

No. 3:

Kelsey.....	1111110111	9	Olmsted.....	1111110110	9
Hammond.....	1111111111	9	Bement.....	1110101101	7

E. ANDREWS.

### Castle Defeats Pierre.

The second match between Samuel Castle, of Newark, and Eugene Pierre, of Bonton, was shot at Martin's Pine Brook Hotel, on Thursday, Nov. 16. It was one of the much-to-be-condemned find, trap and handle affairs, and judging from reports the handling of the birds was in no wise gentle, nor was the cayenne pepper box allowed to get empty.

Each man shot at 25 live pigeons, under old Long Island rules, and the birds are said to have been all "cockers," which may be believed when the manner of "hiving" the birds is considered. The stake was \$300. The score follows:

Castle.....	00101111010001111111	18
Pierre.....	000011011110111010101011	16

### Class Defeats Elliott at Paterson.

ONCE more has the pigeon shooting talent been surprised and once more was J. Frank Class the one who surprised them. It will be remembered that when Class and Elliott first met in a contest it was predicted that Class was outclassed and would fall an easy victim to Kansas City Elliott's skill. There were some, however, who believed that Class not only retained his skill of former days, but also possessed latent skill and nerve which had never been called forth. Class sustained this good opinion by tying his opponent on 96 kills out of the 100 birds, and lost the shoot-off at 25 birds each by having a bird fall dead out of bounds. When the second match was shot, at Morris-town, Class again took the field by storm by killing 95 to Elliott's 90. Class's 5 lost birds falling dead out of bounds. His friends simply took this as a matter of course, and still many to say it was "a fluke!" They did not take into consideration the fact that this self-same Class in match shooting had previously averaged over 93 per cent. at 850 birds, nor did they consider that to kill 95 of the Morris-town birds required more science than to kill 98 such as were trapped for the first match.

On Nov. 17, however, those of the doubters who went to Willard's Park, in Paterson, saw Class kill 99 out of 100 fair match birds against 95 killed by Elliott, who lost three birds dead out of bounds. The day was a fair one for the sport, although not by any means clear. When the match started, at 1:52 P. M., the sun was shining brightly and the sky was clear. Within an hour, however, the sky had clouded and the air became chill and raw, making it uncomfortable to stand about without an overcoat. The attendance was light, not over fifty spectators being on the grounds owing to lack of advertising. It had previously been announced that the match would be shot on the White Plains track, but as that place was in the hands of about 150 Italians undergoing repairs, the scene had to be shifted to Paterson at short notice.

It was just 1:32 when Elliott stepped to the score and downed a slow bird, which scarcely led the trap before catching the contents of the first barrel. Class followed by grasping a fair match driver, using both barrels. Previous to this T. W. Morley, of the Paterson Gun Club, had been chosen as referee; Henry Wolf, of the same club, pulled the traps, while the representatives of the sportsmen's journals acted as scorers. Mr. Morley's red Irish Eagle did the gathering, and did it in great form. The match progressed smoothly until the seventh round, when Class scored on the first goose egg, losing a right-quartering driver, which in our judgment he should have killed. However, this was his only lost one of the match.

Elliott grassed 15 and then lost a right-quartering driver that twisted in all styles. His 17th was similar in direction and flight, and this also went over the hills and far away. The first quarter ended with 24 kills for Class to 23 for Elliott.

The Kansas City trapster had hard luck on the second quarter. His third bird was hit hard with both barrels and seemed barely able to carry its dose, but nevertheless it managed to get over the 18th wire fence marking the 50yds. boundary and then gave up the ghost. His 17th bird, which like the one above mentioned was a right-quartering twisting driver, was hit awfully hard with both loads, but this, too, died over the fence. When this bird was examined it was found to be hit, and he died at that with no less than seven No. 7 trap shot. On the third quarter Elliott's 12th bird refused flight as the trap was pulled, and before it could make up its mind whether to fly or not, wideawake Eagle pounced out and gathered it. This of course gave Elliott another bird, which turned out to be another of those right-quartering twisters, which caught both barrels full and went over the fence to die. Following this he killed 35 straight and ended with a score of 95 kills to Class's 99.

The scores show conclusively that both men were down to form. Class used a quick and effective first barrel, while he abandoned his slap bang style with his second, the result being some fine second barrel kills. Elliott shot in form much superior to that he displayed in the previous match, both barrels being used safely and effectively. The general opinion was that in his present form Class outtranks Elliott, and is shooting well enough to defeat any man in the country. He is certainly doing remarkable work and improving with each contest. That he has been greatly under-rated in the past is sure, and those who have persisted in placing him into the third rank will probably alter their opinions. An average of 96 1/2 out of 100 for three matches is a fine showing, even though the birds be not of the "genuine bluecock" grade.

A glance at the detailed score will show that Elliott's weak point is on birds bearing to the right, all his lost birds taking this direction. The birds as a whole were not near as good as those trapped for the previous match, but still they were a fair lot of match birds. Only two birds were called on account of refusal to fly.

Elliott's best runs were 38, 19 and 15. His second barrel was used 55 times to kill. He used a Greener gun and a Greener wood powder. Class made a run of 92 and used his second barrel 45 times to kill. He used a Greener gun and Schultze powder, his cartridges being loaded by Von Lengerke & Detmold.

The times of the match by quarters were 24m., 29m., 25m. and 25m., a total of 1h. 43m. for the 200 birds.

The exceptional birds (the direction of flight is shown by the detailed score) were, Class (quick kill), 6th (quick), 14th (fast), 16th (splendid second), 34th (lightning bird and quickly killed), 40th (fine second), 63d (awfully fast, elegant second), 64th, 67th, 82d (an ugly zig-zagging driver killed in beautiful style), 89th (a zig-zagging, right-quartering driver, changing direction by the yard, as fine a kill as could be made).

Elliott, 3d (good), 9th (fast and a quick second which was needed), 12th, 14th and 27th (all fast ones and well trapped), 31st (fast), 32d (with both barrels and quickly), 34th (same), 41st (best bird and prettiest kill of day, a lightning driver), 57th (elegant kill of extra good bird), 78th (humming driver, a great second barrel kill), 81st (fast and a good kill), 88th (good kill of fast bird).

Class's 7th bird, the only one he lost, was a hummer and could have been missed by almost any one. His 97th was shot on the ground and he was given another bird which was a fast one and well killed.

Elliott's 28th was shot on ground, referee giving him another bird; on his 32d the trap was pulled before he called "pull" and another bird was allowed, the same occurring on his 36th round. His 43d bird, which fell dead out of bounds, was hard hit with both barrels, and dropped less than a yard beyond bounds. His 63d bird was one which any one would have been excused for missing but he hit it hard with both barrels and saw it drop over the boundary. On his 83d round he called no bird on a duffer.

Below is the score in the style usually presented by FOREST AND STREAM, which style, by the way, all our esteemed contemporaries would like to copy if Uncle Sam's copyright did not prevent them from doing so.

Please note that the characters in the third line signify as follows: 1, first barrel kill; 2, second barrel kill; 0, missed; \* dead out of bounds. In the second line an H signifies a bird which is killed close to the traps, commonly called a flipper. T signifies a towerer.

### Saturday's Match at Morristown.

THE day following the shoot at Paterson the men met again on the Morristown Driving Park, and once more was a fair match contested, this time by the unaccountably poor work done by Class, who at one stage of the game seemed to lose both nerve and skill, losing no less than 9 birds in 23 shot at. Up to the first of these misses he led Elliott by one bird, but from this out he was as good as beaten.

During the early part of Saturday the weather was clear and crisp, with a stiff westerly wind. Before the match began the conditions were materially changed, the sun had become obscured and the

air became raw and damp. The wind did not change its direction, blowing at about twelve miles an hour. The attendance was light, not over seventy-five people being on the ground. Among these were Al Heritage, of Jersey City; M. F. Lindsey and Eddie Collins, of West Hoboken; "Uncle Jack" Harrison, of Dover; John Cocke, of Bloomfield; Samuel Castle, C. M. Hedden and J. E. Wheaton, of Newark; Messrs. Campbell and Wemple, of Glen Ridge; Elliott Smith, president of the American Wood Powder Co.; S. R. Martin and John Class, of Pine Brook; J. R. Boyle, of Willard's Park, Paterson; John Riggett, of Rockaway; Dr. F. J. Ziegler and J. F. Ziegler, of Warrenville, and J. W. Hoffman, of Orange Valley.

It was 1:40 P. M. when the first shot was fired, John Riggett being referee. Elliott shot first, bringing down a fair right-quartering driver with his first, Class following with a first-barrel kill of a left-quartering driver. The first miss was by Elliott on his 11th round, when he made a clean miss with his first and put his second too far behind a fast right-quartering driver. Class ran clean to the 20th round, when a left-quartering driver flipped out of his first load and only got enough of the second to accelerate its flight. Score on first quarter, 24 each. At this stage a drizzling rain started, making everybody feel miserable for half an hour, when it stopped.

On the second quarter Elliott lost his 3d, a fairly fast one, his 12th, an awful ugly twisting driver which fell dead out of bounds, and his 27th, which was being missed with the first and simply frightened with the second. It was in this quarter that Class began his miserable work, using his old slap-bang style of firing both barrels, a style of which he was never the master. The birds that he lost were not the slowest of the day and on the other hand none of them were what could be called "screamers." In a string of twenty-three he lost no less than nine, and while three of these fell dead out of bounds the others were no more than feathered. In fact, three of them were simply frightened. He had been shooting a ragged and erratic first barrel from the start, and while this streak lasted his second was little, if any, better. Of the nine lost six were on this quarter, his total being 43 to Elliott's 46.

Elliott's form was first-class throughout, his kills, as a rule, being clean and clear. On the third quarter he lost his 9th bird dead out of bounds, this being a mean twist, with plenty of staying powers, which enabled it to carry the shot out. He had 20th looked like a clean miss with the first, while the second simply hurried it across the field. Class lost his 1st, cleanly missed, his 2d, which was a fairly fast twisting driver to the left, and his 7th, a fast twisting left-quartering driver which fell dead out of bounds. At this point he seemed to pull himself together and of the next thirty-eight birds he lost only one, and that fell dead just over the fence. At the three-quarter mark Elliott had scored 69 to Class's 65 and the race was all over but the shouting.

On the last quarter Elliott lost his second, a bird which flipped up as the trap was sprung, and then dropped out of the first charge. He put his second in and while the bulk of the charge appeared to enter the ground in front of him, the bird's body, it took to its wings and may be still flying for all the damage it received. His 10th also went over the fence and then he killed out, making his total 92 for the match. Class's only loss on this quarter was his 19th bird, which fell dead out of bounds, giving him a total of 89, this being the third time only in three years that he has fallen below the 90 mark.

There is no doubt but Elliott could have killed one or two birds more in the last half, three of those he lost being very fairly fast. His form was far above that of Class.

The time of the match by quarters was 35m., 33m., 27m. and 30m., a total of 2h. 5m.

Elliott used his second barrel 62 times to kill. His best runs were 16, 15 and 15.

Class used his second barrel 50 times to kill, it being used 28 times to kill in the first half. His best runs were 19, 14 and 36.

The birds were not the cracking good lot that they were expected to be, although several yards faster as a whole than those trapped at Paterson the previous day. They were of the mixed order, which are likely more than any others to cause hard shooting. Some were "screamers," then would come a few fairly good ones, then a batch which were all the way from very fast to very slow, this keeping the shooters guessing on each shot.

This was the fourth match shot between these experts, and the scores have run as follows, exclusive of the shoot-off of the tie in the first match, when out of 25 birds Elliott killed 24 to Class's 23.

Class	1.	2.	3.	4.	5.	6.	7.	8.	9.	10.	11.	12.	13.	14.	15.	16.	17.	18.	19.	20.	21.	22.	23.	24.	25.
Class	95	95	99	99	99	99	99	99	99	99	99	99	99	99	99	99	99	99	99	99	99	99	99	99	99

### The Virginia Championship Again.

LYNCH, November.—*Editor Forest and Stream:* In your issue of Nov. 4 I notice a reply to my article on the Virginia championship cup from W. F. Summerson. The facts I give herewith, and call on your trap editor to correct in a foot note any mistakes that I may make.

At Charlotte, N. C., in the presence of Mr. Townsend I challenged Mr. Summerson for this cup after asking him if there was any one ahead of me, receiving a reply that there was not and that he would shoot me for it at Richmond, Va., and name an early day, also informing me of the conditions under which we should shoot, to which I agreed. I then waited some time for him to set the day, but only received reply to my letters of inquiry that he would shoot as soon as able, and learning he was off shooting at country fairs and other places, I notified him that either the first condition or the shoot or forfeit this cup, and was somewhat surprised to receive the following letter from Mr. E. F. Wayman, dated June 12: "I notice

your challenge in the *American Field* to shoot Mr. W. F. Summerson for the cup. I beg leave to inform you that mine comes in first. Am only waiting for him to get in a better condition. He has been very sick."

To which I replied: "You make a mistake for these reasons, that while my challenge to Mr. Summerson was only published last week I challenged him while at Charlotte, N. C., on the 13th day of May, and if you will recollect the conversation between us on the way to Knoxville, Tenn., you will remember that I told you I had challenged Mr. Summerson for this cup and that I considered I had a walkover for it. This challenge was given and accepted in the presence of the trap editor of *Forest and Stream*, and Mr. Summerson then told me no one was in ahead of me and he told me to name an early date for the race. But assuming you had in an earlier challenge you not Mr. Summerson neither had any right, under the rules governing this cup, to postpone a match over 30 days. Any other challenger has a right to force a shoot, as your agreement with him would be a waiver of your right against any one else, and hence if it were as you say, you now have no rights in the matter until after my race with him, which I shall insist upon coming off, or Mr. Summerson must forfeit the cup."

At the same time I wrote Mr. Summerson: "I received a letter from Dr. E. F. Wayman to-day stating that he had a challenge in for the State cup ahead of mine and guess that he based his opinion upon the date of my challenge that was published last week, but as I challenge you while at Charlotte, N. C., May 13, you can point out to him his error, as you will recollect you told me in Mr. Townsend's presence there was no one in ahead of me for this cup; that you would shoot me and set an early day for the race, and as you now have only four days left in which to comply with the rules I hope you will do so, as neither you nor myself have any right to change the rules governing this cup."

If Dr. Wayman is so anxious to shoot we could all then shoot at once, or we could throw heads and tails for who should shoot first, and then the other shoot the winner on the same day, and it doesn't matter where the cup is to be shot for in this State. I only want time enough to get there."

Does the above look like I would not shoot anywhere but Richmond? And if he had been in such health that he could not go to Richmond, why did he write me on June 14 as follows: "Why not go to Tolchester, Md.? if you will go, I will." When I wrote him, upon seeing an account of the cup race between him and a local friend, he replied as follows: "My friends Dr. E. F. Wayman and Mr. John M. Kinney formulated rules under which it [this cup] is to be shot. In future, should you want any information on the subject, you can correspond with either of the above gentlemen." I immediately wrote Mr. Kinney, inclosing a stamped envelope, but up to this time have received no reply; and now this gentleman tells us that the Staunton Gun Club formulated the rules under which it is held. I can't see how they or any one else had a right to change the original conditions of this cup, and would like to read the code of rules that are more sportsmanlike and yet allow a man to ignore challenges.

The above is but a plain statement of facts in this case, and I leave the sporting public to judge whose course has been the more correct. In conclusion, let me say to Mr. Summerson that, should he feel that he ever wishes to meet me at the score for money or glory, I will pocket my pride and take pleasure in showing him his true standing as a shot.

W. T. MITCHELL.

### An Old-Time Picture.

WE publish this week an excellent half-tone reproduction of a photograph taken at Le Roy, N. Y., in 1864, during the tournament of the New York State Sportsmen's Association. The picture represents Mr. W. Wingert, a noted inventor and gunmaker of Detroit, Mich., and his partner, Charles Bradford, both of whom have passed over to the great majority. Mr. Wingert is said to have been the first man in this country to transform a muzzleloader into a breechloader, and the picture shows them in the act of examining a pair of the altered guns.

The guns thus altered were the Lafauchaux, the barrels of which (before altering) were fastened to the fore end by two pins passing through lugs on the under side of the barrels. The method of procedure was simple. Once the screw-end was separated from the

W. WINGERT. C. BRADFORD.

breech, the hole in the lug nearest the forward part of the fore end was lengthened to admit of play for the pin forward and back. The pin passing through the rear was transformed into a catch and the operation was complete. All that was necessary in manipulating the gun was to loosen the rear catch, slide the barrels forward on the forward pin and tip them ready for loading.

After repeated inquiries and a deal of correspondence we have failed to elicit any further information in reference to either the firm, the working of the altered guns, ammunition used, or in fact any points of interest beyond what is here given. We understand, however, that Mr. Bradford was a regular visitor to the New York State shoots and was the first one to use a breechloader at them.

We would be pleased to publish any further information which it may be in the power of any of our readers to impart on this interesting subject. For the photograph from which this cut was made FOREST AND STREAM is indebted to Mr. C. H. Finch, a veteran sportsman of Syracuse, N. Y., and one of the charter members of the Onondaga County Sportsmen's Club.

### The Paterson Gun Club.

THE semi-monthly shoot of the Paterson (N. J.) Gun Club took place at Willard's Park on Nov. 14, there being a fair turnout. The day was fair and quite a number of spectators were present. The shoot, comprising both target and live bird events. Among those who took part were "Benny" Abbott and "Charley" Lenone, of Passaic; Edward Hill and Charles Zwieler, of Trenton. In two events at 1 targets each the scores were as follows:

No. 1.	No. 2.
Lenone.....1111111111111111-14	111101101111111-1
Abbott.....100001000111100-6	10101001001001-1
Morley.....10101011011101-11	11011110110111-1
Wright.....01010110111111-12	01010110111111-1
Hill.....00010000000000-3	00000110100111-1
Boyle.....10001010011111-9	010011011111001-7
Wolf.....000101011011010-7	110111011110110-1
Hill.....1011111111111011-12	

Then came the club shoot at 10 live birds each:  
 Morley.....2301011212-8  
 Wright.....1122211301-1  
 Abbott.....000211211-7  
 Wolf.....122111211-1  
 Lenone.....120111111-0  
 Hopper.....111111112-1

\*For birds only.

## A Stray Shinplaster

Comes to us once in a while for a copy of "Game Laws in Brief," but shinplasters nowadays are scarcer than Moose in New York; and 25 cents in postage stamps will do just as well.

### A NEW-SUBSCRIBER OFFER.

A bona fide new subscriber sending us \$5 will receive for that sum the FOREST AND STREAM one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals. For \$3 a bona fide new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Fleet's handsome work, "Bird Portraits for the Young" (the price of which is \$3).

**New Utrecht Rod and Gun Club.**  
NEW YORK, Nov. 14.—Inclosed find scores of the last New Utrecht Rod and Gun Club shoot. The live-bird shoots of the club will be held at Woodlawn on the second and fourth Saturdays of each month, and the clay-bird shoots will be held on the first and third Saturdays of each month at Eighty-second street and Third avenue, Bay Ridge, where the club has erected a suitable building on the grounds of Mr. D. C. Bennett.  
Club shoot, 10 live birds:  
D C Bennett.....10•1011111—7 J Koster.....2211012112—9  
J B Vorhies.....21•1102•02—6 M Van Brunt.....012112•111—8

C Ferguson, Jr.....02112211—9 A A Hegeman.....1112122—7  
Hegeman arrived late; could not finish his score owing to darkness.  
In the club shoot, as above, G. E. Nostrand took the medal and first money. Ties for second were shot off as below, and M. Van Brunt took third alone.  
Ties for silver medal and second money in the club shoot: C. Ferguson, Jr. 111, J. Koster 0, J. V. Shields 110.  
Second event, shoot-off of tie from last live-bird shoot: W. F. Sykes 6, B. Rasch 0, J. Koster 5.  
Third event, sweep, 3 live birds, tie shot off miss and out:  
B Rasch.....102—2 J Koster.....101—2  
C Ferguson, Jr.....011—2 J V Shields.....212—3  
C M Meyer.....102—2 G W Cropsey.....011—2  
M Van Brunt.....011—2 G E Ferguson, Jr.....211—3  
G. E. Nostrand and J. V. Shields divided first, and the ties for second and third were shot off miss and out, M. Van Brunt having withdrawn:

**Kings County vs. New Jersey.**  
A MEETING of representatives of Kings county gun clubs was held at W. D. Gilman's Saturday evening last, for the purpose of receiving report of the committee appointed to confer with the representatives of the New Jersey clubs. The committee reported having arranged that the match be shot by teams of twenty men, fifteen birds per man, under American Shooting Association rules. The officers for the team were then elected: W. F. Sykes, Captain; J. C. DeFraine, Treasurer; A. A. Hegeman, Secretary; and the following committee of seven were chosen to select the team: W. F. Sykes, C. Ferguson and G. E. Nostrand of the New Utrecht Rod and Gun Club, C. Plate of the Erie Gun Club, C. E. Morris of the Atlantic Rod and Gun Club, J. C. DeFraine of the Coney Island Rod and Gun Club, and Elias Helgans of the Parkway Rod and Gun Club. Among the names submitted by the representatives of the different gun clubs present for a place on the team were:  
Vernon—Gus Greiff, L. A. and H. R. Thompson.  
Glenmore—Wm. Levens.  
Crescent—Walter Gilman, Capt. Shepard, Chas. Simmonds, L. T. Hopkins.

**SAVE YOUR TROPHIES.**  
Write for Our Illustrated Catalogue  
"HEADS AND HORNS."

It gives directions for preparing and preserving Skins, Antlers, etc. Also prices for Heads and Rugs, Birds and Fish, and all kinds of work in Taxidermy.  
**WARD'S NATURAL SCIENCE ESTABLISHMENT,**  
ROCHESTER, N. Y.  
In addition to that antique and unique picture of  
**Noah's Ark**  
In the new *Game Laws in Brief*, there are 25 half-tone illustrations selected from *FOREST AND STREAM*. The *Brief* is a picture book and game law manual combined. It interests equally those who want the law but care nothing for pictures of the field, and those who want pictures but care nothing about the law. All dealers in sportsmen's necessities and luxuries sell it. 25 cents.

**Sportsmen's Goods.**

Boy's Best Worsted WHITE OR BLACK \$2.50  
Men's Best Wool WHITE OR BLACK \$2.50  
Men's Best Worsted WHITE OR BLACK \$3.00  
Men's Best Made Hand Knit Worsted ex. heavy White, Black, Blue or Gray. \$4.50  
HALIFAX, Nova Scotia.  
Sirs—The sweater is most satisfactory. You certainly make a fine article in that line. Send your bill. G. E. VAN BUSKIRK.  
Athletic Suits of Every Description.  
Goods sent C. O. D. with privilege of examination.  
83, 85 & 87 Main St., Rochester, N. Y.

**DUCK CALLS.**  
Grubb's Improved Illinois River Duck Call. The most natural-toned call made; easy to blow; not easy to get out of repair, having a fine tempered reed; makes it so you can call teal, woodcock and bluebird, as well as mallard. This is the only call you can do this with. Price 55 cents.  
Same as above, made of red cedar, silver mounted, with silver reed which gives it perfect tone, \$1. Every one warranted. Address  
**CHAS. W. GRUBBS,**  
1537 Milwaukee Ave.,  
Chicago, Ill.

Erie—C. Plate, C. Detlefsen, Hy Dohrman, Wm. Lair.  
Parkway—E. Helgans, J. Blake, Jas. Bennett, R. Phister, A. Van Wyckoff.  
Coney Island—Dr. Van Zile, F. Pfander, Saml. Worthridge, John Schliemann.  
Fountain—Dr. Wm. Wynn, Dr. Eddy C. Wingert, L. T. Duryea.  
New Utrecht—C. Ferguson, Jr., G. E. Nostrand, C. M. Meyer, D. Deacon, D. C. Bennett, M. Van Brunt, G. W. Cropsey.  
Atlantic—C. E. Morris, Hy Balzer, J. B. Voorhies.  
The date appointed for the match to take place is Tuesday, Jan. 9, 1899.

**Unknown Gun Club.**  
The monthly shoot of the Unknown Gun Club, at Dexter Park on Nov. 9, brought together an even dozen members. In the club event, at 7 birds, the birds as a whole were good strong flyers and gave the shooters many opportunities for long range kills.  
Four of the contestants, Messrs. Vroom, Hyde, Flynn and Vagts, finished their scores with 7 kills to their credit. With finish of the club event came a 3-bird miss-and-out sweep. Scores:  
Vroom.....1212121—7 Vagts.....1111121—7  
Brown.....1100121—5 Schumacher.....0111121—7  
Hyde.....2221211—7 Plate.....1121012—6

Beormerman.....221—3 20 Lohden.....121—3 20  
Deitrich.....120—2 Hyde.....111—3 20  
Brown.....122—3 11

**Answers to Correspondents.**  
No notice taken of anonymous communications  
S. VAN W.—Will you please state whether it is lawful to use ferrets in hunting rabbits in New York State? Ans. Yes.  
SWAMPSEED.—We would like to publish your game note and more like it, but you do not give any place, so we cannot know what locality is referred to.  
D. B. Rye, N. Y.—Please answer whether ducks can be shot by sail lawfully? Ans. The law provides that wildfowl must not be shot "from any boat other than a boat propelled by hand," but they may be shot from sailboats in Long Island Sound, Gardiner and Peconic bays.  
G. S. Germantown, Pa.—Is there any law forbidding non-residents from shooting quail in Atlantic county, New Jersey, and if so where do I apply for a license? Ans. You will require a license, to be obtained from Charles H. Barnard, Secretary of the West Jersey Game Protective Society, 416 Royden street, Camden, N. J.

J., Grand Rapids.—I notice in *FOREST AND STREAM* of April 30 a report of game killed by the Country Club, of San Francisco. I see they include robins in the list. In this State, as you, of course, know, the robin is not considered a game bird, and is protected by the game law as a songster. Is the California robin referred to a different species than our Eastern robin? Ans. A variety of the same bird—*Merula migratoria propinqua*.  
T. A. B., Woonsocket, R. I.—Last year while hunting at West Canada a party shot a doe which had horns, but with little thought threw the head in the stream. I was there one week after and spent nearly two days hunting for the head, but could not find it. Last spring our guide found it, and now I have the horns and part of the skull. Do you know whether any one can tell any difference in the cranium of a buck and doe? Ans. The sex could not be determined by the skull.  
A. G. H., Brooklyn, N. Y.—As I am going to purchase a rifle for all-around hunting purposes, and have decided on a .38-cal. I would like to know whether you consider the .38-55-235 (powder 48grs.) as good a cartridge as the .38-56-235 in point of accuracy and penetration? Not to use the 330gr. bullet in the latter, range 200yds. Also do you think it better to buy the graduated peep sight and bead combination in preference to the common sporting rear sight, i. e., notched for every 40yds.? Mind, I speak of a hunting rifle not to be used at the range and where facility of reloading, penetration, etc., are considered. Ans. For hunting, we would advise the latter cartridge and either open or Lyman sights.
